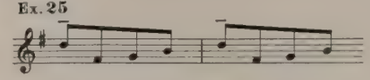
To classify the intervals of the scale, according to Bach's use of them as a means of definite expression, is a much more difficult matter than to discover the groupings of the rhythms. It has been already shown that the chromatic intervals have a restricted use; and it will appear that the skips are often used to show the kind of emotion, to qualify it, as in the case of the "sighing" pairs of notes which lie for the most part near together and show natural grief, and the wide intervals and strange dissonances which interrupt the natural rhythm to depict pain and horror. The motives of joy abound in sixths and thirds, the intervals of the common chords. If Bach writes an interval like

Ex. 24

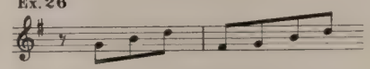
it needs no commentary of text or explanation to convey to us its intense meaning. Wide intervals also may very often be taken as an intensification of the idea.



In attempting to discover the characteristic feeling of any work by Bach, which is not a setting for words, it should be remembered that he continually depicted motion (such as the movement of waves or clouds or persons or animals) as well as *emotion,* and that often his themes cannot be said to have any more definite idea than life or gayety of feeling. So one must not force an interpretation where there is really nothing to interpret. But the chief motives must always have necessarily some shade of the same meaning, wherever they occur; and thus it is with reason that Schweitzer wrote, "Many pieces in the 'Well Tempered Clavichord,' in the violin sonatas, or in the Brandenburg Concertos, speak quite definitely to us—when the meaning of their themes is explained by the text that accompanies similar themes in the cantatas."

Two other points should be kept in mind, one, that the whole theme of a composition is very often made up of two, or even three, motives in succession. These are sometimes similar in character, and sometimes not. The other point is that many of the distinctive motives are found in the bass. Sometimes these bass themes are the chief ones; sometimes they serve as a commentary on the chief theme; and sometimes they involve the chief theme in a conflict. This conflict may continue to the end of the composition; or the two themes may be brought into accord; or one of the themes may conquer at the end. Whatever the conclusion may be, to trace the definite feeling of the various themes throughout the piece gives new depth and interest to the interpretation, for any one who has not previously regarded them in this light.

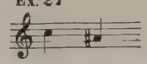
Before taking up the definite application of the motives, the student will do well to try to divest his mind of all the ideas connected with the emotional meaning of chords which have arisen since Bach's day. What were the chief means of expression in the days of polyphony? They were two, pitch, or the shape of the figure; and rhythm, or the note values. The chords which resulted from the combinations of notes in the counterpoint were not the primary consideration. Pitch and rhythm were Bach's tools. Even the emotional quality which to-day is felt so strongly in the change of "modes" major, minor, Dorian and the like—was not so decisively characteristic in Bach's day as it became later. Proof of this fact is found in the major themes which are chosen for mournful, even tragic words, and in the minor themes which accompany some of the most cheerful words.



The motives which the student will find most difficult to distinguish, one from another, are those of even groups of sixteenth or eighth notes; for he often will find the similarity more striking than the dissimilarity. So he often must have recourse to the accent of the groups; for

Ex. 25

will be found to have a more cheerful meaning than

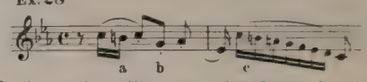


Ex. 26

In studying the syncopated motives, he must decide whether the syncopation is actually a motive, or whether a note is tied into a syncopation merely to prepare for the up-beat of the following real motive. Furthermore, he must observe the chromatic progressions very carefully. These progressions are often used to affect or to make more interesting a simple modulation; and of course in that case they cannot be typical motives.

The diminished third, which is cited as giving extreme melancholy, even loathing, to a motive, is written, for instance,

Ex. 27



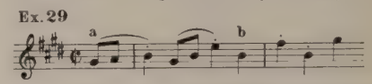
While it includes two half-steps, like a major second, yet its position in the movement of the voice gives it the peculiar quality which Bach desires to express.

The movement of the piece, as indicated by *allegretto, andante,* and so on, is naturally of great importance in determining the type of the motive; just as, conversely, the motive often throws light on the speed which should be adopted.

Bach's pictorial ideas were not the result of a gradual evolution. They are found in his very early works quite as definitely as in the later ones. But the plan was pursued systematically throughout the long range of his compositions, enriching some, but detracting, indeed, from the musical worth of others. However, since it is found in all his works, one may trace it as well in familiar ones as in those less frequently played.

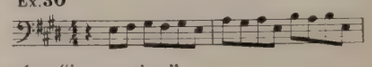
This rhythm is found in the "joy motive" of the *Fugue in C minor* of the "Well Tempered Clavichord, Book I, No. 2" (a); it is accompanied by the "step" of confidence (b); and the long motive of simple joy (c).

Ex. 28



It is made still more significant in the stretto or episode just before the twentieth measure, and is emphasized at the end with its prominent entrance in the bass, *ff*.

Bearing in mind the meaning of this motive, even though the mode is minor, one can determine the tone quality which should be used. Rubinstein said, "a hard, dry, *staccato*. Bach was a serious man." But if the tone has a fuller quality, if the two *staccato* notes are given the true Bach *staccato,* which is emphasis and length, rather than very short crispness, this newer conception fits well with the *ff* ending, which Rubinstein declared to be inconsistent with a "graceful" conception of the original theme. Schweitzer, it should be remembered, holds that the majority of Bach's works should not end *diminuendo, pp,* as they are so often marked, but *f* and *ff*.



Another typical example of the "joy motive" is found in the *Bourree in E Major* of the Sixth French Suite. It appears in the theme of the right hand (Ex. 29a) and ends with the "step motive" (Ex. 29b).

Ex. 29

The Counterpoint in the left hand has the "tumult motive"

Ex. 30

and a "joy motive."

In the *Two Part Invention, No. 5 (E-flat major),* the "joy motive" appears as the beginning of the subject, which ends with the "step of confidence."

Ex. 31

The counterpoint is, as often happens, a long motive of "simple joy." Here, however, is plainly one of the "conflicts" of direction, which Bach so often created, with the "upward striving" of one theme in combat with the downward strength of another.

(*Continued in* THE ETUDE *for October*)

The Hand and the Memory

By LAURA R. BALGUE

FOR FINGER INDEPENDENCE, muscular development and suppleness, try these exercises fifteen minutes at a time, four times a day.

1. "Tap" the air twenty times with the thumbs, as far up and down as they will go, gently, never strenuously, then twenty times with the second fingers, and so on. Do it about six times.

2. Clasp the fingers of the left hand over back of the right hand, and firmly draw the left hand fingers between the right hand fingers, slowly, three times, to stretch the tendons. Reverse the hands. Repeat this five times.

3. Return to finger tapping.

4. Draw the fingers of the left hand along their palm, open, spread and stretch the fingers. While spread, stretch the fingers twice, relaxing absolutely between stretches. Do the same with the right hand.

Vary the above exercises by sometimes closing the knuckles of all the fingers of one hand together, and opening, rolling thumb joints, always alternating hands, relaxing after every muscular effort, the idle fingers of course being relaxed and resting at all times. There is no muscular strain.

The hands are in this way "conditioned" much more quickly and even better than they could be at the piano; and after an early morning round of it, it is a delight to find the hands quite fit for the very first note at the keyboard.

Such exercises are a wonderful help to all who play the piano, but especially to busy people, people with scant access to a piano, people with cold or with undeveloped hands, or those living in flats; for they are simple, soundless and ever convenient.

And if the higher mental memory falters on an intricate passage not played for a long time, the muscular memory, which speaks only through well-conditioned hands, will come to the rescue. The mind grasps what the muscles automatically do, and intelligent concentrated practice easily brings that passage up to par.

Keep your hands fit at all times. It is so easy to do! Then, too, they will add to both your personality and your success.

BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI
FAMOUS BAND LEADER AND TEACHER
CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

The Marching Band

SOON ANOTHER SUMMER will have passed—carefree days of travel, fishing, tennis, golf, and swimming will be supplanted by days of activity. New organizations are built on the old, and with freshened zest we face the problems of planning and administration of our instrumental music program.

For many band directors in the thousands of high schools and colleges throughout the Nation the cool and delightful fall days inaugurate "The Marching Band Season," with all the glory and excitement of multitudinous football contests, all the flash of colorful uniforms and stirring music. Each director is caught in a whirl of marching engagements, intensive training for groups of enthusiastic young musicians, small and large tasks that increase by the hundredfold.

Each Saturday will find gay throngs crowding the stadia of our schools and colleges, eagerly awaiting the thrill which catches every heart with the initial entrance of the band—the highstepping dignity of the drum major, the royal fanfare of the trumpets, the pulsing beat of the drums, the trim uniforms and brisk steps of the bandsmen. Then the quiet hush which precedes the singing of alma maters, the full throated pride of the song, and the sudden roar greeting the husky contestants.

The spirit and pageantry of such occasions is an inseparable part of the great American game of football. The glamour and spectacle incident with these athletic events has made of the marching band an inviolable tradition, a vital force contributing to the enjoyment of a game dear to the hearts of Americans everywhere.

Like a great stage drama, the football scene unfolds, and not the least of the principals is the band. While a good majority of the fans attending these weekly football classics are not familiar with the finer points of the game, everyone is able to appreciate the maneuvers and evolutions of the bands. Somehow, whether or not the home team has been victor or loser, there has been great satisfaction in witnessing the performance of the bands.

Behind the Scenes

BUT LIKE THE DRAMA, behind the scenes there must be careful planning, effective training, and adequate preparation. We must realize that in this activity the band can profit greatly, and that in it too lies opportunity for calling forth the best in musicianly conduct and performance. Thousands of persons who never hear the band on the concert stage become ardent supporters of high school and college bands simply through their exhibitions on the gridiron. It is no small matter when we consider that our college bands perform during football season before audiences numbering more than fifty thousand people. Too much attention hardly can be given to fundamentals of good performance.

It is the writer's belief that a properly drilled and rehearsed marching band can offer educational advantages to young musicians far beyond many of the benefits found in any other form of musical activity. One of the first fundamentals essential to perfection in the marching band is training in correct posture, carriage and bearing, and such training has incalculable effect on the daily personal appearance and physical condition of band members.

The marching band provides valuable lessons in coöperation, responsibility, and mental discipline. Every movement, in marching, is subject to scrutiny, and the movement is noticed whether it is good or bad. Every individual must be alert, and must coördinate mind and muscle in the execution of each maneuver and in a musical performance fittingly timed and rehearsed to the various formations. The planned mechanics of the marching band activities are only as fine as the least perfect individual will allow.

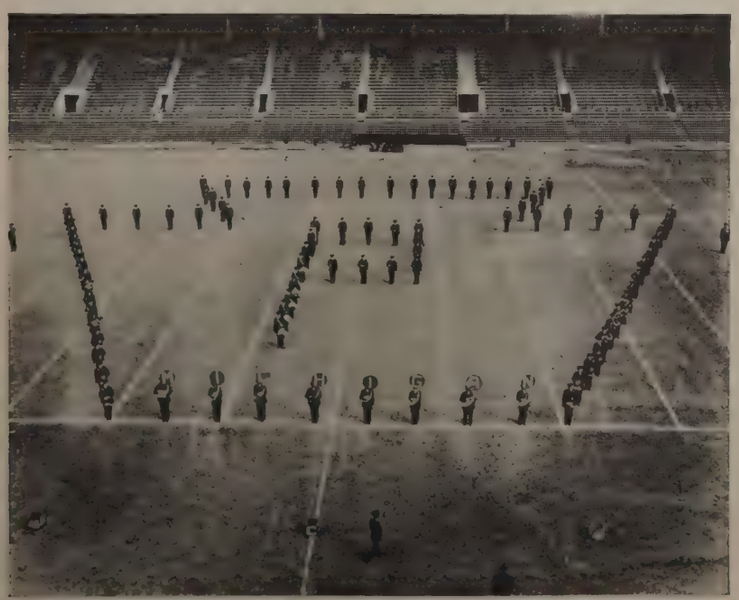
In any field of endeavor, the greatest stimulus to character comes with service, and probably no other organization is called upon so frequently to serve its community as the marching band. It serves school and city administration, and is called upon for service to civic clubs. It engenders a spirit of coöperation in the community more successfully than any other musical unit, and for itself the band fosters an enviable "esprit de corps"—a spirit that will give warmth to reminiscences of its members when they have left the ranks.

Undoubtedly many high schools and universities maintain a band as a "musical unit" with the primary aim of participating in marching events. Many of such organizations owe their existence, in fact, to the marching program, and where they survive solely for this purpose we cannot help but feel regret. The band is essentially a *musical* unit, and marching is but one phase of its activity which it would be illogical to overstress. The benefits of belonging to a marching band are minimized if it becomes a victim of the marching program.

There are communities which visualize the marching accomplishments of their bands as an end in themselves. They point with pride to proficiency in the maintaining of perfect alignment, to originality of formations and intricacy of maneuvers, and while such accomplishment is worthwhile, we cannot help but feel that an overemphasis on mechanical ability to the detriment of musical ability will bring eventual failure to any marching band.

An equal balance of marching and playing proficiency is greatly to be desired, and we believe there is error in the tendency in certain sections of the country to make

HERE COMES THE DRUM MAJOR
He is Robert Fox, drum major of the University of Michigan Band for 1935-36-37.



of the band a "drill team" and neglect good playing in overattention to marching. We are prone to require our school bands to perform on the march before they have acquired a capability in the playing of instruments in a standing and moving position, and we sometimes make the mistake of giving so much time to unusual and intricate formations that music rehearsal suffers.

The plaudits of the crowd must not be confined to praise for novel formations; it must be proud also of the musical qualities of the band. When a band is deficient musically, marching ostentation is a poor substitute.

Important Details

ON THE WHOLE, however, a happy combination of playing and marching perfection can be had if certain aspects of outdoor performance are given attention. The tendency of most players on the march

Music Extension Study Course

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Music appearing in the Music Section of this Issue

MY LADY'S GAVOTTE

By Bertha R. Frick

The first composition under consideration this month recalls knightly days when every gentleman was expected to be expert in the use of the sword or lance, and able as well to step the measures of a minuet or gavotte with courtly grace.

Although it has a long and ancient history, the gavotte retains its charm and is a form much used by our modern composers.

Rhythm and phrasing are naturally of primal importance in playing this music. Simplicity, too, is important in the matter of interpretation. Set a moderate *tempo*, keep it intact, and try to catch the atmosphere of that long ago era when the gavotte enjoyed its heyday.

Release rather crisply the many two note slurs and see that the distinction between *piano* and *forte* is well marked.

It will be observed that the first theme is in D major; the second in B minor and the third in G major.

For best results, pedal only as indicated n the text.

FARMER BOY FROM DUBLIN

By George Johnson

The first theme of this piece is syncopated and suggests that this very urban farmer boy of Mr. Johnson's imagining is under the influence of phonograph or radio recordings of dance tunes from Yankeeland.

Remember that in syncopation the accent falls always on the syncopated beat. The left hand accompanying chords all fall on the weak beats, thus aiding the syncopated effect.

The *tempo* is *allegro* and the tune is to be played quite vigorously—the tone ranging from *forte* to *fortissimo*.

The second theme is in D, relative minor and the bass here is an imitation of Irish bagpipes. The drone effect of the open fifths should be emphasized somewhat against the right hand melody which is slurred throughout.

It will be found effective to play the first section without pedal, thus securing contrast to the sustained effect of the second section.

TWILIGHT IN ARCADY

By Clarence Kohlmann

This composition, obviously lyric in form, calls for one's best possible singing tone, and should be played in the style of a nocturne. The left hand accompaniment is Chopinesque in treatment, and is best performed by using a rolling motion of the hand and arm.

Give due attention to the many notes bearing the *sostenuto* sign. Give these notes a certain importance, but do not allow them to become obtrusive. The right hand song, remember, is to be clearly heard at all times with no effect of forcing.

It is necessary to use the pedal freely—once to each measure as indicated.

Observe the many changes in pace indicated by the words *allargando, poco agitato, molto rit*, and so on.

Loosen the reins of imagination and emotion. A precise or stilted interpretation of this number would be insipid.

MOON SHADOWS

By Frank Grey

Still another lyric piece, this time with the melody lying in the lower or alto voice of the right hand.

In the title is to be found a definite clue to proper interpretation. Let the treatment be fanciful—even a little bit mysterious. *Don't* let the *tempo* drag. Preserve, rather, throughout the feeling of uninterrupted motion.

The second section beginning with measure eleven is in A minor and the mood brightens. The triplet figures in the right hand lend a certain liveliness and activity amounting almost to restlessness.

The first mood of the composition is recaptured, however, as the first theme reënters D.C., and ends sedately at *Fine*.

AUTUMN SUNSET

By Frederick A. Williams

This little composition opens *Andante Cantabile;* that is, slowly and in singing style.

The first section is written in nine-eight metre and the melody lies in the right hand against sweeping *arpeggi* in the left.

The pedal is necessary to achieve proper *sostenuto* and should be used throughout the first section as shown in the first two measures. Tonal coloring in keeping with the title is important.

The metre changes to six-eight in the second section, which is written in the key of E-flat major, subdominant to the B-flat major of the opening theme.

The sustained basses in the left hand must be made to sing against the repeated notes played by the thumb.

Try, by careful handling of tonal coloring, to suggest the ever changing color values to be found in a September sunset.

A WALTZ IN THE MOONLIGHT

By Ralph Federer

The graceful first theme with which this dance opens calls for careful and precise use of the pedal. It should be released sharply as the first beat in the left hand is slurred into the second.

Set a moderate pace and try to play this theme with a certain poetic reflection, later using more animation as the second theme makes its appearance at measure thirty-three.

Give proper value to the sustained basses found in the second section. These make a chromatic descent which is an important factor in establishing the character of the entire second theme.

Play the Coda more slowly, *piu lento*, imagining the dancers reluctant to end their dance in the moonlight.

FAREWELL SUMMER

By Mrs. H. H. A. Beach

A work from the pen of Mrs. Beach always is a matter for serious consideration, and *Farewell Summer* does not depart from the distinguished precedent set by the composer. This composition shows the sure hand of the master craftsman, is rich in musical content, and very pianistic, lying naturally under the hands.

Play the first theme with all the stateliness in keeping with the gavotte form, observing carefully the two note slurs followed by *staccato*.

The second section is in the form of a musette. The musette was, as we know, an instrument of the bagpipe family having a drone bass. Notice that the drone effect is caught by means of the repeated D in the left hand.

The melody of the second theme, should be played *dolce*, sweetly, and should be at the same time well marked. Here, be careful to observe the most strict *legato*. The *una corda*, or soft pedal, is in use for the first eight measures of the second theme and is released after the double bar, beginning with measure 33.

Melody tones are plainly marked and lie on the thumb side of the right hand.

A fine number to keep in mind when building an all American program.

MORNING AT THE MILL

By Evangeline Lehman

This newest piece of Miss Lehman's is descriptive, like its title. The repeated notes, alternating between the thumbs of the hands, depict the monotonous and ceaseless motion of the mill wheel, and form a characteristic background for the melody which lies in the upper or soprano voice of the right hand.

Observe the text indication in connection with the melody. It is marked *molto staccato sempre*—always very short and detached.

The *tempo* is *allegro* and the mood *giocoso*—jolly and sportive.

Follow pedal marks closely.

MAZURKA IN F-SHARP MINOR

By Frederic Chopin

The Chopin *Mazurka* and Poland are linked so closely as to be almost synonymous. With little Poland recently occupying such prominent space in the headlines, a Master Lesson on one of its national dances is particularly apropos.

The lesson in this issue of The Etude, is by Mark Hambourg and should prove of absorbing interest to readers of The Etude.

THE RINGLET

By Chopin-Liszt

When two master pianists, who happen also to be master composers, combine their efforts, the result is apt to be pianistic, to state the case mildly. Such is the happy result with this charming little number in which characteristics of both Chopin and Liszt are clearly discernible.

The Ringlet is in mazurka form and should be accorded typical Chopin *rubato* in combination with the *bravura* style of Franz Liszt—especially in the short cadenzas.

Play the melody in song style and follow expression marks as given.

The most elementary knowledge of the styles of the two composers will go far toward assuring a satisfactory reading of this little known but none the less interesting piano composition.

THE CUCKOO SINGS HIS MERRY LAY

By Harry Bagge

The cuckoo's call has been popular as a musical *motif* with composers from the earliest days of music to the present time. Practically all of the old masters made use of it in some form or other and to-day it is found to be very effective in elementary piano music. Using as it does, two notes of the triad, it affords opportunity for chord analysis, and its imitative quality never fails to make an appeal to youngsters.

Mr. Bagge uses it in an easy second grade piece and supplies words.

Play this little piece moderately fast with an eye to *staccato* notes and phrasing.

SKIPPING HOME FROM SCHOOL

By Robert Nolan Kerr

It is a foregone conclusion that one will find much of pedagogic value in a composition from the pen of Robert Nolan Kerr.

Skipping Home from School develops smooth scale playing in the right hand and promotes good style in attacking and releasing the three note phrase motifs scattered throughout the composition. The left hand also comes in for a share of development since it carries the melody in the second and third lines.

More important than all this (from the viewpoint of the pupil) is the fact that it is really interesting music and fun to play.

Use this composition as a valuable exercise, camouflaged, for the pupil whose scale playing is a bit on the ragged side.

LET'S BE GAY

By Alice M. Steede

About grade two and a half, let us say, this little piece develops playing of two note slurs, *staccati, sostenuto*, and phrasing in general.

Play it in a manner light and lively with due consideration for the various marks of dynamics.

It is suggested that this piece be played without pedal.

OUT FOR A STROLL

By Renee Miles

An easy first grade number which never employs more than one note at a time in either hand. Each phrase remains in five finger position, although several different hand positions are employed. Play it smoothly and evenly and be sure to give full value to all dotted half notes.

ZUYDER ZEE

By T. Robin MacLachlan

A Dutch dance with the melody in the left hand—at least in the first theme. Toss off sharply all slurred groups and apply vigorous accents throughout.

Music Over Twenty Centuries

You, whom we are proud to have as an Etude enthusiast, have perhaps noted how we have endeavored to reach out in all directions to the perimeter of the art and to cover every subject that may be profitably and entertainingly presented. The issue for next month (October) is a splendid example of this, as is evidenced by two of the leading articles "What Plato (427-347 B. C.) Said about Music" and "The Hour of Charm," an article dealing with Phil Spitalny's up to the minute group of young lady orchestral players and singers of rare beauty and ability.

THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Advice on Pieces

I have been taking music lessons for about five years and can play such pieces as *Clair de Lune*, by Debussy and the nocturnes, by Chopin. At present, due to financial difficulties, I am unable to take lessons. I practice regularly, an hour or more a day, but I am a little wary about attempting any but easy new pieces, as I feel that my musical knowledge is inadequate for learning more difficult music without the aid of a teacher. I like difficult pieces, and am particularly fond of Tschaikowsky and Debussy. Can you help me?—W. C. F., New Jersey.

With your present set up you will get more satisfaction if you spend your teacherless hour a day on pieces which are not too difficult; but there is no reason why you should not make technical progress if you budget your time carefully, jealously guarding every precious practice moment. Compel yourself to concentrate so intently that after each ten minutes work you will be ready to rest for sixty seconds, content to take a few turns around the room for relief. Are you one of those persons who have to "fool around" the piano for fifteen minutes before you can really get down to work? This insidious habit is the worst time waster of all, and I mention it only because it is such a common tendency. How well I know this, for in spite of all my experience, I still have to guard against it!

You ought to spend the first twenty minutes practicing two contrasted kinds of technic, as for instance, chords and major (or minor) scales; arpeggios and an octave etude; chromatic scales and finger independence exercises, and so on. After two weeks, change to another set, and after two months start the whole series over again.

Force yourself to memorize a new piece for at least twenty more minutes; and use the last period to polish off or to review pieces already learned.

Tschaikowsky has not written very much interesting material for piano solo; the pieces I like best are the little *Chanson Triste*, the *Song Without Words, Op. 2, No. 3, Doumka* and *Troika*—these last two rather tricky to play. From Debussy I recommend the *Sunken Cathedral*, the *Nocturne*, the *Little Shepherd*, the *Girl with the Flaxen Hair*, and even the dashing *Prelude in A minor*, which, although brilliantly effective, is not difficult.

A Teacher's Quandary

I am offered a pupil seven and a half years old who has been taking lessons for three years. In my opinion, she has not advanced as rapidly as she should, since she is unusually talented and intelligent. As my technical abilities are limited, although I have some experience, I hesitate taking her, for I feel she would advance more rapidly with a brilliant performer.—C. G., California.

Oh, for the old days when children were not expected to "advance rapidly," when a teacher could give a pupil one thick music book with all the necessary material in it—good, bad and indifferent! "Them" may not have been thorough days, but they were certainly more enjoyable for the youngsters. Are you old enough to remember a fat volume by Damm which contained dozens of marches, waltzes, duets, etudes, excerpts from sonatas and symphonies, song and operatic arrangements, and in fact, was a compendium of all that a young person should know about music? Do not mistake me—I am not recommending Mr. Damm, even if you can buy him (which I doubt). But I am pleading here for a similar volume which would be up-to-date, inexpensive, and acceptable to modern teachers who are sick of supplying costly supplementary material to their students. How much better it would be if we could put our early grade students through several such easy, fat volumes, giving them a general survey of the music field! Most youngsters lack music and pianistic facility on account of the painful pushing to which they are subjected. Let's give them heaps of material in their own grade, let them browse around, chew their cuds and enjoy themselves. Away with this rapid advancement obsession! I am sure that even the fond mothers—those bugbears of our lives—will be won over when they hear the old, well loved tunes played by their precious offspring.

This time I shall ask a question—do any of you know such a volume? It must be at least 150 pages long, not high brow, chock full of music, nearly all of the same grade, and cost not more than a dollar. A tall order, isn't it, but one we have every right to expect filled.

There I go again! Putting on the heat against this deplorable tendency of the modern music teacher to force "progress" at the expense of enjoyment almost made me forget your question. No pupil requires a teacher who is a brilliant performer. It is more essential, especially for a child, to work with one whose playing, even if modest, is a good aural and visual model, an instructor who can clearly and patiently explain the necessary steps for improvement, and whose communicative enthusiasm will fire the child to do his best work. If you can meet these requirements, tackle your job boldly, and more power to you!

High Fingers

What do you think of high finger lifting for beginners—this push up business? I understand that pushing the fingers up uses a different set of muscles from the down pressure and tightens the wrist, and so on. I teach a slightly elevated position of all fingers so they can *drop* to the key from the middle joint, and so do not ask the pupil to force fingers up unless the middle joints seem particularly stiff and in need of special exercise.—M. G. L., New York.

You are right, no good is accomplished by any conscious striving to pull the fingers away from the keys after 'playing. This causes unnecessary extra contraction, creates lost motion, and is a stupid waste of effort. On the other hand, no finger can "drop" from the middle joint. Just try it some time and see! Even if the finger falls from the knuckle joint (as is the case) it hasn't sufficient weight to make even a *pianissimo* tone. Therefore all finger movements must be reinforced by a swing of the finger itself with the help of hand and arm. In slow practice it is better to let the finger rest on the top of the key until the split second of playing; then, at the playing moment, three acts must be performed practically simultaneously: 1. A sudden finger lift, and at the same time 2. the swift swinging on the tone and 3. instantaneous key release. Thus, the maximum of effect is obtained with the minimum of effort in the quickest possible time.

Beginner Materials

After a beginner—child—has used Scharwenka, "Op. 62"; Bach-Carroll, "First Studies, Bk. 1"; or Schumann's, "Op. 68"; or has gone through Köhler, "Op. 157"; what would you suggest for technical etudes? Is there a Czerny that is particularly good for that grade? How about Doring, "Op. 8"; Brauer, "Op. 15"; Le Couppey, "Op. 20"; Berens, "Op. 61"; or Krause, "Op. 2"? —M. G. L., New York.

Heavens, your knowledge of all the old standbys and their Opus numbers puts me to shame! I've never even heard of several of those fellows. Why not give your pupil something of more recent origin like John Thompson's "Fifty Selected Studies"; or "The Girl at the Piano" (20 piano pieces which may well serve as studies); Elizabeth Gest's "Second or Third Book of Tones and Tunes"; or James Rogers' "Miniatures"?

Rotation

Am I right in assuming that "rotation" as applied to arpeggios means bearing toward the outside of the hand when the right goes up and left down, and rolling slightly toward thumb side when right comes down and left up? So many writers on technic glibly say to "rotate" without defining it.—M. G. L., New York.

Yes, but in the process of rotating, do not forget to keep your wrist rather high and level. Exaggerated rotation often results in an excessively dipping wrist which ruins all arpeggio playing.

The best, clearest and most concise little pamphlet on the subject is Matthay's "The Forearm Rotation Principle and its Mastery."

Too Young?

I am quite puzzled. I am giving a small child piano instruction. She was four years old in December, so you see she is very young. Personally, I believe she is too young, but her mother thinks it is a good thing to start early with her because she is left handed.

I have been giving her from five to seven minutes every day and this has continued for about two weeks. Now it seems to me that there is very little more for me to teach her that she can (and will, for she is stubborn) grasp and enjoy.

I have taught her the names for her fingers, Tommy Thumb, Pointer, and so on, and have given her finger exercises at the table. At the piano, she can now find C, and I have her play C, D, E, and so on. But all this is getting tiresome to her. If I could keep her interested in practicing thus, she would advance. We sing and clap the time but she doesn't seem to have much rhythm. The book that I use is "What to do First at the Piano," by Helen Cramm—it seemed to be the simplest thing that I could find.

Can you give me an idea of something that would interest a child such as I have described, who can barely count and say the letters of the alphabet? Do you think she should not begin so young?—E. L., Massachusetts.

No child should have piano lessons at four years unless (a) she shows definite musical talent; (b) shows a lively curiosity by going frequently to the piano to experiment for herself; (c) has a parent who is willing and competent to spend ten or fifteen minutes daily in supervising periods at the piano.

Your approach in this case has been admirable—I don't see how it could be improved upon. The only suggestions I have to offer are these:

1. Try the "Experiments with a Three Year Old," from the Teacher's Manual of "Playing the Piano," by Maier-Corzilius (Ps. 84-91); and many of the rote motives and tunes in the early pages of the book.

2. Use "Music Play for Every Day", a volume rich in musical material for use with a very young child.

3. Organize or send her to a general music class, such, for example, as are so successfully conducted by the Dunning system.

Taking Up Teaching Again

An old fashioned piano teacher, beginning work again after a long period of inaction, asks your help in the selection of music that children—especially boys—will like. The pieces should not be above grade three in difficulty. I cannot get music here on approval, so am dependent on what the local music stores have to offer; and they have not an interesting selection of music for the early grades. I noticed some easy arrangements in THE ETUDE: Mozart's *Pastorale* and Grainger's *Country Gardens*. Could you mention others?

I know I can keep the pupils and get others, if only I can give them music that they like.

—D. B., British Columbia.

Suggestions: Grade I: *Beside the River*, Risher; *Along the Way*, Risher; *The Masked Ball*, White; *Mayan Sun Dance*, Hibbs; *Frisky Kitty*, Trinkaus; *March of the Giants*, Massa; *A Spanish Dance*, Bussey; *Ping Pong*, Philleo; *Skippy's March*, Kinscella; *Echoes of the Hunt*, Delacourt.

Grade II: *Marche Triomphale*, Ketterer; *At the Barn Dance*, Bennett; *March of the Caliph*, Baines; *Sun Bears*, Leonard; *Carnival Dancers*, Chauncey; *Snow Flurries*, Locke; *Valse Miniature*, Ewing; *Crocus Blooms* (Waltz), Johnson; *China Town*, Rogers.

Grade III: *Dream River*, Kern; *Night Witchery*, Renton; *In Days of Long Ago*, Copeland; *Slavic Dance*, Perry; *March of the Cookie Solders*, Lehman; *A Carnival Scene*, du Val; *Twilight in Arcady*, Kohlmann; *Cuban Dance*, Mana-Zucca; *Punchinello*, Bentley; *In Chiffon* (Waltz), Chase.

Easy Arrangements: *Home on the Range*, King; *Mighty Lak' A Rose*, (Nevin) Felton; *The Swan* (Saint-Saëns) Carleton; *Amarylis*, King; *Largo* ("New World Symphony," Dvořák) King; *Liebesträum* (Liszt) Rolfe; *Shortnin' Bread*, Wolfe; *Deep River Reverie*, Santa Bonita; *Shepherd's Hey* (Easy Version) Grainger.

Any of these pieces may be procured through the publishers of THE ETUDE.

Hand Position

I have a girl who has taken lessons since she was seven years old—she is now ten. The first two years she had a lovely hand position, with fingers always nicely curved, but of late, I have noticed that occasionally the fingers bend in, and upon examination, I find that her fingers (when extended straight out together) are all tip tilted—they seem to turn up at the ends! Her mother wonders if this could be a result of biting the finger nails. Should I consider this condition as an acceptable excuse for an occasional crooked finger, or shall I still insist that her fingers must be perfectly curved at every motion? The girl is doing very satisfactory work and is well advanced in her technical work.—L. W., New York.

Biting nails usually has the opposite effect of making children curve their fingers more than ever; it's only when the girls get to the manicure age that their fingers cave in or flatten out. There is nothing more maddening than to have to listen to the futile clicks of rouged nails on piano keys; No one with long, beautiful nails should ever play piano. But your girl is evidently just getting to the awkward (and careless) age which usually begins between ten and twelve. For a year or two, her fingers like the rest of her, will be unable properly to coördinate; but don't worry her about it, for the tip tilting will disappear before you know it.

The "Mazurka in F-Sharp Minor" of Chopin

A Master Lesson

By MARK HAMBOURG

Internationally Famous Pianist and Pedagog

THE MAZURKA is a dance native to Poland, and it originated in the sixteenth century. It first took the form of national songs with accompaniment of dancing; and, after being introduced into Germany about 1750, it reached England about 1850.

It was usually danced by four to eight couples at a time; and it was remarkable for the variety of steps necessary for performing it; in fact even improvisation was allowed. The time of the music is always three-four, and the form generally consists of two or four sections of eight measures, each section being repeated. The dance should be played a good deal slower than a waltz, with a certain amount of *rubato* in the rhythm, and with an accent on the third beat of each bar.

Chopin made the Mazurka form especially his own, by extending it, treating it in all kinds of different ways, and making veritable little tone poems out of this national Polish dance. In all he wrote fifty-two mazurkas, and they express every mood, from the gay to the most melancholy.

The *Mazurka in F-sharp minor* is a particularly graceful composition and must be played throughout with well defined rhythm, including the essential mazurka accent on the third beat of every measure. The tone must be singing in the sentimental parts of the piece, but sharp and incisive during the dance melodies. It is the accent on the third beat of the bar which gives the peculiar lilt to the Polish mazurka, and determines its national flavor.

The piece opens in the treble, with a tied quarter-note on F-sharp, on the third beat of measure 1. This F-sharp is marked *piano*, and it should be accented. Even though *piano*, it should be played with a warm tone, and be held a trifle longer than its actual value, in order to impart the necessary lilt to the phrase which it introduces. The triplet figure on the first beat of measure 2 must on no account be hurried; but it must have its just value, whilst the mazurka accent should be well defined on the G-sharp of the third beat of measure 2. The accompaniment in the bass should be *non legato*, except where especially marked; and it should be played with a light *staccato* touch; as rhythmically as possible; and with the accent on the third beat in every measure well emphasized.

The Pianist Takes Breath

AT THE END of the second beat in measure 3, the hands are taken off the keyboard for a brief moment, like the taking of breath by a singer, before proceeding to the development of the next phrase which commences on the accented A in the treble on the third beat of measure 3. The same breath pause takes place again before C-sharp in the treble, on the third beat of measure 5; whilst measure 6 is played somewhat quicker, with another little breath pause after the B-sharp, eighth note, in the treble, on the second beat of this measure, as also on A-sharp in a similar position in measure 7; and again after G-sharp in the treble on the second beat of measure 8. The notes so marked in the left hand, namely, F-sharp, half note, and E-sharp, quarter note, in measure 6, E-natural, half note, and D-sharp, quarter note, in measure 7; D-natural, half note; and C-sharp, quarter note, in measure 8; and C-natural and B-natural, in measure 9; all must be well brought out.

As measures 6 and 7 are a little quicker in *tempo*, so measures 8 and 9 are a trifle slower; and the music does not reach absolute *A Tempo* again until measure 11. The phrases in measures 10, 11, 12, and 13 are a repetition of the first four measures and must be performed in the same manner, with a breath pause after the second beat in measures 11, and 13, before taking the accented notes on the third beat of each of these measures. Measure 14, is a little *ritenuto*, with the accent, again in both hands, on the third beat; whilst measure 15, is *pianissimo*, but *in tempo*.

There is a slight *crescendo* in measure 15, leading up to the first beat of measure 16, in the treble; and the middle note F-sharp, half note, on the first and second beats of this measure must be made prominent; whilst the whole measure is played *rubato*, as also is the following one. Each note of the triplet figure in measure 17, in both hands, must be brought out.

The Theme Changes

AFTER THE FIRST seventeen measures have been repeated, we come to the second part of the *mazurka*, where a more energetic theme is introduced with double *forte* notes on the third beat of measure 17, and on the first beat of measure 18. The whole of this new subject, which lasts until measure 24, must be performed very rhythmically, but with abandonment. The eighth notes in measure 18, on the second and third beats, should be stressed, and an accent should be made on the first beat of measure 19. From the second to the third beat in measure 19 there must be a slight *crescendo*, and there should be another accent on the third beat of this measure, leading up to double *forte* again on the first beat of measure 20. Measures 20, 21, 22, 23, and 24, all must be played in a similar manner, whilst measure 25 is distinctly *rubato*, the triplet quarter notes in both hands in this bar being brought out in *recitativo* style, in order to give significance to the reëntry of the original theme, in measure 26. This theme must be resumed in measure 26, in a slightly slower *tempo* than in the opening measure of the *mazurka;* and the music should arrive at complete *A Tempo* only in measure 28.

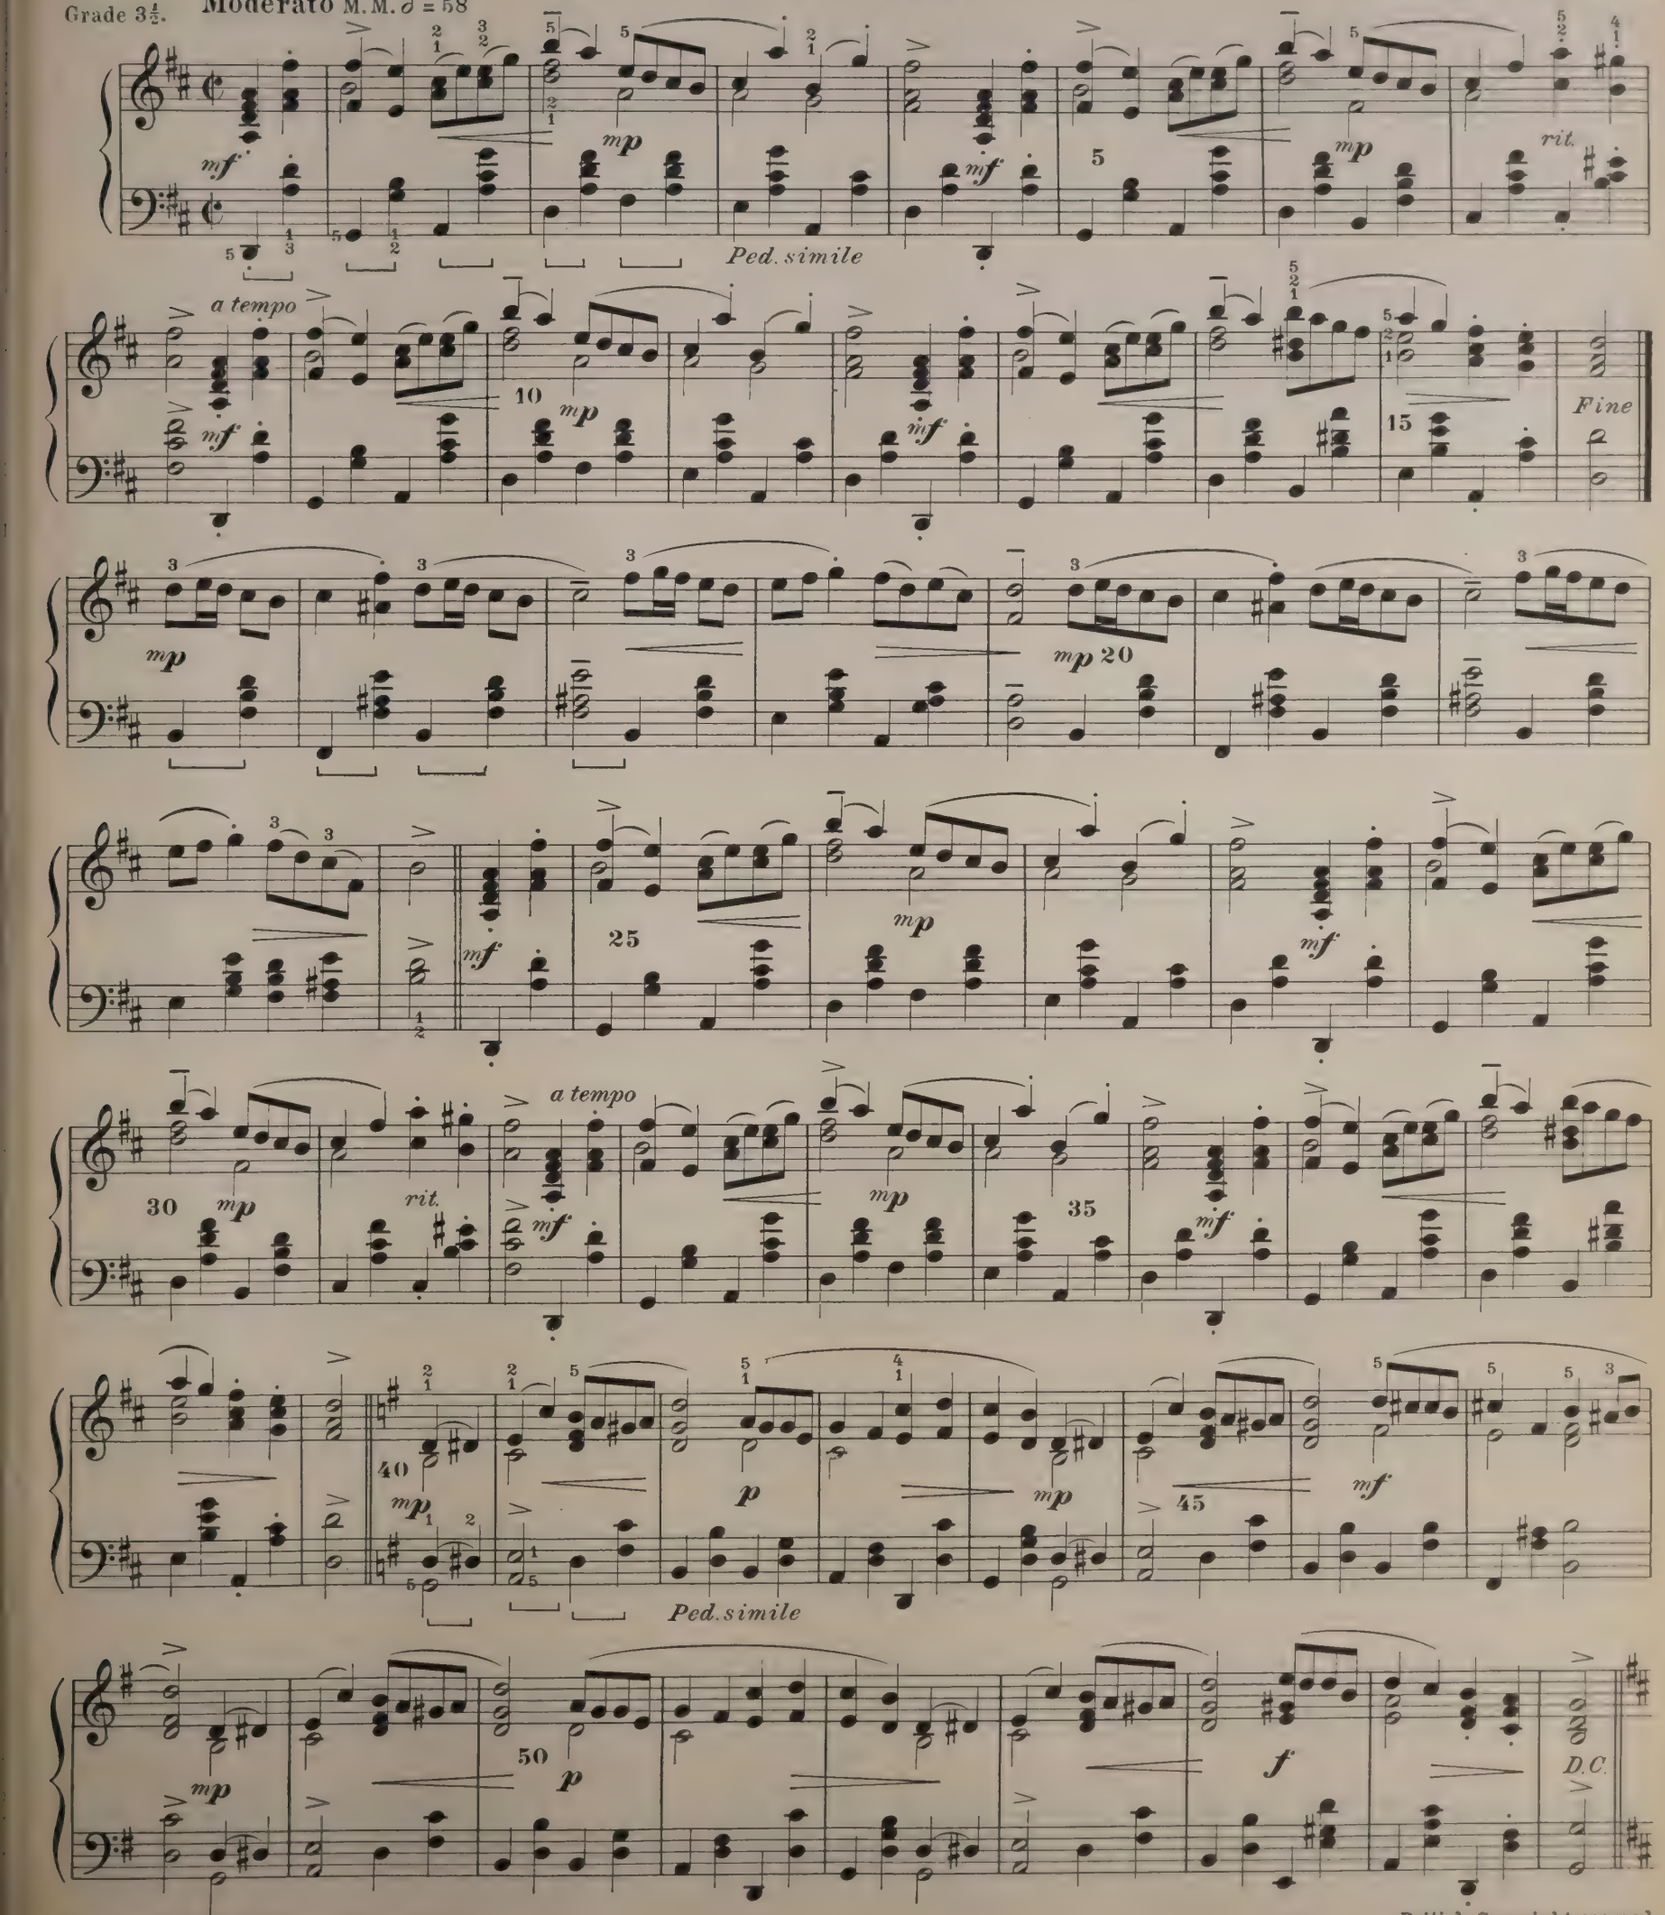
In measure 30, the half-note, F-sharp, on the first and second beats of the measure in the left hand, must be stressed, as also is E-sharp, quarter note, on the third beat of this measure; and there should be a continued bringing out of the top notes in the left hand until measure 34, in the same manner as I pointed out in the first part of the *mazurka*, (in measures 6, 7, 8, and 9). Measure 33 should be slower, but measure 34, must be *in tempo* again. In measure 41 I do not diminish the tone so much, but end the phrase in *mezzoforte*.

WHERE CHOPIN DIED

Chopin died in the very heart of Paris. Readers have frequently seen pictures of the front of the house, but almost none realize its location near the great bronze Napoleonic column in the Place Vendome. Chopin took up residence here in September, 1849, when he was already too weak to stand without the support of faithful friends—among them the pianist, Adolph Gutmann; the devoted Auguste Franchomme; and the Countess Delphine Potocka. On October 16th he received the last sacrament, from the Abbé Alexandre Jelowicki; and at four of the next morning he passed on. The house at the extreme right, with windows looking out upon the monument to the greatness of Napoleon, was Chopin's last abode.

A Fresh Thought

ON THE THIRD BEAT of measure 4, a new development is introduced; and, from this measure on, until measure 45, the music must be played with humour, but heavily. The top notes in the right hand should be brought out, and with not too light a touch, giving an impression of jauntiness and swagger, whilst the following measures from 46 to 50, should be played lightly and in *piano* tone, so as to form a contrast to the heavy humour pervading measures 42 to 45, and to sound like a colorful echo of them. Arriving at measures 50 to 54, the theme must again sound heavy and decisive; and it should be played *forte;* but measures 54 to 58, should be an echo of them, like measures 46 to 50 were to measures 42 to 46.



The notes in the right hand, in measure 57, all must be stressed, and a slight *ritenuto* at the close of measure 56 should be made, to usher in the original theme which returns in measure 58. In measure 58, the second and third beats are played *rubato*, with the notes held back lingeringly, and the melody in the right hand is declaimed with a singing tone, and romantically, whilst the answering phrase in measures 62, 63, and 64, should be given a more contemplative atmosphere. There must be an accent on the third beat of measure 59, and the second beat of measure 60, in the bass must be brought out. Again in measures 62, 63, 64, and 65, the top notes in the left hand have to be brought out in their chromatic sequence (as formerly in measures 7 to 9, and in measures 30 to 34.)

From measure 65 to the end of the work, the *tempo* should be distinctly slower than what has gone before, as though the dancers were getting tired. But though the *tempo* must slow down, care must be taken never to lose the true rhythm of the *mazurka*. It should just sound halting, especially from measure 69, onward, whilst a further little *ritardando* should occur in measure 71, but return to *tempo* in measure 72. The final measure 73 has a *ritardando* on the triplet figures in both hands, and every note in this measure should be stressed and declaimed to mark the definite close of the dance.

FAREWELL, SUMMER

A much played work by the foremost of American women composers, Mrs. H. H. A. Beach (if indeed she may not be considered the greatest of all living women composers). The work is worthy of serious study in that it embodies the fine musicianship of the master and is susceptible to delicate interpretative discrimination. Grade 5.

"O last of the free-born wildflower nation!
Thy bright hours gone and thy starry crest:-
Three names are thine, and they fit thy station,
Frost Flower, Aster and Farewell Summer,
But Farewell Summer suits thee best."

MORNING AT THE MILL

EVANGELINE LEHMAN

A masterly petite etude reflecting the rare melodic facility of this very gifted composer. The work has decided kinesthetic value in that it is one of those pieces which seem to give physical pleasure to the fingers as well as the mind during performance, much as does the famous *Minute Waltz* of Chopin, the *Spinning Song* of Mendelssohn, or the *Valse in E flat* by Durand. In other words, aside from its charm, the player gets fun from playing it. Grade 4.

MAZURKA IN F♯ MINOR

Grade 5.

F. CHOPIN, Op. 6, No. 1

One of the most distinctive and effective of all the Chopin *Mazurkas*. The first movement has the undulating rhythmic spring of the true Polish dance. The middle section, however, may be made a brilliant *bravura* flash. Mr. Hambourg has done one of his very best Master Lessons on this piece in this issue.

Ritardando
Bring out the top notes but not too lightly.
scherz.
Bars 42-45 with humor but
Bars 46-50 lightly like an echo of preceding bar.
heavy.
Bars 50-54 heavy and decisive.
Bars 54-58, an echo, like bars 46-50.
rit.
Rubato with singing tone.
contemplative
legato
From bar 63 to the end of the piece, the tempo should get slower without losing the
slower tempo
rhythm of the mazurka.
rit.
a tempo
rit.
Haltingly.

COMPACTNESS WITH COMFORT

Living room, studio, and breakfast-nook kitchen in one, all done in excellent modified modern decoration style.

Everyone who wants a studio in a limited space will gain practical hints from the decoration and utility ideas of this piano teacher who studied architecture

By
ANN LEVINGTON

How is this for compactness? Everything—plus the kitchen stove.

"THREE rooms in one! I have never seen such a compact room, yet, with so much space to move around in." An interior decorator made this observation about pianist Henry Levine's New York studio apartment.

After Mr. Levine graduated from Harvard as a *Cum Laude* student in architecture, he moved to New York, became an Etude subscriber and opened a studio for piano teaching. Among his pupils, he can name Eddy Duchin and Phil Wall (pianist for Andre Kostelanetz). He also teaches the offspring of such popular conductors as Paul Whiteman, Leo Reisman, Ray Sinatra and Jack Shilkret.

Henry Levine recently played the Gershwin *Rhapsody in Blue* with the Boston Symphony Orchestra. Not only is he a fine artist, he is an authority on furnishing the typical New York studio apartment and getting the most living joy out of the least space. This is his hobby, and a valuable one it is for modern living.

"If one benefits by my experience, the smallest room can be made into a charming studio," remarked Mr. Levine. "Every one wants a place of his own; a place to do as he pleases; a place to follow his profession undisturbed. Any small room, wherever situated, in a home or even in a modern office building, can be made into an attractive studio.

"I am my own interior decorator. Perhaps my architectural studies helped, but I decided that if I was going to live, to teach piano, to give musicales, and to entertain eight people at dinner in a comparatively small room (eighteen by twelve feet in area), I must take advantage of every square inch and make it count.

"The most important asset in my studio is, of course, my Steinway Grand piano. Although it is five feet, ten inches, in length, it is possible to give quintet concerts consisting of two violins, viola, violoncello and piano, with twenty guests attending. You will wonder where they are seated. Well, dust is very bad for music; and there must be space for a large library of sheet music, scores, recordings and books. To store them, low, ivory-colored cabinets with close-fitting doors were designed. These are placed in each corner of the room; in fact, they line the walls of the room. The tops are upholstered in ivory-colored leather, and pillows are kept on them. This solved the seating problem. An upholstered cedar chest is also used for this purpose, and in it are kept my personal, as well as household, linens. A sleeping couch with pillows is used to conceal a folding dinner table which is stored underneath it. This table, with extension leaves, serves eight dinner guests. The folding upholstered dining chairs are kept in the clothes closet. A drop leaf table is concealed behind the piano, for informal entertaining and studio musicales. Every piece of furniture in the room is a shield for something else stored behind it.

"The floor rug is brown, in modern design. This was chosen especially to keep the pupils' footmarks from showing, and it has succeeded beyond my wildest hopes. Modern chairs and smoking stands help to complete the furniture.

This floor plan shows clearly how a small space may be very large, given the will and the ingenuity.

"The large casement windows are curtained with chintz. A black stripe in the ivory chintz was selected to match a black strip moulding that runs around the ivory colored walls. This black moulding sets off the black frames of some sketches of my own which decorate the walls.

"For the vanity of feminine pupils, there are several cut glass mirrors on the walls, both round and square. They also lend an appearance of width to the room. On the bathroom door is a full length mirror which is an asset when grooming for concert appearances.

"Lighting plays an important part in dressing up the studio. Little lamps are kept in every nook and corner, and there is a cluster of five lights in the center of the ceiling. The lamp shades are of geometric patterns, namely, an inverted cone, a dome, a cylinder, a spiral and a modernistic chromium piano lamp with a wood base. These lamps must serve many purposes; a little dim light left at the door entrance when you are away; a special light for telephone dialing; and special atmospheric light in two boxes with glass tops. These are placed on a book case that is high enough to throw off a reflected light. This is what may be called 'restful illumination.' A dim night light in the bathroom in summer prevents heat when one wants a cool shower.

"The kitchen excites real admiration. It is only nineteen inches deep and forty inches wide. It is unique, in that every bit of space is used, the panel of the door included. Oh yes, it contains every conceivable household gadget. I am known as a collector of gadgets and must have scores of them. For instance, my stomach has long suffered from hard boiled eggs, which would be put on to boil while their cook started to practice; and you know the rest of that story. Well, an hour glass arrangement, was discovered, whereby at the end of three minutes the hour glass would topple over and ring a bell. Then there is the whistling tea kettle; so that, with a moment's interruption, there still can be practice, hot tea and soft boiled eggs when wanted.

"My hole-in-the-wall kitchen has refrigeration. It contains a compact electric stove which will bake and broil, a small sink and a moulding board. Shelves contain full sets of dishes, glassware, frying pans, pots, chopping bowls, and cooking materials. On the top shelf are the cleaning fluids and electric light bulbs, canned goods, cereals, and so on, to mention just a few items.

"There is also a shelving rack on the door panel. This contains extra glassware and cutlery. A folding shelf acts as a serving table, and in the morning this serves as a breakfast room. A towel rack completes this unit. When the door is closed it is made to fit tightly into the kitchen, and one would never know there were hundreds of articles stored away in a few cubic feet. Thus, with a touch of architectural ingenuity, a little space is transformed into an expanded studio home of compactness and convenience.

"Every music lover has moments when he wants isolation. Almost any small room will provide it, with real comfort and artistry, if one will but take the pains to plan it rightly. And this studio has won the admiration of many a fastidious guest."

Shopping for Charm

Theodora van Doorn's Fall Perfume Parade

SHANGHAI—A BIENTOT

Shanghai! The city where East meets West, the city of ancient Chinese culture and custom, British stability and tradition, French debonairness and gaiety, Russian pathos and "nitchevo", American matter-of-factness and achievement, Chinese phlegmatism and poetry. Think of a Chinese Ming vase containing a pot-pourri of ecstatic odors, mingling the fears, hates, loves and joys of the nations who meet in this oriental melting pot. Think of a fine piece of carved jade. They are all there in *Lentheric's* magnificent perfume *Shanghai*.

In direct contrast is *Lentheric's A Bientot* ('till we meet again), a light, gay, refreshing, free, playful fragrance, full of youth and expectancy, midsummer floral odors for your year-round delectation. And of course we could not mention the name *Lentheric* without recalling its genuinely popular standby, *Numero Douze* (No. 12).

BOND STREET

The young are so very young and the old so very, very old. The young invariably want to be older, and the old generally would prefer to be young again. Utopian as it sounds, I feel that each is approaching a happy medium. *Yardley & Company* seems also to have approached that happy medium in their perfume *Bond Street*. It is a rare combination of sedateness and swank, reflecting Bond Street, London, to the dotting of an "i" and the crossing of a "t." There is a mellow sweetness to its body which brings a whiff of the English countryside to the sophistication of shopping "by appointment". Fortunate indeed are we Americans who can have within our purse-reach, this crisp, sweet odor which satisfies at once the swank and the sedate in our natures. *Bond Street's* gold capped bottle is both modern and sedate in its severity of line, set in a pedestal of gold and in the truly regal hues of Britain at her best.

DUCHESS OF YORK—INFANTA

Duchess of York—a regal odor. *Matchabelli* provides in this perfume the directness and simplicity of the lilac bush. But it is a wild lilac with a tantalizing something which is never achieved in common garden culture. It has the clear-eyed dignity of the Victorian lady at her best, as sympathetic and faithful as Helen Hayes' Victoria Regina, but with that inimitable touch of youth which characterizes the early scenes of her portrayal of England's much-loved queen. It is delightfully conservative, yet youthful as *modern* England.

Again we present a contrast. *Matchabelli* also produces *Infanta*, equally regal with its deep and tantalizing atmosphere of mystery and flirtation from grilled balconies; of fans and flashing blades; of Spanish grandees strolling and strutting; of the pomp and medieval brilliance in the time when Spain was discovering and conquering the Americas. An imaginative, sultry, smoky odor, brought to life by the heavy sweetness of Spanish grapes and exotic gardens.

JOIE DE VIVRE—PALO ALTO

Of course you remember Irene Dunne's superb performance in the "Joy of Living". You may or may not be a Fairbanks' fan (the younger not the older) but you couldn't see the "Joy of Living" without becoming an Irene Dunne convert. *Ybry* must have thought as highly of Miss Dunne and this picture as I did, for they have named a luxurious, sleek, satin encased, bizarre-shaped modern bottle of perfume after them. It is an interesting, necessarily daring odor full of the newly discovered joy of learning how to live. *Joie de Vivre* is a happy perfume, vibrant with life, ready to go anywhere, at any time at the toss of a coin, yet it is a luxury perfume.

Ybry has also recently introduced *Palo Alto*, a subtle scent reminiscent of the heather in high hills and of the ever present spring flowers which bloom bravely just below timber line.

PRETEXTE—ARPEGE

Some perfumes smell differently on every person using them. There is something about their chemical contact with the skin and its oils, which brings forth a highly individualistic yet effectual fragrance. *Lanvin's Pretexte* is one such perfume. I have tested it and have so far failed to find any two on whom it smelled exactly the same. And by the same token I am still trying to find someone who does not enthuse about *her* individualistic version. Another *Lanvin* perfume, *Arpege*, has no coyness nor pretext. It is appealingly simple and direct, captivating in its utter simplicity. Yet both are ravishing floral combinations; as glamorous as a beautiful evening gown, as Parisian as the Opera Comique.

TOWN AND COUNTRY

Think of Pierre's at tea time. Think of the Savoy in London for dinner. Think of dignity with sophistication, of high heels and "tails"—and there you have *Helena Rubinstein's* great perfume, called *Town*. It has sureness—savoir faire—an unerring instinct for being in the right place at the right time—and obviously it's for town or city use.

Now throw back your head and breathe in deep lungfuls of country air—back from the roads with their gasoline and tar—back near a pond where hundreds of water lilies are in bloom. There's a pine woods and spruce—there's fresh water from a spring nearby—you're in the open spaces and it's summer—and you're glad. And that's *Town's* memorable counterpart *Country*—as pat a pair of appropriate odors as you'll see in a day's shopping. Both by *La Rubinstein*—and lovely!

PREFACE—COMME TOI

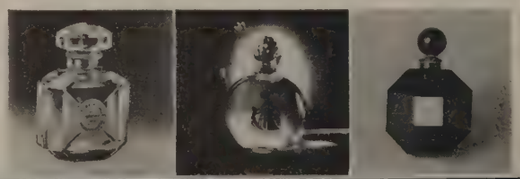
Pinaud's new perfume *Preface* is aptly named. It suggests the beginning of a new round of joyous living. It breathes anticipation. It has the fragile fragrance of great grandmother's garden with its melange of Mignonette, Sweet William and Pinks. Yet it is extraordinarily virile for all its fragility. It seems to say, "this is the beginning of a wonderful experience; a day-time full of adventure; a morning stroll in the garden; an evening to come, of mystery and romance." Though *Pinaud* has been known more generally for its products for the opposite sex, this famous old firm has for years been working quietly on the development of a feminine patronage. *Preface* bids fair to further this end. It has a lovely companion in another new odor called *Comme Toi* ("as *you* are," or "like *you*"). My personal preference is *Preface*. It will be seen very shortly in stores carrying the regular *Pinaud* line.

L'HEURE BLEUE—RUE DE LA PAIX

The hour of twilight, with its fading sun and its lengthening shadows, faithfully reproduced in perfume by oh, so exclusive *Guerlain*. It may sound fantastic to you, but can you conceive of a blasé beauty editor genuinely feeling the hush of twilight, the lights coming on, that peaceful almost poignant quiet which at the same time suggests the eternal query, "what will this evening bring?" *L'Heure Bleue* is a cool, verdant odor, redolent of fresh flowers, later turning to unstudied allure. For sixty years it has been the best seller in a superb line.

Rue de la Paix—street of fashion and scintillating brilliance, is mirrored in its smart, aristocratic ebullience, through that liquid concentrated chic of the same name (and by the same maker.) There is nothing langorous about *Rue de la Paix*. It should be worn at your most vivacious moments. Don't even smell it unless you want to fall in love with it.

MAGNOLIA—QUELQUES FLEURS



There is something of the old dreamy Southland in this distinctive new odor from *Houbigant*. Magnolias in bloom on a warm evening have that delicate, penetrating fragrance for which every Southerner has a nostalgic affection. It is a full flavored natural odor in which the North can now revel as well as the South, all differences forgotten in the oneness of their appreciation of *Magnolia*. Its introduction during the current revival of the gay romantic fashions of yesteryear is most appropriate.

One of the most loved perfumes of the last two decades is *Houbigant's Quelques Fleurs*. It still holds on with the modern generation, many of whom have just as warm an affection for it as did their mothers before them. The discovery of a really fine perfume is an event equal to the writing of a fine book. *Quelques Fleurs* is in that category.

UN AIR EMBAUME

Another of the old favorites which continues to have a loyal following among women of distinction and discernment is *Rigaud's Un Air Embaume*. As distinctive as its name, it has a brisk yet pungent scent. Like all good perfumes, a little of it goes a long way. There is an underlay of the woods, a hint of that fragrant something which one finds in a cool, lush sanctuary in which the sun seldom shines directly. Yet it also has that sharp, refreshing sensation of newly mown grass near a garden. If you are among its admirers, you'll know just what I mean. It has a current popularity, yet it dates back to the day of Consuelo Vanderbilt's wedding party where it was the chosen odor for the entire menage.

MARJORIE LAWRENCE —and Achievement!

How she reached success in Paris and New York—and what she does to keep her hard-won position in Opera

BY ANNABEL COMFORT

A ROLLICKING little Australian girl with golden brown hair and big blue eyes trilled her songs at Sunday school entertainments and church socials; but she did not know that her success was at that time assured. By the time she was seven, however, she knew what she wanted from life. She wanted to grow up and go to Paris to sing; and within the next twenty years this ambition became an actuality. Marjorie Lawrence, the dramatic soprano, went to Paris and became a prima donna at the Opéra.

Her early wish has carried her farther than even she could have imagined. Last winter this cantatrice thrilled the Golden Horseshoe at the Metropolitan Opera, by leaping nimbly on her white horse and galloping off the stage through the red flames which climax the final scene in "Götterdämmerung." Would the more buxom artists of the mauve decade have performed such an athletic feat without the aid of a stepladder?

As we sat together in her modernly appointed midtown hotel suite the writer realized what a beautiful woman Marjorie Lawrence is at close range. Her hair is a mass of girlish curls. She has eyes that change color momentarily, and a sparkling intelligence and determination that immediately convince one that she still knows what she wants.

But with all her attributes, namely, a great singing voice, the dramatic ability of a Duse, a mind which delves deeply into the real meaning of *lieder* and the ability to thrill her concert audiences with their meaning, Marjorie Lawrence has also the soul of a sensitive feminine artist.

"Please do not mind my looks to-day," she began. "I have been out shopping, and it is such a weary business collecting odds and ends and trying to book suitable passage for Paris at this time of the year. You know I am preparing for a thrilling visit—a return engagement to sing eight performances during the summer season at the Paris Opéra!"

When asked what else she planned to do on this Paris excursion, besides *Brünnhilde* in "Die Walküre" and *Elsa* in "Lohengrin," she answered with great seriousness, "I must brush up many rôles. I expect to do a *Tosca*, a *Thais*, or an *Elektra*, and many, many more. Then there must be time found to go to some of my favorite Parisian shops. Without this, it would not be a real trip; and then one must not forget the hairdresser nor the splendid cosmeticians.

"For my fifty concerts that are booked for next season in your wonderful America, there must be new songs learned while abroad. And some of these songs will be by some of the young American composers that I find so interesting.

"Oh yes, and there is the matter of personal appearance which is such a definite factor in the success of the singing artist. It is a most important subject.

"I have always had very personal ideas about clothes, and all I wore were products of my own hands, until I became so busy at the Opéra in Paris. It really grieved me to have to turn my 'brain children' over to dressmakers, because all my friends liked the homemade frocks better. Even my brother liked better the pajamas I made than any from the shops.

"The subject of styling is so interesting that one cannot resist the sport clothes and the suits made by your American firms. And you have such swanky little street dresses —so much more youthful and charming and of better-quality than anywhere else. The prices are also of interest. How can they make such things so reasonably that they are within the reach of everyone?

"Colors used for dressmaking in America are so gay and cheerful, when compared with the French idea of what a well dressed woman should wear on the street. Paris is really depressing in the summer because French women wear so much black. It is so different here. Everyone dresses with chic, so much so that it really gives me a lift.

"The fifty hats brought for my season here are all Parisian made; but I already have succumbed to the American hat mode. One finds such ultra hats and shoes along Fifth Avenue that there is small question of where I shall buy them in the future.

When recently filling an operatic engagement in Buenos Aires, it seemed that one saw the most beautiful shoes in the world, as all footwear is there made to order, which makes it very expensive. Upon coming to New York, however, the American made shoe was found to be far superior, which before had seemed almost impossible.

"As to evening gowns, opera and concert singers never should wear the same one when repeating an engagement in the same city. It is just not being done anymore!

"You know there is a tradition among non-musical people that the more musical one is the less attention should be paid to personal appearance. The public heretofore has had to take artists for their vocal value regardless of shape, or size, or style. Little attention was given to dress. As opera became less precious to the few and more popular to the many, the attention to dress detail and personal attractiveness became increasingly important. Surely the style and cut of the evening gown used for concert work should be a paramount consideration, after the singer has worked out her program. After having had many evening gowns made by Paquin of Paris, still my eyes will turn toward Fifth Avenue and the many gorgeous models on display there.

"The same thought must be given to operatic costumes. My white riding skirt costume, created especially for mounting the horse in 'Götterdämmerung,' was not successful. European operatic costumers just could not comprehend an opera singer wearing a full pajama skirt. I clung to the idea and achieved the realization at the Metropolitan; and now I mount *Grane* and ride away in perfect ease. The unusual costume worn in 'Salome' was designed by Freddy Wittop of the French Casino in Paris. Since the costume must be made with seven attached veils, to be removed during the dance before Herod, it too, must be practical in design.

"The problem of care of the person is equally important.

"American women have a queer custom. After bathing and powdering and a little perfume behind each ear, they feel ready for the day. Continental women distribute perfume over the body, after the bath. A modified lesson from these 'sisters across the sea' might be helpful to your ladies.

"I never have been able to own enough perfume. My friends tease me by calling me a perfume collector. A person cannot have too many kinds of 'scent' on her boudoir table. Different odors to fit every need and change of mood.

"An artist has a double responsibility, one as a person and one as a performer. She must *always* look her best. My hair must be washed and curled every other day. For the hair there should be pure soaps, and then rinses with a (*Continued on Page* 594)

THEODORA VAN DOORN'S FALL PERFUME PARADE

(*Continued from Page* 592)

MOMENT SUPREME—JOY!

"Sweet" said the immortal bard, "are the uses of adversity." Sweeter still are the powers of publicity—as was discovered some years back by *Patou*. Shortly after their top ranking perfume *Moment Supreme* was introduced to this country, the wife of a vurry, vurry rich man, enthralled by its odor, used it as a guest gift (to 1200 guests) at one of the most social Bar Harbor weddings of the season. The resultant reporting of this gift in the society columns of magazines and newspapers and the favorable comment which the odor itself elicited, put it in the top place in this famous French couturier's perfume line, where it has remained ever since. *Moment Supreme* has a subtly pervasive pungency, not that strong heady positiveness which characterizes the so-called cheap "mystery" perfumes. This odor has in it a sharp spiciness that bids fair to keep it well up among the favorites in the costly perfume class. The bottle itself is of heavy crystal, fatly flat and triangular. The stopper is a formalized floral design to match.

Nearly everyone agrees that *Patou's* recent creation *Joy* is one of the most exquisite perfumes ever discovered. Expensive but worth it.

FRENCH CANCAN—FLEURS DE ROCAILLE

Years ago when the mere sight of a silk-clad ankle was looked on as a social as well as a moral mistake, that famous French dance, the Cancan, with its display of lacy white ruffles, was shocking our seagoing ancestors. In later years, this dance was relegated to the innocuous. Today the grace and veuve of the Cancan, its saucy liveliness and the swish of fluffy ruffles is perpetuated in *Caron's* lovely creation, *French Cancan*, a spicy, lively, tempting odor, which is in a simple elongated bottle with a ruffled collar of fine lace quite aptly around its neck. *Cancan* is a perfume for those times when you are at your gay best.

Fleurs de Rocaille, another of *Caron's* odors, is a blend of those charming flowers which make their homes among towering cliffs, giving their sweetness to an unknowing world. It invokes to thought great gray chateaux, ivy creeping over old walls, rambler roses rollicking on crumbling stone, tiny hidden arbutus and violets. *Caron* has captured a veritable rock garden in *Fleurs de Rocaille*.

JE REVIENS

Je reviens (I will return), a promise captured in clear blue essence, an odor of hope and expectancy, encased for your pleasure in the larger sizes, in most attractive Lalique bottles, is the fragrance that *Worth*, famed French couturier, names as his most popular perfume. Deep-toned, springlike, full of the promise of returning summer; with a background of the moist, warm, newly-turned earth, the faint but deeptoned scent of the flowers of spring, *Je reviens* recalls how things smell on the first warm day when you are returning (and spring is returning) to a favorite spot.

REFLEXIONS—DOUX JASMIN

Here is *Ciro's* many mooded divertisement in floral fragrance known as *Reflexions*. Call to your mind the myriad flashes of light and color in a beautiful heart-shaped diamond, the deep reflective calm of a still, still pool, the sunlight flickering from mirror to mirror and back to the sun again. Perhaps I have conveyed in a feeble way, my concept of this perfume of moods, this *Ciro* creation which has captivated many people who really know good perfumes.

There are many Jasmins but to the best of my knowledge, only one *Doux Jasmin* which the deep funereal subtone has been skillfully removed, leaving a triumph of t alchemist's art, a pure floral Jasmine fragrance that is graciously soft and soothin yet titillating to the extreme. An aristocrat of perfumes is *Ciro's Doux Jasmin*.

ELATIO

Mere men and some women get a lift from a famous cigarette. I get a much bigg lift from *Dorothy Gray's* fine perfume *Elation*. It has a heady sort of fragrance, o that makes you greet your next encounter with all the zest that is in you. It inspire enthuses, captivates those who come within its radius of influence. So if my lady nee that something which builds up her belief in herself, that conjures up confidence, th puts her on the "qui vive," she wisely chooses *Elation*. It is a fragrance which lives i name, an effervescent floral blend, worthy of the sponsorship of *Dorothy Gray*.

GARDENIA—No.

What perfume parade would be complete without a mention of *Chanel's* known-the world-over *Gardenia?* Many perfume houses have included this popular floral essence i their lines since the Gardenia became one of America's most accepted corsage flowers *Chanel* has produced that familiar scent with all its subtle deep exudations. It has stoo in my perfume collection as a daytime favorite and I am what is known as hard to pleas *Chanel's No. 5* is perhaps even more generally accepted. A richly blended odor of th "come-hither" school, and intriguing cross-play of light and shadow. Deservedly favorite.

KOBAKO—EVENING IN PARIS

Kobako is *Bourjois'* arresting new odor that grows on you the longer you smell it. I is a little off the sweet side which is of itself a mark of distinction in perfumes. There i a hint of temple incense which is aptly amplified in both bottle and container. The outside receptacle is a faithful copy of a flowered, antique pedestaled shrine. It is in dul lacquer red, with the pedestal in ebony composition. The bottle is an exquisite replica o a carved Chinese museum piece with a motif faintly suggesting the tree of life. Few containers are as striking in their reproduction of oriental art treasures.

Naturally, the better known *Bourjois* odor is *Evening in Paris*. It suggests the smart dining place, followed by the opera or the theatre and gay Parisian night clubs; then onion soup at dawn in the markets, and home to bed as the first rays of the sun strike the eastern side of the Arc de Triomphe; all this is embodied in *Bourjois' Evening in Paris*.

MARY DUNHILL

Among the daintier, more imaginative containers in a trade where beautiful containers are the rule, I found two *Mary Dunhill* odors in which the outside container vied with the bottle itself in stimulating both appreciation and acquisitiveness. *Flowers of Devonshire* for instance is a truly English odor encased in a dainty blue and silver box with a sprig of gay little velvet flowers attached to its front. The bottle itself is set like a richly cut jewel in a pale blue velvet and silver base, the epitome of daintiness and luxury. *Frou-frou du Gardenia* is a gay imaginative rendition of this highly popular floral odor. The container is of a white striped satiny cardboard edged in green with a green satin ribbon across its top. On its front is a handsome full-blown cloth gardenia complete with bud and leaves. The bottle is the last word in concentric modern simplicity.

Marjorie Lawrence—and Achievement!

(*Continued from Page* 593)

little lemon in them. Again pure soaps and astringents help to keep the complexion firm and smooth. The opera singer must have generous quantities of cleansing cream at hand, to remove the heavy stage make-up which must be used before the footlights. For the street I powder my face and neck with great care, with an ocher rose shade of powder, and with a dark brown eye brow pencil for every day. Just one more thing—the artist must never forget her hands and nails. Her hands are her character advance agent. My nails must be well polished with a medium colored liquid polish. To keep my hands soft and smooth, a night hand cream is always available on my dressing table. Yes, my art, and my right personal appearance play almost equal rôles in my life."

Marjorie Lawrence was born in Deans Marsh, Australia, which at that time boasted one hundred and forty inhabitants. Her parents owned a sheep ranch, and Marjorie had four brothers and a sister. Three of her brothers are sheep farmers; but the fourth one, Cyril Lawrence, takes charge of his sister's operatic affairs.

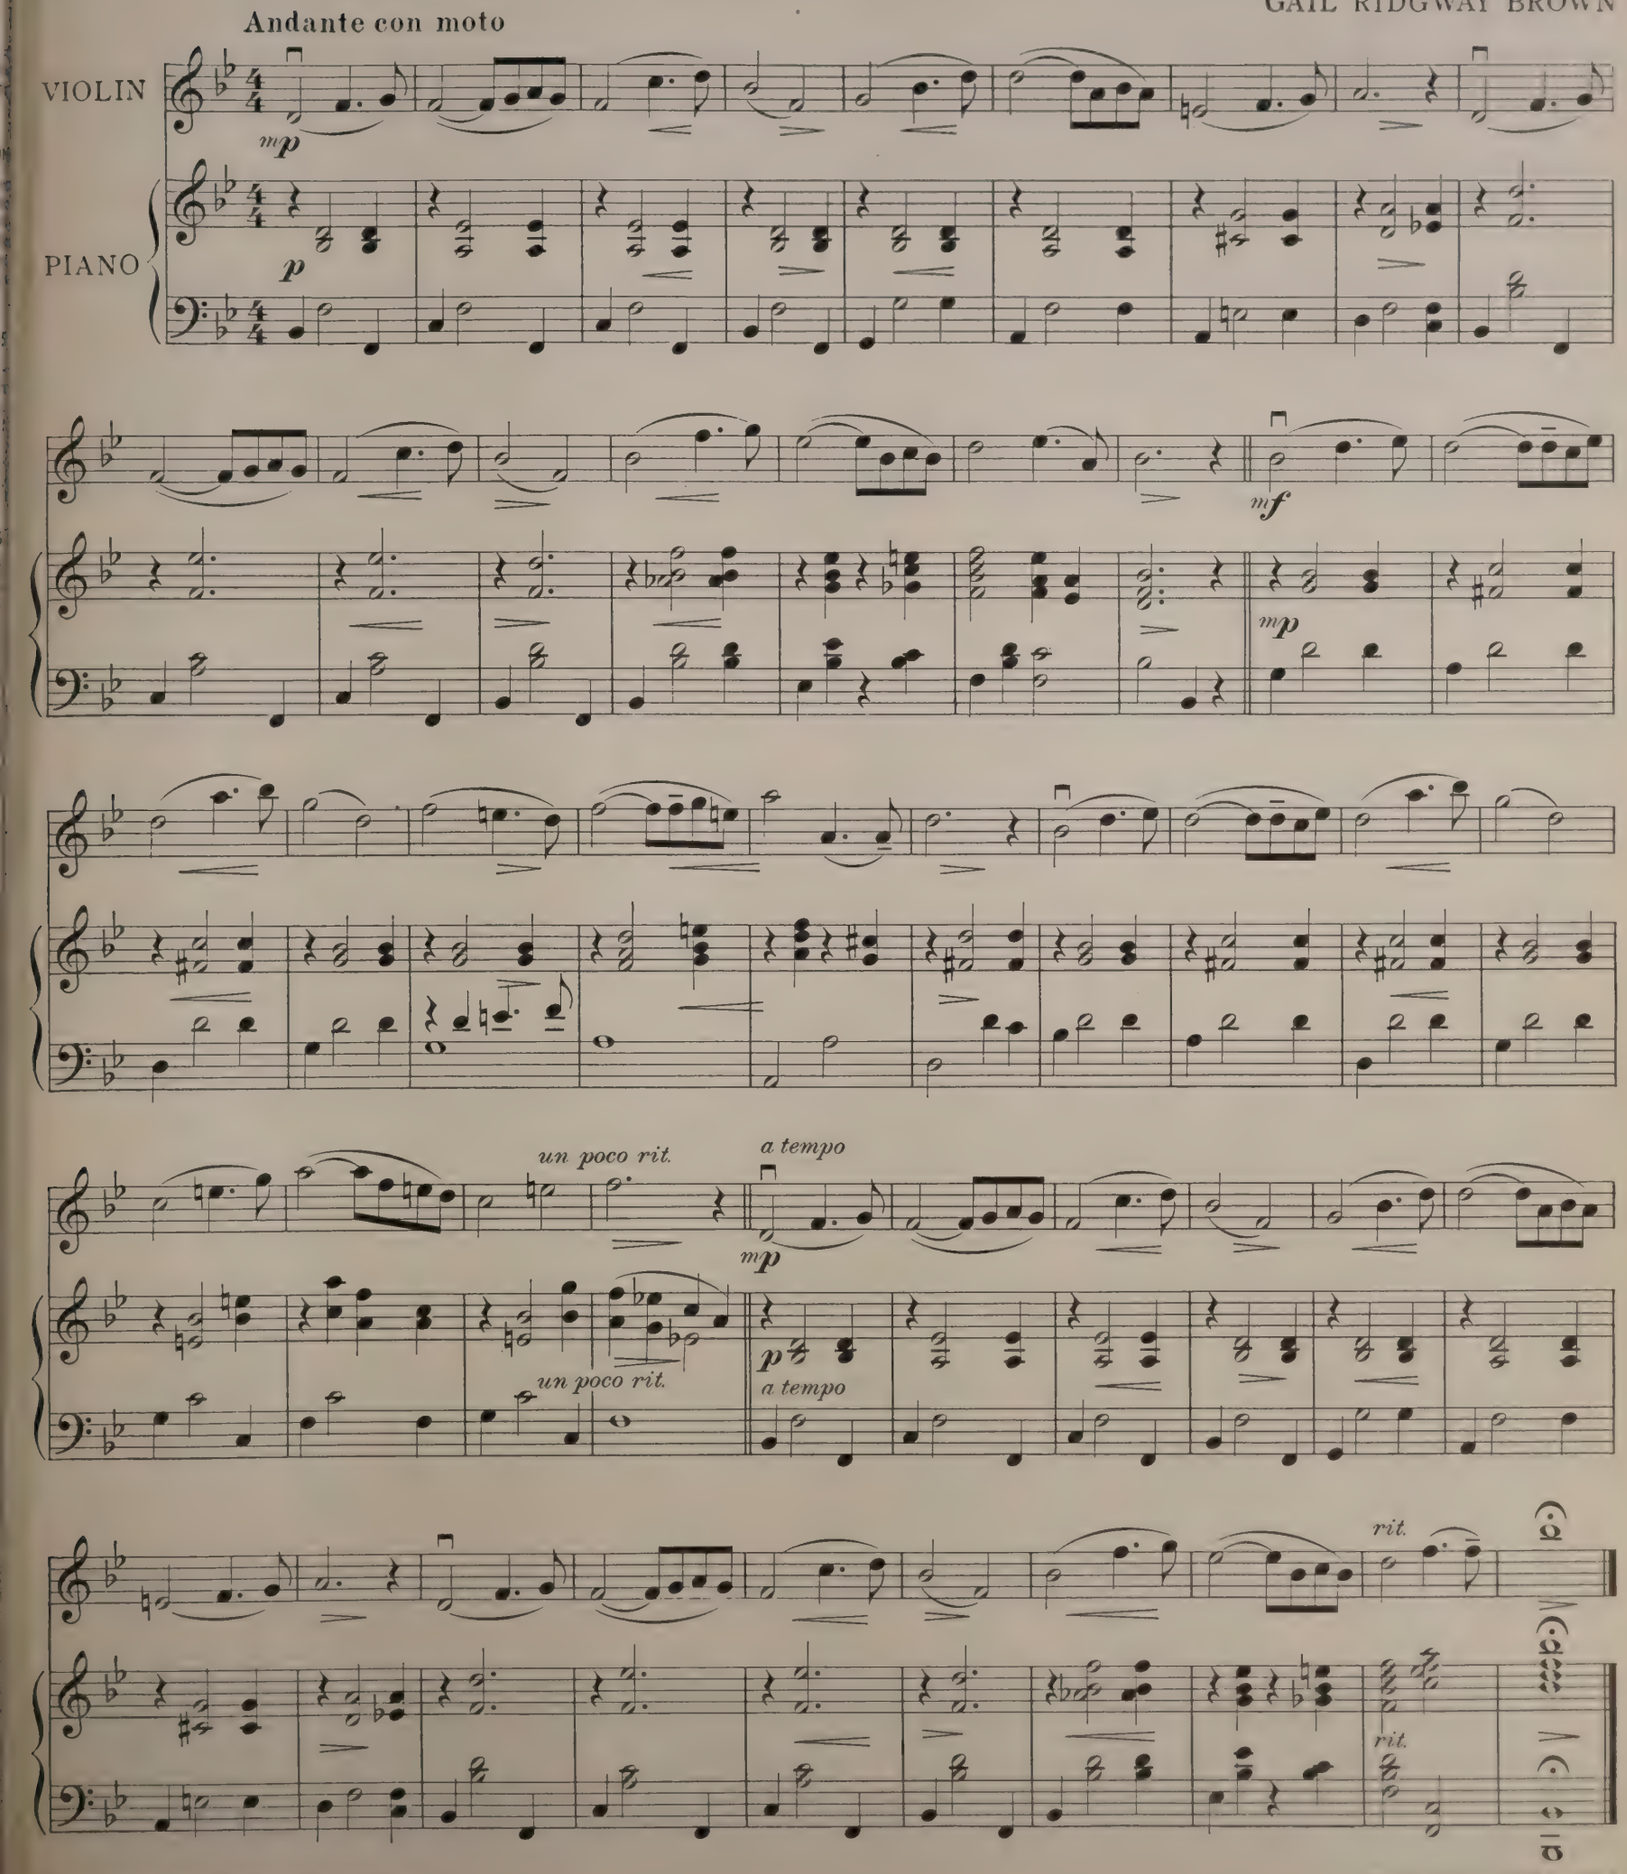
"I was an impossible child," our prima donna recalls. "I wanted to be a boy like my brothers. My mother passed away when I was two years old, and my older sister was just as good as I was bad. I simply never did what I was told, and my relatives and neighbors wondered what would happen to me when I grew up.

"My father had to play a mother's rôle, and he was against my having a career. I could ride a horse just as well as the rest, and I was proud of it. This love for horses and animals is still alive. The hope of buying a ranch and spending a part of each year as in my childhood will persist. I had to be at the top of my classes or know why, and I often thought life had handed me a pretty bad 'spin,' as we say in Australia. Theatrical idols did not interest me but great explorers and people who could find out things, seemed pretty wonderful."

Marjorie Lawrence admired Melba, because she was Australian. Her only contact with good music until she was eighteen, was through the phonograph. She saw her first opera at the Melbourne Opera House, and her father very reluctantly said she could study voice with Ivor Bourstead, eminent vocal teacher of Melbourne. Within the next two years Miss Lawrence lost her father but won a prize offered by the *Melbourne Sun*, which meant financial aid. When John Brownlee, Australian baritone, heard her sing, he said she must go to Paris to study. So brother Cyril and Marjorie started for Paris by the way of India where were collected many rare kimonos and shawls. India left a lasting impression. Arriving in Paris, which Miss Lawrence says is the only place for real study, she became a pupil of Mme. Gilly. The next three years were just hard hard work learning operatic rôles and perfecting vocal technique. From ten o'clock to twelve-thirty (noon) is her time for practice; and every day, including Sunday, this young artist never fails to remember it is work time.

After appearances in the provinces and at Monte Carlo Miss Lawrence made her début in 1932 at the Paris Opéra, as *Elsa* in "Lohengrin." She was an instantaneous success. A Metropolitan offer was made, but impresario Roche of the Paris Opéra begged her to stay on and gave her an enticing new contract. She stayed, but came to the Metropolitan just one year later, and on December 18, 1935, Marjorie Lawrence was hailed the new *Brünnhilde* in "Die Walküre." This past winter she created a sensation as the heroine in "Salome," and her acclaim thus far at the Metropolitan has been no less in the Wagnerian rôles.

The synthetic life has no appeal for Marjorie Lawrence. She would rather sit and read a book when spare time permits. Louis Bromfield's "The Rains Came" held her interest because its setting took her back to the India she knows and loves. To read a good poem sitting under a big shady tree, or to indulge in interesting conversation, holds fascination. She always has her knitting to fall back upon; and her knitted sweaters are something for the eye to behold.



Two amusing incidents happened last winter. Her association and love of animals surely followed her to New York. This time her association was funny, and not pleasant. While strolling in the Bronx Zoo, Miss Lawrence was entranced with the many different species of bears and monkeys, so much so that the watchman locked her in, and, if it had not been for a policeman, she would have spent a night of horror. When the lions roared and the cats cried, well you can imagine!

Her next difficulty was on a smaller scale. Coming home from singing a performance at the opera, she felt something crawling in her opera cape. Finally she screamed, and a mouse was pulled out of her back. She carried home a little opera mouse who had decided he would like to live in more modern quarters.

Marjorie Lawrence has advice for all ambitious young singers. Find the correct vocal teacher. Usually the student that has talent has no money, but the saying is still good, "Where there's a will there's a way." Languages should not be overlooked, and she believes they should be studied with a native of the language. Diligent work is the only recipe she knows that has thus far been a surety for success.

THE LORD'S PRAYER

We have reviewed scores of settings of *The Lord's Prayer* but know none more beautiful than this reverent and masterly setting by Dr. Carl A. Preyer, who has been with the University of Kansas as professor of piano, counterpoint, and fugue for over forty-five years. Dr. Preyer is one of the most loved and revered musicians of the middle west. In Germany he was a pupil of Navrátil, Barth, and Urban.

The Educational Use of Sound Amplifying Systems In Schools

By EDWARD DICKINSON

THE ASSOCIATION of radio, phonograph, and telephone into a single piece of apparatus for school use is what makes a sound system. And this system, installed or built into a new school building, is one of the greatest steps forward in educational methods and personal safety devised for school use. I am not a salesman for sound systems nor for any parts of them, but investigation entirely on my own responsibility has led me to find things that are so good that I want to tell everyone about them. The opportunities offered pupils in our grade schools, when the building is equipped with a sound system, in contrast to the things done for me in the schools of twenty-five years ago, are such that I envy the youngsters and wish that I could turn time back and be educated all over again.

A school house with proper sound system equipment should have a loud speaker in every room. These speakers resemble closely the popular cone speakers of radio sets of ten years ago, but hang high up on the wall. In the gymnasium the speaker is behind an iron grill. I have been told that there are speakers that can be countersunk into walls; and I have seen the speakers in the High School at Great Neck, New York, built above doors and hidden behind handsome, ornamental lattices.

These speakers are connected by wires to a panel in the school office, which panel is a shiny metal frame covered with various knobs and dials, by the turning of which knobs different speakers throughout the building are played; and so versatile is a sound system that several different programs can be broadcast through the school at the same time, as well as can a single person or group of persons be paged, or phonograph music furnished for marching and physical exercises.

The School That Was

WHEN I WAS IN SCHOOL, if a person was wanted a pupil was sent all over the building in search. The pupil on this duty was one who, because of good work or good behavior, was excused from his classes for a morning or an afternoon and attached to the office as errand boy or errand girl. This was an honor. Other sessions found other pupils on this duty. We loved it. But was it fair to our parents—tax payers—whose money was being spent to purchase instruction for us, to take us away from our work? Later intercommunicating telephones were put in; and the locating of some one meant ringing several phone bells till the person sought was found. But with this sound system, one summons is all that is needed. A knob is turned. The person speaking picks up a microphone—that looks just like a telephone minus a receiver—and says into it, "Miss So-and-So is wanted at the office." Instantly that message is heard at every point about the building. For the thousand and one little accidents that require the school nurse, there is no finer way of promptly securing her services.

In the old days we had a fire drill. When the gong rang four times we formed in a column of twos and on a second ringing marched out of the building. In the interval between the first and second ringing it was expected that a designated pupil would rush to a piano in the hall and hammer out Sousa marches. If by any chance the usual route taken by a class was obstructed, someone from the office had to pass through or over moving columns of children, to reach the pupils affected by the change in instructions and redirect them, adding to the confusion and the danger if it were a real fire. With a sound system any change of instructions can be given without leaving the control panel where the microphone is hung, and music for the marching can be had from a phonograph panel, with an automatic record change that will keep the music coming till every pupil has left the building and then marched back to class.

The School That Is

EVERY MORNING and every afternoon a gong was rung at which all the windows were opened and the pupils stood in the aisles between their seats. Then the grade teachers would lead their respective classes in a ten minute calisthenic drill, without music. With a sound system the drills can be uniform throughout the building and all the classes can have exercise with music, which is far snappier and far more inspiring than without. To see this just witness a dumb-bell drill in a gymnasium, first without music and then with the smooth rhythm of *The Merry Widow Waltzes*.

Penmanship drills used to consist of rows and rows of circles overlapping; and once in a great while, as a special favor, our grade would be permitted the school's phonograph and the writing exercises would be conducted to some such piece as *The Blue Danube Waltz* or *The Anvil Chorus*. Invariably better work was thus obtained. And painting lessons, which to-day are being regarded as more and more important, were handled in the same way and with like results. Usually the penmanship and drawing classes came at the same time of the day, no matter what the grade; and so, with a sound system, every drawing class and every penmanship class may have the advantage of music.

The many educational broadcasts to-day can be received by the radio part of a sound system and sent to the classrooms, and the system can be built to handle several different broadcast programs at the same time, so that material suitable for the sixth grade may be had in that room at the same moment something suitable for the second grade is being brought in there. And so the sound system has become one of the most efficient and effective devices of the well equipped school house.

"Can" and "Will"

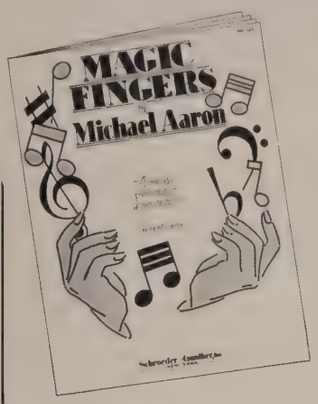
By THOMAS ANGUS

THE FOLLOWING verse comes from a long standing friend of THE ETUDE, who reside's in far away New Zealand. It is not distinctly musical; but our teacher friends will appreciate its finely suggestive spirit for students of all ages.

"Can" and "Will" are cousins
Who never trust to luck,
"Can" is the son of "Energy"
And "Will" the son of "Pluck."
"Can't" and "Won't" are cousins too,
Always out of work;
"Can't" is the son of "Never Try,"
And "Won't" the son of "Shirk."

NEW

• PIANO TEACHING MATERIAL •



Schroeder & Gunther, specialist in the publication of the better piano teaching material, have been alert to the more discriminating demands of the piano teacher and the piano student of to-day. These NEW publications offer melodic interest for the student as well as technical value.

Comments from Teachers—

"I like the way you print your music—it is easy to read, well phrased and fingered."

"The new publications received last week are 'finds' everyone of them."

"I wish to compliment you on the high-class of music, and the attractive way it is published."

MAGIC FINGERS

By—

MICHAEL AARON

A melodic presentation of technics in the second grade of difficulty. Each idea is incorporated in two separate piano pieces—the first piano piece being a single version of the idea although complete in itself. The second one a little more difficult and slightly elaborated. Thus one number prepares the student for the other and eliminates preparatory exercises.

Price 60 Cents

COMMENTS

"Should meet an enthusiastic reception, very musical and interesting."

"I recommend Magic Fingers, which I consider practical and effective."

WITH

MELODY AND TECHNIC

Chit Chat (Gr. 2) ..... .25
By Helen Boykin
Fine for style and analysis and the early use of pedal.

The Metronome (Gr. 1-2) ..... .25
By Cleo Allen Hibbs
Is a clever rote number and fine for note lengths and rhythm. Good for development of co-ordination.

On The Village Green (Gr. 3) ..... .30
By Fini Henriques
Fine rhythmic patterns and adjustments. Dynamics interesting and easily felt.

The Little Donkey (Gr. 2) ..... .25
By Cleo Allen Hibbs
Clever, descriptive number. Fine phrasing and swing with voices in thirds and chord shapes. A real appeal.

Indian Dance of Welcome (Gr. 2) ..... .25
By Verna Wells
Splendid little rhythmical number, best taught on rhythmic patterns. Can be used for both rote and reading.

Desert Dawn (Gr. 3) ..... .30
By Cleo Allen Hibbs
A very charming and colorful number, might be used as a pedal piece.

Willow In The Mist (Gr. 4) ..... .30
By Cleo Allen Hibbs
Refreshingly different. An impressionistic number charming and colorful for third and fourth grades.

THE SINGER'S ETUDE

Edited for September by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

The Song In Vocal Study

By WILLIAM G. ARMSTRONG

WELL CHOSEN SONGS are invaluable as exercises for vocal development. Songs are the objective; and, as songs differ in construction, it would be impossible to arrange vocal exercises to cover the vagaries of all composers. Again, the substitution of pleasurable efforts for those of a tedious nature always is accompanied by quickened nervous activity, and a relatively quickened muscular response—so necessary to a facile technic—mental and physical buoyancy, and increased interest; whereas prolonged tedious efforts are productive of lazy nervous activity, lazy muscular response, mental and physical fatigue, and lost interest.

Therefore, songs, well within the range of the voice, should be taken up as soon as possible. Preparatory to this, we instruct the student regarding tone values, diction, and interpretation, something after the scheme which follows.

Consonants are directors, or "placers" of tone, and vowels, their combinations and modifications, the inclusive tone values. Therefore we shall be particular about articulation of consonants, and shall build our tone on the vowel sound, or sounds, of each word; and, that our tone may be as an uninterrupted flow of tone changing in color, we shall eliminate, as far as intelligibility will permit, all sounds which interrupt the smooth flow of tone, and all sounds which are unmusical. For example, in the word "often," we shall not sing it "oftĕn," nor "of'uhn," with the "uhn" through the nose, but "of'ŭn"; because the first is bad, the second breaks the even flow of tone, and is unmusical, while in the third way the "ŭn" is brought out sufficiently to assure continuity of tone.

The Art of Words

PROCEEDING WITH OUR INSTRUCTIONS, we select as a medium, say, a few lines from the song *Over the Steppe*, by Gretchinanoff:

"Sad lies the steppe in its solitude,
Night comes on shadowy wings."

Here our tone values are—in the "sad" the short ă, slightly broadened. In "lies" the pure long ī; and in "the" the short ŭ sound. In "steppe" the short ĕ. For "in" the short ĭ. In "solitude" three tone values, sŏ- - lĭ — tūde (with the last syllable pronounced "tyoud" and not tood). In "night" the long ī; with "comes" using the short ŭ. In "on" a good short ŏ. In "shadowy" three vowel values, as shă-dō-wў̆, with the y like the short ĭ; and in "wings" the short ĭ. Of errors against which the student is to guard, there are such glaring ones as "sŏd" for "sad"; "lois" for "lies"; "thaw" for "thŭ"; "noight" for "night"; "shadowee" for "shadowў̆"; and "wēēngs" for "wings."

Then we too often have, in the beginner, the hard, throaty "er" sound in such words as "mother," and "father." The same hard "r" sound frequently mars such words as "heard" and "word"; which may be easily corrected by a single trill of the "r," a dropping of the jaw, and a slight borrowing from the short ŭ. Incidentally, while a lengthy trilling of the "r" is an excellent exercise towards flexibility of the muscles of the tongue, it is most unmusical, and, in interpretation, it therefore should be either reduced to a single trill or altogether omitted and dependence placed upon a borrowing from the sound ŭ, and a dropping of the jaw to overcome the hard sound of "r." But we must hasten.

The Individual Interpretation

WE NOW HAVE REACHED the point of points; the finish; the "to be, or not to be" of interpretation. And the question arises, "Is there a correct interpretation of a given text"? Yes, an interpretation which brings out every detail of that text? Do all singers bring out of a text all there is in it?

"No", and "why"?

They fail of complete conception. What is the secret of it all? Let us put our heads together and see if we can find it. We have a visual perception of an external object, when it is really before us. We have a visual conception of that object when, in its absence, the mind distinctly perceives that object without actually seeing it. Then, when this mental conception is vivid, distinct, and complete, we call it imagination.

A perception having been made, it is taken up by the intellectual faculties and becomes a more abstract property of the mind, and is capable of being reproduced at any time, without actual perception, or real conception; and this we call reflection or meditation.

Finally, when the mind is perfectly engrossed in the contemplation of its own conceptions, we are, as it were, in a dream, and the power to shut the mind up with its own conceptions and reflections, is called abstraction; and when abstraction is in power, our conceptions are as much realities to the mind, while they last, as are actual perceptions; and we shall think, feel, talk, and act the same as if our conceptions were real perceptions.

Now what is needed is, firstly, a text that will grip the imagination of the student; and, secondly, one of which there are two or more possible versions, with the latter that the student may work out his own interpretation. To this end, the teacher gives his version, choosing one which will arouse disagreement in the mind of the student, by which he knows that he will be exciting the student's imagination.

Then what does our mind perceive in the following text?

"Sad lies the steppe in its solitude,
Night comes on shadowy wings,
Never a tree nor a floweret,
Never a nightingale sings.
Darkly the night knits her somber brow,
Nowhere a star in the skies,
Hardly I know why so suddenly
Visions of thee now arise:
Visions of thee, my beloved one,
Limpid and fair as the day,
Smiling upon me, thine image
Brings brightness that pierces the gray.
Comes now the song of the nightingale,
Melting away like a sigh;
Flowers are nodding caressingly,
Studded with stars is the sky."

First, a steppe, a dreary, desolate, lifeless desert; not a single tree, flower, bird, or star to break the awful loneliness of it. Then a weary wanderer in its depths; a human derelict; one of a group of Russian "politicals" condemned to Siberia, sick unto death, and left to perish alone on the desert waste. Then, to the now broken and delirious wanderer, there comes a vision of a loved one smiling upon him; and, instantly, all is changed; he no longer is alone; the desert has lost its loneliness; birds are singing, flowers are waving in the breeze, and stars light up the sky.

Now, as our conceptions, under the influence or abstraction, are as much realities to our mind as are actual perceptions; and since we think, feel, talk, and act, the same as if our conceptions were real perceptions; the desert waste, the wanderer in its depths, the vision of the smiling loved one, the singing of the nightingale, the nodding of the flowers, and the appearance of the stars in the sky; all these are as real to the artist of song as actual perceptions; and as his perceptions become an abstract property of his mind, he is capable of reproducing them at any time. In other words, once perceptions are taken up by the intellectual faculties, they are accepted by, and stored away in the subconscious, there to be awakened and reproduced through the mere mention of the title of the song; and this we call memorization.

Is it necessary, then, to say that in order to reach this state of abstraction, one must become, in thought, our wanderer; thinking as he thinks, and speaking as he speaks? Now what, most likely, would be the nature of the utterances of our wanderer? What the nature of the tones of his voice? Where would he raise, and where moderate, his voice? Which words would be emphasize?

He says, "Sad lies the steppe"; not "terrible, dreadful, awful lies the steppe." So, when he breathes,

"Sad lies the steppe in its solitude,
Night comes on shadowy wings . . .
Darkly the night knits its somber brow,
Nowhere a star in the skies."

would he speak in an agitated powerful, vibrant tone of voice, as he would were he speaking of the steppe as "terrible, dreadful, awful"; or would he speak in a soft, sorrowful, sighing tone? And when, in his delirium, he says, "Hardly I know why so suddenly visions of thee now arise," can we not hear perplexity in his tone, and see a hand brushed across his brow, as if to assure himself that the vision is not a dream; that his loved one is really with him? Can we not hear his whole soul in an outburst of ecstasy as he, with his arms outstretched to his loved one, says, "Visions of thee, my beloved one"; and then in the words, "Limpid and fair as the day," can we not hear the soft, sweet tone of adoration?

Again, at peace in the presence of his beloved one, can we not see the childlike smile and hear the sigh of contentment as he says, "Smiling upon me thine image brings brightness that pierces the gray"? Then is a final burst of ecstasy, "Comes now the song of the nightingale"; then exhaustion, and in hushed tone, "Melting away like a sigh." With the approaching end, words come more and more slowly and faintly, and in muttered tones of a child in its dream, "Flowers are nodding caressingly, studded with stars is—the—sky." A smile, a sigh, and—peace.

This, dear student, is one version. What is yours?

Our Poverty of Singing Artists

By D. C. PARKER

WHEN WRITING on "Our Bad Singing," for *The Musical Standard*, Mr. D. C. Parker of London said in part what is just as true of America.

"It may be that we produce as great a proportion of good singers as other countries do, and that they leave our shores, for which I do not blame them. Sir Thomas Beecham has pointed out that the best of our singers have to go abroad, because opportunities of advancement here are practically non-existent. He has spoken of good singers as one of our exports. This only tends to prove the truth of my contention. If the good singers seek openings elsewhere, the ones left are very much as I have described them to be. Yet, it does seem extraordinary that the musical state of this country is such that, to take two examples, Mary Garden and Joseph Hislop (both, curiously enough, born in Scotland) have to spend their lives in foreign lands.

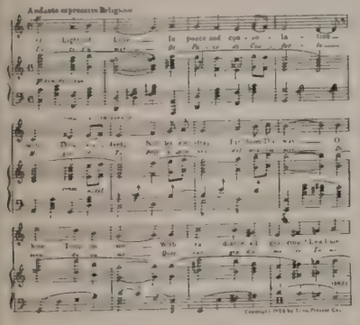
"Who is to blame? Perhaps the break caused by the war lies at the root of the trouble. The public, at any rate, shows itself complacent. It applauds rubbish and masterpieces with a sublime disregard of the gulf which separates them. It applauds singers who have obviously come out prematurely, and singers to whom the kindest thing to say would be, 'Take some more lessons.' By doing so, it swells the head of mediocrity and manufactures cynics. Because of its self-satisfaction, its too easy acceptance of the inferior, the public must bear a generous share of the blame.

DELIGHTFUL

Songs

BY

A. Buzzi-Peccia



Arturo Buzzi-Peccia, noted authority on voice culture, coach of many prominent singers, is known to many for his fascinating song creations although he has written symphonic poems and an opera. Long identified with music life in America, Buzzi-Peccia was born in Milan, Italy and studied at the Royal Conservatory of Music there.

Everything in Music Publications

1712 CHESTNUT STREET

PHILADELPHIA, PA.

"The singers themselves cannot escape censure. Many of them take what they conceive to be the easy road to success; they want flattery and adulation, not criticism; they want wealth and publicity, not a slowly-acquired prestige. And they need not be surprised if they reap exactly what they have sown; but it will not be a bumper harvest. It is told of Porpora, a renowned singing master, that he kept a pupil at one page of solfeggi for five years, after which he described the pupil as the greatest singer in Europe. Not many of our singers hasten so slowly. We have need of Porporas. I should like to think that all reputable teachers impress upon their pupils the appalling condition into which our native solo singing has fallen; that they urge their pupils not to hurry; that they hold them back from public appearance until they have passed well out of the pupil stage. For, in so far as the teacher encourages quick production and compromises with the easy-going attitude of his pupil, so far is he distinctly to blame.

"The cure, then is to be dissatisfied; that is, when we hear the third rate we must call it so, whatever be the name and reputation of the singer. Only by doing so shall we ever get the first rate. The public must bestir itself, open its eyes wide, see what is done elsewhere, and get into its head that the best is always worth striving for. Ask for the best and it is forthcoming. If the public hissed a few bad performances, you would be surprised at the salutary effect of the action. Singers must take their work more slowly and more seriously, whether the public can recognize the half-baked or not. Teachers must deter their charges from embarking upon a professional career at too early a stage."

How to Preserve the Voice

By JESSIE L. BRAINERD

A BEAUTIFUL SINGING VOICE is a Heaven-sent gift. But, it is a delicate instrument and requires utmost care and common sense if it is to last into the later years of life. Here are a few suggestions that, if carefully heeded, will preserve the beauty and freshness of his voice so that the singer may give the best possible performance at all times.

1. Take time to work out a program of practice hours. It is a mistake to practice hours and hours until the throat muscles become exhausted and the whole body feels tired. It is much better to practice from twenty to thirty minutes at a time, interspersed by short rest periods, than to practice for an hour at one sitting.

2. Take especially good care of the entire physical health. A minor digestive disorder will ofttimes affect the brilliancy of the voice to an alarming degree and cause a feeble interpretation of songs.

3. It is wise to take every precaution known to prevent a cold. But, if a cold comes, refrain from singing. Much injury can result from singing with congested throat and nasal passages.

4. The room in which the singer is to perform must be clean and warm. A draughty, smoke filled or dusty room is extremely hazardous to a voice and can cause permanent damage to the lungs.

5. Yelling at a football game is permissible for some people, but is most inadvisable for a singer.

6. If it is necessary to talk at length, speak in low, free tones. Save the speaking voice as well as the singing voice. Silence is golden.

7. Singing on a sleighride in the frosty, night air is pleasant to hear, but is very liable to cause unpleasant results to the throat of a singer.

8. Several million people smoke. However, if a singer wants to preserve his voice over a period of years, if he wants his voice to be always clear, ringing and brilliant, he had better leave the smoking to those millions who are not so fortunate as to own a lovely singing voice.

The Bells of St. Mary's

SEVERAL READERS of THE ETUDE have asked for the story of the very well known song *The Bells of St. Mary's*. Through the kind interest of Mr. Walter Eastman of London, who has secured from the composer, Emmett Adams, the following story of the song, we take pleasure in passing it on to our readers.

The poem *The Bells of St. Mary's* was written by Douglas Furber; and the music was composed by Archie Emmett Adams, in 1918. It will be of particular interest to Americans to know that the song is dedicated to St. Mary's Church, the Mother Church of Southampton.

The site of the original town of Hampton (Home Town) was the district surrounding the Saxon Church of St. Mary. This, the earliest, and Mother Church of Southampton, was rebuilt by Queen Matilda, wife of King Henry I of England. Queen Matilda died in the year 1118, the church remained until about 1550, when it was almost entirely destroyed on account of the danger of French attacks.

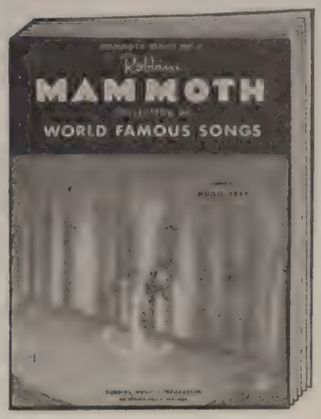
The church, reconstructed by Archdeacon Brideoaks in 1711, and enlarged by the Earl of Guildford, was entirely rebuilt by Canon Wilberforce, grandson of William Wilberforce (leader of a committee pledged to the abolition of slavery), as a memorial to his father, Samuel, Bishop of Winchester.

The foundation stone of the new church was laid by H. R. H. Albert Edward, Prince of Wales, on August 12, 1878.

The remaining part of the building, with the exception of the tower and the spire, was completed in 1884. Twenty years later the tower and spire were finished, and on the 5th of January, 1914, the rector, Canon Lovett, placed the cross on the top of the spire, but on account of the troubles of the war, the dedication services were postponed until November 1920.

The fine peal of bells first chimed on June 27, 1914. These were presented by Mary Wingrove.

* * * * *



"The first act of 'Tristan and Isolde' lasts for an hour and a half, and the first act of 'Lohengrin' for an hour, during which one must hold almost interminable poses; a test of physical endurance rarely considered in the summing up of general results. The great duet in 'Les Huguenots' coming at the end of the performance, requires half an hour closely put in. Bodily strength and endurance are the first requisites to support the demand of such ordeals. Without them nothing can be accomplished."—Lillian Nordica.

THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

Getting the Spirit of a Great Motet

By WILLIAM H. BUCKLEY

GOUNOD'S lovely motet, *By Babylon's Wave*, gives a chorus excellent opportunities for dramatic interpretation. Its four movements are so contrasted and the music is so sincere that one seems never to tire of it. The first movement, *Here by Babylon's wave*, suggests complete despondency; the second, *When mad with wine*, keen resentment; the third, *O Lord, tho' the victor command*, is an expression of outraged patience, working up to a bitter denunciation in the last movement, *Woe unto thee*.

Almost every word has its place in the interpretative scheme. One must pay attention to the minutest details if the finest results are to be attained.

Care in the Beginning

OPEN WITH an extremely light and floating tone. Try singing as gently and softly as possible, with scarcely any breath, and you will produce the tone you require. Practice this tone yourself until it is perfectly easy, and then demonstrate it to your choir. Make sure that no one takes a full breath in preparation, since this will cause contraction and a thin pinched tone totally unlike that which you seek.

You may find it difficult to get your choir to sing sufficiently softly at first. Ask them to let the singing be only a whisper, a murmur. Tell them that you do not want to hear any individual voices, that you want only the massed tone. Ask them to sing so softly that they will hear the singers on either side of them. Use any pictures or ideas you can think of, but do not be satisfied until their *pianissimo* choral tone is as beautiful as you would expect a similar solo tone to be.

When this tone is established, be very particular about articulation. The initial aspirate of the first word, "Here," should be made use of in beginning this *pianissimo* singing. In the second phrase begin very softly and then gently swell out to "bound." This slight climax, to *mezzopiano*, comes on the first beat only, and you begin dying away at once, to the word, "us." There is a natural falling away in the next line; but when you reach "The pains of death surround us," begin swelling out from the beginning of the line to the word "death" and harden the "d" of "death," to express fear. Get a second stress on the second syllable of "surround." These small climaxes should not go beyond a *mezzoforte*. In the next line we find one of the most thrilling effects of the whole motet. In "Sion," thy mem'ry still," begin softly, as usual, but swell out to a full *fortissimo* on the first beat of the syllable, "mem," and die away to *piano* at the end of "still." This illustrates a fierce resentment breaking through for a moment and, futilely, falling away to a settled melancholy. The swelling out and dying away must be even and gradual. "Heart" is the principal word in the next phrase. Then, more softly, "And still we turn to thee," with a stress on "still." Begin to gain power on the words, "Our eyes," making "sad" the peak of this phrase, which is finished very softly. Place yourself mentally in the position of the Israelites of that time, and this interpretation will seem quite natural.

In the line beginning, "Through our harps," "on" will be the climax. Get the final "s" of trees on the third beat exactly. "Wearily," the peak word of the next phrase, should be sung slowly and wearily. Be sure that the nasal consonants in "moaning, mingle," and so forth come through *poco animato* with the climax on the first beat of "breeze." Give slight stresses on the words "voice," "sad," "sigh" and "groaning" in the next line.

The Mad Passage

IN THE PASSAGE, "When mad with wine," detach and emphasize each syllable. Do not make it too *staccato* but see that each singer makes a distinct separation. It is sung *fortissimo;* but never allow the tone to become strident. This will give to this section an effect tending towards the savage.

"O Lord, though the victor command" seems to come from the very depths of mental agony. Stress the words "Lord," "command," "sad" and "lonely." "Holy" is the peak word in the next phrase. The basses have a difficult augmented fourth in the C to F-sharp following the tenor lead. Be sure the intonation is perfect. Unless your contraltos are very strong, it will be wise to have the sopranos assist them in their lead in this *fugato* passage.

Let the basses sing "Jerusalem" to represent the timpani in an orchestra. This comes at the top of a climax which has been working up from the very beginning of this section. Get a strong *sforzando* from the other three parts on the first and last syllables of this word and again on "if" and on the last syllable of "forget" in the next phrase. "Let our hands" begins softly but *non-legato* and with incisive articulation, to represent repressed anger and hatred. Take it *poco animato* and *poco a poco crescendo,* working it up more and more excitedly, until the singing is frenzied when you reach "Jerusalem." Be sure you have saved up sufficient power to bring out the third "Jerusalem" with a thrilling increase in the volume of tone, at the same time adding to its effect by singing it *allargando.* Hold the last syllable as long as you dare and cut it off in the midst of its full power.

The climax is still further increased by following it with silence for the space of about one measure. Begin the next phrase, "let our hands," about *mezzoforte* and increase gradually to a *forte* on "power." The next word, "Jerusalem," is capable of interesting treatment. Moderate the pace very slightly; begin the word softly, swelling out to a *forte* only for an instant at the beginning of the last syllable. Then immediately begin to die away. Let this *diminuendo* lengthen this final syllable several beats. Close the lips on the final *m* for one beat at the extreme end of the *pianissimo.* Continue this *pp* in the next phrase, swelling out to the second syllable of "forget" and dying away to the end of the line.

The Last Movement Attack

MAKE A momentary pause before beginning the last movement to allow your singers to prepare for a big attack on the opening "Woe." Accenting each syllable brings out the fierceness of this denunciation. Sing it *non-legato* and make the two notes on "city" very staccato. "Pity," the last two syllables of "forsaken" and the word "taken" will all be *staccato.* Make the interpretation as energetic as possible without hastening the pace in the slightest degree. This is done solely by means of emphatic accents. The phrase "shall thy babes be taken," should also be sung *staccato.* In the last word of "taken and dash'd," let the first beat be "da," the second beat, "sh," given as *forte* as possible, and the third beat, the final consonant. In the third repetition of this phrase, sing the final consonant of "dash'd" at the second beat and emphasize the "sh" in the first beat. Sing from "Then unto thee" to the end, *allargando.* But, in the phrase, "Be woe," keep the "be" very short, in order to give an effect like a whip-lash. Watch the A-flat and the F-natural in the second bass part.

This analysis of the interpretation of this number will give you some idea how to study other choruses in order to discover their possibilities. Let your performance be as natural as possible, but overlook nothing which might contribute to that effect. *By Babylon's Wave* is too long and too dramatic to make a good service number. It is more suitable for a special musical service or a choir concert. But the principles involved in its satisfactory performance can be so readily applied to service anthems that the time taken in its preparation will bring splendid returns. It should be performed without accompaniment.

How to Succeed With Your First Choir

By F. LESLIE CALVER

WHEN THE YOUNG CHOIRMASTER takes up his first appointment he is unlikely to be able to pick and choose the members of his choir as he would like. He is almost bound to have under him singers who are, possibly, enthusiastic, regular in their attendance, and popular, but untrained and unaware of faults which are obvious to the sound musician. In the same way, many persons who speak bad grammar do so without having the least idea of the fact. To try to correct them would be a most awkward and difficult task, requiring great tact and diplomacy.

That is, by analogy, the kind of problem which often faces the young choirmaster, and he must exercise great discretion in dealing with it. He must avoid being too much of the pedagog, otherwise he will soon be unpopular. He should cultivate a pleasing way of addressing his choir, striving to show that he is anxious to help rather than to offer adverse criticism.

He should remember that any person who can train choirs really well is automatically marked out for promotion. For that reason he cannot know too much about the art of teaching singing. He should cultivate a succinct and interesting way of imparting his knowledge to singers, thus making them look forward to the choir practices and feel that they can always learn something from him. A right start on these lines is very important in shaping the young choirmaster's career. It matters little how humble his first choir may be.

Probably no advice is more often given to singers that the admonition "open your mouth." If the choirmaster really understands voice training, what he actually means is "open your throat." His object is to realize greater volume in the right way. The easiest way of obtaining this, without tediously explaining how to sing more loudly, is to require the singers to open their mouths widely. It is language which they all understand.

It is sometimes pointed out that a conscious opening of the throat may be detrimental, and obviously would be if an attempt were made merely to stretch it open; but when it is opened correctly there can be no harmful effects. If the sensation of yawning be introduced the bottom seems to drop out of the throat. The moment of starting to inhale in preparing for the yawn is the one when the throat is wide open. It is at this precise moment that the throat will be found to be completely relaxed. If singers are persuaded to try this several times, and then to sing "ah" on a suitable note, a wide-open throat, without any forced feeling of stretching, will result. Frequent practice of this process will cause it to become automatic. Then the mouth will open naturally to its proper extent.

Another constant source of trouble for the choirmaster is diction. How difficult it is to make choirs sing in such a way that the words can be understood by listeners. The problem is to obtain proper enunciation. This admonition is probably the one which choirs heed less than any other; yet it should appeal to all, for the music is really only the vehicle of the words. The chief cause is probably laziness—unconscious laziness, perhaps, but still laziness—and the failure to realize that, even a

Courses leading to the A. B., and B. Mus. Ed. degrees. Rates reasonable. In the heart of the Shenandoah Valley, Dayton, Virginia.

distance away, words become indistinct, especially in the case of a chorus, because all the singers pronounce more or less in their own individual way.

The best remedy is to induce the choir to sing consonants so distinctly that they appear to be exaggerated. The tongue should not barely touch the roof of the mouth or the teeth, nor the lips just meet. These enunciators should be made actually to work. The last letter of a word usually receives but scant attention; yet it is often the very one which decides whether the word is intelligible to the listener or not. To correct this fault, of which very few singers are innocent, requires not merely a resolution to do better, but a persistent, conscious effort of the will. All consonants should be accented, and their emphasis become a habit, particularly in regard to the terminal consonant of every word. If singers could be induced sometimes to read aloud to themselves, exaggerating all consonants, distinctness in speech would become habitual and reflect itself in their singing.

Vowel sounds are also often ignored or mispronounced. The first thing to do is to correct the most vital vowel. Then the others will not be so difficult. The vowel *e* or *ee* never should be pronounced with the corner of the lips drawn back towards the ears. Usually the tendency is for the tone to follow the corners of the lips. Lips drawn back to a distinctly smiling position will cause the tone to be produced back in the throat. By the expression "in the throat" it is meant that the natural resonance cavities of the mouth and head are not brought into play, the tone coming directly from the throat to the exit of the mouth. The throat cannot control tone quality, and it is therefore necessary to rely upon changes which can be made by the cavities mentioned. A note must be allowed to cause resonance inside the mouth before being released. To allow the lips to point back towards the ears destroys that resonance. Lips held loosely and easily forward will add the kind of quality which is desirable in singing, and which is determined by the shaping of the lips. The vowel *e,* therefore, will be sung with the lips held in the position which would be assumed to sing *oo* as in the word *foot.*

Another vowel which often causes trouble is *a* as in the word *say.* The same position of the lips should be used, with a slight change towards a larger opening in all directions. Such words as *that* and *man* never should be sung with the flat, disagreeable sound which is often heard in speech. Any tendency to go to the other extreme, and sing "thawt," and "mawn," must likewise be very carefully avoided.

Phrasing is usually a point to which untrained singers give inadequate attention. This is because they allow the music to overwhelm the words in importance. It is often a matter simply of resisting the tendency to breathe in the wrong place. The worst office of this kind is, of course, to do so between the syllables of a word. Happily, however, most singers avoid this fault nowadays. Choristers should be taught to be constantly alive to the question as to whether, if they were merely reading the words, they would take breath where they do when they sing them. A little concentration on the meaning of the words will quickly show the correct solution. Regardless of what the musical notes may be, breath should be taken at the point determined in this way. Singers should be urged to read far enough ahead to see what word ends the phrase they are singing, and to breathe there. A breath is never taken after an article or a preposition, nor should it be, generally speaking, when a comma would be entirely out of place in writing. A breath in singing, in fact, has the same effect as a punctuation mark in print. One of the choirmaster's greatest difficulties is to combat the tendency of the human mind to form musical periods in equal groups. When choirs sing, for example:

"Thine for ever! Saviour keep
Us, Thy frail and wandering sheep,"

and take a breath after the word *keep,* they do so, not because they must, or because, as they sometimes say, they are "puffed," but simply because it is the end of the line of poetry which apparently balances so nicely with the next line. The difficulty is mental rather than physical. Every choirmaster knows how difficult it is to secure in singing the same effect as is produced in print by:

"Thine for ever! Saviour keep us,
Thy frail and wandering sheep,"

with not the faintest suspicion of a breath between the two words *keep* and *us.*

This goes a long way towards explaining why the old German *chorales* were once so popular. A pause was made at the end of each line, automatically dividing the musical periods into equal groups and satisfying the innate sense of rhythm of the people, regardless of the meaning of the words. In those chorales, however, it is rare indeed that the poet has not brought his art to the point where there is a natural pause (to be used for breath in singing) at the end of each line of the stanzas.

The Versatile Organist

By MARIE M. HINE

We will suggest a list of requirements for a well equipped church organist.

The church organist must be well past the elementary stage of organ playing, by which we mean that he must have independence of hands and feet. He must be able to play *legato*—without which organ playing is not organ playing. He must have ability to phrase artistically. He must be able to change a suggested registration to suit his individual organ; and he must be able to make changes in registration without interrupting the flow of rhythm.

If you think you are expert in this, listen carefully to a first class orchestra with its unbroken flow of rhythm; then try to work up the same composition on the organ, where the feet must produce the contra bass and violoncello effects, must manipulate several swell pedals, a crescendo pedal and a number of mechanical attachments; and the hands must control the reeds, strings and flutes and some more mechanical devices. It is then you realize your shortcomings in this direction. But with practice these changes can be made smoothly.

—*The Diapason*

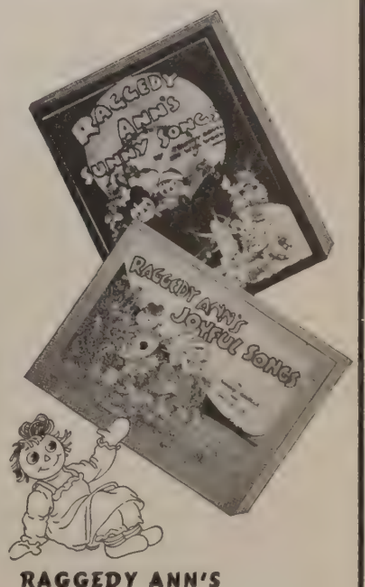
Vertebrae for Endurance



"Is it not the great justification of history to set up standards and models of what or what not to do? Beethoven's works could not have lived more than a century had they been of flimsy texture. Our own present-day composers may be marvels of ingenuity in the coloristic, rhythmic, and exciting aspects of music; but let them remember that a lasting work of art must have a backbone and organically related members just as in a human being."
—Walter R. Spalding.

Organ and Choir Questions Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Will you give me some information relative to the purchase of a pipe organ? How do organs rank to-day? What is the best method of procedure? What specifications should an organ include for the amount we have to spend—$8,000?—K. D.

A. We suggest that you get in touch with the leading organ builders, stating amount you wish to spend, and asking for specifications. The size of the organ you can secure for the amount you have, depends on the builder selected, amount of case work, conditions of installation and so forth. The following specifications—one for a two manual instrument at $8,000 and the other for a three manual at $8,500—will give you some idea as to what you can secure. If the cost of the three manual instrument exceeds the amount you can spend, it can be slightly modified to bring it within the amount you have on hand.

TWO MANUAL SPECIFICATIONS

GREAT ORGAN (Enclosed)		
Open Diapason	8′	73 Pipes
Flute Harmonic	8′	73 Pipes
Gemshorn	8′	73 Pipes
Dulciana	8′	73 Pipes
Flute	4′	73 Pipes
Octave	4′	73 Pipes
Twelfth	2-2/3′	61 Pipes
Fifteenth	2′	61 Pipes

SWELL ORGAN (Enclosed)		
Bourdon	16′	73 Pipes
Geigen Diapason	8′	73 Pipes
Rohr Flute	8′	73 Pipes
Salicional	8′	73 Pipes
Vox Celeste	8′	61 Pipes

Trumpet	8′	32 Notes
Dulciana	8′	32 Notes
Gemshorn	8′	32 Notes

Q. Will you please indicate metronome and expression marks on the number indicated on enclosed sheet?—A. M. G.

A. The number is the *Prelude in C Major* for organ, found in Volume II of the Widor-Schweitzer Edition of Bach. No indications of *tempo* are given, but we suggest a *tempo* of ♩ M. M. ♩=80. There are important features in the inside parts, which cannot be shown in the one part you quote. However we will indicate in a general way, a suggested treatment, based on the part you have given.

Ex. 1

Assuming you have a two manual instrument, begin on the Great Organ (bright combination) with Swell coupled (no 16′ manual stops) and Pedal to balance, with Swell and Great to Pedal couplers. At the second eighth note in measure nine go over to the Swell organ (Swell box having remained closed). After going over to the Swell organ, gradually open Swell during measures nine, ten, eleven and twelve, closing it again during measures fourteen and fifteen. At the second eighth note (left hand) in measure sixteen return to the Great organ, following with the right hand at the second eighth note in measure seventeen. During measures twenty, twenty-one and twenty-two open Swell, which remains open until the beginning of measure thirty. Beginning with the second eighth note in measure thirty, gradually diminish by closing Swell to the end of the *Prelude*. We have marked with ∨ the points at which we suggest a slight "break" in the passage. We do not find any evidence in the Widor-Schweitzer Edition of the notes you indicate for the trills in measures twenty and twenty-one, that Edition indicating the upper note for the trill as being "d" in measure twenty and "g" in measure twenty-one.

Q. The organ on which I practice is approximately sixty years old. The keyboard extends only four and one-half octaves, and some sets of pipes are not complete. (Specification enclosed). The Oboe is poor and the Trumpet terrible. The full organ, without these stops, is very beautiful. The Stopped Diapason is the finest I have ever heard. A new church is being planned and I suppose the old organ will be discarded or sold. Do you think it would be worth while to buy the old pipes, except the reeds, and make it over into an electric organ? Could new pipes be made that would match the tone of the old, to complete the sets to five octaves? What would the average cost be? What additional sets of pipes would you suggest? Is there any place that I can get information as to the grade of instruments the different organ companies build? Is electro-magnetic action the same as direct electric? Will you please send me the names and addresses of the American and Canadian organ builders?—Young Organist.

A. The old pipes might be included in a new electric action organ, if they are found suitable. The matching to carry out the sets would be very difficult, and, if attempted, should be done by a very experienced expert. We recommend your consulting such an expert both as to advisability and cost. Of course many or few stops can be added. We suggest that the following might be added: Swell—Bourdon, 16′—Geigen Diapason—Vox Celeste—Flute Harmonic 4′—Cornopean (bright) Pedal—Bourdon Dolce 16′ (borrowed from Swell) Dolce Flute 8′ (borrowed from Swell)—a complete set of couplers. It would be difficult to secure accurate information as to grades of instruments made by various builders. Our advice would be to investigate the leading builders and base decision on the results. We presume "electro magnetic" action to be intended to imply direct electric action—and that the word "pneumatic" would be used to define the electro pneumatic action. We are sending you by mail the names and addresses of some organ builders.

TUNEFUL TWADDLE

Willie at His First Church Service

Willie wiggles several times, then asks timidly, "Mamma, what makes the lady holler?"

"Hush! Willie, the lady is singing."

A pause, and then, more timidly, "Mamma, is the man playing the organ so loud because he doesn't want anyone to hear the lady?"

The Mother, embarrassed, "Hush! Willie. I don't know."

Comes the offertory, "Mamma, are the people putting pennies in the box so they can see the man play the organ and dance? Why doesn't he stand up when he dances?"

Mother, sharply, "Willie, do be still! The man is not dancing; he is playing pedal notes with his feet!" as she drags *Curly-locks* towards the door.

* * * * *

Safety First

"Why did you get seats for 'Madam Butterfly' when I distinctly told you I wanted to hear 'Pagliacci'?"

"To preserve my dignity! When I reached the ticket office I forgot how to pronounce it."—*Boston Transcript.*

* * * * *

Just a "Tweedle" Hole

A critic speaks of a "flute" and a reader asks, "What is a "flute"? As near as we can describe it, it is a long, thin hole with a piece of punctured brass or wood around it, and the player breathes gently into one of the holes.

THE ACCORDION DEPARTMENT

The Accordionist's Debut

By PIETRO DEIRO
As told to ElVera Collins

ACCORDIONISTS SHOULD PLAY before the public at regular intervals if for no better reason than merely to check up on their playing to see what they have neglected in their daily practice. It is surprising how revealing a public appearance may be. Those selections which seemed fairly to roll out of the accordion in the privacy of a practice room take on a new aspect and must be coaxed out of the box. Even then they sometimes merely stumble out.

A great amount of pleasure may be derived by playing for one's own enjoyment but there is even more pleasure to be had in the knowledge that one can entertain others. In fact, there is a certain satisfaction in it for it may be compared to a school examination. Regardless of how well one may render a program when alone, he cannot say that he has mastered it until he is able to play it well for others.

The way you play in public will show how you have practiced in private. Are you one of those accordionists who learns a new selection by playing it helter skelter, time after time, and then, a day or so before it is to be played before others, you begin to observe the expression marks? Naturally this caution would not be needed for those who are studying with accordion teachers, but there are many adults who have taken only a few lessons and then have pursued their studies by themselves. It is for their benefit that this particular advice is given.

Eliminate Your Troubles

WHEN LEARNING A NEW SELECTION, carefully observe all signs for shading of tone, hastening or retarding the musical movement, phrasing, accenting, and so on. Work out the fingering which is best suited for you and then adhere to it. You could not expect to play a tricky cadenza well if it were practiced two or three weeks with a certain fingering and then this fingering were suddenly changed the day before it was to be played in public.

There are two common faults to be found with amateur accordionists when they begin to play in public. Their anxiety over the notes often causes them to forget tonal shading and they go through an entire selection playing as loud as possible. Surely nothing could be more monotonous for the listener and harder on the player. The next fault is that although they may begin a selection at the proper *tempo*, they unconsciously speed it up as they play. If you are one of the accordionists who are inclined to this fault it is suggested that you practice with a metronome. Perhaps somewhere along your path of progress you have formed the habit of beating time with the foot. Naturally this is common among orchestra musicians but who ever saw a concert violinist do it? Break yourself of the habit or your audience will watch your feet instead of listening to your playing.

The selection of the program is of vital importance. Assuming that you will make an informal début, the program should be somewhat informal also. Do not try to play music that is too heavy. There will be plenty of time later for overtures and heavy classics. Select numbers of a melodic type and intersperse some pieces which are general favorites without being hackneyed.

The weight of an accordion makes it necessary for a student to do most of his technical practice while sitting. The standing position is more graceful for soloists and it is therefore suggested that a portion of the practice period should be devoted to playing while standing. Be sure to rehearse the program numbers standing, otherwise you might become confused, as there is a slight difference in the position of the keyboards and the action of the bellows in the two positions.

Are you careful not to watch the piano keyboard as you play? Surely you do not hang your head over the keyboard and rest your chin on the top of the box? It sounds grotesque but many accordionists do it. Practice before a mirror occasionally to be sure to avoid making facial expressions while playing. Perhaps you think it could never happen to you but it is surprising the number of accordionists who have had to be broken of some such habit as twisting the mouth, biting the lips or scowling.

A certain amount of distraction must be expected when one is to play in public. Prepare for this by walking from room to room during the practicing. Stand before a window (naturally where you cannot be observed), and play while you watch traffic and the passersby.

If you are not fortunate enough to possess a natural smile, do not cultivate a set grin. Just an animated pleasant expression will suffice. Walk out on the stage or platform leisurely as though playing the accordion gave you real pleasure. Perhaps you are quivering inside but the audience need not know that.

About eighty percent of the success of a début depends upon preparedness and the balance depends upon the faith you have in yourself. All other things are subordinate to these. Make up your mind that you are going out to play perfectly and then do just that.

Accordion Questions and Answers

Q. I play both piano and accordion. Will you please advise if it is possible to play arpeggios *legato* on the accordion? Can the thumb be stretched under the hand far enough to sustain the tone on the longer intervals? I can do it on the piano but not on the accordion.—G. S.

A. It is not difficult to play *legato* arpeggios on the accordion. Your difficulty is probably caused by cramping the wrist. The right arm should be away from the body to permit freedom of action so there can be a straight line from the elbow to the hand. When the arm is too close to the body it is necessary to bend the wrist so much that it distorts the hand position.

Q. I am a piano teacher who is beginning to teach the accordion. Should beginners who have never had any musical training be started on treble or bass clef accompaniment? They wish to play popular music later on. I explain to my pupils that there are four ways of writing music for the left hand for the accordion.—D.S.W.

A. Students progress faster if they use the treble clef accompaniment for the first year but if your students are preparing for orchestral careers you may as well start them on the bass clef. Regarding the four systems of writing accordion accompaniments, fortunately this confusion will soon be ended as the leading composers, arrangers and publishers have formed an association to bring order out of the chaos. It is called the American Accordion Association (A.A.A.). A definite system has been decided upon.

ALL THEIR LIVES
your children will cherish this gift

THE VIOLINIST'S ETUDE

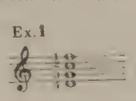
Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

Three of the Violinist's Problems Solved

By KELVIN MASSON



Holding the Violin

THE VIOLIN IS HELD between the collar bone and the jaw, the point of the chin touching the tailpiece. It is advisable to hold the instrument in such a manner that the strings are horizontal. The violin itself is held pointing at an angle of about forty-five degrees toward the player's left, and the instrument slopes at about the same angle from left to right. The body is inclined slightly toward the left to gain greater freedom in shifting.

The following principles pertain to the manner in which the arm, hand, fingers, and thumb of the left hand are held:

1. The upper arm should not come into contact with the body. The degree to which the elbow is turned inward (to the right) is determined by the length of the individual player's fingers and thumb. It is turned inward sufficiently for the nail joints of the index and middle fingers, during passage work, to approach the strings vertically.
2. The hand is kept on a straight line with the elbow, except in some descending shifts (discussed under *Shifting*). Some players prefer to bend the wrist a trifle toward the scroll when trilling.
3. The index finger touches the neck sideways at a point a little below the third inner crease of the finger, counting from the tips of the finger.
4. The thumb touches the left side of the neck laterally, with the inner surface of its nail joint, pointing back in the direction of the scroll a trifle. Looking at the player from his left the thumb appears to be a little closer to the scroll than the first finger. Many violinists fall into the bad habit of letting the violin rest against the second thumb joint. This fault occurs because the elbow is not turned inward sufficiently.
5. Geminiani invented the following formula, which will assist students to

Ex.1

determine the proper playing attitude of the left hand thumb and fingers:

Action of the Fingers

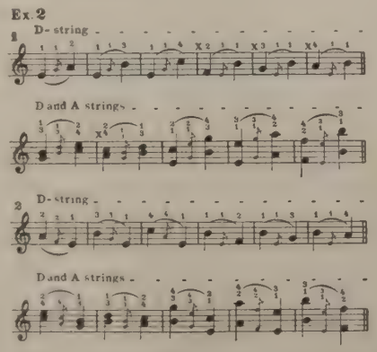
IN GENERAL the fingers, in passage work, are kept close to the strings during actual performance. However, exercises in which the fingers fall from a greater height help to develop strength in the individual fingers.

In playing passages the holding down of a finger until necessity demands that it be taken off is a rule which should be followed only in the event that it makes the playing of the particular passage easier, for in some cases the chaining down of fingers in this manner prohibits velocity. Fingers release their stopping immediately after the note on the new string is sounded, unless a quick return to the old string is anticipated. In all bowings of notes closely connected the finger or fingers being played on one bow plane should not be raised until the notes played on the new bow plane have begun to sound.

It is advisable to lift the fingers from the string individually, instead of "drawing" them off by pulling the fourth finger side of the hand away from the face. The fourth finger, to a limited extent, works with the third finger because of its peculiar tendon attachment to this finger within the hand itself.

In carrying out the vibrato, only the vibrating finger, or fingers, will come in contact with the string, and the index finger does not come into contact with the neck of the violin. The modern vibrato takes place mostly in the fingers (a sort of pressing from the finger motion against the string), a little in the wrist, and a very little (if any) in the lower arm. Also, during the vibrato, the fingers are allowed to deviate from their vertical attitude toward the strings, the fleshy cushions on the inner part of the finger tip stopping the string. This is especially advisable in the case of players with narrow finger tips, because playing on the tips in sustained portions of a work produces a rather dry and crisp tone. Enesco and Thibaud advocate this procedure.

In trilling, the upper fingers swing in relaxed fashion with the trilling finger, as in the vibrato.



To play high tones on the various strings, it is important that the finger pressure be increased.

In producing the left hand *pizzicato*, the left elbow is turned in the opposite direction from its usual one; the tones are not forced, but instead, one should develop a reserve strength to manipulate easily this branch of violin technic.

Shifting

THE METHOD OF SHIFTING advocated by Carl Flesch is valid. Its underlying mechanical actions are illustrated in the following examples:

Ex.2

The small sized notes are intermediary notes, stopped but not heard because of the speed in the shifting action.

The five examples marked with an "x" are exceptions to the old rule of "slide on the last finger used in the old position." The above examples reveal the following principles of making a shift from one position to another:

1. In ascending shifts, slide on the lower of the two fingers involved in the shift (in single stopping).
2. In descending shifts, slide on the last finger used in the upper position (in single stopping).

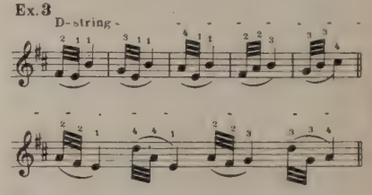
In all ascending shifts involving those positions below the fifth, no preparatory thumb movement is necessary; the hand moves as a whole to the intermediary note in the higher position. No preparation is necessary because in making shifts upward, ample support of the violin is provided by the jaw and collar bone.

In all ascending shifts to the fifth position or higher from a lower position, the preparatory thumb movement of pulling it under the neck, thereby supporting the neck with the thumb's nail joint from underneath, without the counter support of the index finger, should be carried out before the hand leaves the lower position.

In all ascending shifts from the fifth position or a higher position, the hand assumes a more horizontal position so the index and middle fingers will drop vertically on the strings. The thumb, when playing in positions above the fifth, and sometimes in the fifth, supports the neck of the instrument from underneath.

In all descending shifts into positions below the fifth, the preparatory thumb movement of thrusting it back so it points in the general direction of the scroll, supporting the neck of the instrument from underneath, should be carried out before the hand leaves the upper position. (Note the differentiation in the character of this thumb movement compared to the one used in ascending shifts to the fifth position or higher.) Concurrent with this thumb movement the wrist bends outward slightly in the direction of the shift; both the wrist and the thumb regain their normal position (wrist straight, thumb touching the neck laterally) as soon as the intermediary note in the lower position is reached.

In all descending shifts from the fifth position or above, the thumb gradually assumes its more lateral relationship with the neck, instead of its underneath support position characteristic of the higher positions, and the hand gradually changes from its horizontal position to its normal straight with the arm position.



In shifting, exert as little pressure as possible upon the sliding finger. In making the *portamento*, a stronger pressure is advisable; the musical meaning of the particular phrase determines the amount of pressure of the string, the speed of the gliding action, and whether the finger to be played in the upper or lower position is used to make the *portamento*.

The index finger does not leave the neck in making the shift except in shifts to the fifth position or higher from either direction.

Most shifts to and from an open string are made without the utilization of intermediary notes; however, the preparatory thumb movement and wrist action are carried out according to the rules for shifting.

We suggest the following exercises (original, we think), for more advanced pupils to develop facility in shifting:

Ex.3

The first thirty-second note is a harmonic; the second thirty-second note is to be played so quickly that no secondary noises are audible. The exercise promotes light pressure on the part of the shifting finger.

Progressive Group Teaching

By R. L. OLSON

THE EXPERIENCE of the writer in regard to violin group instruction, has proved most satisfactory. When youngsters unite in groups to study their favorite instruments, they seem to relax and feel more at ease in responding. It creates and stimulates enthusiasm immediately. It not only develops solo playing, but also assures confidence in ensemble playing.

During the introduction of the violin, place strong emphasis on learning the parts of the instrument and bow and, above all, position. In teaching the correct holding of the violin and bow, not only remind the class of the rules to be observed, but physically adjust each pupil's arms and hands. This should be given much care at the very beginning, if the efforts are to be successful.

When introducing E, open string, have the class to play this E open string several times, so they can get accustomed to the feel of the violin and bow. Work also for tone production, and correct standing position. This will be a good time to check position again. Now have the pupils to respond to the name of the tone just played, and have them to play again.

When playing F-sharp, first finger on the E string, explain clearly to the class the placement of this finger. Before playing in the normal position, have them to place the violin under the right arm so they can actually see the placement and respond to the name of the tone, "F-sharp, first finger away from the nut." Before playing, while the violins are still under the right arm, raise the finger up and down, silently, several times to develop accurate placement. The same system applies to the remainder of the fingers throughout the four strings. Study each string thoroughly before going to the next.

Now, when the pupils have learned to use their first three fingers, is an ideal time to teach a beautiful appealing melody by rote. A simple lullaby would be very appropriate. Play the melody twice; let the class listen very attentively. While teaching this, study the composition by phrases; so the class may learn the form of a phrase.

After the lullaby has been played and the class has come to realize pitch consciousness, play the first phrase again, while the pupils sing with the playing, so they will be able to realize low and high tones, and to sing low or high, as the pitch may be. Do this several times, because, when one can sing the tones, it comes more natural to play them on the violin.

Second step: Play the entire phrase again, and let the members pick out the short and long tones and sing "short, short, long," thus studying sections of a phrase.

Third step: Note the fingers which are used for the particular tones; then sing finger names and play a rhythmical movement to the melody. Words for the melody are very helpful in making rapid progress and they also create a picture in the mind.

When full accomplishment of melody through tonal effects is reached, the group will be ready for the study of notation. This would have proved an exceedingly confusing task, had violin notation been introduced first. After a brief study of notation, secure a copy of the rote song, and play from notes. This method of group instruction is very beneficial and worth while to the class and at the same time, most enjoyable for the instructor to present.

Tuning the Violin

By LAWRENCE METTERSHEIMER

STUDENTS OF THE VIOLIN frequently display a somewhat faulty pitch discrimination when tuning their instruments to the piano, even though they are able to tune the fifths correctly and to play double stops with a moderately accurate intonation. When the orchestra or ensemble in which such a student is playing takes its pitch from the piano, the student's difficulty in tuning to the given pitch may express itself as a lack of confidence or uncertainty which is particularly apparent to the director of the orchestra. It is not unusual to see the violinist taking the A from another violin rather than from the piano, or else, after the orchestra has started, making a further adjustment of the pitch because the instrument was not tuned properly in the beginning.

The difficulty with most students lies in the perception of very slight variation of pitch between two notes of different tone quality. It is hardly necessary to consider the average beginner's casual attempts to tune the fifths of the violin. An improperly tuned instrument is an obstacle to progress, and the faults an elementary pupil exhibits as a result of practice under such conditions are convincing proof that a beginner should take as many lessons a week as he can afford.

Diligent use of the following method will enable the student to develop an accurate sense of pitch when tuning the violin to a different instrument.

First of all, an effort should be made to tune the violin to pitch in the usual manner. Then, in the first position, and with the first finger placed on B of the A string, the bow should be drawn gently across the A and D strings, sustaining this note with the open D and moving the finger, if necessary, until the full sonority of true pitch is obtained. The B, thus adjusted to the open D, should be compared to the B of the piano—the white key just above the A given to the violin. The difference in pitch between the piano B and the same note on the violin will make an easily recognized test of the accuracy to which the A has been tuned. If necessary, the tuning of the A string should be corrected and the process repeated. By going from A to B, and making the necessary corrections, the ear is relieved of the fatigue induced by sustained attention to the given A pitch, and the acuteness of pitch discrimination is maintained.

Some Technical Helps

By SAMUEL APPLEBAUM

THE CONCERT GOER demands more warmth from the present day virtuosi, and this necessitates a more extensive use of the *vibrato*. It is not sufficient that the *vibrato* be used in *cantilena* passages only. Technical passages also must be imbued with brilliance and warmth, demanding a more continuous use of the *vibrato*. Greater artistry than ever is now required in phrasing and fingering, in order to interpret more carefully and more accurately.

The fourth finger on a long note in a singing passage is seldom used by the great artists and has practically disappeared from the editions of Heifetz, Kreisler, Hartmann, Enesco, and others.

There is a definite tendency toward a greater efficiency in the performance of technical passages. Shifts are often avoided by firmly stretching to another position. The musical ideal of a passage is never lowered in order to make the passage easier to perform.

We now have a more satisfactory fingering for the chromatic scale, and this is conducive to a more distinct enunciation. For example, open G, G-sharp and A are played with the open string, then first and second fingers. The first finger then reaches up to A-sharp, with the hand and thumb remaining in the original position, and B, C and C-sharp are played with the second, third and fourth fingers.

The whole tone scale, employed by modern composers, places an additional responsibility on present day teachers. If we accept the equal temperament of tuning, the scale is then divided into six equal intervals without a dominant or leading tone. While there are only two whole tone scales, they may be written with various notations and with many variations in fingering.

* * * * *

Will the Public Please Wake Up?

"The whole trouble with American music is the American public. The American public does not in the least care about American music or American musicians. If anything, it prefers the foreign variety. Until it can come to give its musicians some small fraction of the regard that it pays to its baseball players, its music is going to continue to be a poor relation. Just now it gives regard only to its popular music composers, and these it rewards enormously. That is why American popular music is the best popular music in the world."—Edward Moore, late music critic of the *Chicago Tribune*.

WHERE SHALL I GO TO STUDY?

PRIVATE TEACHERS (Western)

FREDRIK E. BLICKFELT
Voice Specialist
Four years with Vincenzo Sabatini, Milan, teacher of John McCormack, and Antonio Cotogni, Rome, teacher of Battistini.
8224 Marmont Lane — Just off Sunset Blvd.

AMERICAN CONSERVATORY OF MUSIC

CHICAGO **53rd SEASON**

Founded in 1886 by John J. Hattstaedt, today The American Conservatory of Music is outstanding among institutions for music education in this country. Its graduates are to be found occupying positions of honor and responsibility in every department of music.

Member of the National Association of Schools of Music

The Faculty—One hundred and thirty artist teachers of national and international reputation comprise the faculty.

Accredited Courses are offered in Piano, Vocal, Violin, Organ, Orchestra and Band Instruments, Public School Music, Children's Piano Work, Class Piano, Musical Theory, Dramatic Art and Dancing.

Certificates and Degrees are conferred by authority of the State of Illinois and recognized the country over. Degrees conferred are those of Bachelor of Music, Bachelor of Music Education, Bachelor of Speaking Arts, Master of Music and Master of Music Education.

Dormitories—Desirable living and boarding accommodations can be secured at the Conservatory Dormitories at surprisingly low rates. Particulars on request.

Professional and Teaching Engagements—Although the management does not guarantee positions, it has been most successful in assisting students to find remunerative situations in colleges, academies, music schools and in concert, orchestra, lyceum and choir work.

Tuition is reasonable in keeping with the times and may be paid in convenient installments. Complete particulars given in catalog which will be mailed on request.

Students' Self Help—The management makes every endeavor to assist needy students to find part-time employment. Many find work as teachers, accompanists, or part-time positions working for commercial houses, etc.

Fall Term Starts September 15th

For free catalog address John R. Hattstaedt, Pres.

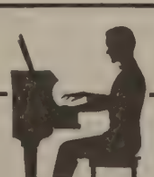
AMERICAN CONSERVATORY OF MUSIC
575 Kimball Hall, Chicago, Ill.

SCHOOL OF MUSIC
OF THE UNIVERSITY OF MICHIGAN

Complete curricula leading to degrees in all branches of Music. Faculty of distinguished artist teachers. Concerts and May Festival by world's greatest artists and organizations in Hill Auditorium seating 5,000. Chorus of 350; student symphony orchestras, glee clubs, bands, etc. Recitals each week on $75,000 organ.

Fall term opens September 26.

CHARLES A. SINK, President
Box 1004, Ann Arbor, Michigan



COSMOPOLITAN SCHOOL OF MUSIC

SHIRLEY GANDELL, M.A., Oxford University, England, President.
34th year. Accredited. Offers courses in all branches of Music. Certificates, diplomas and degrees. Desirable boarding accommodations. Located in downtown musical center.
Box E, 306 S. Wabash Ave., Chicago.

SCHOOL OF THE DRAMA
THE GOODMAN THEATRE
ART INSTITUTE OF CHICAGO

Accredited professional training in acting, production and design. Degree and Certificate offered. Apply now; limited enrollment.
For free descriptive bulletin address
Kenneth Sawyer Goodman Memorial Theatre
Dept. B, The Art Institute, Chicago, Ill.

THE ETUDE 1712 Chestnut Street Philadelphia, Pa.

CHOOSE SHERWOOD BECAUSE . . .

- For 40 years this school has inspired young people to artistic success and good livelihood in all branches of music and drama.
- Here is *professional* training under teachers who are also outstanding professionals.
- Here, too, is a pleasant comradeship of young people with similar interests and aspirations.

Courses lead to degrees, diplomas and certificates in Piano, Violin, Cello, Voice, Organ, Theory, Composition, Public School Music, Conducting, and Dramatic Art. Instruction fully accredited.

Scholarship assistance for deserving students. Dormitory. Write for catalog. 410 S. Michigan Ave., Chicago, Ill.

Institutional Member of the National Association of Schools of Music.

SHERWOOD MUSIC SCHOOL

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

For Position Study

R. M. 1. You are approximately correct in your opinion that a knowledge of the keys of four flats and four sharps, and of the first four higher positions will be sufficient to enable you to take up ordinary popular music, although it is true that you will occasionally run into passages requiring a knowledge of all positions and all keys. 2. For position work you might take up Hohmann's "Practical Method for the Violin Book 4." This book contains exercises in all seven positions, but you can take them up one after another, as fast as you can master them.

"Warming Up" Exercises

A. R. W.—Any good technical exercises will do for "Warming Up" exercises for a few minutes practice before playing a solo. Ch. Dancla's "School of Mechanism, Op. 74," is very good. This is familarly known as Dancla's "Fifty Daily Exercises." Learn two or three pages of these studies from memory, and play them over and over for a period of five minutes or so before you play your solo. Even five minutes of such work will render the fingers surprisingly supple and limber. If there is a symphony orchestra in your town, try to gain access to the musician's room before a rehearsal or a concert. Note that twenty minutes or half an hour before the actual program starts, the musicians will take their instruments from the cases and start "warming up". The warmth of the fingers will cause the strings to go down slightly, and the players will keep tuning from time to time until the pitch finally "stays put". Watching this process is an excellent object lesson to the young violinist, or violoncellist. Permission to attend such a "tuning" rehearsal can readily be obtained from the director or the concertmaster.

A Viotti Concerto

H. G.—The "Concerto, No. 23," by Viotti is the easiest of the twenty-nine concertos written by this composer, and one of the easiest of the standard works in this form. Most violin teachers start their pupils in concerto playing, with the Viotti "No. 23." His "No. 29" is much more difficult. It was a favorite concert number with Eugene Ysaÿe, the famous Belgian virtuoso.

Concerning String Height

M. G. V. 1. Some violinists prefer to have the strings on their violins higher above the fingerboard than others. There is no exact rule. The G string, however, is the highest, and the E string the lowest. Your course would be to find a violin where the strings lie at a height, which seems convenient for your own playing. Then measure the distance of each string from the fingerboard and cut the bridge of your own violin so that it will bring the strings to the same distance. Better have this done by a skilled repairer, as it is a delicate operation. 2. The note you illustrate in your letter is a harmonic, at the exact center of the A string, producing the note A, one octave above the open A string. In order to produce the harmonic, the finger (in this case, the fourth finger, as an extension from the third position) is placed very lightly on the string, and not pressed down on the fingerboard as in a regular note. 3. The surface of the fingerboard should be straight, and not have a downward curve in the center, as you suggest.

Left Hand *Pizzicato* Sign

I. U. T.—A cross above a note signifies, as a rule, that the note above which it is placed, is to be played *pizzicato* with the left hand.

Universal Pitch

D. H.—The pitch almost generally used in the United States is known as "Universal Pitch", in which the A has 440 (double) vibrations per second. All piano tuners use this pitch, and modern pipe organs are tuned to it. Grand opera and symphony orchestras use it, also violin soloists, string quartets, and so on. It is well for the violinist to use the pitch A—440 (double vibrations per second) and change only when absolutely necessary.

The Beginner's Violin

T. R.—Having five hundred dollars to start your violin studies, you are in doubt whether to buy a violin for four hundred dollars, and then spend one hundred dollars for lessons. In this I fear you are making a great mistake. You had much better spend fifty dollars for a violin, and the balance for lessons. Right at the start is when you need lessons by a good teacher. The more expensive violin can come later. If you have a bad start at the hands of an inferior teacher, it will be almost impossible to rectify your mistakes later on, if you wish to play the violin really well. A good teacher can select a violin for you, which will do for a start, but a faulty start will be almost impossible to correct, later on.

A Violin Obbligato

R. E. C.—An obbligato is an extra part written to accompany or embellish a solo voice or melody. It is usually written to accompany the voice, but can be used to accompany an instrument. The obbligato part cannot be omitted, without marring the effect of the composition as a whole. In other words it is *obligatory* that it be performed. A familiar example is the *Angel's Serenade*, by Braga, for voice, with violin obbligato.

Violin Piccolo

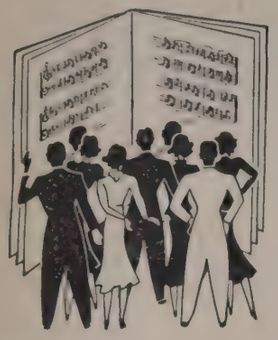
Y. U. B.—A Violin (Violino) *piccolo*, is a violin smaller than the ordinary violin, and tuned a fourth higher. *Piccolo* in Italian means small.

A Tourte Bow?

S. D. F.—I cannot tell, without seeing it, whether the bow you are considering buying, is genuine. Tourte was the greatest bow maker who ever lived, and his bows are very scarce and high priced. The price varies with the quality. A good Tourte bow ranges in price from several hundred dollars to as high as twelve hundred dollars for an exceptionally fine specimen. Great violinists insist on using Tourte bows, if they can possibly obtain them. These bows are made of Pernambuco wood, which grows in the forests of South America, especially Brazil. Pernambuco wood is remarkably elastic, not too heavy, and the ideal wood for making violin bows. It is very hard to obtain good straight sticks of Pernambuco, suitable for bow making. I remember visiting an eminent bow maker, a friend of mine, in New York City, a few years ago. He told me that he had spent the past week in the hold of a ship which had just arrived from Brazil, loaded with Pernambuco wood (also used for dye-stuffs). He found two or three hundred dollars worth of wood which would answer for bow making, which he eagerly bought from the ship owner. He said that rummaging around in the dark hold of a Pernambuco laden ship, was a rather ticklish form of exercise, as one never knew when he would run up against a nest of boa-constrictors, or other dangerous tropical snakes which had gotten mixed up with the cargo. However, he escaped with his life, and later on showed me a splendid lot of violin bows he had made out of his purchases of Pernambuco.

The Vibrato

L. G. T.—There is nothing more important in the way of developing a beautiful tone than the vibrato. Without this lovely embellishment the tone is insipid, tasteless, and without beauty and charm. No question is so frequently asked in this department as that of how to acquire a good vibrato. Of course the best, surest and quickest way is to go to a good violin teacher, and get instruction in producing the vibrato. It is quite difficult to learn it from books, or from indifferent teachers. However, there seem to be many who would rather try to learn something by their own efforts, spending twenty dollars of their own time, than to pay five dollars to a teacher to learn the best methods. Many try to learn the vibrato from books, and to these I would advise a careful reading of the chapter on the Vibrato in the valuable little book; "Violin Teaching and Violin Study," by Eugene Gruenberg. The author first gives his own views on the subject, and then gives quotations on the vibrato from the works of some of the greatest violinists. Among the authorities quoted are Ferdinand David, Singer and Seifriz Violin School, Spohr, Gruenwald, Rode, Kreutzer, Baillot, and others. These violinists give their ideas as to how the vibrato is best produced, and the best means of acquiring it.



The great violinist, David, has this to say on the subject; "The vibrato arises from a trembling motion of the finger, causing a fluctuation of the pitch a trifle above and below the true tone. The index finger must leave its accustomed place at the neck of the violin that now is held only with the thumb and the tip of the stopping finger. The player should be able to make it rapid or slow, but should be on his guard against too frequent or unnecessary use of it."

Violin students who live in the country or in small towns where there are no violin teachers, can get considerable help in learning the vibrato by watching violin players in the movies, as they use the vibrato. Occasionally, the films will give representations of orchestras, solo violinists, and other string players, whom students can watch and observe the motions as they perform the vibrato. A keen student can often get ideas in this way.

Bands and Orchestras

(*Continued from Page* 575)

is to overblow, and with it goes a lack of regard for tone, intonation, balance and the other elements essential to satisfactory musical performance.

Overblowing may be a result of a lack of sufficient brasses to give the band a solid, resonant tone, or it may result from poor distribution of parts wherein there is an insufficiency of solo parts. Another important aspect is the selection of marches which will permit the band to sound full.

We cannot hope to achieve good results on the march with but a few brasses, and in addition there should be enough players to permit the solo voices an opportunity to rest occasionally, preferably after each strain. Too often young players are forced to play for several minutes at a time without rest, and it can be seen that this is extremely harmful to an immature embouchure and may often result in permanent injury. In those bands which do not have enough players to allow for occasional rests for the brasses, particularly, it is wisest not to attempt music of a too difficult nature. In all cases careful attention should be given to the selection of proper music for the marching band. Marches that have full trombone, baritone, and bass parts are preferred. Many excellent concert marches are unsuitable for parade purposes due to thinness of arrangements. Trombones do not usually sound well on afterbeats or on parts of a too rhythmic nature, but rather require a counter melody or full chordal treatment.

Very often, cornet parts of second and third players are wasted. Clarinet parts are frequently too technical and written too high for practical purposes, and these problems have an adverse effect on the precision and marching of the section. Many marches which are otherwise excellent parade marches have these faults, but with a bit of arranging can be made suitable for marching purposes.

Marches which require rapid articulation are not practical for marching purposes, with the average band, since the execution in these passages is likely to become muddy and the rhythm irregular.

There is much to be gained in the development of solidity and sonority of the band through marching experience. There is nothing better for the brasses than a few minutes each day devoted to *forte* playing, and it is surprising to find that many of our brass players sound pathetically weak out of doors. This is, of course, due in a large measure to the manner in which they are accustomed to play indoors, and due to a lack of serious attention to the method of building up a solid, resonant tone.

If possible, marches should be memorized. The bandsmen can then devote most of their attention to the problems of marching. Alignment, spacing and other features of the parade are greatly improved if the player does not find it necessary to follow every bit of the music score. The one danger of "memorizing" the music lies in the possibility and the probability of a great deal of "faking" on the part of certain players in the band, especially among those playing second and third cornets, clarinets, saxophones, horns and other harmony instruments, all of whom are likely to play the melody, if not checked upon carefully.

The Comfortable Pace

Among the important items of preparation and execution in the marching band, is the matter of cadence. I do not feel that the cadence should be maintained at a definite *tempo* throughout an entire performance, nor should all bands attempt to march at the same cadence. We have seen and heard bands that marched precisely, executed their maneuvers, and played perfectly at a cadence of 156, and in contrast have watched bands with bad alignment and poor playing marching at a cadence of 128 to 132. There is a need for experimentation in order to determine that point at which a particular band can march and play most satisfactorily. What might be a good cadence for one band could prove entirely unsatisfactory for another.

In addition there are some marches which sound better at a rapid cadence than others, and there are several which are improved by maintenance of a slower than ordinary *tempo*. I believe that cadence on a field is somewhat like an *allegro* of a concert overture in that it should adhere to the character of the music. All *allegros* are not M.M. ♩-128, and neither do all marches sound best at this *tempo*.

A good marching band should play its parade repertoire precisely and cleanly, without stressing any one particular cadence. A shifting of cadence in accordance with the requirements of the individual pieces will be more in keeping with the impression of smooth performance.

In some of our recent marching contests, there seemed to be a tendency to overrate the importance of special maneuvers and novel formations, many of which were executed without musical accompaniment. We cannot help but decry this attitude, feeling that the band is not a group of puppets presenting a pretty or entertaining picture, but a group of musicians combining the arts of marching and playing. Thus the execution of a formation while playing music is one stage of achievement, while the elimination of music brings the formation to a commonplace level of pure drilling.

The stages in training and developing a first class marching band are a little more complex than might be imagined. Bands must have thorough training in simple individual movements, and then progress to the mastery of the more complicated movements. Those bands which attempt intricate movements without first having made a mechanical habit of the simpler actions usually lose out when the time of final performance is at hand.

Many excellent texts have been written which deal in full with the various problems connected with drilling the marching band, and among them are: "The Band on Parade," by Raymond F. Dvorak; "Band At-ten-tion," by Mark H. Hindsley; "Drill Evolutions for the Band," by Capt. R. B. Reynolds; "Marching Maneuver Series, Vols. 1, 2, 3, and 4," by George T. Bennett.

These books and many others will prove exceedingly helpful in the training of marching bands.

As a final thought, it is well to emphasize the value of a good marching and playing band to both the student for the training it offers him in discipline and individual responsibility, and to the band program for the community interest and support which it invokes.

At the same time, it should be kept in mind that marching itself is but one of the qualifications of a good band, and since it is primarily a musical unit, musicianship is a most essential part of its equipment. Like every other organization in our entire music program, the marching band is progressing towards better standards and greater achievements.

I am convinced that in the future our marching bands will place more and more stress upon a complete concert band instrumentation, with special emphasis upon the musical selections performed by these

(*Continued on Page* 628)

Especially Designed for YOUR CHILD

No instrument will give your child more pleasure and satisfaction than a Deagan Marimba. It is the easiest of all instruments to play, and especially easy for those who have studied piano. It may be carried anywhere—creates a hit wherever it goes. *And now a special student's model is available at the lowest price in Deagan's history.*

The Deagan Stu-Dette is a full-fledged 2½ octave marimba, with real resonators and bars of genuine Honduras rosewood. Its tone has all the rich, mellow beauty which for more than half a century has distinguished Deagan instruments. It comes complete and ready to play, with folding legs that enable you to place it out of the way when not in use.

There's a world of fun for all the family in this inexpensive instrument, with a chance to join one of the hundreds of Stu-Dette Marimba orchestras now forming throughout the land. Ask for full particulars!

TEACHERS AND MUSIC SUPERVISORS

The low price of the Deagan Stu-Dette, with its full, rich tone, opens an entirely new field of musical possibilities. The Deagan lesson course makes it easy for any instructor to teach the Marimba. Why not a Marimba Ensemble for *your* school or among *your* pupils? Details are yours for the asking.

Why Study Music?

By JANET NICHOLS

"Music is the mediator between the spiritual and the sensual life."
—Beethoven.

ONE AFTERNOON I had a half hour of leisure. There was really nothing that needed to be attended to, and so I sat down at the piano and played a lovely *Tyrolese Dance* by Charles Repper. Something about the lilt of the music charmed me, and indeed it transported me into another world. I found myself playing this tune over and over again, and each time feeling more refreshed, in fact, rejuvenated; and my cares completely vanished.

That half hour of music changed my whole outlook on life for the remainder of the day, for a few days after. I found myself in an unusually pleasant frame of mind, and my friends seemed to find me agreeable, too, because it seemed as though everyone I met desired that I accompany them to something or other.

If studying an instrument long enough to be able to play reasonably well will do this for one, it certainly seems to be worth the effort required in the learning, but music does even more than this.

As a child the writer's family and general environment were not what one would consider in the "privileged class." Everyone was striving for little more than an existence, and without music there is perhaps no reason to believe that we ever would have departed very far from that environment; but through music we were able to step completely out of it.

Everytime I am in the society of some cultured and interesting person I say silently, "Music has done this for me"; and I offer a little prayer of gratitude.

The study of music in almost every instance should bring success and happiness in some way or other.

FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

A Fresh Start for Teacher and Pupil

AGAIN WE ARE on the threshold of a new season filled with new hopes, aspirations and resolutions. Refreshed after a period of rest and recreation it now behooves us to take stock of ourselves and become fully prepared for what there is in store for us in the coming months. If you are not one of those who has taken time by the forelock by using some of the vacation days for this purpose, it is well to begin at once to brush up on technic and to send for the latest catalogs from publishers of fretted instrument music in order to become familiar with all the new publications. A teacher who uses the same material year in and year out and refuses to keep his knowledge up to date, soon finds himself in a rut on a downward path, which eventually leads to failure. Where a certain guitar or banjo method may be just the thing for one pupil, another of opposite temperament and musical ability will require something different and it is the progressive, well informed teacher, who will select the right studies for each pupil in order to assure consistent progress, which finally means success.

Amongst the many letters addressed to this department during the past year, we have received an occasional complaint about poor business and asking how to secure more pupils. Then again we have had reports from others, who boasted of a full schedule in spite of the business depression. Evidently there are quite a number of teachers who have found a way of selling themselves and their services to the public through intelligent and vigorous advertising. Just what the best method of advertising should be in his own environment, is a problem every teacher must make an effort to solve right at the start of his career. A card in a metropolitan or local newspaper is effective, but it should be displayed consistently over a long period. Circulars mentioning the instruments taught, the possibilities and advantages of playing the fretted instruments and describing your methods of teaching should be sent to every prospect and, in smaller communities, to every resident. If there is a radio station in or near your town it is advisable to arrange for a weekly broadcast for yourself and a few advanced pupils. Many stations will give you this time gratis, if you can put over an interesting program. Pupils' recitals in the studio or in local churches, Sunday Schools, or Y M C A's, where advanced pupils and fretted instrument ensembles may take part, are perhaps the most effective and least expensive advertising mediums. An attractive, well delivered program of guitar, mandolin and banjo numbers in solo and ensemble never fails to stimulate the interest of an audience and will always tempt many of the hearers to become one of the performers instead of remaining a listener.

After the student enrollment has arrived at a satisfactory stage, the main task is to hold the pupils and keep them interested. By this we do not mean to keep them coming to the studio, merely to collect the dollar and a half or two dollar fee each week, but to have them come for advice and help in all their musical problems and for an outline of study from week to week and year to year until they have become so proficient, that they may take pride in their own accomplishment and be a credit to their master.

As soon as a pupil has made sufficient progress on his respective instrument, he should be permitted to become a member of the studio orchestra. Nothing in his early student days will create so much interest and give him so much pleasure, as to become part and parcel of an ensemble of players rehearsing musical numbers within the range of their technical abilities and occasionally performing them before relatives and friends. For junior orchestras it is advisable to select music that is easily understood, melodious and well adapted to the technic of the fretted instruments; and do not hesitate to add occasionally a popular number of the better type.

Fretted instrument teachers, perhaps more so than others, are frequently confronted with the statement from a prospective pupil, "I just want to learn enough to play popular music." We recall a chat with a prominent teacher during which he boasted that "When anyone comes to me with that request I tell him that he has come to the wrong place"; which, in our humble opinion, is an unforgivable attitude. The mere fact that the person bought an instrument and is calling on a teacher proves that he is anxious to learn to play; and it is a credit to any teacher to take in hand a pupil of that sort and not only teach him to read music and the technic of the instrument, but also develop gradually, by using tact and diplomacy and by frequent personal demonstrations, an understanding and liking of the better class of music. We have in mind instances of this kind, where pupils who started in a similar way, eventually became good players, and the growth of their musical appreciation was such that they became regular subscribers at symphony concerts and operatic performances.

It goes without saying that a pleasing personality, a thorough knowledge of everything pertaining to fretted instruments and a well equipped, pleasantly furnished studio are important contributing factors to the success of any teacher.

The most conscientious and well informed teacher cannot get good results, unless the pupil gives him his full coöperation by faithfully studying the lesson material assigned to him from week to week. The pupil should carry out to the letter the instructions given and try to have the lesson as perfect as possible, even if it is necessary sometimes to add fifteen or twenty minutes to the allotted practice period. A lesson well digested will prove a joy to pupil and teacher alike. Parents of children studying music can assist the teacher greatly by seeing to it that the young pupil adheres to a regular daily schedule. Ask the child to play over the lesson two or three times and then have him play it once more, even if it is only an exercise or a little tune. Having someone listening to his playing will make him feel important and he will try harder to have it perfect. Do not use the word "practice"; it sounds like work and children when picking up their guitar or mandolin want to play.

PACIFIC NORTHWEST'S OLDEST MUSICAL SCHOOL

ARIEL RUBSTEIN, DIRECTOR
ALL BRANCHES OF MUSIC—OUTSTANDING FACULTY
1539 N.E. 10TH AT WEIDLER

EARN A Teacher's Diploma or A Bachelor's Degree IN MUSIC
In Your Spare Time at Home

In every community there are ambitious men and women, who know the advantages of new inspiration and ideas for their musical advancement, but still neglect to keep up with the best that is offered. It is too easy for them to say "I am busy and haven't the time for more study myself." They find that excuse instead of making the effort to use the minutes each day which so often go to waste.

The most successful musician, of course, is a very busy one. The demands upon his attention are never ceasing—yet he is the one who can find the extra time for something worth while. It is for such a one, chiefly, that the Extension Courses are the greatest benefit. For him it is hard to give up his interesting class or position and go away for instruction.

Extension work is also equally advantageous to the beginner and the amateur. The work can be done at home in spare time, with no interference with one's regular work.

The Increased Requirement for DEGREES has Resulted in Larger Demands for the ADVANCED COURSES offered by the UNIVERSITY EXTENSION CONSERVATORY. (Address Dept. A-124) 1525 E. 53 Street, CHICAGO, ILL.

Look back over the last year. What progress have you made? Perhaps you've wanted to send for our catalog and sample lessons before—just to look into them. That is your privilege. We offer them without obligation to you. Ours is one of the leading musical institutions teaching music by the Home Study method and we urge you to take advantage of the spare moments you are sure to find. You must not rely upon your good intentions, as you have in the past, or you will miss this opportunity. There is a greater demand all the time for the courses we offer, as they fit teachers for better positions. This is an age of specialization and the specialist is earning fully double or more the salary of a musician with only a general knowledge. Openings in the music field are growing very rapidly. There are big paying positions for those who are ready for them.
A Diploma is the key to the best teaching position. Do you hold one?

Our Diplomas and Degrees are Awarded by the Authority of the State of Illinois

It is up to YOU. On your own decision will rest your future success. Fit yourself for a bigger position—demand larger fees. You can do it! You can easily and quickly fit yourself right at home through Extension Courses.

This great musical organization now in its 35th successful year—has developed and trained many musicians and many successful teachers. And to you we offer the same advantages which have been given to them. Now is the opportune time for you to clip the coupon. Get it in the first mail. Don't waste any more time! The coupon will bring you information about the lessons which will be of untold value.

This Is *Your* Opportunity—Mail the Coupon TODAY!

QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Tempo and Pedaling

Q. 1. I am in doubt about some of the tempos in the Bauer arrangement of the Bach Prelude and Fugue in C minor *for two pianos. Will you please give me the approximate markings? In the* Prelude *the* Maestoso *marking is followed soon by* Tempo giusto. *Does this mean a return to the* Maestoso *after the preceding* astringendo? .

2. *What pedaling is advisable in Liadow's* Music Box (*Hesselberg's arrangement for two pianos*)? *My friend and I have been using the soft pedal, and a little of the damper pedal in the D major section. Is that correct*—Miss O. M.

A. 1. Approximate *tempos* are: *Prelude,* ♩ = 132; *Fugue,* ♩ = 132. If this *tempo* is too fast for the octaves at the end of the fugue, a slower *tempo* can be used. I have examined two editions of this organ fugue but neither has the markings you mention. *Tempo giusto* means to play in strict time. No doubt after Mr. Bauer had marked the term *stringendo* he used the term *tempo giusto* so the player would be sure to get back to normal *tempo*.

2. The space in this column is too limited to mark more than a measure or two of pedaling. You are correct in using the pedal as you do in the D major section. The damper pedal can be used freely in compositions imitating a music box, as that instrument has no device for shutting off tone; of course, not to the extent of blurring. Two-piano playing is often spoiled by too much pedaling. Often it is necessary for only one of the performers to use the damper pedal; naturally this will be the one who plays the lower fundamental basses.

How to Play a Trill

Q. Will you please tell me how to play the trill in the following example from Ketelbey's In a Monastery Garden? *I have heard it played three different ways, lately.*—Miss J. M. P.

Ex. 1

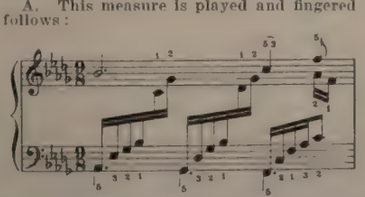
A. The trill may be played either of these two ways:

Ex. 2

What is a Tie?

Q. What is the correct definition of a tie? I find that some books state, "A tie is a curved line connecting two consecutive notes of the same name and pitch, into one continuous tone, the first note being played and the key held down through the full value of both notes. If either of the two notes has a dot over it, the sign is a slur, not a tie, and both notes are played."

On the other hand, other books state, "The tie binds two or more figures of the same sound and is used instead of a dot when the note to be prolonged is interrupted by a bar or when the value is less than that of the first note, or when the duration of the sound is of many measures."



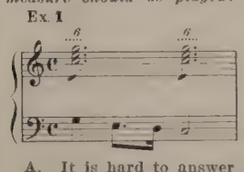
Since these statements are contradictory, I would appreciate your advice.—Miss A. C. T.

A. The tie is variously defined, but I like the following definition, taken from my own "Music Notation and Terminology," as well as any: "A tie is a curved line connecting the heads of two notes that call for the same tone and indicating that but one tone is to be sounded, this tone having a duration equal to the combined value of the two notes." Your second definition seems to me both cumbersome and incorrect, whereas the first one is not clear and refers only to music played on a keyboard instrument. A comprehensive definition ought to cover the use of the tie in all sorts of music—including vocal.

How to Finger Arpeggios

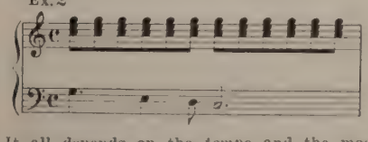
Q. Please show me how to finger the arpeggios in measure 31 of Debussy's Clair de lune. (*Jean Jobert edition.*) *Are all the runs on the bass staff (page four) played with the left hand or with left and right?*—Miss L. S.

A. This measure is played and fingered as follows:



In this particular edition all notes on the bass staff are played with the left hand and all on the treble, with the right hand; however, this is not an ironclad rule. You are always allowed to play them some other way provided you find it better for your type of hand.

A Question of Rhythm.



Q. Will you please inform me as soon as possible as to how the second count of this measure should be played?—M. E.

Ex. 1

A. It is hard to answer your question on the basis of so short an excerpt. If the *tempo* is fairly rapid, the sixteenth note in the left hand will probably be played *with* the sixth of the eighth notes in the right hand, in spite of the fact that according to strict timing this sixteenth note would come just a little *after* the sixth eighth note.

Ex. 2

It all depends on the *tempo* and the mood of the composition, however; and if this happens to be a song, it depends also on the text at that particular point.

What is "Bebung"?

Q. In the Adagio *of Beethoven's "Sonata, Op. 110," measures five and six, there occurs a repeated high A. My edition (Lebert and Stark) has the notes connected in pairs with what look like ties, but the fingering is marked 4-3 for each pair and an editorial note speaks vaguely of the "Bebung," an expression I never have heard applied to piano music. The marks look like to me ordinary ties. Are they ties or not? If not, what authority is there for their not being ties?*
—A. H. C.

A. These marks certainly look like ties; however, artists do not play them that way, and with good authority, for the fingerings are Beethoven's own. By "Bebung" is meant "an effect obtained on the obsolete clavichord by rapidly vibrating the finger up and down without raising it from the key." Of course, on the pianoforte this will not make a tremolo. I can do nothing better than to quote Mr. Artur Schnabel, one of the best of living authorities on the playing of these sonatas. In a footnote he speaks of these repeated A's as follows: "Now, as to the description of the pairs of repeated A's. The fingering is Beethoven's. The key which is touched by the third finger, should produce a tone hovering between reality and imagination—but it must be heard nevertheless. Perhaps it might be helpful to take some suitable word for this pair, a monosyllable, such as "Du," whose vowel takes on a soulful emphasis, changing from gentlest sigh to passionate cry."

A MacDowell Question.

Q. 1. Is the piano solo, Poem *by Fibich a part of a larger composition, or originally written for some other instrument?*

2. In MacDowell's To a Wild Rose, *is the* A *in the bass repeated, since it is impossible to hold it over from the preceding measure?*
—Miss I. T.

A. 1. As his Op. 41, Fibich published four sets of short pieces. His *Poem* (*Upominky* in the original Czechoslovakian language) is No. 4 in the fourth set (or book), which contains forty-one pieces.

2. I have often wondered why, in such a very simple piece, MacDowell should have written such a difficult measure. Perhaps that is why he threw it into the wastebasket! (You know that is where Mrs. MacDowell found this little gem.) Only a large hand is capable of playing this measure, so, unless you have such a hand, you will have to repeat the bass *A* in the second measure following. If you are fortunate enough to have a sustaining pedal you can make excellent use of it here.

No damper pedal is needed in these two measures.

Tied Notes in Jensen's Elfin Dance

Q. Will you please tell me if the G in the sixth measure of Jensen's Elfin Dance *is tied to G in the seventh measure; also the F-sharp in the seventh measure.*—Mrs. G. B. T.

A. Yes, they are tied notes. Jensen is often guilty of this faulty marking of tied notes.

VOICE QUESTIONS

Answered

By FREDERICK W. WODELL

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Three Vexing Pupils

Q.—I have three pupils about whose vocal faults I should like some advice. 1. The first is a young lyric soprano who has a slight tremolo. *Can you suggest some helpful breathing exercises and* vocalises *to remedy this?*

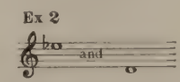
2. The second is a young basso profundo *who has no trouble with his low C, but who begins to have difficulty with his larynx as soon as the scale possesses tones above the lift in his voice, when he is asked to sing an occasional scale ascending and descending. What exercises would you suggest to free his voice and develop his high tones and some resonance? Also please give a list of teaching songs for this young basso?*

3. The third is a young coloratura *who had her tonsils removed last summer, and who lately has developed an ugly, heavy quality in her lower voice. Can you suggest some exercises for her; also some songs to develop her voice?*

—M. E. M.

A.—1. Improve the student's ability to send out her breath very slowly and steadily indeed, while singing. Lead her to will, strongly, before singing, that the tone shall be clear and steady, and to keep her mind on that point. Give her work on the starts (attack), on easy, middle pitches, using much *ĕ, ĕ* (let) and *ŭ* (cut), and later *o* (lōt) and *ah*. Sharp, with clear definition of pitch. Later, lengthen the tones somewhat and demand that the voice shall be willed to be steady.

2. Get this singer's tone production on a correct basis of controlled outgoing singing breath, with freedom of tongue and jaw, on sustained tones, with moderate power, especially between



Ex 1

Do not talk larynx to him, nor allow him to think about how the "wheels" of his vocal instrument "go round." Use short downward scales and *arpeggi*, on *ŏ* (no) *ô* (lot) *ah, ă* and *ĕ*, for a time. Later the same work, but now downward-upward-downward; finally upward-downward. Allow no pushing of the voice upward. With the development of a good middle range the upper voice will begin to come into the fold. Warning—in such cases the process is a comparatively slow one and requires patience and intelligent perseverance on the part of both teacher and pupil. We think you would gain much for your work by a serious study of two books: "Guide to the Male Voice," by Frederic W. Root, and "Art of Singing," by William Shakespeare. You might examine the following numbers for your basso: *Heart's Devotion*, by A. W. Kramer (in D); *Sylvia*, by Oley Speaks (lowest key); *The Shepherd True*, by E. M. Read (low key). You would do well to look over the catalog of the publishers of THE ETUDE, entitled "The Singer's Handbook," in which you will find the items listed according to voice and grade, and the compass limits given. See also the John Church Company Catalog of Songs.

3. Put this student upon a diet of work with downward scales and *arpeggi*, conversational weight of voice, using for the most part the vowels *ĕ, ĕ* (let), *ă* (at) and *ô* (lot) between

Ex 2

Find "head voice" on the top note, and carry it down as low as possible. Be certain that there is no stiffness in the tongue and jaw. Let there be a natural smile about the eyes and mouth, and in the sound. Do sustained tones from fourth line D, treble clef, downward one octave, using *M* preceding and closely joined to the vowel; also use *N* in the same manner. Be sure the pupil uses a loose muscle under the chin, and a smile on the face. It might be well to consult with the throat surgeon as to whether this student's throat is in fit condition for singing. The following pieces may be examined for her use: *A Baby's Hair is built of Sun*, by William Wentzel; *My Heart Ever Faithful*, by Bach; *The Sleigh*, by R. Kountz; *Nothing so Beautiful*, by Meta Schumann; *The Blackbird*, by R. Billin; and *Upon a Gay Morning*, by Vernon Eville (in E-flat).

For a Weak Voice

Q.—I am a girl fourteen years old. My compass is from G below Middle C to fourth space E, G clef, though occasionally I can reach the high A. The voice is weak and not very clear, though at school I was considered rather good. I am always clearing my throat while singing. My parents will not be able to afford me vocal lessons for quite a few years yet. Should I try to develop my voice by singing, or just let it alone?—C. T.

A.—The fact that you are always clearing your throat while singing may be a sign that you have some degree of throat trouble, or that you are singing incorrectly, or both. The doctor can tell you about possibility number one; a good vocal teacher, about number two. You cannot develop your voice by singing incorrectly. We presume you are certain to do some singing, so advise you to sing lightly for the most part, and in the long middle range, keeping the tongue loose and forward, and the lower jaw free. Watch yourself in the school and other ensemble singing, that you do not force the voice.

Books, Records, and a Tenor

Q.—1. I am twenty-seven years of age; my voice is a robust tenor. I studied three years and made progress but am now unable to continue. Teachers have described my voice as "beautiful." Will you recommend some books with instructions that would help to further my progress. There are plenty of teachers who want to teach me for almost nothing, but past experience has taught me not to study from such as these.

2. Do you think the study of records by such singers as Caruso, Gigli, de Luca, Ruffo and Martinelli a benefit? I want you to understand that I am not trying to imitate them, but listen to their voice production, phrasing, and so on. I am a constant reader of THE ETUDE, *and particularly enjoy your answers to voice questions.—Merci.*

A.—1. Read, and seriously study the following books, which may be ordered from the publishers of THE ETUDE: "Common Sense and Singing," by J. B. Kennedy; "Art of Singing," by William Shakespeare; "Guide to the Male Voice," by Frederic W. Root; "Position and Action in Singing," by E. J. Myer.

2. Bear in mind that some voices which give satisfaction in the concert room do not record very well; that there is a difference in the recordings of the same performer; that even with the best recording, there is nevertheless the interposition of a mechanism between the singer and the listener, which is not the case when these face each other in the auditorium. Your list includes three tenors, and two baritones. Listening to them would afford an opportunity for comparison as to phrasing, which might benefit you. How much good you would get out of listening to their voice production we cannot say. This would depend upon the adequacy of your equipment for the task.

To Sing or Not to Sing

Q.—I am a young man of seventeen years, singing in a choir, in concerts, and operettas. A very fine musician, teacher of piano, advises me, however, not to sing at all; to make piano playing my study. What to do?

—Inquirer.

A.—See a first class vocal teacher and take his or her advice about continuing the vocal work.

A Young Hopeful

Q.—I am fifteen years of age. My voice has a compass from F below middle C to D above high C, if I have confidence in myself. I hope to take lessons later on, and can now play the piano quite well. What is my voice classification? Is the voice worth training for concert or operatic work? Is the present omission of voice lessons likely to be detrimental to my future as a singer?—L. C.

A.—Voices are classified by *timbre*, as well as by compass. Have a good vocal teacher to tell you to what line of professional work you may look forward. Only after actually having heard you sing a considerable variety of songs, could anyone give an opinion of your voice and your chances of success, that would be of any value to you. No detrimental results would ensue should you wait for another year or two before beginning serious study.

A Vocal Obstruction

Q.—A young lady pupil with a long range and a good voice, often has a "frog in the throat," which prevents the tone from coming through. Is this nervousness?—B. G.

A.—Probably. Your pupil might well practice the breathing exercises and those for the "starts" on a controlled breath, given in "The Art of Singing," by William Shakespeare. See also answer to E. B.

For a "Dry" Throat

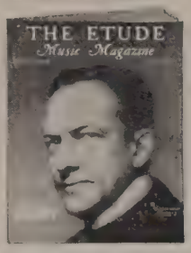
Q.—I have a pupil with a very good soprano voice, but her throat becomes dry after singing for a while, especially when the room is warm.—E. B.

A.—Nervousness may contribute to this condition. A good medical man might suggest helpful treatments, both local and systemic. Let your pupil inhale through the nose instead of the mouth, as often as is practicable when singing. See also answer to B. A. A small glassful of refreshingly cool (not cold, and little or *no* ice) often will prevent this throat trouble. If not effectual in this case, try an additional small glass of the same water, about a half hour before lesson time. Be sure that the pupil is singing with a very free and open throat.

An Uncertain Voice

Q.—One teacher declared me to be a coloratura soprano, started me with Caro nome, *and urged me constantly to sing more loudly. After eight months I changed teachers for financial reasons. My present teacher says I am either a contralto or possibly a mezzo. I want to learn to sing professionally. Where shall I go to get instruction.—M. A.*

A.—You reside near a great and musical city where live many good teachers. Get into personal touch with several of them, hear some of their pupils, and judge for yourself. As a general rule it is not wise to put the load of a cart horse on a pony's back. However, occasionally a timid pupil is the better for being urged really to do something with the voice. Good tone quality is the proper aim of the student.



The Publisher's Monthly Letter

A Bulletin of Interest for All Music Lovers

MUSIC STUDY EXALTS LIFE

MUSIC STUDY EXALTS LIFE

The Cover for This Month

Practically every major city in this country as well as a number of the leading cities abroad, in South America, and in the Orient, at some time or other throughout the first three decades of this century, saw headlines and billboard notices to the effect that Henry Hadley was to appear as conductor of the symphony orchestra of that great city.

Side by side with the international fame he built up as a conductor was his even greater fame as a composer, particularly of orchestral works which usually were features of the symphony concerts he conducted. Many other American composers gained premieres for their symphonic works through the generous representation Dr. Hadley gave American composers on the programs conducted by him. He held positions as the conductor or associate conductor with the Seattle Symphony, San Francisco Orchestra, New York Philharmonic Orchestra, and the Manhattan Symphony. On occasions he was the guest conductor of the Philadelphia Orchestra.

For a period Dr. Hadley was a conductor at the Mayence Stadt-Theater, and by invitation of Gatti-Casazza he conducted the Metropolitan Opera House Company's second presentation of his opera, "Cleopatra's Night". At Mayence (or Mainz-am-Rhein) he produced and conducted his first opera, "Safie", (1909). Another of his operas "Azora, Daughter of Montezuma" was given its premiere by the Chicago Opera Company in 1917. In 1918 the Society of American Singers, New York, presented his one act opera, "Bianca". His cantata, "Belshazzer", for chorus, three soloists and orchestra was presented for the first time anywhere in 1932 at Robin Hood Dell, Philadelphia, with the Philadelphia Orchestra and the Strawbridge & Clothier Chorus, under the direction of Dr. Hadley.

It was a great loss to America when Dr. Hadley died at his home in New York on September 6, 1937. His health had been poor for nearly two years prior to this, but in the months before his passing he was virtually a semi-invalid. This great American celebrity, to whom tribute is paid by the placing of his portrait on the cover of this issue of THE ETUDE one year after his death, was born in Somerville, Massachusetts, December 20, 1871. He was christened Henry Kimball Hadley. His father, who was a teacher of music, gave him his first music instruction, teaching him two instruments—the violin and the piano. Because the boy showed talent at an early age in creditable attempts at composition he was sent to the New England Conservatory of Music so that he might have the opportunity of studying under Stephen A. Emery and George W. Chadwick for theory and composition. In 1894 he went to Vienna to study counterpoint under Eusetius Mandyczewski. While there he was studying violin with Csillag.

When he returned to this country he became director of music at St. Paul's School, Garden City, and during this period held an organ position in New York. Renowned Anton Seidl, successor to Theodore Thomas as conductor of the Philharmonic Society, presented Hadley's Symphony No. 1 in 1897. His second symphony, "The Four Seasons", won the Paderewski prize for American Composition in 1901. Among his other prize winning compositions was his symphonic rhapsody, "The Culprit Fay", which won the National Federation of Music Clubs $1,000 prize. His opera, "Bianca", won the Hinshaw $1,000 prize; and his cantata, "In Music's Praise", won the Oliver Ditson prize in 1899.

Something of the attention that was gained by Hadley's compositions from the very beginning is evidenced in the fact that in 1892 the then thirty-year-old Walter Damrosch on one of the his New York Philharmonic Society Concerts conducted Hadley's concert overture, "Hector and Andromache". The great John Philip Sousa, when touring at the age of forty in 1896 with his epoch-making Sousa Concert Band, played Hadley's "Festival March".

With his orchestral works Hadley gained credit for being "dextrous to a remarkable degree in the mechanism of composition, with a scoring that was mature, fervent and certain". The critics credited him with having the gift of melody and the courage to write it without losing it in any incoherence through efforts at ultra-modern effects.

Many charming and beautiful numbers in smaller forms came from the pen of this gifted composer. He had approximately 150 songs and piano pieces among his compositions besides his anthems, part songs, etc., and numerous major works for the orchestra and the operatic field.

Maybe this month you'll find a picture of the composer of that song that is so dear to you, of that singer you heard years ago and whose voice now is stilled forever, of that celebrated pianist whose talent was so highly lauded by your mother, of that new sensation in the opera houses, the films, or on the radio. There'll be a brief biography, too, telling you something about his or her life and achievements.

Started in February, 1932, this ETUDE feature has appeared each month since, listing musical celebrities in alphabetical order. The listing now presents those whose family name begins with the letter S and it will continue until all of outstanding prominence in the world of music have been included.

Music clubs, especially junior organizations, have found this series most helpful. So have classes in music appreciation, and normal school students. Some readers, to make a more compact and convenient reference, purchase scrap books in stationery or 5-and-10-cent stores and paste in them each page as it is published.

Incidentally, separate copies of this page are printed, after it appears in THE ETUDE, for the convenience of those who do not wish to mutilate their copies of the magazine. These copies are obtainable at 5 cents each, postpaid. Back copies of all of *The Etude Historical Musical Portrait Series* pages are obtainable.

Let's Get Up a Club!

The "gang spirit" in boys and in girls is an expression of their gregarious instincts. If this is directed along the lines of a wholesome active club, it may produce values which influence the child. If neglected and let "run wild" it may prove the doorway to a life of crime and immorality; as, indeed, it has proved many times.

Teachers and parents are beginning to realize that profitable, elevating clubs are an invaluable part of modern education. The best authorities on education advocate their formation, so that every child may have the advantage of belonging to a club built around the matters in which the student is most interested.

America has literally thousands of musical clubs, large and small, but it never can have too many. The Publishers have all sorts of helps for forming music clubs to which we shall be glad to refer you without cost. Just write us "Please send advice upon how to form a musical club" and we shall be glad to acquaint you with lists of materials.

Warning! Beware of Frauds

Frauds posing as magazine agents, both men and women, are active. Pay no money to strangers unless you are convinced of their responsibility. Read any contract offered you. Do not permit any agent to change the terms in a contract. Help us to protect you from loss. We cannot be responsible for the work of swindlers.

A Feature Many ETUDE *Readers Enjoy*

Many readers have told us that one of the first pages to which they turn upon opening their monthly copy of THE ETUDE, is that which shows the 44 miniature pictures with thumb-nail biographies of *The Etude Historical Musical Portrait Series*. What a mine of information in a 9¼ x 12" space!

Change of Address

Be sure to advise us immediately, giving both permanent and summer addresses if copies of THE ETUDE have been following you to your summer home. It requires about four weeks to make a change of address. Please let us hear from you promptly so that there will be no interruption in service.

"Then Cometh the Harvest"

At this season of the year throughout the North Temperate zone the measure of success or failure attending spring-time plantings is known to every farmer. The music publisher every month is observing the measure of success attending certain publications in being able to note them in current reports of numbers which are running so low in stock quantities as to require reprintings.

Out of the long list of publications requiring reprintings during the last thirty days we have selected the following as those most deserving of mention. As stated before in these columns, the usual rule in standard and educational music publishing is to run an edition sufficient to care for two seasons' demands. It is only those that lived up to this average on the last editions that are mentioned here.

The Theodore Presser Co. gladly will extend examination privileges on any of these numbers.

PRESSER'S FALL BARGAIN OFFERS

Provide Money-Saving Opportunities and Aid Active Music Workers in the Vitally Important Detail of Acquiring New Materials

• THE SPECIAL INTRODUCTORY POSTPAID CASH PRICES ARE GOOD ONLY UNTIL SEPT. 30, 1938 •

THEODORE PRESSER CO., 1712 Chestnut St., Phila., Pa.

The "Why" of Fall Bargain Introductory Offers—

There is a cooperative thought in giving active music workers money-saving prices on these new publications, as a price-advantage to the buyer aids the publisher in making known the merits of the books to a wider audience of music-minded folk.

Necessary Limitations On These Bargain Offers—

ONE COPY OF A PUBLICATION is all that is allowed to a customer at the "Introductory" or the "Advance Offer" price.

NO RETURNS, NO EXCHANGES, NOR EXAMINATION PRIVILEGES PERMITTED on any items secured at these prices.

PAYMENT MUST ACCOMPANY THE ORDER.

Order Promptly As These Prices Positively Will Be Withdrawn October 1, 1938.

Offer No. 1

PLAY WITH PLEASURE

An Album for the Grown-Up Piano Student

By WILLIAM M. FELTON

(Price, $1.00)

Introductory Cash Price, 60c POSTPAID

SOLD ONLY IN THE U. S. A.

The increasing interest in piano playing as a relaxation, reflected in the sales records of leading piano manufacturers, is quite evident to music publishers in the demand for methods, studies and pieces that appeal to adult students. Many, whose musical education was neglected in youth, are now taking up piano study and not a few instrumentalists, products of school bands and orchestras, also turn to the piano as a more personally satisfying means of making music. Here are arrangements, about Grade 3, of classic and standard numbers and selections from modern composers, but the outstanding feature of the compilation is the inclusion of so many familiar melodies from operatic, folk song and other sources, hitherto not obtainable in comparatively easy piano arrangements. Everybody enjoys playing and listening to selections from *The Mikado, Traviata, Carmen* and *Chimes of Normandy*; it will be a real treat, not only for the adult student, but for many "home" pianists of limited technical attainments, to be able to play Sibelius' *Valse Triste*, Mendelssohn's *On Wings of Song*, the beautiful *Poeme* by Fibich and such standards as the *España Waltz*, arranged by Waldteufel from Chabrier's celebrated *Rhapsody Espagnole*, *Qui Vive* (Ganz) and the *Salut à Pesth* (Kowalski). For the many pianists who do not aspire to the virtuoso stage of development, but who love to play good music, this album will prove a cherished possession.

Offer No. 2

MUSICAL VISITS WITH THE MASTERS

16 Simplified Arrangements from the Classic Composers

For the Piano

Compiled by BRUCE CARLETON

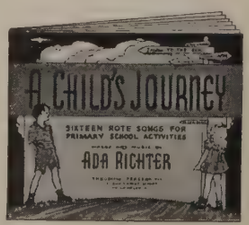
With Biographical Notes by PRESTON WARE OREM

(Price, 75c)

Introductory Cash Price, 40c POSTPAID

Every sincere teacher seeks to inculcate in the pupil a love for good music. Really, it is the only way to retain the student's interest in the long run. Various methods of introducing the young student to the classics have been tried—radio, the phonograph, concert attendance—but it is generally agreed that nothing proves more interesting than to have the student, himself, play the classics. To make this possible, for the pupil just about completing the first grade, this book was compiled. The title page shows portraits of the sixteen great composers whose works are represented, and upon opening the book the pupil finds simplified arrangements of pieces considered best representative of the composer's style, each two pages in length and accompanied by a brief biography. Next to the biography there is space provided for pasting in a pen-graph portrait of the composer. The sixteen portraits are provided at the end of the book. Here are the names of the composers: Brahms, Mozart, Schubert, Verdi, Mendelssohn, Gluck, Rubinstein, Chopin, Haydn, Bizet, Tschaikowsky, Beethoven, Handel, Liszt, Schumann and Bach.

Offer No. 4



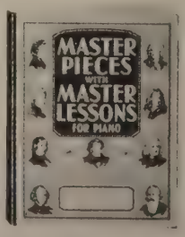
A CHILD'S JOURNEY

Rote Songs for Primary School Activities

By ADA RICHTER

(Price, 75c)

Introductory Cash Price, 50c POSTPAID



Mrs. Richter, who has been most successful in her teaching of little ones, plainly reveals the reason for her success in the now thoroughly established *Ada Richter's Kindergarten Class Book* ($1.00) and the popular *My First Song Book* (75c), both of which have imposing sales records for the short time they have been on the market. This new book of 16 songs presents stories of individuals, scenes and events a child might be expected to encounter on a holiday trip. First he stops *At the Barber Shop* and then after meeting *Mr. Policeman* he rides *On a Double-Decker* to the Zoo where he meets *The Camel, Lazy Sleepy Crocodile* and *Mrs. Kangaroo*. Then he takes *An Airplane Ride* to the country where he has a jolly time with *Two Frogs, A Cow* and *The Happy Bee*. Returning home he listens to the Story Lady of the radio as she tells of *Lo Ling Lee, Tiny Suki San* and *Little Dutch Children*. Other holiday journeyings include *Hallowe'en, Mr. Turkey Runs Away* (Thanksgiving) and *My Christmas List*. The piano accompaniments are quite simple; in fact, the songs are sufficiently rhythmic to be sung without accompaniment.

Offer No. 3

MASTER PIECES WITH MASTER LESSONS

For the Piano (Price, $1.00)

Introductory Cash Price, 65c POSTPAID

Thousands of advanced piano students who longed for the opportunity to enter the master classes of the world's famous piano pedagogs and were prevented from attending because of the expense involved and the distance from their residence to the place where these master classses are held, will find in this volume much that they would have obtained had they been able to register with these teachers for private lessons. Imagine having under one cover master teachers' analyses and directions for playing fifteen of the great master pieces for the piano! Here each master lesson is given not only once, as in a class, but always is in possession of the student and may be read and reread before and during the practice period. Each composition is completely keyed with the master lesson that accompanies it.

Offer No. 5

TEN STUDIES IN STYLE

For the Piano

By CARL WILHELM KERN

(Price, 60c)

Introductory Cash Price, 30c POSTPAID

This latest addition to the Music Mastery Series is a set of ten studies in advanced second and early third grade by the well-known composer and teacher, Carl Wilhelm Kern. In each some special technical problem usually arising at this stage of the pupil's development is given attention, such as crossing hands, phrasing, contrasting dynamics, scale passages and various rhythms. To make the work more interesting to the pupil these exercises are presented in the form of pieces, all of them bearing imaginative titles like *Banjo Joe, Elfin March, Merry May, Tarantella, Con Amore, At a Military Post, Rustic Dance, Pranks, At Midnight,* and *At the Airport*. Each is accompanied by an analytical note and suggestions for the development of technic.

Offer No. 6

FOURTH YEAR AT THE PIANO

By JOHN M. WILLIAMS

(Price, $1.00)

Introductory Cash Price, 70c POSTPAID

SOLD ONLY IN THE U. S. A.

John M. Williams

The patience of the many who subscribed for this book in advance of publication is at last to be rewarded in the early delivery of first-off-the-press copies. Mr. Williams exercised the greatest of care in selecting material for this work as, naturally, he wanted it to rank with his extraordinarily successful books that cover the first three years' study at the piano for students of the upper grammar and high school ages. The study material, all attractively titled, has been chosen from both standard and modern sources. The names of Concone, Czerny, Schytte, A. Dorn, Franz and Bilbro give some idea as to the variety. Among the features that will be noted with pleasure by the progressive teacher are the pedal, chord and arpeggio studies and the extensive work in frequently-neglected tonalities, major and minor. Those who have used the previous Williams books know that they can expect most appropriate and always interesting musical examples. With Mr. Williams musicianship goes hand in hand with technical development. The student who completes this book adds to his repertoire several very desirable recital numbers.

Offer No. 7

TWO-VOICE INVENTIONS

By J. S. BACH

Edited by F. BUSONI

Carefully Prepared with English Translations By LOIS and GUY MAIER

(Presser Collection, Vol. 346—Price, 60c)

Introductory Cash Price, 35c POSTPAID

SOLD ONLY IN THE U. S. A.

During the past season the publishers were privileged to add to the Presser Collection of Standard Works and Studies in Book Form the famous Busoni Edition of Bach's *Two-Voice Inventions* in an excellent English translation of the text by Lois and Guy Maier. Printed on a superior quality of paper from brand-new plates, this edition reflects credit on the publisher and the editors, and it will be well worth the teacher's while to specify "Presser Collection" when assigning this work to students.

Offer No. 8

THREE-VOICE INVENTIONS

By J. S. BACH **Edited by F. BUSONI**

Carefully Prepared with English Translations by LOIS and GUY MAIER

(Presser Collection, Vol. 347—Price, 60c)

Introductory Cash Price, 35c POSTPAID

SOLD ONLY IN THE U. S. A.

J. S. Bach

The editors who so efficiently prepared the above-mentioned Bach's *Two-Voice Inventions* also made this excellent American Edition of the *Three-Voice Inventions*. The work should be especially appealing to American students and educators because it is the product of one of America's outstanding authorities on the works of Bach, who, in collaboration with his talented wife, made the English translations and carefully edited every detail of the book's preparation. Don't fail to mention "Presser Collection" in ordering.

Offer No. 9

GROWN-UP BEGINNER'S VIOLIN BOOK

By MAURITS KESNAR

(Price, $1.00)

Introductory Cash Price, 65c POSTPAID

SOLD ONLY IN THE U. S. A.

With the rapid growth in the number of community orchestras there has arisen a shortage in violinists; and directors, in many instances, have taken a page from the experience of high school music supervisors and have organized violin study classes of adults. One of the handicaps these progressive individuals have encountered is the lack of appropriate material published. The author of this book, widely known in educational circles, experienced this condition and set about to make a new work. He knew where to find exercises, of course, and from all the celebrated writers for the instrument he has chosen the most suitable for each stage of the pupil's progress. But to make the book really attractive he, and the publishers, knew that a liberal amount of pleasing, melodious recreation material must be interpolated. At his disposal was placed a fine library of copyrighted compositions by contemporary composers. He selected what he considered the best of these for inclusion in the book and then, after considerable research, added easy arrangements of folk songs and dances some of which are little known to the present generation of music lovers. His method, especially designed for classes, but also suitable for use in private instruction, employs the "Key of C approach" and gives careful directions as to fingering, bowing, etc., frequently simplified by illustrations and charts, all of which carry the student into the playing of a fair-sized repertoire. The publishers believe that this work will rank with the successful beginner's books that they have issued for piano and other instruments.

Offer No. 10

LITTLE PIECES FROM THE CLASSIC MASTERS

For Violin and Piano

Compiled and Arranged by LEOPOLD J. BEER

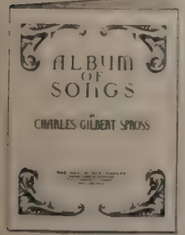
(Price, 75c)

Introductory Cash Price, 45c POSTPAID

C. von Gluck

Many young violinists have visions of future achievements that ultimately will lead to a seat in the symphony orchestra, or to the concert platform. The experienced teacher knows that to achieve the goal more than technical facility will be required. Genuine musicianship, and a real deep-seated appreciation of the classics, is absolutely essential to symphony player and soloist. World-famous violinists and teachers have discovered so many gems of melodic inspiration in unknown or forgotten works of the old classic composers that a number of these authorities make a hobby of delving through old libraries in search of these priceless treasures. Mr. Leopold J. Beer, long prominent in the musical life of Vienna and a distinguished violinist and pedagog, has gathered together and arranged for this volume selections from Purcell (1658-1695), Francois Couperin (1668-1733), Rameau (1683-1764), Bach (1685-1750), Handel (1685-1759), Gluck (1714-1787), Kuhnau (1667-1722) and Louis Couperin (1630-1665). All of the pieces are within the playing capabilities of students well along in the first position. They have been carefully fingered, phrased, and the bowings clearly marked. The arranger also gives alternate fingerings for playing, where desirable, in the third position. This volume should be in the library of every violinist and the publishers are confident that it will receive a most cordial welcome from the teaching profession.

Offer No. 11



ALBUM OF SONGS

For High Voice

By CHARLES GILBERT SPROSS

(Price, $1.00)

Introductory Cash Price, 70c POSTPAID

The songs of this foremost American composer, concert pianist and accompanist for many celebrated singers, have been extraordinarily successful. Many of them have won acceptance as standard art songs, both with concert and radio vocalists and in the studios of leading voice teachers. Dr. Spross evidently possesses an inexhaustible flow of melody and his choice of texts always has been noteworthy. His marvelous pianistic ability and his experience as accompanist for Melba, Nordica, Hempel, Bori, Marion Talley, Gigli and Evan Williams seem to have made certain of his songs especially attractive to sopranos and tenors. Among these might be mentioned: *Ishtar, How Many Times Do I Love Thee?, Jean, The Little House, Birds, 'Tis Spring Once Every Year* and *The Raindrop*. There are eight other worthwhile Spross songs in this album for high voice, some of which also are included in the companion volume for low voice. Here, at the special final introductory price, is a good buy for singers and teachers. Individually these songs are priced at from 50c to 75c a copy and hundreds of copies have been purchased at these prices. This volume is printed from the same plates and is substantially bound in a heavy cover paper.

Offer No. 12

ALBUM OF SONGS

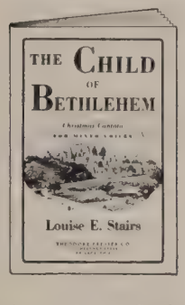
For Low Voice

By CHARLES GILBERT SPROSS

(Price, $1.00)

Introductory Cash Price, 70c POSTPAID

Some of the songs that appear in the album for high voice also have been included in this book, but the outstanding feature of the collection is the fine group of virile songs written especially for men singers and for which Dr. Spross justly is famous. But the ladies have not been neglected, and mezzos and altos in acquiring this album add to their repertoire, at an almost ridiculously low price, such excellent songs as *Sunrise and Sunset, My Star, I Know, The Wind,* and *The Day Is Done*. Discriminating singers know that they safely can choose Spross songs, not only because of their artistic merit, but for their "audience appeal" as well.



Offer No. 13

THE CHILD OF BETHLEHEM

A Christmas Cantata for Volunteer Choirs

By LOUISE E. STAIRS

(Price, 60c)

Introductory Cash Price, 40c POSTPAID

Encouraging indeed was the reception accorded this cantata when it was published last season. Noting with pleasure the interest we have decided this season to give choirmasters, organists and those having in charge the selection of music for church services another opportunity to become acquainted with the merits of this cantata by making the special price offer shown above. The cantata is made up of a series of smooth-singing choruses, solos for each of the usual voices—soprano, alto, tenor and baritone—and several novelty groupings, such as a *Cradle Song* for alto solo and humming accompaniment (2 part), several duets for soprano and alto, short trios for soprano, alto and tenor; also a chorus for men's voices, mostly in unison. Mrs. Stairs has drawn freely upon the Scriptures for her telling of the age-old story of the Babe in the manger and supplements the Biblical account with several well-selected hymn texts. The cantata takes about three-quarters of an hour for performance. Very little rehearsing should be necessary for a satisfactory presentation of this work by the average volunteer choir.

Offer No. 14

AN OLD-FASHIONED CHARM

Musical Comedy in Two Acts and Four Scenes

Book and Lyrics by JUANITA AUSTIN

Music by CLARENCE KOHLMANN

(Vocal Score—Price, $1.00)

Introductory Cash Price, 75c POSTPAID

Many works written for the stage make an instant appeal to the participants when the script is read. Producers, directors and actors throw themselves eagerly into production preparations and rehearsals. Yet, when the much-heralded play, musical comedy or operetta is presented it fails to "click," to use the colloquial expression. Why? Because the tastes of the audience have not properly been understood. When *An Old-Fashioned Charm* was given its premiere before an audience of over 1500 the performers were mostly inexperienced amateurs. And yet, the production was very successful. This musical comedy is enjoyed by audiences and performers because its story is up-to-date, with a bit of the Hollywood idea, its music is tuneful, rhythmic and "whistleable," yet never too difficult for average singers, even performers of high school age. The title may be "old-fashioned," but the play most certainly is not. Only one stage setting is required and the costumes, afternoon party and evening clothes, should give the producer few worries. Opportunities are given for the introduction of dancing groups and the Stage Manager's Guide, obtainable on a rental basis, gives complete directions for all terpsichorean interpolations. The Orchestration also may be rented.

Offer No. 15

GOLDEN KEY ORCHESTRA SERIES

Compiled and Arranged by BRUNO REIBOLD

Edited and Annotated by PETER W. DYKEMA

(Prices—Parts 50c each; Piano (Cond. Score) $1.00)

Introductory Cash Prices

Each Part, 35c POSTPAID

Piano (with Cond. Score), 75c POSTPAID

SOLD ONLY IN THE U. S. A.

Bringing within the playing capabilities of the average well-trained high school or community orchestra some of the finest music, this collection proved one of the outstanding successes among the new publications of the past season. The compiler, in arranging this material, has adhered closely to the original and has so profusely cross-cued the various parts that the pieces sound well even if played by combinations smaller than the instrumentation usually found in the present-day high school orchestra. Yet, each number in the book is most effective when played by organizations of symphonic proportions. Full instrumentation is available as follows: First Violin, Second Violin, Violin Obbligato A, Violin Obbligato B, Viola, Cello, Bass, Flute, Oboe, First B-flat Clarinet, Second B-flat Clarinet, Bassoon, First E-flat Saxophone, Second E-flat Saxophone, B-flat Tenor Saxophone, First and Second Horns in F, Third and Fourth Horns in F, First B-flat Trumpet, Second and Third B-flat Trumpets, First Trombone (Bass Clef), Second and Third Trombones (Bass Clef), Tuba, Tympani, Drums, and Piano (Conductor's Score). Note the diversity of styles, yet the uniformity of excellence in the selections chosen for inclusion in this unique volume: *Prelude in E Minor* (Johann Sebastian Bach), *Procession of Knights of the Grail*, from "Parsifal" (Richard Wagner), *Gopak*, from "The Fair at Sorochinsk" (Modest Moussorgsky), *Dance of the Bayaderes*, from "The Queen of Sheba" (Karl Goldmark), *Prelude* (Armas Järnefelt), *Interlude*, from "Sigurd Jorsalfar" (Edvard Grieg), *Bourrée*, from the "Third Cello Suite" (Johann Sebastian Bach), *Dance of the Tumblers*, from "The Snow Maiden" (N. Rimsky-Korsakov), *Musical Characterization*: Theme in Various Styles (Siegfried Ochs), *Träumerei* (Edward MacDowell), *Theme*, from "Don Juan" (Richard Strauss) and *Shadow Dance*, from "Dinorah" (Giacomo Meyerbeer). At these special introductory prices a really worth-while addition to the repertoire of the orchestra is made possible at a considerable saving. Be sure to state parts desired when ordering.

Offer No. 16

THE ART OF INTERWEAVING MELODIES

A First Study in Counterpoint for Students of All Ages

By PRESTON WARE OREM

(Flush Cloth Binding—Price, $1.25)

Introductory Cash Price, 90c POSTPAID

When Dr. Orem's *Harmony Book for Beginners* ($1.25) first appeared its method of presentation was considered almost revolutionary. Instantly it was seized upon as the solution of the problem of what and how to teach the American student who had ambitions to know more about the music he plays. Then to enable those who had mastered the fundamentals of harmony to make practical application of their knowledge to composing, *Theory and Composition of Music* ($1.25) appeared. Colleges, conservatories and schools of music, everywhere, adopted these as standard text books, and private teachers have pronounced them a wonderful help in maintaining interest in all branches of music study. Modern compositions and arrangements, especially for orchestra, band and chorus, reveal a thorough knowledge of counterpoint on the part of composers and arrangers. In the past many students have failed in this study, largely because of the dry-as-dust text books they were forced to use. *The Art of Interweaving Melodies* treats counterpoint, not as a series of dull mathematical problems to be solved, but as a pleasing science with which to make beautiful music. Dr. Orem presents many fascinating music examples and, of course, he tells the story of counterpoint in his usual breezy style.

Special Announcement!

RHYTHMICS, DYNAMICS, PEDALS

By LEIMER-GIESEKING

Gieseking

The Theodore Presser Co. takes pleasure in announcing that it has secured the publishing rights for North America for this new work by two of the foremost European musical authorities, Karl Leimer, director of his own Conservatory in Hannover, Germany, and his distinguished pupil, Walter Gieseking, technical giant of the keyboard. Readers will be familiar with an earlier book by these renowned authors, *The Shortest Way to Pianistic Perfection* (Price $1.50), the success of which leads us to believe that many alert teachers of piano will welcome this second book. The subject matter deals with rhythm in its more complex aspect, the means of expression, phrasing, pedaling, and other problems of piano playing, each with numerous musical examples.

This book cannot be put upon advance sale, because it is already an established success in the original German edition, but we are now offering our friends an opportunity to get one or more of the first copies of the first English edition in America.

Price, $1.50 (U. S. A., Canada, and Mexico)

TEN STUDIES IN BLACK AND WHITE

For Piano
By MANA-ZUCCA

Advance of Publication Cash Price, 20c POSTPAID

This new set consists of ten original studies of charming variety, in the fourth grade and higher. The author, Mme. Mana-Zucca, has had a distinguished career as teacher, concert pianist, and composer, and this new work of hers will contribute greatly to her already enviable reputation.

Here are the titles and characteristics: *A Misty Scene* (melody and accompaniment in legato style); *A Sky-Line* (to develop the stretch of the hand); *The Dancing Spray* (wrist attack); *Autumn Leaves* (octave study in crisp staccato); *A Seascape* (left hand arpeggio study with right hand melody); *A Spanish Scene* (study in contrasting rhythm); *Still Life* (legato study); *Clouds Over the Ocean* (double notes); *The Fountain* (study in velocity); and *Flowers in Bloom* (study in quick attacks).

Offer No. 29

PLAY AND SING

Favorite Songs in Easy Arrangements for Piano
By ADA RICHTER

Advance of Publication Cash Price, 25c POSTPAID

(Sold Only in the U. S. A.)

Play and Sing, our new book of easy-to-play arrangements of familiar songs, like its predecessor, *My First Song Book* by the same author, groups the contents under different heads. Here we find School Songs, Songs of Other Lands, Songs of My Country, Songs from Operas, and Songs My Grandparents Sang Long Ago. In all there are over forty individual song selections. Almost any child is familiar with the melodies of these songs, but can play almost none of them because, as originally printed, the music is too difficult for the young player. With these easy arrangements, however, any second grade pupil should be able to learn them.

Offer No. 30

THE ORGANIST'S TREASURY

Selected from the Compositions and Arrangements of
I. V. FLAGLER

Advance of Publication Cash Price, 60c POSTPAID

(Sold Only in the U. S. A.)

It has been the purpose of our editors to select for *The Organist's Treasury* the very best of the compositions and arrangements contained in *Flagler's Collection of Organ Music* in five volumes. Composers represented include Dubois, Lemaigre, Bizet, Guilmant, Beethoven, Widor, Meyer-Helmund, Massenet, and Rubinstein. The book contains a generous supply of carefully edited pieces of special interest to students of organ music, and will be published in the convenient oblong size, 12 x 9 inches.

Offer No. 31

THE YOUTHFUL TENOR

An Album of Songs for Studio and Recital

Advance of Publication Cash Price, 35c POSTPAID

In choosing solos for the youthful tenor his limited voice range must be carefully considered. And then there is the matter of the text. Any one at all familiar with the tastes of young men knows how difficult it is to find texts that not only please, but also are suitable for use by a young man at any public appearances he may be called upon to make as a soloist. This book will contain about a dozen solos that will meet every requirement of the youthful tenor and teachers are urged to acquaint themselves with its merits by ordering copies at the special advance of publication price.

Offer No. 32

THE YOUTHFUL BARITONE

An Album of Songs for Studio and Recital

Advance of Publication Cash Price, 35c POSTPAID

Much of what has been said about the companion book, *The Youthful Tenor*, is applicable also to this new album for baritones now in course of preparation. The compilers in selecting material for this volume will be aided by the availability of many songs with virile texts especially written for men. Naturally, they finally will select those that also stay safely within the voice range of the young baritone. This volume will contain about a dozen songs such as teachers will be glad to assign and students will be delighted to sing.

Offer No. 33

TRADITIONAL CHRISTMAS CAROLS

For Junior Choir (Unison)

Advance of Publication Cash Price, 10c POSTPAID

The popularity of carol services at the Yuletide season is increasing from year to year and with it there has come an interest in the strictly traditional carols which are of the lesser-known variety. Such carols comprise the numbers making up this collection for unison singing. A great deal of research has gone into the selection of these carols, which are drawn from the lore of many countries. There are carols from Welsh, Bohemian, English, Kentish, French, and Austrian sources.

Offer No. 34

PENITENCE, PARDON, AND PEACE

A Lenten Cantata by J. H. MAUNDER
Arranged for Women's Voices
By JAMES C. WARHURST

Advance of Publication Cash Price, 30c POSTPAID

(Sold Only in the U. S. A.)

We are glad for the opportunity to present to our customers this celebrated cantata in a new three-part (S.S.A.) women's voices arrangement. The work is too well-known to require special comment, except to state that in this new form its presentation will be possible in places and at times when the original form could not be used. Mr. Warhurst is an experienced arranger, organist, and choirmaster, and has adapted this work admirably for chorus of women's voices. There are solos for soprano and alto.

The time of performance is about thirty-five minutes.

Offer No. 35

THE MANGER PRINCE

Christmas Cantata for Mixed Voices
By LOUISE E. STAIRS

Advance of Publication Cash Price, 30c POSTPAID

In *The Manger Prince*, we have a new Christmas Cantata from the pen of Mrs. Stairs, whose *Child of Bethlehem* elicited such favorable notice last year. From various parts of the Scriptures, Mrs. Stairs has selected texts to which she has made pleasing and appropriate musical settings, interspersed with suitable hymns. Her music always has a natural flow of simple melody in moderate range of voice. This cantata will be on the market at an early date, so as to be available in plenty of time for rehearsals.

Offer No. 36

CINDERELLA

A Story with Music for Piano by ADA RICHTER

Advance of Publication Cash Price, 25c POSTPAID

This book may be put to many uses. Detailed suggestions for recital programs based upon the story are outlined. It is especially suitable as a book for Mother or Teacher to read and play for a child. For piano classes, it provides excellent supplementary material in which the music can be used for "extra work" and the illustrations colored for "busy work."

The story is illustrated with piano solos of about second grade; some with words which may be sung. The book is ready for immediate delivery and this will be the only opportunity offered to take advantage of the special advance of publication cash price.

Offers Continued on Next Page

THEODORE PRESSER CO., 1712 Chestnut Street, PHILADELPHIA, PA.

World of Music

(*Continued from Page 560*)

RICHARD WAGNER'S MEMORY was especially celebrated by Cleveland, Ohio, on May 22nd, the one hundred twenty-fifth anniversary of the master's birth. A wreath was laid at the base of the Wagner statue in beautiful Edgewater Park, by a committee of citizens; and the *Cleveland Plain Dealer* gave a whole page to a color illustrated article telling the story of Wagner performances in the city, starting with the *Overture to "Tannhäuser,"* as played in 1869 by Theodore Thomas and his orchestra. Cleveland heard its first complete Wagner opera in 1876, when our own Clara Louise Kellogg was the *Senta* in a performance of "The Flying Dutchman" by her English Grand Opera Company.

THE PASADENA MUSIC FESTIVAL closed its third annual event with a performance of Handel's seldom heard "Saul" on May 17th, with chorus and orchestra; Douglas Beattie, bass, as *Saul;* Rose Bampton, soprano, as *Michael,* Saul's daughter; Mario Chamlee, tenor as *Jonathan,* his son; Emery Darcy, baritone, as *David;* Myrtle Leonard, contralto, as the *Witch of Endor;* and with Dr. Richard Lert, noted for Handel research, as conductor.

HERBERT SANDERS, one of the outstanding organists of Canada, passed away on May 26th, at Montreal. Born in 1878, in Wolverhampton, England, his studies were finished in London, where he became a Fellow of the Royal College of Organists at the early age of twenty-one. He migrated to Canada in 1907 and since that time had held positions in leading churches of Guelph, Ottawa and Montreal.

CHARLES WAKEFIELD CADMAN'S two act opera "Shanewis" was heard at Enid, Oklahoma, on April 26th, when it was presented by the Cimarron Opera Company (a local organization) under the direction of Henry Hobart, and with the composer as guest conductor and pianist.

BENNE HENTON, a pioneer saxophonist of America, and a member of the famous bands of Patrick Conway and John Philip Sousa, the latter of whom pronounced Mr. Henton to be the greatest saxophonist of his day, died on July 9th, in Philadelphia. He had for many years been head of the Henton-Knecht musical instrument firm, of "The Quaker City," and was widely known as "the man to make the first record and the first broadcast with the saxophone."

THREE THOUSAND WERE TURNED AWAY from the Varsity Arena on the occasion of the first of the summer series of Promenade Concerts of the Toronto Symphony Orchestra. Reginald Stewart and Sir Adrian Boult were the conductors for the season.

MARK LOTHAR'S "SCHNEIDER WIBBEL," a humorous opera in four acts, had its première, early in June, at the State Opera of Berlin. The libretto, by Hans Mueller-Schloeffer, is said to transcend the musical setting in its art. It is constructed from certain humorous incidents supposed to have developed among the burghers of Düsseldorf because of their resentment of Napoleon's rule during the French occupation of Germany in 1813.

* * * * *

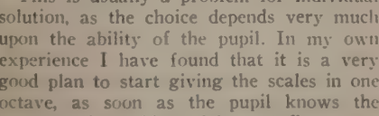
COMPETITIONS

AN ENGLISH "GRAND PRIX" has been established by the British Council, which offers an annual stipend of £250 (about $1,250), for which foreign students will compete in order to complete their musical education in one of the Royal Schools of Music in London. The prize entitles the holder to free musical training and maintenance in England during three years. For information address British Council, care of Royal Academy of Music, Marylebone Road, London, N.W.I., England.

TWO WOOLLEY SCHOLARSHIPS in instrumental music, for the year beginning October 1, 1938, are offered under the auspices of the United States House of the Cite Universitaire of Paris. Winners will have quarters in the United States House and a stipend of six hundred dollars. Candidates must be American citizens, between the ages of nineteen and thirty-two, who are graduates of a college, university or professional school, and who have a good working knowledge of the French language. Particulars from school mentioned.

THE H. W. GRAY COMPANY PRIZE of one hundred dollars is offered under the auspices of the American Guild of Organists, for an anthem of any difficulty or length (with about eight printed pages given the preference). Submissions close January 1, 1939; and further information may be had from The American Guild of Organists, 1270 Sixth Avenue, New York City.

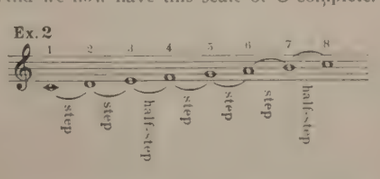
Scales for Little Folks



By ISABEL W. RUSSELL

PERIODICALLY, some one asks, "How soon can a young pupil take up scales?"

This is usually a problem for individual solution, as the choice depends very much upon the ability of the pupil. In my own experience I have found that it is a very good plan to start giving the scales in one octave, as soon as the pupil knows the notes on the treble and bass staffs.



First, let the pupil see what the scale of C major looks like on the staff.

Ex. 1

Then explain how the scale is constructed, by showing how it is built when starting with C. Thus, C to D is a whole step (a better term than "tone" for this purpose, as the word "tone" has another very definite use in music, and then "step" naturally suggests climbing the scale). Why? Because there is another key between C and D. D to E is the same. E to F is a half-step. Why? There is no key between them. F to G, G to A, and A to B, all are whole steps, because there is a key between each pair. B to C is a half-step, just like E to F. And we now have this scale of C complete.

Ex. 2

Next call attention to the location of the half-steps, and explain that they always will remain in these places, in every major scale. Children will take an interest in scales, if they are presented as something which they can build.

As each new scale is taken up, explain why the sharps and flats are introduced to preserve the order of the steps and half-steps. In this connection, explain to the pupil how the common chord is formed on the keynote. Show how beautiful this can be made to sound, if struck carefully; and how it may be used to develop a graceful use of the wrist.

If this outline has been thoroughly followed, there will be no trouble when the time comes to extend the process into scales of any number of octaves.

Advance of Publication Offers — *Continued*

Offer No. 37

28 MINIATURE ETUDES

A Book of Studies for the Third Grade Piano Student

By ELLA KETTERER

Advance of Publication

Cash Price, 30c POSTPAID

These twenty-eight attractive study pieces are each a page long and they combine the imaginative with the practical in helping the pupil to an enjoyable mastery of some of the important things that should be accomplished in third grade study.
For instance—triplets are introduced in a piece entitled *The Whirlpool*, syncopation in *Oriental Song*, suspension in the charming little piece called *Sunday Morning*, broken thirds in a piece called *Up the Stairs*, a piece called *Prattle* presents the trill. *The Bouncing Ball* demands performance of repeated notes, in the *Harp Song* arpeggios predominate, *In Sprightly Mood* turns attention to rhythm, wrist study is met in *Scamper!*, rapid passages divided between the hands appear in *Run and Jump*, and so on through the other seventeen little study pieces there are things in which it is worthwhile to become proficient.
Miss Ketterer has unusual gifts as a creator of attractive piano pieces and in this set of etudes these gifts are combined with her knowledge of what the pupil needs; this knowledge having been gained through the conducting of a successful studio of piano teaching.

Offer No. 38

FRAGMENTS FROM FAMOUS SYMPHONIES

Compiled and Arranged for Piano

By WILLIAM BAINES

Advance of Publication

Cash Price, 30c POSTPAID

Sold Only in the U. S. A.

A lasting interest in music comes to the majority of those piano pupils who are fortunate enough to have their teacher use, as early as possible, opportunities of giving them acquaintance with master pieces in music. Of course, the piano student in the second grade of study is not ready to grasp all of the beauties in the harmonic structures and the tone colors of symphonic works, but he will better be able to grasp them later and will have a sincere desire so to do if while he is only a young student he becomes acquainted with the rich and substantial melodic qualities found in the famous symphonic works of Beethoven, Brahms, Mozart, Haydn, Dvořák, Tschaikowsky and Schumann. Fragments of some of the wonderful symphonies of these composers have been taken by Mr. Baines and skilfully arranged so that, without facing any technical possibilities beyond the capabilities of second grade pupils, the young student may have the delightful pleasure of bringing out from under his own fingers themes from these works which mean so much in present day symphony concerts and radio broadcasts.

Offer No. 39

ONE STRING SOLOS FOR VIOLIN BEGINNERS

By KATE LARUE HARPER

Advance of Publication

Cash Prices

Violin Part, 15c; Piano, 20c POSTPAID

In this day, when all beginners in music and particularly the younger ones want to play some tunes right away, educators gifted with creative talents have brought forth some remarkable musical offerings for beginners.
This new set of solos for violin beginners is a splendid example. The beginner is not bothered jumping from string to string, but plays each attractive melody on one string using only the first, second and third fingers, and the open string. Thus, the beginner gets right into the joy of playing melodies and without realizing it secures a preparation for later study when then moving from string to string may be attempted and the weaker finger, the fourth, brought into play.
There are illustrations and attractive texts accompanying these *One String Solos*. The violin part is published in a separate little form for the student and the piano part which is for the teacher or the accompanying pianist forms another volume. Each is oblong in shape—the binding being down the shorter way of the page—the music running across the longer way of the page.

Offer No. 40

16 MODERN ETUDES

For the Advanced Trumpet Player

By JOHN HUBER

Advance of Publication

Cash Price, 40c POSTPAID

The trumpet player, particularly the one having the sincere musician's desire to be as proficient as possible upon his instrument, will welcome this set of etudes, as will all trumpet teachers dealing with well advanced students.
So much depends upon the trumpet player in all kinds of instrumental ensembles using the trumpet, from the dance band to the concert band or symphony orchestra, that material such as given in the etudes virtually becomes a necessity for daily practice.
Properly used these studies will develop interpretive ability, proper breathing, and correct tone production —besides flexibility in triple tonguing.

Offer No. 41

CHILD'S OWN BOOK OF GREAT MUSICIANS

Brahms—Tschaikowsky—MacDowell

By THOMAS TAPPER

Advance of Publication

Cash Price Each, 10c POSTPAID
Set of Three, 25c POSTPAID

The plan of these books is a simply told life story of a great composer with numbered blank spaces on the various pages—a sheet of pictures being numbered to match the spaces in which they are to be pasted after being cut out. A needle and silk cord with directions for an art type of binding is provided without any extra cost. Blank pages in the rear of the book give space for the child to write, in his own language, his story of the composer's life.
Bach, Beethoven, Chopin, Grieg, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Verdi and Wagner are the composers covered already in this series—one to each booklet—and these are priced at 20c each. The three new books are on Brahms, Tschaikowsky and MacDowell. It is only these three that are obtainable at the advance of publication price.

Offer No. 42

MANUAL OF FUGUE

By PRESTON WARE OREM, Mus. Doc.

Advance of Publication

Cash Price, 40c POSTPAID

This is a much to be desired volume in the services it can render to the teacher of theory and composition and to the serious student of music. To the uninitiated —musical structures seem to be something incomprehensible, except to unusually gifted people or those who spent years of study on the subject; but just as he has done previously in his *Harmony Book for Beginners*, his *Theory and Composition of Music*, and his *Art of Interweaving Melodies* Dr. Orem has told in this book more clearly the things that will guide the student to successful efforts in the various phases of Fugue writing such as Canon, Imitation, Double Counterpoint, etc.
Although this book does not run to as many pages as the other three very successful books here mentioned it does, with its original examples and authoritative text matter, offer much that will prove invaluable to those wanting to know things about this realm of music.

Offer No. 43

REWARD CARDS FOR MUSIC PUPILS

(Second Series)

Advance of Publication

Cash Price, 35c Set, POSTPAID

For years teachers have been using *Reward Cards* issued by the Theodore Presser Co.—published in a set of sixteen cards, and now, in response to a continued insistent demand for more such cards, this second series is being produced. The first series covered sixteen master composers. In this new set composers' portraits and pictures of their birthplaces, wherever possible, are given and where not possible some other pertinent scene. The portraits and pictures are to be reproduced in tasteful coloring, lithographic process being used giving the effect of artistic water color rendition. On the back of each card will be the biography of each respective composer. The composers in this new set of *Reward Cards* (Second Series) will be: Rimsky-Korsakow, Rubinstein, Saint-Saëns, Sibelius, Moussorgsky, Rossini, Moszkowski, Massenet, MacDowell, Grieg, Elgar, von Gluck, Dvořák, Debussy, Chaminade, and Bizet. As in the first series a *Prize Card* will be included with the set. The *Reward Cards* are postcard size, the *Prize Card* a trifle larger.

Music Towns

By Aletha M. Bonner

Do any of you live in towns with musical names? Or do you know of any such towns?

In Texas, the Lone Star State, there is a town called Art, and one called Fife; also an Alto, but no Tenor. However, Texas' next door neighbor, Arkansas, has a town named Bass. Also the town of Harmony is in the home of the Arkansas Traveler, as well as one named Mozart and another called Jenny Lind.

Kentucky boasts of many music named towns, as Drum, DeKoven, Carmen, Major and Minor. That famous old hero of song, Old Black Joe has a spot in the Blue Grass State, though it is spelled in one word, Blackjoe. There is also one there named Concord.

Concord has been a national favorite as a name, as there are at least fourteen Concords, many being colored by historic background, as the Concord in Massachusetts—

Where, in a long gone year
Was heard the beat
Of horses' feet—
The steed of Paul Revere!

Returning to the Southland, one may visit the towns of Chopin in Louisiana; Verdi and Duet in Virginia; Bells in Tennessee (as well as in fifteen other states); Largo in Florida.

Lovers of grand opera will be interested in Natoma, California; also Victor; but one must journey to Alabama to locate the town of Victor Herbert.

Missouri has a Solo and a Flat; Nevada has a Sharp and Wisconsin has one called Vespers. Who knows some others?

Lists of Names

Game for Club Meeting

By Anna P. Myers

Each player must be supplied with pencil and paper. In a given length of time, see who can make the longest list of musical instruments. The same may be done with names of composers. The one writing the longest list in the given number of minutes is the winner.

Papa Haydn at the Fair

By LENELLE M. KANTHACK

A large sign painted in bright red hung above the booth in the center of the fair grounds. The sign read "TOYS." Around it crowded many children dressed in gay holiday clothes.

"I like the toy booth best," said little Maria.

"I do too," said Paul.

Suddenly Maria's brother Carl shouted, "There he comes! Papa Haydn is coming!" The children turned from the booth. They saw a man coming down the road. With him was a funny little dog.

"Let's go and meet him," said Paul. The man smiled a very friendly smile when he saw the children running toward him.

"Hello, Papa Haydn," said Maria as she clasped her small hand in his. Little Paul took his other hand. The other boys and girls grouped about him.

"Hello, my friends. How is the Eisenstadt Fair to-day?" he asked.

"Fine. Just look at my new toy. I bought it at the Fair," said Paul.

"See my new hair ribbon, Papa Haydn," said Anna. Papa Haydn smiled.

Through the fair grounds they went. People turned to watch the man and the children skipping by his side. "Choose the kind of candy you want," he told them as he stopped at the candy booth. Carl and Anna chose taffy. Maria and Paul wanted striped stick candy.

"Thank you so much, Papa Haydn," they all said.

The Fair each year at Eisenstadt was a happy event. Everyone came from far and near. People from town wore fine new clothes. The people from the country wore their bright holiday clothes. They strolled from one booth to another. Everyone carried something they had bought. Some carried kettles and dishes. Others waved little flags on a cane. Some had noise makers and carried small bags of sweets.

The crowd of children with Papa Haydn was growing larger all the time. They stopped at the toy counter.

"Who wants the cuckoo call?" asked Papa Haydn. He picked up a toy musical instrument.

"I do," said Paul.

"Here's a trumpet, a quail call, cymbals and a drum. Take your choice," he told them. There was a mad scramble as each child made his or her choice. After he had paid for the toys for the children, Papa Haydn bought a complete set for himself.

"I must go now, my friends," he told them.

"Oh, must you go? But why do you want those toy musical instruments, Papa Haydn?" asked Carl.

"You wait and see," he told them. "It's to be a surprise. Goodbye." The children watched their friend as he started home. They liked this dark faced man with the flashing dark gray eyes and the kindly smile. They liked the way his wig looked too with the side curls. Papa Haydn was soon out of sight. Playing loudly on their toy musical instruments, the children went to find their parents who were somewhere in the crowd.

Seated at his desk at home Papa Haydn placed his toy musical instruments in a row. He picked up his pen and began to write. In music he wrote a story about the fair and the children he loved. Hours went by and he worked on. He did not stop until he had found a place in his story for each one of the toy musical instruments. The next day he called his musicians together to play the story he had written.

The friendly man the children called Papa Haydn was really the great Joseph Haydn, a famous musician, who was born in 1732 and died in 1809. The musical story he wrote that day was called "Children's Symphony," and it really tells about Joseph (Papa) Haydn's day at the Eisenstadt Fair with the children he loved so well.

Have you ever taken part in this toy symphony? If not, your club or class should play it some time. It is lots of fun to play, and it is also very beautiful music.

Stop and Go Signals of Music

By Marjorie Knox

How do you start your piece? Like a hasty motorist with squeaking brakes approaching a stop signal at a busy intersection?

Or do you, more sensibly, begin slowly and keep a wary eye out for the unexpected?

As a musician, the red STOP light you look for is the signature at the beginning of the piece. It means STOP to you because, before playing, you must know what sharps or flats will appear in the future measures. You must pause to consider also the time signature and its meaning.

When your yellow GET READY light flashes, you shift gears, so to speak, by placing your hands on the correct pianoforte keys: you prepare yourself to begin.

At last, when the green GO light glares into your eye, you are able to proceed slowly into the composition. That is the way a careful, observing motorist would do. As in an unfamiliar town, you must drive carefully and keep alert for the moment when the test of your ability will come.

Perhaps on the way, you commit an error, or have a sight accident, like a tire blow-out. Then you must stop and work awhile until you have learned, or "fixed" it. If you fail to stop, the tire will be cut to shreds; likewise, a piece, if left uncorrected, will be ruined.

Perhaps you, as a motorist, know the town's driving regulations. And as a pianist, you have practiced the difficult places until you can play the entire piece with speed and assurance. Like a new driver who feels confident that there is no risk about his taking someone riding with him, the pianist now has no fear of playing his piece in public because he has learned it carefully—and *thoroughly*.

Watch your signals!

Listening Lessons

By E. A. G.

Sonatina in G, by Beethoven

If you have passed the grade of the "Sonatina in G," by Beethoven and have not learned it, it is just too bad!

There are several things that every junior should learn to play, and this "Sonatina" is one of them (others are included in this series of listening lessons).

A sonatina, you know, is a small sonata, and is less developed in form than a large sonata. It is well to learn a few sonatinas as preparation for the larger sonatas later.

Thousands of juniors play this "Sonatina in G," by Beethoven, and play it with exactly the same fault—they do not give the first note of the piece, the half note, its full, half note value. Sometimes they play it as a quarter note, making the measure sound like three-four time. Sometimes they give it a dotted quarter value, making the measure sound like no time signature whatever. And the same fault comes again in the third measure.

The quarter rest at the end of the first section is also frequently overlooked, making another three four sort of measure.

The second section is often played uninterestingly and mechanically.

LISTEN to this "Sonatina" and make it sound musical. Play it like a real artist would play it.

Which hand has the melody? Is it major or minor? Is it spirited or dreamy? Is it fast or slow? See how much variety there is in its themes. LISTEN to it.

What a Blow!

By Edward Ellsworth Hipsher

Though many instruments I had,
My birthday brought a horn from Dad;
Then, morn till night,
I blew with might
Till neighbors near were driven mad.

'Twas on a truly luckless morn,
A wild desire within was born;
When, sure enough,
One mighty puff
Just popped me right inside the horn.

For hours and hours I sought in vain
To make escape; with might and main
I gave at last
One great big blast
And blew myself right out again.

The Rainy Day Game

By MILDRED McGLOTHIN

"OH, DEAR," sighed Ellen, as she watched it rain. "I do wish it would stop raining! Jeanne and I planned to play tennis this afternoon and now it has to rain!"

"Ellen, I'm afraid you'll have to call off the game to-day. We've been needing rain badly for a month, and now that we have it, let us not fuss about it," said her mother.

"But what shall I do, Mother?"

"Well, you've been neglecting your music dreadfully, Ellen. Why not ask Jeanne over this afternoon? I have a plan that might help you both."

So Ellen called her chum Jeanne over the telephone, and told her about her mother's plan for helping them in their music.

"I'll be right over," Jeanne exclaimed. Ellen's mother brought two pencils and two pieces of paper with her into the music room and on one she wrote Jeanne's name, and on the other, Ellen's.

"Now, girls, for every piece you play without making a single mistake, you'll receive ten points. The girl who, at the end of each week, has the most points will be given a prize."

"Oh, this is going to be fun!" cried the girls in one breath.

"Jeanne will practice for thirty minutes and then Ellen will follow: Remember, play well if you want a prize." Then Mrs. Neil left the girls alone.

For the rest of the season Jeanne and Ellen really got to work on their music and they surprised their teacher so much she could not understand it.

"Ellen's mother told us about a little game," explained Jeanne. "It was so interesting that we practiced more and more."

"Yes, The Rainy Day Game certainly helped me!" laughed Ellen, who was taking her lesson at the time.

Boys' Own Recital

By ALICE THORNBURG SMITH

"WHY cannot the boys have a recital without the girls?" asked one of the pianists in the boys' group.

"Do you think you could give a good program?" inquired their teacher.

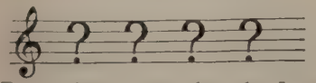
"Of course," they answered in chorus.

"Yes, and better than with the girls," remarked another, under his breath. "Just give us a chance, and we will show you."

So it was arranged to invite parents and friends one afternoon to hear a recital given by ten boys.

One of the boys acted as master of ceremonies, introducing each player and announcing the numbers.

Besides the solos numbers, the program included the awarding of keyboard harmony certificates to some of the boys. These can be seen in the accompanying photograph.



Boys' Recital, Garden Grove California

Music

By Nickie George *(Age 9)*

Sing a little song to-day,
'Twill give us all great pleasure,
The joys that music gives to us,
No one can ever measure.

1. From what country does the *Londonderry Air* come?
2. What is a harpsichord?
3. What does *senza ritenuto* mean?
4. What instruments in a symphony orchestra comprise the wood wind section?
5. Is the "Messiah" an opera or an oratorio?
6. Who wrote it?
7. What notes make the dominant seventh chord in the key of C-sharp minor?
8. When was Schumann born?
9. What composer is this?

10. Where do the accents fall in nine-eight time?

(Answers on this page)

LETTER BOX

DEAR JUNIOR ETUDE:

Since 1922 we have been getting THE ETUDE regularly. We like it very much and I especially like the Junior Page. I have taken piano lessons for over two years. My teacher recently gave a recital at which I played Rachmaninoff's *Prelude*. I am often called on to accompany singing in music class, and Sunday School and I play many other places where music is needed.

From your friend,
MARY ELIZABETH BONN, (Age 13),
Maryland.

DEAR JUNIOR ETUDE:

On the feast of St. Cecilia, our music class had a party. We like to honor her each year as she is the patron Saint of music. At the party, we decided to have a club. We call ourselves St. Cecilia's Music Club and we meet twice each month. The members are twenty in number.

At our last meeting, one was presented with a gold music pin. The club has a scrap book wherein is kept all the clippings, pictures, proceedings, and so on of the club. Each member has a scrap book for pictures of composers and the various musical instruments.

From your friend,
MARY E. KRAUSS

Answers to Ask Another

1. Ireland; 2. An ancestor of the piano, in which the tone and mechanism are different from the piano, but the appearance very much the same as a small grand piano; 3. Without ritard; 4. Flutes, piccolos, oboes, English horns, clarinets, and bassoons; 5. An oratorio; 6. Handel; 7. G-sharp, b-sharp, d-sharp, f-sharp; 8. 1810; 9. Haydn; 10. On the first, fourth and seventh eight notes.

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "Musical Games."

Must contain not over one hundred and fifty words and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by September Eighteenth. Names of prize winners and their contributions will appear in the December issue. The thirty next best contributors will receive honorable mention.

RULES

Put your name, age and class in which you enter on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper do this on each sheet: Write on one side of paper only.

Do not use typewriters and do not have anyone copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class.)

Competitors who do not comply with all of the above rules and conditions will not be considered.

How to Listen to Music

(Prize Winner)

AMONG the vast army of music students there are few who cultivate the critical faculties in listening properly to music. Much practice and attention are required when learning how to listen to it. The mere act of hearing music will not cultivate the art of listening. Even pupils who are technically well advanced will need systematic practice in this art.

When listening to music, we should make ourselves as comfortable as possible so as to be prepared to listen to the single notes (first diatonic, then chromatic) different kinds of rhythm, chord combinations and the value of notes; otherwise the ear receives little benefit and the mind does not coöperate.

Another requisite to intelligent listening is that the hearer shall not see the actual performance. We attempt a double task of seeing and hearing and do not get good results. The matter of watching a performance of music is a result of curiosity, for the music is invisible, and those who see most, hear least of a musical performance.

ANGELINA RAUSEO (Age 13), Class B,
Pennsylvania.

3. Take a letter from sounds of suffering and leave a musical instrument.
4. Take a letter from keen and leave a musical instrument.
5. Take a letter from a fruit and leave a musical instrument.

Honorable Mention for April Puzzles:

Mildred Heston; Alberta Bennet; Louis Bonelli; Margaret Goodman; Leonie Dangoisse; Kathryn Kane; Jacqueline Noreyko; Sheila Falconer; Betty Sattelle; Betty Cooper; Annette Morris; Elleen Newcome; Marjorie Corson; Andrew Wainright; Bert Hilson.

Prize Winners for April Puzzle:

Irma Pederson (Age 14), Class A, Minnesota.

Gloria Roth (Age 11), Class B, Long Island.

How to Listen to Music

(Prize Winner)

MANY PEOPLE do not really understand or know how to listen to music. Symphony orchestra concerts, if followed, may help one to understand and know how to listen to music. One can listen for certain instruments in the orchestra and learn to recognize the tone quality of the instrument. We can also listen for expression and the emotion the player is trying to express. In listening to vocal solos, notice the different types of songs and voices. If we have some knowledge of the composer and his life, we will better understand the piece and appreciate it more. We should listen for the melody and the theme that runs through the piece. We must learn to listen for the beauty of the piece and try to understand that it is not possible to produce really fine music without good technic, a thorough knowledge of the selection, and a real musical feeling.

RUTH MEYER (Age 14), Class A, Missouri.

How to Listen to Music

(Prize Winner)

SINCE I am a little musician taking piano lessons, I feel that I know how to listen to piano music better than any other kind; whether I am listening to a pianist in person or over the radio, I always try to get the name of the piece, and this gives me an idea of how the piece might sound.

Then I listen for the rhythm and melody which is taken either by the right or left hand. As I listen, I try to detect the tone quality, I try to observe the *crescendo*, the *diminuendo* and other markings. All this gives me an appreciation of the piece as a whole. I also enjoy listening to good orchestras and good singing, which seems to carry me away in a dream.

Music is a language all of its own that speaks to me when I listen.

MARGARET GOODMAN (Age 8), Class C,
North Carolina.

Juniors in Costume Recital
"Music of Many Lands"
Lafayette, Louisiana

Honorable Mention for April Essays:

Louise Poore; Sheila Falconer; Stella Mayer; Mildred Allred; Jean Aldrayd; Kenna Aagard; Julia McCartney; Gwyneth Herbert; Dorothy Jeffcoat; Louise Sivers; Mary Brideson; Helen Baseo; Mildred Anderson; Arlene Johnvin; Virginia Weber; Jean Gordon; Lois Johnson; Shirley Ellenbogen; Roger Steiner; Joyce Harrison; Geraldine Whisnant; Fradell Stalman; Dorothy Jane Adams; Josephine Kadluboski; Emmeline Tryham; Jeannette Larson; Dorothy Hereau; Sigrid Eskildsen; Marion Harmon; Ritha Richey; Leona Renkema; Betty Cooper; Teresa Macrimi; Doris Ricke; Georgia Anne Rabe; Sonly Ann Haglund.

Letters from the Etude Friends

Praise for the Accordion

To The Etude:

The boys, Arthur Metzler and Arthur Van Damme from Chicago deserve mention in which only the most descriptive words could be used. They proved to this community that real music can be played on the piano accordion. The applause and the comments the next day proved their success. The point I especially want to make to The Etude is that accordion programs should have artists like these two young men on their programs to show the public that good high class music can be played artistically on this instrument. I am so enthusiastic about these young men, that I would recommend them for a concert tour of the country, for no other purpose than to open the eyes of the public toward good accordion music.

—W. H. Anderson.

Locating the Octaves

To The Etude:

Here is a suggestion which you might find worthy of publication in The Etude. A pupil had trouble figuring out in which octave the pieces assigned to her were to be played, so we solved the problem thus.

Beginning with middle C and counting upward we numbered the octaves of the keyboard No. 1, treble octave; No. 2, treble octave, and so on. Beginning with middle C and counting downward we numbered the octaves No. 1, bass octave; No. 2, bass octave, and so on.

Before studying a new piece, no matter in what key it is written, she writes a middle C in her music, then the C's above, marking the No. 1 and No. 2 treble octaves; also the same process in the bass, going down. With this to guide her, she is learning to associate the octaves in the written music with the corresponding octaves in the keyboard.

—Florence E. Davis.

To See, as Well as to Hear

By D. D. FREAS

When a pupil studies a selection from an opera, the more he knows of the story of the opera, the more expression he can put into the music from it. One project, interesting to many pupils, is to make a miniature stage, with the correct scenery as far as possible. One or two principal figures may be put on the stage. These may be cut from advertisements or fashion magazines, if desired. Some children draw the costumes, which should be as they are in the opera. An old shoe box may be used for a stage.

A marked improvement has been noted among pupils who practice with the "scene" beside them.

A Jolly Chord Game

By FLORENCE L. CURTISS

This is a profitable game for use in class work. Prepare cards the size of ordinary playing cards. On some have key signatures printed and on others have tonic chords to correspond, such as these shown.

Give a set to each pupil. The first pupil to get his cards matched—the signature cards with their correct tonic chords—is declared the winner.

Worth While Music in the Movies

By VERNA ARVEY

Since Hollywood has turned toward biographies of famous men for scenario material, it follows that the lives of composers will be carefully scrutinized for their screen possibilities. The recent film on Beethoven is worthy of mention as exemplifying a notable trend, though it was severely criticized on the grounds of historical inaccuracy. More successful as a picture but, alas! not widely circulated, was the film, "Harmony Lane," based on the life of the beloved Stephen Foster and starring Douglas Montgomery.

Now, according to Morris Stoloff, music head, Columbia Pictures are planning to film the story of Chopin. Frank Capra, director of so many films of major importance, has interested himself in producing it. It will afford a splendid musical vehicle, for it is possible to use the music of Chopin's contemporaries who will be brought into the film, as well as that of Chopin himself. Incidentally, there was a foreign film made on the same subject. This writer has been given to understand that it has not been released in America; probably it never will be.

Not to be outdone, Warner Brothers-First National Films are reported to be considering the "Life of George Gershwin" as a screen vehicle, with John Garfield, the "Golden Boy" actor from the New York stage, in the leading rôle. Since this is a film relating to American music, it is to be hoped that an American composer will be engaged to score the film and to write the incidental background music. Leo Forbstein is the director of Warner Brothers' Music Department. Under him are Heinz Roemheld, Hugo Friedhofer, Adolph Deutsch, Ray Heindorf, Max Steiner, Erich Wolfgang Korngold and Howard Jackson—the latter an American composer who creates prolifically for films, and whose achievements in this medium are too often overlooked. His latest scores were those for "Beloved Brat," with Bonita Granville; and "My Bill," starring Kay Francis.

"The Great Waltz," produced by Metro-Goldwyn-Mayer, is based on the life of Johann Strauss II, whose music, orchestrated by Dimitri Tiomkin, underscores the film. Fernand Gravet enacts the composer's rôle; and Luise Rainer plays his wife. Miliza Korjus, whose beauty and magnificent soprano voice are new to the screen, sings, as does George Houston, baritone. Toscha Seidel is the violinist who is heard, but not seen, in the picture. Dr. Guttmann directs an orchestra of ninety pieces; and, for the first time in Hollywood, the studio rented a collection of rare violins and hired fine symphony orchestra men to play them under the microphone for this film, glorifying "The Waltz King."

It goes without saying that, if films based on the lives of significant composers are handled intelligently and accurately, they will be an inspiration to all musicians and to young aspirants to musical fame.

M.G.M. also, with the energetic Nat Finston as its musical director, plans to release another Victor Herbert work. This time it is "Sweethearts," starring Jeanette MacDonald and Nelson Eddy, with W. S. Van Dyke directing, and Hunt Stromberg producing—the same combination that gave us "Naughty Marietta."

Next Month

THE ETUDE for October 1938, brings these engaging features.

PHIL SPITALNY AND ORCHESTRA

"THE HOUR OF CHARM"

The concerts of Phil Spitalny and his group of young women players and singers have been outstanding weekly radio events, enjoyed by millions. To get together an assembly of young women, of marked skill as instrumentalists and vocalists, who also are famed for their beauty and charm, is an unusual achievement. Maestro Spitalny tells how it was done.

A MASTER AS HIS WIFE SEES HIM

Mme. Aino Sibelius tells things about the delightful home life and methods of work of her famous husband, the Finnish master Jean Sibelius, which have an appeal to all music lovers. An article with a captivating romantic appeal.

CARING FOR THE VOCAL INSTRUMENT

What greater authority could there be than the famous Metropolitan tenor, Giovanni Martinelli, who made his debut twenty-eight years ago and is still singing with amazing freshness and vigor. You will be fascinated by his suggestions.

THE CONDUCTOR AND HIS ORCHESTRA

The young and brilliantly successful new conductor of the New York Philharmonic-Symphony Orchestra, John Barbirolli, talks about interpretation and conducting in a way that can not fail to stimulate every reader of THE ETUDE in the vast radio audience which hears this great organization every Sunday afternoon of the season.

WHAT PLATO SAID ABOUT MUSIC

This great Greek Philosopher was one of the first famous protagonists of music. Music in his day was woefully primitive, but he was "strong" for it. What would he think of modern music, if some one were to drop him down in one of our huge concert halls or night clubs?

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of delightful new music to play and sing.

Musical Books Reviewed

Human Values in Music Education

By James L. Mursell

Here we have a volume presenting some of the most cogent reasons for the perpetuation of music study. In a series of chapters discussing such themes as "Music, Education, and Human Values"; "Music as an Individual Experience"; "Music as a Social Opportunity"; "Music as an Agency for Growth"; "Music as a Moral Force"; "Music and the School"; and other similar topics; the author presents many a master thought to spur the acquisitive mind into action. At the same time the book will act as a useful guide to help many a timid teacher over the shoals of early experience and into the deeper waters of a practical pedagogy. A book of value in any public or private library.

Pages: 388.
Price: $2.40.
Publishers: Silver, Burdett and Company.

Bands and Orchestras

(*Continued from Page* 617)

bands and the manner in which they are played. Much in this respect already has been accomplished by some of the leading university and high school bands.

The marching band is gradually being taken from the "ballyhoo and pomp" stage to a more dignified position. Modern arrangements made especially for field purposes provide for opportunities whereby the marching band can gain admiration and approval of its musical abilities as well as its marching capabilities.

Worthwhile musical scores of the musical comedy type set to related formations will in the near future supplant the present trend of setting music to certain selected formations. This offers the band a creative artistic field that is both practical and entertaining, and which calls for the best efforts of directors and participants in the activities of the marching band.

The future marching bands will provide just as much thrill and color as ever before, but the day of stereotyped marches, faulty instrumentation and performance will have passed, and another great step will have been taken in the course of music education.

A Right Hand Builder

By GAIL DUPONT

Transposing this phrase from *The Fire Engine* by Ada Richter

etc.

into various major and minor keys will accomplish much for the right hand.

First, it will produce a faultless legato, increase a small hand, and relax a stiff one, so that smoother arpeggios and wider note stretches can be played.

Second, it will add luster to legato playing, by developing a fuller, richer tone.

Third, the rhythm is improved, through accenting the notes correctly, and instantly recognizing the rhythm groupings.

Fourth, it accustoms the fingers to play rapidly on the black keys, and makes the reading of flats easy.

Fifth, the hand position can be corrected and clarified.

Sixth, the whole hand is brought under control, through the daily practice of this invigorating and relaxing drill.

CANTATAS
For Choirs of Mixed Voices

Harvest Home
By William Baines — **Price, 60 cents**
Here is a cantata taking about 35 minutes to sing, which covers a definite need for which there is not an especially extensive selection available. It may be presented by the average volunteer choir and the usual quartet of soloists. Features a soprano and alto duet, and solos for alto and tenor. The latter, "Bring Now Your Gifts," is followed by an organ offertory.

Hymn of Praise
By Frederick Wick — **Price, 60 cents**
Choirmasters will be delighted with this exceptionally fine composition, the work of one of our foremost chorus conductors. The soprano, tenor and baritone solos in this cantata will not tax the ability of any soloists, and the chorus work for mixed voices can be handled by the average volunteer choir.

CENTURY MUSIC IS A COPY

CENTURY Certified EDITION SHEET MUSIC

WHY PAY MORE YOU CAN'T BUY BETTER

For thirty-eight years Century music has enjoyed the distinction of being one of the finest editions published, yet its price is but 15c a copy.

In the following list are featured some of our very latest issues, including the works of four of today's most popular composers.

Teachers, pupils and players will find them all of exceptional value, especially Kay Armour's "Modern Piano Method" and Walter Rolfe's "Book on Harmony." You can buy them at your dealer or direct from us.

Teachers who use and recommend Century music win the everlasting gratitude of parents who can't afford the high prices generally asked for teaching music. Century music helps you hold your old pupils and also aids in enrolling new ones.

Your money refunded without question, if not fully satisfied with your purchase.

NEW *and* IMPORTANT

A MODERN PIANO METHOD FOR BEGINNERS

by

KATHLEEN ARMOUR

PRICE 15c EACH PART

Here is something decidedly new and original. It is issued in five parts in sheet music form and each part sells at the regular price at 15c per copy, which enables the pupil to start the study of the piano with very little financial outlay. This modern work is based on the middle C approach and is so clear and step-wise that the pupil is playing little tunes almost at the outset. Profusely illustrated. Teachers, be sure to see this outstanding work.

3196—Part I—Learning Letters on the Keyboard
3197—Part II—Notes, Bars, Time Signatures
3198—Part III—Five Finger Exercises
3199—Part IV—The 2/4, Time Signature
3200—Part V—Introducing the 8th Note

CENTURY PIANO SOLOS, 15c ea.

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

SIR LANDON RONALD

SIR LANDON RONALD (Russell), English composer, musical scholar, and conductor, died on August 14th, in London. He was a full brother of Henry Russell of Boston Opera Company fame, and a half brother of Clark Russell, novelist of the sea, and conducted opera at Covent Garden when but twenty-one. He first came to America in 1894 as orchestral conductor for a concert tour of Melba; and in 1922 he was decorated as a Knight of the British Empire, by King George V.

THE GHOST OF AZUCENA'S MOTHER appeared as a novel feature of a recent performance of Verdi's perennial "Il Trovatore" as given at the German Theater of Prague.

PAUL HINDEMITH'S new opera, "Mathis der Maler (Mathis the Painter)," had its world première when it opened the summer series of gala performances at Zurich, before an audience of Swiss connoisseurs and many distinguished foreigners. The composer and cast won "profuse applause" for "a première success, the like of which has seldom if ever been witnessed in these parts." Asger Stig created the title rôle.

THE PHILHARMONIC ORCHESTRA of Lisbon, Portugal, with Dr. Ivo Cruz as conductor, recently presented a festival program of the works of Camille Saint-Saëns.

G. FRANCESCO MALIPIERO is reported to have begun the composition of a "Missa per Mortuis' in memory of Gabriele D'Annunzio, and also the music for the great patriot poet's tragedy "Ecuba" that will be presented in 1939 at the Greek Theater of Syracuse.

THE LITTLEFIELD BALLET, with Catherine Littlefield as director and *première danseuse,* is reported to have been engaged by the City Opera Company of Chicago, for its seven week season of 1938-39. In addition to its appearances with the Opera Company, this leader among native American ballet organizations will produce a series of seven performances under the auspices of the City Opera Company.

DAME HARRIET COHEN

HARRIET COHEN, eminent British pianist and exponent of modern music, while still one of the best of living interpreters of Brahms and the romanticists, is visiting us this fall for an extended tour. She has received a number of Government honors, including that of Dame Commander of the British Empire, from King George VI; and she was invited by the Bach Gesellschaft to play the master's concertos for festivities at Eisenach, his birthplace.

MASSED CHOIRS, with five thousand voices of men, women and children, and conducted by Dr. Edgar Bainton, director of the State Conservatory, offered the musical climax of two concerts before audiences which filled the new Angus and Martin Stands at the Royal Agricultural Show Grounds, during the recent celebrations marking the one hundred and fiftieth anniversary of British settlement in Australia.

"THE RING OF THE NIBELUNGS," by Wagner, has recently been heard complete for the first time in Rome, where it was given at the Theater Royal, under the direction of Tullio Serafin, long a popular leader of the Italian wing of opera at the Metropolitan of New York.

CHARLES M. COURBOIN, eminent Belgian organist, who for many years has made his home in America, received recently from King Leopold of Belgium the decoration as a Knight of the Order of Leopold. The bestowal was made by Comte Robert van der Straten Ponthos, Belgian Ambassador to the United States, at the American Academy of Arts and Letters, New York.

FIFTEEN THOUSAND LISTENERS, of all ages, gathered on the usually quiet banks of the Potomac, on July 10th, to hear the first of the "Sunset Symphonies" series of summer concerts as conducted by Dr. Hans Kindler, in Washington.

VICTOR J. GRABEL, internationally known band conductor and for some years the Editor of the Band and Orchestra Department of The Etude, is leaving his great activities in Chicago to become head of the Band and Orchestra Department of The University of Tulsa, Tulsa, Oklahoma.

A MUSIC BUILDING, seating twenty-five hundred people and costing three hundred and fifty thousand dollars, will be a feature of the New York World's Fair of 1939. It will be the center of the International Music Festival which will be a part of the event.

THE BOSTON SYMPHONY ORCHESTRA closed on July 2nd its fifty-third season of "Pop" Concerts, when it had passed the five hundredth of these interesting events. This was Arthur Fiedler's ninth season as conductor; and for the closing program Jesus Maria Sanroma was the soloist in the perennial "Pops" favorite, Gershwin's *Rhapsody in Blue.*

SAMUEL INSULL, former utilities magnate of Chicago, president of the Chicago Civic Opera Company from 1929 to 1932, director of campaign and large contributor to the twenty million dollar Chicago Civic Opera House opened in 1929, and generous supporter of many musical enterprises in and around Chicago, passed away on July 15th, in Paris, where he had made his home since the tragic collapse of his gigantic utilities empire in the "Windy City." Born in England, seventy-eight years ago, his first work in the United States was as secretary to Thomas A. Edison.

APPROXIMATELY ELEVEN THOUSAND SINGERS, from one hundred and sixty-eight singing societies, gathered in Chicago from June 22nd to 24th, to participate in programs offered at the Amphitheatre, under the direction of Ludwig Lohmiller, H. A. Rehberg and Reinhold Walter.

A PRIZE OF £50 (two hundred and fifty United States dollars) offered by the Australian Broadcasting Commission for a song with words and music by an Australian, has been awarded to Alfred Hill of Sydney.

THE FIRST STRAUSS PREMIÈRE IN MUNICH occurred on the evening of July 24th when "Der Friedenstag (The Day of Peace)" by Richard Strauss was heard for the first time on any stage. All his previous works have been first heard in Dresden; and he explained this departure from custom by pointing out that his former works had been repertoire opera, while "Der Friedenstag" is more especially a festival opera.

CONSTANCE LUCAS, young American violinist (the daughter of Clarence Lucas, writer and correspondent), has been awarded a first prize in the competition of the Ecole Supérieure de Paris, the only violinist to win a first prize at this event.

WORKS OF THIRTY-THREE AMERICAN COMPOSERS were included in the programs of the summer season of concerts of The Goldman Band on the Mall of Central Park, New York, and Prospect Park, Brooklyn. Of these, Victor Herbert led, with twenty-eight performances to his credit. Of Old World composers Cantor Bach led with forty-eight performances (were they of the "Immortal Forty-Eight"?); Wagner ran second, with thirty-eight; and Tshaikowsky third, with thirty-five performances.

JAMES FRANCIS COOKE, President of the Presser Foundation and Editor of The Etude Music Magazine, received from the University of Michigan, at its June commencement, the honorary degree of Doctor of Laws; and in the same month The College of Emporia (Kansas) conferred upon him the honorary degree of Doctor of Education.

MORE THAN ONE THOUSAND PIANISTS participated in the third Annual Piano Festival of Indianapolis, held in June, in the Butler Fieldhouse before two capacity audiences. Students of one hundred and fifty teachers from forty cities played on one hundred and twenty-five pianos. The receipts went to the Wilking Foundation to provide scholarships for piano students of the state.

ANOTHER POSTHUMOUS SCHUMANN COMPOSITION, this time a "Sonata for Piano and Violin" written in October, 1853, has been exhumed from the archives of the Prussian National Library, and it will be published in due time.

DR. HOWARD HANSON

DR. HOWARD HANSON, director of the Eastman School of Music, has received notice of his election to the Royal Swedish Academy of Music. His "Third Symphony," commemorating the tercentenary of the first Swedish colonization in America, was performed at Oslo on June 27th and broadcast throughout that kingdom. Perhaps the first American composer to receive this distinction.

MUSICAL EVENTS have been special features of the Empire Exposition in Glasgow, Scotland, opened by King George VI and Queen Elizabeth in person. Paul Robeson, colored American baritone, filled the great concert hall, in spite of "celebrity prices" which have caused much comment for such an enterprise.

ARNOLD BELNICK, young prodigy violinist, was recently awarded the one thousand dollar grand prize in the Sealtest Rising Musical Star Contest; since which he has been heard with the NBC Orchestra, with Alexander Smallens conducting.

THE PHILADELPHIA ORCHESTRA closed its 1938 season of Robin Hood Dell Concerts on the evening of August 16th, before an audience of four thousand people. Alexander Smallens was the conductor; and Lucy Monroe, soprano, and Jan Peerce, tenor, were soloists in solo and duet selections from opera.

WOMEN IN MAJOR ORCHESTRAS had their first chance when Alfred Hertz introduced eight of them into the string sections of the San Francisco Symphony Orchestra; and most of them are still there.

JAMES WELDON JOHNSON, Negro composer, author and poet, was killed on June 26th in an automobile accident near Wiscasset, Maine. Mr. Johnson, a professor of Creative Literature in Fisk University since 1930, and a brother of J. Rosamund Johnson the famous choral conductor, was sixty-seven years of age and author of "The Book of American Negro Spirituals."

VICTOR KRISTOFFERSON

VICTOR KRISTOFFERSON, a six year old pianist of Rye, New York, who last year won the gold medal in a National Piano Playing Tournament in the Wanamaker Auditorium of New York, again met with similar success in a tournament held on June 3rd at the Hotel Biltmore, when the judges rated his work as "Superior—a most talented student of a masterful teacher." With a rating of ninety-five plus, he was especially commended for tone, technic, phrasing and expression in playing.

(*Continued on Page* 697)

"ARIVEDERCI!"

Toscanini saying "Until We Meet Again," last March, to the cheering crowds at his final broadcast of the NBC Symphony Orchestra. Toscanini returns again this month, to lead this same orchestra.

Maintaining Radio Interest

"WE ALWAYS have corned beef on Tuesday, and I hate it." The speaker was a little girl in an orphan asylum we visited. "We can always tell the day of the week by the food they give us," she continued. There is nothing so deadening as the monotony of routine. We may look forward to certain gustatory weekly festivals, such as Boston beans on Saturday, pancakes on Sunday morning, or fish on Friday; but, when the whole week becomes a calendar of food, many of the pleasures of the table vanish.

Psychiatrists invariably advise us to keep free from the humdrum of too much routine. This presents a very serious problem to all broadcasting companies, particularly in America, where the very existence of broadcasting depends upon advertising sponsors, who, in order to feel warranted in continuing their patronage, must feel assured of an audience of undiminishing size and interest. The problem is increased by two established factors:

a. The restricted amount of A-1 material available for use in programs.
b. The restricted number of very highly gifted persons to deliver the programs.

Obviously this makes the variety that human interest demands, very difficult to secure.

We are often astonished by the way in which certain broadcasting "artists" hold the attention of their "public" year after year. The most amazing of these are, of course, the great comic geniuses, "Amos and Andy," to whom millions have listened for a decade, with undiminishing delight. But there are many others including Rudy Vallee and Bing Crosby, crooners who probably would have worn themselves out years ago if they had not wisely introduced other personalities. The public, likewise, never seems to tire of such voices as those of Kate Smith, Nelson Eddy, Richard Crooks, Lawrence Tibbett and Lucille Manners. With varied programs, these singers have become perennials. News commentators, like Lowell Thomas, Boake Carter, Edwin C. Hill, Gabriel Heater and H. V. Kaltenborn, have become among the inspirational lares and penates of thousands of homes. There are, of course, other fixed date programs, such as the Philharmonic Orchestra and the great NBC Symphony Orchestra on Sunday, and the Metropolitan Opera Company on Saturday afternoons. Thousands look forward to the rapid fire Burns and Allen program, as well as those of Fred Allen and Jack Benny and their peculiar jamborees, and the sometimes pathetic Major Bowes Amateur Hour.

The only reason why radio has the repetition of these popular favorites is that there have been no other performers of so amazing talent and lasting qualities to take their places. Do not think that there is a monopoly. They hold their positions in face of all attempts of newcomers to excel and supersede them. A newcomer of towering talent would be instantly recognized, as was little Deanna Durbin; and, mind you, she has not "petered out." You see, there are only about twenty-eight worth while evening hours weekly available to accommodate the thousands of radio aspirants. Multiply this, let us say, by the four leading "coast to coast" broadcasting networks, and we have one hundred and twelve night programs, which cannot at best accommodate more than seven hundred "spots" for the presentation of really compelling interest, outside of orchestral and band groups. Meanwhile the doors of the broadcasting companies are besieged by armies of would be composers and radio performers.

As we view the situation, however, the great problem is that of securing enough music of the right type to insure an unfluctuating interest in programs. It would appear that, with the immense amount of music in the world, there would be a limitless supply of fascinating and usable melodies. This is not the case. For instance, out of Dvořák's great output we have about four widely accepted songs: *Songs My Mother Taught Me; Humoresque; Largo from the "New World Symphony"*; and

the *Slavonic Dances*. From Sir Edward Elgar's output we have two: *Salut d'Amour* and one march from the *Pomp and Circumstance* group; and so on, through the masters great and small. The result is that brilliant arrangers, such as Andre Kostelanetz, Ferde Grofé and Mayhew Lake, are employed to make special arrangements, and many of their creations have very rare beauty and ingenuity. Without these, radio would be dependent upon the standard classics and semiclassics, many of which have been heard over and over again so many times that the ears of the public have become callous to their former lure. Strangely enough, the march music of John Philip Sousa, like the simple themes of Stephen Collins Foster, does not seem to wear out in this way.

Of one thing we are certain, from thousands of contacts with all kinds of people, and that is that the public is getting "sick to death" of the horrible boiler factory banging of jazz or "swing" bands, in which the height of accomplishment is noise. Time and again we have seen radio owners of all types rush to turn off aural offenses of this kind; and, much to our surprise, they seem to offend non-trained music lovers quite as much as the cultivated music lover. "Shut off that horrible thing!" is now not uncommonly heard. Possibly there may be a continuing audience for this jungle, jamboree stuff; but, unless the sponsor is particularly interested in the asylum business, we would consider this a bad advertising venture. There have come out of the welter of jazz and swing certain very fascinating rhythms and a few melodies of indisputable charm; but, where one is forced to hear the repetition of one inane theme thirty or forty times, to the accompaniment of a wash boiler, a convalescent trombone and an irrepressible saxophone, the punishment becomes torture to any ordinary ears. What kind of an idiot would we consider an actor who came out on the stage and, at the top of his lungs, yelled fifty or sixty times a line from some doggerel verse?

Never in the world's history was there such an opportunity as now for real melodists with training. A modern Godard, Delibes, Raff, Schütt, Chaminade, Moszkowski, or Strauss, would not long go unrecognized. Note how eagerly the ever fascinating themes of Victor Herbert were seized by radio. Because such themes are so rare, they were literally worked to death. Of course this was very complimentary to the memory of the inimitable Victor, but it was damaging to the assets he left to his family. This is the reason why the provisions made by the American Society of Composers, Authors and Publishers (ASCAP) for the just remuneration of composers for their performing rights, never can be adequately estimated by the works being presently "heard" upon the air, since certain composers in the past have made enormous contributions to the promotion of the Society's interests and have literally exhausted their energies and their genius in so doing. Victor Herbert's works are just as charming as they ever were, and they still are enormously in demand; but even a steady diet of the finest delicacies in the world palls upon the appetite in an amazingly short time. Feed a child upon ice cream at every meal, and he soon will turn up his nose at ice cream. Movie symphony players, who, for instance, play Beethoven's "Fifth Symphony" twenty-eight times in one week, know how exceedingly difficult it is to keep artistic interest at a white heat.

We have noted withal, a regularly increasing tendency of radio owners to want to know more about the charming music they hear over the air. There is the fascination

(*Continued on Page* 689)

THE PRESSER HOME FOR RETIRED MUSIC TEACHERS

This is the first picture published showing the large new Annex of the Home. It contains the Assembly Room, the Theodore Presser Memorial Room, and additional residents' rooms.

The Conductor and His Orchestra

By JOHN BARBIROLLI
Conductor, The Philharmonic-Symphony Society of New York

A Conference Secured Expressly for The Etude *Music Magazine*
By STEPHEN WEST

Toppo, New York

JOHN BARBIROLLI

IN TALKING IN A GENERAL WAY about orchestras, it is difficult to deduce conclusions from the New York Philharmonic-Symphony Orchestra, which it is my privilege to direct, for the reason that this orchestra is so well established and reflective of such a splendid background that it does not, strictly speaking, represent the "general run" of orchestral organizations. Work with the Philharmonic-Symphony represents a sum total of conditions which, I imagine, would be hard to duplicate. Therefore, instead of speaking of this one organization, I prefer to tell something of my experience with orchestras in general.

First of all, the term "an orchestra" is a very hard thing to define. A group of instrumental musicians? Unquestionably—but that same group of men and instruments varies greatly with the conductors who lead it. The identical orchestra gives very different results with changed conductors. Not only are these results different according to interpretation, but even in actual basic sound. One conductor may work for a distinctly lyrical tone; another, for a more sturdily robust tone. Both will be ready to sacrifice other elements to the perfecting of the one they desire most; and accordingly the orchestra will sound in a different manner when the two leaders direct it. In this sense, the orchestra loses its identity as a group of individual players (all of whom have highly individualized and specific ideas of their own about matters musical) and takes on the nature of a single instrument—a highly sensitized human Stradivarius—through which the conductor makes himself understood. Thus, in the last analysis, the orchestra becomes the conductor. According to his own musicality, the conductor strives to make the orchestra sound like himself.

A Man with Responsibilities

IT IS PRECISELY for this reason that the conductor becomes a responsible figure. And he must assume the full weight of this responsibility as earnestly as he can, for the sake of the men who merge into his "instrument" as well as for the sake of his own reputation. A conductor must be more than a musical theorist. He should be able to play some, if not all, of the instruments he directs. Often, at rehearsal, it is infinitely helpful to reach out for a violin or a violoncello, and to demonstrate an effect that verbal explanation alone might be insufficient to clarify. Many of our finest conductors have themselves played stringed instruments, at one time or another in their careers. I began my work as a violinist and continued it as a violoncellist; and I still find that, although lack of regular practice hampers me as a solo performer, it is of the greatest value to me to be able to demonstrate what I want. A knowledge of the stringed instruments is not the only high road into this kind of graphic illustration, of course; but, since the orchestra derives its chief effects from the strings, for the most part, they are most to be depended upon.

The conductor's first step in working with his men is to give them the clearest possible notion of what he expects them to do. The more definitely he can bring this before them, the better. I adhere to the old theory of marking all the bowing and phrasing into a score before the parts are copied for the men. I do this, myself, trying to make all details as clear and as accurate as possible. The librarian then consults my marked score and repeats the indications in the parts that are set before the players. I find this the best preliminary means of getting the tone of the orchestra together, and of knitting it into a single, blended whole. A different sound results when the strings are touched with the point of the bow from that produced by the bottom of the bow; and, unless the various sections of men are playing in absolute accord, the resulting tone becomes diffuse and uneven.

In clarifying his ideas into the greatest possible definiteness, however, the conductor must exercise extreme care in one point; that is, his own flexibility. No matter how well he may have worked out some idea of tone or of phrasing, when he first puts it to the test at rehearsal he may find it to be quite impractical after all. Then it is not always easy to make a quick change, to admit one's self to be wrong, and to adjust the whole work to a fresh start. But this must be done. The conductor, who will not change his ideas, is in danger of mental paralysis.

The Dangers of Familiarity

NO ONE IS QUICKER to detect the strong and weak points of the conductor than the men who play under him. The relationship between a conductor and his men can admit of infinite variations of warmth and color. A new conductor takes his place on the podium; he knows that the men must do as he desires, and the men know it, too. But that is not enough. The men must do, yes, must be eager and willing to do more than simply to follow the beats of the stick. The success with which the conductor inspires this eagerness and willingness in the men (who must follow him anyway) determines that conductor's powers. The happiest relationship results when the conductor regards his men, not as employes to whom he has a right to dictate, but as co-workers, with whom he comes together for the common purpose of joyous music making. And the men should be willing to follow him, not through fear or duty, but through affection and respect.

The conductor needs to know the delicate art of dealing with men. No general, no giant industrialist needs it more. The conductor must draw one single response from perhaps a hundred men, no two of whom are alike, and no two of whom can be approached in exactly the same manner. One may respond to sheer bullying; another, to friendly suasion; a third, to disciplined thinking; a fourth, to consultation. Each must be stimulated in his own way, if the ultimate results are to be harmonious and unified. For this part of his work, at least, the conductor must forget music and make himself over into a fine psychologist.

Young people who have their eyes set upon an orchestral goal—whether as conductors or as players—would do themselves excellent service by seeking opportunities to play as much chamber music as possible. One often hears that it is difficult to get orchestral training, and this is true; professional organizations have but few openings for the sort of performers who still need to have their musical corners rounded off, and not every community can get an amateur orchestra together. Precisely for these reasons, I advocate a preliminary grounding in chamber music playing. Everyone who plays at all, can find some friend or fellow student to play with him. And the moment when he first begins to play his first quartet, he is also beginning his orchestral training. Here he has, in miniature, every fundamental and every problem which he will later encounter in orchestral work. Balance of tone, balance between parts, the relative importance of what should and what should not "sound" at any given moment, the incalculable value of good intonation, the discipline of accuracy, the give and take between leader and men: all of these are exactly the same in chamber music and orchestral playing. To-day I look back upon my own early drill in chamber music playing as one of the greatest assets I possess.

"No Excellence Without Labor"

IN COMING TOGETHER with the men of the orchestra, hard work is to be given preference over inspiration. Every note, every tone, every shade of phrasing and interpretation must be carefully worked out and emphasized at rehearsals. And there must be adequate rehearsals. Do not expect anything to happen at the concert that has not been zealously prepared. If anything does happen, it will, more likely than not, be the wrong thing. A concert may be compared to a display of fireworks; no rocket can blaze forth that has not been first put into the thing, by well planned technical processes. The inspiration that makes an unheralded appearance somewhere between the first and second movements on concert night, is not worth having. But the inspiration that comes as the result of ardent and diligent thought, this makes the concert a success.

The more practical experience the young conductor can get, the better. Operatic work is especially helpful, because it calls into play a need for ingenuity in mastering problems that are not of musical origin and cannot always be prepared in advance. Suppose the conductor is about to beat the entrance of a tenor aria and the stage-set door sticks, making it impossible for the tenor to get out on time? The conductor must, all in a flash, delay his beat, hold the orchestra in check, watch for the tenor, adjust himself to indicating an instantaneous entrance, and keep the entire episode from being noticed by the audience. Such emergencies require quick decision and thorough musical resourcefulness, together with extraordinary technic of the stick. The more elements one contends with and masters, the better; and the sharper his wits will become.

As to this mysterious "technic of the stick," this highly individualized matter of beat patterns and gestures, which often causes comment among spectators, it seems to fall into two categories. First, there is the simple beating of time, which anyone can master and which, indeed, is part of the regular curriculum in kindergartens! There is nothing difficult about beating time; and, although it does form the basic groundwork of conducting, it is as different from the art of conducting as the kindergarten child's crayon sketch of an apple is different from the fruits in an Alma-Tadema canvas of spring. The second phase of stick technic, then, may be defined as the expression of the conductor's individual thought and also of the will power by which he communicates his thought to the men. And this part of the process is by no means

so simple. Neither is it difficult. It is best described by the anecdote told of Victor Hugo, who was once asked whether the writing of epic poetry is easy.

"It is either easy," he replied, "or impossible."

That, to my mind, is the most straightforward statement of the art of conducting. Conductors are born, not made. No matter how much they study—and they must study much, indeed—their real progress begins only after the business of formal study has ended. An artist is born not only with a gift for music, but also for a special kind of music; that is, a talent for the piano, the violin, the voice. Similarly, a man either possesses the sum total of magnetism, communicativeness, and perceptive ingenuity, which make a master conductor, or he does not. If he does not, he cannot go to any school to learn mere gestures. If he does, he develops his own technic of gestures, quite as the violinist or pianist develops his individual touch upon his instrument. In that sense, any gestures productive of superb tonal results are justifiable; and any which do not give such results are bad. A conductor does not get his results because he lashes out his arm like a sword, or because he bends at the knees. Those motions in themselves mean nothing. They grow important only when they represent one man's individual method of translating something within his own mind, into plain, graphic, articulate language for the men before him. For that reason, stick technic (over and above the accepted gestures of time beating and entrance cues) can be neither learned nor taught. It must be individual. Furthermore, stick technic, in its widest sense, is not confined to the baton alone. The conductor gets just as telling results from the expression of his eyes and his face. Once he understands that baton technic is simply the graphic translation of the conductor's ideas, he will find himself paying less and less attention to mannerisms of podium deportment and concentrating more and more upon the inner meaning which the conductor brings forth from the music. For that, after all, is the real significance of his task.

A Land of Musical Opportunities

As a final word, I would like to express my sincere admiration of the musical conditions I have found in America. Nowhere else in the world is there such a wholehearted fostering of fine music, carried on in such a bounteous way. It was surprising to me, when first I came here a year ago, to observe the number of excellent orchestras you have—other than those of New York, Boston, Philadelphia, Cleveland, Detroit, Minneapolis, to name but a few of those most widely known. Still, the sheer size of America might explain the fact that you have so many; your cities lie farther apart than many European capitals. What is especially heartening is not merely the number of orchestras, nor even their fine quality, but the excellent conditions under which they flourish. Money is spent upon maintaining them, and they are thus permitted to grow as purely artistic enterprises, without the laming fear of needing to work solely to live. In that respect, America stands foremost among the nations. And the good such a generous system of endowment brings with it is incalculable.

For the most part, orchestras are spoken of in terms merely of the pleasure they bring to the listening public. They do far more than that. They create outlets and opportunities for fine playing. And such opportunities, in turn, extend the field over which great music may reign. The musical atmosphere which existed in the smaller European courts a century ago—when each princeling vied with his neighbors, to have the finest orchestra and to stimulate the best in playing and in taste—stands, to-day as the best explanation of why music flourished then so nobly as it did. Your American conditions are different, of course, from those of court patronage; but the results cannot help but be the same. America must be proud, indeed, of carrying on the traditions of fine, generous, and dignified musical patronage; and she may well look forward to creating among her sons and daughters the musical florescence of to-morrow.

Practice Is Playing

By **Marjorie Gleyre Lachmund**

Every teacher is only too familiar with the plaint, "I like to play, but I don't like to practice"! And wits are constantly searched for new ways to combat it.

Recently a remedy was tried, which, if not new, will bear repeating. It was approached from a psychological angle on the assumption that, if the child's thought about it was changed, the reaction might also change.

"Alice," I said, "when you sit down to practice, you are playing, aren't you? You think about it the wrong way. Instead of saying to yourself, 'oh dear! now I have to practice for an hour,' why do you not say, 'well, I guess I'll sit down and play for an hour?'"

The suggestion also was made that, since mistakes spoil the playing and therefore lessen the pleasure of playing, she would want to correct them, not as a chore but for her own satisfaction; and repetition of the correction was the way to prevent a recurrence of the error. I tried to emphasize that, since she liked to play, she would want to do whatever was necessary to make the playing more enjoyable. A performance marred by errors or stumbling is not much pleasure to either the listener or the performer.

While Alice did not immediately change into a conscientious student who wore the varnish off the piano bench, she showed a marked improvement not only in performance, but also—which gave even more satisfaction—in interest.

Musicians of October Birth

By W. FRANCIS GATES

OCTOBER, beautiful month of Autumn, has contributed richly to the harvest of master musicians.

As a beginning there must be mentioned Franz Liszt, supreme "Wizard of the Piano"; Niccolò Paganini, perhaps an even more romantic figure in his "wizardry of the bow and strings"; and Jenny Lind, "Swedish Nightingale," superb artist, and perhaps most fabulous of all singers.

Of master composers we may mention Camille Saint-Saëns, Giuseppe Verdi, Georges Bizet, Johann Strauss, Jr., Domenico Scarlatti, and Henry Smart, as well as Woldemar Bargiel, Stephen A. Emery, Henry Schoenefeld, Wilhelm Bernhard Molique, Heinrich Schütz, John L. Hatton, Vaughan Williams, Albert Lortzing, and Alexander Gretchaninoff.

Of interpretative artists there are of conductors, Theodore Thomas, Artur Nikisch, Leopold Damrosch, Karl Muck; of pianists, Emil Sauer, Antoine de Kontski, Arthur Friedheim; of violinists, Karl Flesch, Francis Macmillen; and of vocalists, Julia Culp, Giovanni Martinelli, and Marie Van Zandt.

To America this month has been richly generous in giving of composers, Henry Clay Work, William MacFarlane, William Billings, Paul Ambrose, and Howard Hanson (also conductor); of historians and critics, Glenn Dillard Gunn, Oscar Sonneck, Alexander Wheelock Thayer, and William Foster Apthorp; of pianists, Vernon Spencer, Frank La Forge, Allen Spencer, John S. Van Cleve, and Julie Rivé-King; of vocalists, Allen Hinckley, Oscar Seagle, and Annie Louise Cary; of organists, Edward Dickinson; and of publishers, Oliver Ditson.

A Natal Chronology

1st—Paul Dukas (1865), Heinrich Conrad Schleinitz (1802), Henry Clay Work (1832)

2nd—Michael D. Calvocoressi (1877), Henri Fevrier (1875), Glenn Dillard Gunn (1874), William Charles ("Will C.") Macfarlane (1870), Heinrich Panofka (1807), (George) Alexander Russell (1880), Siegfried Saloman (1816)

3rd—Woldemar Bargiel (1828)

4th—August Wilhelm Bach (1796), Jacob (Jacques) Blumenthal (1829), Stephen Albert Emery (1841), Louis Koemmenich (1866), Henry Schoenefeld (1857)

5th—Denis Diderot (1713), John Erskine (1879), Thomas Greatorex (1758), Cyril Bradley Rootham (1875)

6th—William Batchelder Bradbury (1816), Julia Culp (1881), Jenny Lind (1820), Oscar George Theodore Sonneck (1873)

7th—William Billings (1744), Charles Crozat Converse (Karl Redan—1832), Wilhelm Bernhard Molique (1802), Enrico Tramonti (1876), Jean-Baptiste Vuillaume (1798)

8th—Emil Sauer (1862), Heinrich Schütz (1585), Marie Van Zandt (1861), Louis-Victor-Jules Vierne (1870)

9th—Karl Flesch (1873), Henry Albert Lang (1854), Charles-Camille Saint-Saëns (1835)

10th—Edward Dickinson (1853), Johann Ludwig Krebs (1713), Henri Rabaud (1873), Alexander Siloti (1863), Vernon Spencer (1875), Giuseppe Verdi (1813)

11th—Paul Ambrose (1868), Allen (Carter) Hinckley (1877), Xavier-Henri-Napoléon Leroux (1863), Theodore Thomas (1835)

12th—John Liptrot Hatton (1809), Artur Nikisch (1855), Ralph Vaughan Williams (1872)

13th—Moritz Hauptmann (1792), Anselm Hüttenbrenner (1794), Johanna Wagner (1828)

14th—Francis Macmillen (1885), Georges-Amedée-Saint-Clair Mathias (1826)

15th—Konrad Ansorge (Eduard Reinhold—1862), Marc' Antonio Cesti (Bapt. Sept. 15, 1618), Alexander Dreyschock (1818), Thomas Hastings (1787), Friedrich Nietzsche (1844)

16th—Gaetano Capocci (1811), Émile-Louis-Victor Mathieu (1844)

17th—Pierre-Alexandre Monsigny (1729)

18th—Albert Saléza (1867), Francis Thomé (1850)

19th—Adolfo Fumagalli (1828), Clarence Lucas (1866)

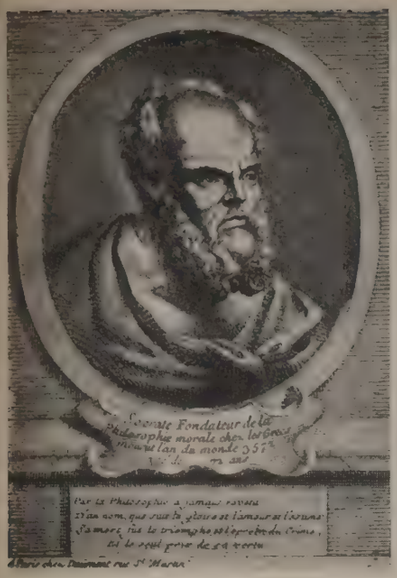
20th—Karl Mikuli (1821)

21st—Egon Wellesz (1885)

22nd—Annie Louise Cary (1842), Leopold Damrosch (1832), Karl Dorius Johann Fuchs (1838), Frank La Forge (1879), Franz Liszt (1811), Giovanni Martinelli (1885), Karl Muck (1859), Federico Ricci (1809), Eduard Schütt (1856), Alexander Wheelock Thayer (1817)

23rd—Alexander Archangelsky (1846), Carl Hahn (1874), Gustav Albert Lortzing (1801)

24th—William Foster Apthorp (1848), Ferdinand von Hiller (1811), Franco Leoni (1864), Ernst Friedrich (Eduard) Richter (1808)



25th—Georges Bizet (1838), Alexander Tichonovitch Gretchaninoff (1864), Michael Horn (1859), Minna Peschka-Leutner (1839), Georg (Alfred) Schumann (1866), Camillo Sivori (1815), Johann Strauss, Jr. (1825), George Putnam Upton

"TIME OUT" FOR MUSIC

This picture shows an orchestra of workers playing together during the daily recess, in a work room of a great industry in Florence, Italy. It is reprinted from the* Leipziger Illustrirte Zeitung. *Here and abroad, industries large and small find that during the week it is a very profitable business to take "time out" for the practice of music.

SOCRATES

What Plato Said About Music

Some Two Thousand Year Old Wisdom on the Tone Art

By PEARL L. WEBER, Ph.B.
Assistant Professor of Philosophy and Psychology
University of Omaha

PLATO

PLATO HAS THINGS TO SAY ABOUT MUSIC, in at least nineteen of his twenty-nine surviving writings. He was probably the most musical philosopher of all time. In no other philosopher's works has philosophy been graced with so brilliantly beautiful a garb. As Shelly so well expressed it, Plato "exhibits the rare union of close and subtle logic with the Pythian enthusiasm of poetry, melted by the splendor and harmony of his periods into one irresistible stream of musical impressions[1]." Surely what Plato said about music should have more than slight significance and interest for all students and lovers of the art. It is often difficult to interpret Plato with any high degree of assurance, for the reason that what he writes he puts into the mouths of the many persons of his dialogues. We cannot be sure whether he is in earnest or in jest. This article was purposely and advisedly entitled "What Plato Said about Music," because the interpretation of what he said would be a horse of a different color. Then, we should need to know this before beginning an interpretation.

Like the typical Greek that he was—one who thanked the gods he was born a Greek—he deals with origins and fundamentals. He tells us that music begins in rejoicing. When rejoicing we are unable to be still. So "our young men break forth into dancing and singing[2]." "And the gods, pitying the toils which our race is born to undergo, have appointed holy festivals, wherein men alternate rest with labor; and have given them the Muses, and Apollo, the leader of the Muses[3]," the god of music, "who presides over harmony, and makes all things move together, both among gods and among men[4]," Apollo, lord of the lyre—and also Dionysius, "to be companions in their revels—the young of all creatures cannot be quiet in their bodies or in their voices; they are always wanting to move and cry out; some leaping and skipping, and overflowing with sportiveness and delight at something, others uttering all sorts of cries[5]."

"There is a tradition or story, which has somehow crept about the world, that Dionysius was robbed of his wits by his stepmother, Hera, and that out of revenge he inspires Bacchic furies and dancing madnesses in others; for which reason he gave men wine. Such traditions concerning the gods," says Plato, "I leave to those who think that they may safely be uttered; I only know that no animal at birth is mature or perfect in intelligence; and in the intermediate period, in which he has not yet acquired his own proper sense, he rages and roars without rhyme or reason; and when he has once got on his legs he jumps about without rhyme or reason; and this, as you will remember, has already been said by us to be the origin of music——[6]." "But, whereas the animals have no perception of order or disorder in their movements, that is, of rhythm and harmony, as they are called, to us the gods—have given the pleasurable sense of harmony and rhythm; and so they stir us into life, and we follow them, joining hands together in dances and songs—[7]."

The Muses are the nine goddesses who are the patronesses of the arts, and music is the name of the art which is called after them.[8] "The name of the Muses, and of music, would seem to be derived from their making philosophical enquiries.[9]" Music itself is a gift of the gods to men. But it was never intended, as the many foolishly and blasphemously suppose, merely to afford us idle pleasure. On the contrary, music has for its ideal end and purpose beauty, and the sincere love of the beautiful.[14] The melody of the Muses is due to Love, who was its inventor—"the love of beauty, as is evident, for with deformity Love has no concern—and from the love of the beautiful has sprung every good in heaven and earth.[10]" The inspiration of the Muses is a kind of madness "which taking hold of a delicate and virgin soul, and there inspiring frenzy, awakens lyrical and all other numbers." "But he who, having no touch of the Muses' madness in his soul, comes to the door and thinks that he will get into the temple by the help of art, is not admitted; the sane man disappears, and is nowhere when he enters into rivalry with the madman.[11]" "The Muse first of all inspires men herself; and from those inspired persons a chain of other persons is suspended, who take the inspiration.[12]" "Through all these the god sways the souls of men in any direction he pleases. Thus there is a vast chain of dancers and masters and undermasters of choruses, who are suspended—at the side of the rings which hang down from the Muse.[13]"

The Muses have been so generous and beneficent that they have given of their gifts and bounties even to the grasshoppers. Phaedrus had not known of this, so Socrates expresses surprise by saying to him: "A lover of music like yourself ought surely to have heard the story of the grasshoppers, who are said to have been human beings in an age before the Muses. And when the Muses came and song appeared they were ravished with delight; and singing always, never thought of eating and drinking, until at last in their forgetfulness they died. And now they live again in the grasshoppers; and this is the return which the Muses make to them—they neither hunger nor thirst, but from the hour of their birth are always singing, and never eating or drinking; and when they die they go and inform the Muses in heaven who honor them on earth.[15]" Plato indicates that Socrates, who was his own great teacher, was personally mindful of music. While in prison Socrates versified and set to music Aesop's fables, because a certain dream had frequently admonished him to make music. He had earlier supposed the dream referred to the daily music of the philosophic life; however, now that he was in prison under sentence to die, he was scrupulous not to neglect the possible literal interpretation of the word music, and had written a prelude to Apollo and set to music Aesop's fables.[16]

"So much of music as is adapted to the sound of the voice and to the sense of hearing is granted to us for the sake of harmony,[17]" which is the reconciliation and syncrasy of differences and oppositions. "And anyone who pays the least attention to the subject will—perceive that in music there is—the reconciliation of opposites; and I think that this must have been the meaning of Heracleitus, although his words are not accurate, for he says that the One is united by disunion, like the harmony of the bow and the lyre. Now there is an absurdity in saying that harmony is discord or is composed of elements which are still in a state of discord. But what he probably meant was, that harmony is composed of differing notes of higher and lower pitch which disagreed once but are now reconciled by the art of music; for if the higher and lower notes still disagreed, there could be no harmony—clearly not. For harmony is a symphony, and symphony is an agreement; but an agreement of disagreements while they disagree there cannot be; you cannot harmonize that which disagrees. In like manner rhythm is compounded of elements short and long, once differing and now in accord: which accordance—music implants, making love and unison grow up among them; and thus music, too, is concerned with the principles of love in their application to harmony and rhythm.[18]" "And harmony—is not given—with a view to irrational pleasure, but—to correct any discord which may have arisen in the—soul, and to be our ally in bringing her into harmony and agreement with herself; and rhythm too was given—for the same reason, on account of the irregular and graceless ways which prevail among mankind generally, and to help us against them.[19]"

"Now the irregular strain of music is always made ten thousand times better by attaining to law and order, and rejecting the honeyed Muse—not however that we

APOLLO PLAYING THE LYRE

Apollo was the Greek God of Poetry and Music. After Zeus, he was the most important of the gods of the ancient Greeks. The original of this statue, the Apollo Citharoedus (Apollo of the Cithar, or Lyre) is in the Vatican at Rome.

mean wholly to exclude pleasure, which is the characteristic of all music.[20]" "But the pleasure must not be that of chance persons: the fairest music is that which delights the best and best educated, and especially that which delights the one man who is preëminent in virtue and education." For of course all of us are not equally delighted with every sort of music. "What, then, leads us astray? Are beautiful things not the same to us all, or are they the same in themselves, but not in our opinion of them? For no one will admit that forms of vice in (music and) the dance are more beautiful than forms of virtue, or that he himself delights in the forms of vice, and others in a muse of a different character. And yet most persons say that the excellence of music is to give pleasure to our souls. But this is intolerable and blasphemous; there is, however, a much more plausible account of the delusion—the adaptation of art to the characters of men. Choric movements are the imitations of manners occurring in various actions, fortunes, dispositions—each particular is imitated, and those to whom the words, or songs, or dances are suited, either by nature or habit, or both, cannot help feeling pleasure in them and applauding them, and calling them beautiful. But those whose natures, or ways, or habits are unsuited to them, cannot delight in them or applaud them, and they call them base. There are others, again, whose natures are right and their habits wrong, or whose habits are right and their natures wrong, and they praise one thing, but are pleased at another. For they say that all these imitations are pleasant, but not good. And in the presence of those whom they think wise, they are ashamed of dancing and singing in the baser manner, or of deliberately lending any countenance to such proceedings; and yet, they have a secret pleasure in them. And is any harm done to the lover of vicious dances or songs, or any good to the approver of the opposite sort of pleasure? I think there is. "I think" is not the word, but rather, "I am certain." For must they not have the same effect as when a man associates with bad characters, whom he likes and approves rather than dislikes, and only censures playfully because he has a suspicion of his own badness? In that case he who takes pleasure in them will surely become like those in whom he takes pleasure, even though he be ashamed to praise them. And what greater good or evil can any destiny make us undergo? I know of none.

Musicians of Character

"Then in a city which has good laws, or in future ages is to have them, bearing in mind the instruction and amusement which are given by music, can we suppose that the poets are to be allowed to teach in the dance anything which they themselves like, in the way of melody, or rhythm, or words, to the young children of any well-conditioned parents? Is the poet to train his choruses as he pleases, without referenee to vice or virtue? That is surely quite unreasonable, and is not to be thought of.[22]" "And therefore the judges (of music) must be men of character, for they will require both wisdom and courage; the true judge must not draw his inspiration from the theater, nor ought he to be unnerved by the clamor of the many and his own incapacity; or again, knowing the truth, ought he through cowardice and unmanliness carelessly to deliver a lying judgment, with the very same lips which have just appealed to the gods before he judged. He is sitting not as the disciple of the theater, but, in his proper place, as their instructor, and he ought to be the enemy of all pandering to the pleasure of the spectators. The ancient and common custom of Hellas, which still prevails in Italy and Sicily, did certainly leave the judgment to the body of spectators, who determined the victor by show of hands. But this custom has been the destruction of the poets; for they are now in the habit of composing with a view to pleasing the bad taste of their judges, and the result is that the spectators instruct themselves; and also it has been the ruin of the theater; they ought to be having characters put before them better than their own, and so receiving a higher pleasure, but now by their own act the opposite result follows.[23]"

"Music is essentially representative and imitative. Consequently, when anyone says that it is to be judged by pleasure as the criterion, his doctrine cannot be admitted; and if there be any music of which pleasure *is* the criterion, such music is not to be sought out or deemed to have any real excellence, but only that other kind of music which is an imitation, a representation, and a symbol of the Good.[24] For pleasure is, at best, the last and lowest of goods, and not first, not even if all the oxen and horses and animals in the world by their pursuit of enjoyment proclaim her to be so.[25]" "Music is more celebrated than any other kind of imitation, and therefore requires the greatest care of them all. For if a man makes a mistake here, he may do himself the greatest injury by welcoming evil dispositions.[26]" Beauty of harmony, rhythm, and melody in this art of arts depends upon simplicity. Complexity of melody, and song composed in the panharmonic style and in all rhythms engenders license, whereas simplicity in music is the parent of temperance in the soul. If we depart from ideals of simplicity in our music there will be such a wave of intemperance and disorder and disease that lawyers and doctors will spring up everywhere.[27] The Muses would never fall into the monstrous error of mixing up the voices and sounds of animals and of men and instruments, and every other sort of noise, as if they all were one. All this sort of thing aims only at swiftness and smoothness and brutish noise, and is exceedingly coarse and tasteless.[28]

Music and Youth

The corruption of music and art led the way in the development of a licentious liberty that bred Titanic natures who paid no heed to laws, to oaths, to faith, or to the gods.[29] Music may breed chaos and anarchy in a state, or law and order, depending on its quality. The souls of the young should be charmed by the power of good music into harmony with the law.[30] Music, indeed, is so vitally related to government that "when the modes of music change the fundamental laws of the State change with them.[31]" The Ionian and Lydian music of lamentation and sorrow, of drunkenness, softness, and indolence—the music of relaxation and apathy—are to be banished from the ideal state; only the Dorian and Phrygian music, the strains of necessity and freedom, of fortune and misfortune, of courage and temperance are to be retained.[32] All these and others were early discerned and distinguished, "nor were the performances allowed to confuse one style of music with another. And the authority which determined and gave judgment, and punished the disobedient, was not expressed in a hiss, nor in the most unmusical shouts of the multitude, as in our days, nor in applause and clapping of hands. But the directors of public instruction insisted that the spectators should listen in silence to the end; and boys and their tutors, and the multitude in general, were kept quiet by a hint from a stick. Such was the good order which the multitude were willing to observe; they would never have dared to give judgment by noisy cries.[33]" But since the good old days many composers, "by composing—licentious works, and adding to them words (just) as licentious—have inspired the multitude with lawlessness and boldness, and made them fancy they can judge for themselves about melody and song. And in this way the theaters from being mute have become vocal, as though they had understanding of good and bad in music and poetry; and, instead of an aristocracy (of beauty), an evil sort of theatrocracy has grown up. For if the democracy which judged had only consisted of educated persons, no fatal harm would have been done; but in music there first arose the universal conceit of omniscience and general lawlessness; ——— freedom came following afterwards, and men, fancying that they knew what they did not know, had no longer any fear, and the absence of fear begets shamelessness.[34]" And so "we shall not want multiplicity of notes or a panharmonic scale," "we shall not maintain the artificers of lyres with three corners and complex scales, or the makers of any other many-stringed, curiously-harmonized instruments." And be it noted that "In this composite use of harmony the flute is worse than all the stringed instruments put together; even the panharmonic music is only an imitation of the flute." "There remain only the lyre and the harp for use in the city, and the shepherds may have a pipe in the country." "And so, by the dog of Egypt," let us purge the state "of all music expressive of meanness, or insolence, or fury, or other unworthiness.[35]" (No need to ask the modern question: what of the saxophone?)

Music Softens Nature

Another aspect of excess in relation to music is the matter of overindulgence, and exclusive devotion to the art, both of which produce softness and effeminacy. "The mere musician is melted and softened beyond what is good for him." The very fine quality of gentleness, "when too much indulged, will turn to softness." "And when a man allows music to play upon him and to pour into his soul through the funnel of his ears those sweet and soft and melancholy airs of which we were just now speaking, and his whole life is passed in warbling and the delights of song; in the first stage of the process the passion or spirit which is in him is tempered like iron, and made useful, instead of brittle and useless. But if he carries on the softening and soothing process, in the next stage he begins to melt and waste, until he has wasted away his spirit and cut the sinews of his soul; and he becomes a feeble warrior (or weakling). If the element of spirit is naturally weak in him the change is speedily accomplished, but if he have a good deal, then the power of music weakening the spirit renders him excitable; on the least provocation he flames up at once, and is speedily extinguished; instead of having spirit he grows irritable and passionate and is quite impracticable.[36]" Fortunately, however, no man need find himself in such a sorry state, for "there are two principles of human nature, one the spirited and the other the philosophical," and some god "has given mankind two arts answering to them (and only indirectly to the soul and body) in order that these two principles (like the strings of an instrument) may be relaxed or drawn tighter until they are duly harmonized. (These two arts are music and gymnastic.) And he who mingles music with gymnastic in the fairest proportions, and best attempers them to the soul, may be rightly called the true musician and harmonist in a far higher sense than the tuner of strings.[37]" Such an one is "attuned to a fairer harmony than that of the lyre or any pleasant instrument of music; for truly he has in his own life a harmony—arranged in the true Hellenic mode.[38]" To know only that some notes are higher, some lower, and some of equal pitch does not make a real musician; though if you did not know this you would know almost nothing of music. But when you have learned what sounds are high and what low, and the number and nature of the intervals and their limits or proportions, and the systems compounded out of them, which our fathers discovered, and have handed down to us who are their descendants, under the name of harmonies; and the affections corresponding to them in the movements of the human body, which when measured by numbers ought, as they say, to be called rhythms and measures; when, I say, you have learned this, then, my dear friend, you are perfect; and you may be said to understand any other subject when you have a similar grasp of it. But the infinity of kinds and the infinity of individuals which there is in each of them, when not classified, creates in everyone of us a state of infinite ignorance; and he who never looks for number in anything will not himself be looked for in the number of famous men.[39]"

All human beings stand in need of music —"the life of man in every part has need of harmony and rhythm, in order that they may be more gentle, and harmonious, and

WHEN QUEEN ELIZABETH WAS A MUSIC STUDENT

Through the kindness of Miss Rose Wollstein we are enabled to present to readers of The Etude a picture of the piano class of the late Mme. Mathilde Verne (sister of the late Mary Wurm who was so long a valued contributor to The Etude). One member of this interesting group of young English women is Elizabeth Bowes-Lyon (standing second from the left), now Queen Elizabeth of England. Find Her Majesty the Queen.

THE SPITALNY CHORAL GROUP

PHIL SPITALNY

Secured Expressly for The Etude *Music Magazine by* ROSE HEYLBUT

THE TIME HAS COME, I fully believe, when musicans can no longer close their eyes to the fact that the lighter forms of music, as exemplified by "dance numbers," have their legitimate place in the art. The dance itself is one of the oldest forms of music. We accept gigues (or plain jigs) by Bach, minuets by Mozart and Schubert, waltzes by Chopin and Brahms, as parts of any concert program. I do not pretend that our modern "lighter numbers" are the equal of those compositions; but I do maintain that the difference lies in the artistic projection of the composers and not in the dance forms themselves. There are few symphonies and concertos, of more modern vintage, that hold their own against the nobler works of classic times.

Dance music should earn consideration as a part of good music, if only for the reason that the majority of people enjoy it; and music is, first and foremost, a source of enjoyment. Let us understand clearly at the outset, however, that there are differences even in dance music. Throughout this discussion, the term dance music shall be used to mean music of melodic agreeability, subtly and musically arranged, and artistically performed. I hold no brief for the inartistic combination of overheavy brasses and unrestrained drums, that I think of as "cannibal music." In the field of legitimate light dance music, however, there is room for study and for careers; and it is high time that our serious musicians should recognize this fact.

A Natural Resort of Youth

ALL OF US KNOW that the pupils in our various studios and music schools do turn to dance music, either as personal relaxation or as a means of finding their way to earning and experience. We know also that the concert field, either in solo work or in orchestral organizations, is rapidly becoming hopelessly overcrowded. It is, therefore, a great pity that the field, which is being investigated by the students anyway, should not be developed more specifically as a means of entering the world of professional music.

What, then, should be the first requisite of a dance, or jazz, band player? Unhesitatingly, a solid foundation in thorough, serious musicianship. My own training has been strictly along classical lines. I used to play clarinet in the original Cleveland Symphony Orchestra. Later, I founded and conducted my own symphony orchestra in Cleveland, with which I gave Sunday morning concerts of classic and symphonic programs. It was during the development of these programs, however, that I first realized a truth which seems to be one of the foundations of musical participation.

Experience showed that the vast majority of our people are music lovers at heart, provided they can be given music which means something to them. Further experience showed that, without some sort of attentive musical training, the full meaning of the heavier (and, certainly, the more modern) classical works simply cannot be grasped and enjoyed. It takes more than a mere music lover to understand the full beauty of a performance, let us say, of "Parsifal"; of Debussy, Honegger, Stravinsky. It takes the applied attention of a music student. And once this fact is admitted, we are found to be at a sort of crossroads of musical decision; confronted with the questions, "Shall *music* be allowed to continue to mean only classical music, regardless of the fact that many people, music lovers at heart, do not begin to comprehend it? Shall the needs of these very active music lovers be neglected, simply because they have not had the time or the advantages to make themselves music students as well? What sort of music can we offer to the masses who love music without having studied it?"

To my mind, the answer is light music; melodic, rhythmic, well played tunes which will satisfy the ear and the emotions, without overtaxing an intellect which has not been trained so that it may grasp the beauties of the greater classics. In this belief I broke away from the symphonic programs, which had been my chief business, and undertook to probe the public taste in the matter of lighter numbers. And the result has been a conviction that my belief is far from wrong. In giving my public light music, there has been no compromise with cheapness. Only good, melodic airs have been arranged, and this in a way that will be easily understandable. But there is no wish to be misunderstood as advocating the downfall of the symphony orchestra. That is by no means the case. But all must admit that the symphony orchestra does not serve everybody's needs. The fact that none of our great symphonic organizations are self-sustaining must prove this; and I therefore feel that something should be said in favor of that form of entertainment which, without becoming unmusical, can fill the needs that the symphony misses.

THE "HOUR OF CHARM" ORCHESTRA

The Road to Recognition

OUR MOST SUCCESSFUL jazz band leaders will be found, without exception, to be graduates of symphonic organizations. Paul Whiteman was a symphonic performer. Benny Goodman is an excellent clarinetist, fit for any great orchestra. Tommy Dorsey ranks among the world's finest legitimate trombonists. Thus, first of all, the jazz player needs a background of solid musicianship.

It may be asked why this is so, when the tasks to which our jazz band player will devote himself lie such a distance from the music which a solid course of tr[illegible]

obliges him to study. The answer lies less in the form of music he plays than in the principle of artistic performance. Dance music becomes acceptable only when it is performed artistically. The notes and emphases are quite different from those in the classic field; but the respect for tone, for rhythm, for melodic line, for group coöperation is exactly the same; and it is quite as difficult to perform dance music artistically as it is to play Bach. That is why the average student is shortsighted, if he tries to break his way into the field of dance music with no preparation beyond a taste for "hot rhythms."

In my own orchestra, eight of the first violins are graduates of the Juilliard School of Music. My concertmaster, Evelyn Kay, recently gave a recital, quite apart from her work with me, at which she performed the *Symphonie Espagnole* of Lalo and the César Franck "Sonata in A." This is quite as it should be. Only a performer with an adequate perception of Lalo and Franck can bring the element of art into dance numbers!

People frequently ask about the difference between jazz, swing, and dance music. In my opinion, there is no difference at all, except the names. All of these forms stress melodic and rhythmic appeal. While jazz music has been long with us, of course, to-day's jazz shows a marked development over that of fifteen years ago. Noisy jazz (cannibal music) now has less chance of success than formerly. Our audiences very definitely prefer the finer type, in which the melody is projected by strings, woodwinds, or muted brasses, while the rhythm is marked by accentuation rather than by blaring tom-tom beats. And it requires excellent musicianship to give the dance numbers the color they require.

What qualities are required in engaging new instrumentalists for my orchestra? First, musicianship and an indication, at least, of musical artistry. My auditions are always given in terms of classic repertoire. No performer is engaged, who cannot give a finished rendition of two sonatas and two concertos. The next qualifications demanded are individual gifts of rhythm and melodic perception. Candidates must also be able to read music fluently. And, finally, they must come with experience.

Now in this requisite of experience we sometimes run into difficulties. Many young musicians can play well, but have had no training whatever in jazz. On the other hand, countless applicants believe themselves to be experts with the drum and the traps, but who have not the first sense of fine musicianship. Both of which types of applicants must be rejected. The desirable jazz band performer must be a thorough musician first, and an experienced jazz player in second place. And these are all too few.

Shall Schools See the Way?

IT WOULD RESULT to the advantage of all concerned if our music schools and conservatories were to establish departments in which lighter music could be taught and practiced. Perhaps that sounds like a dreadful suggestion? I do not think so. With eight Juilliard graduates in my own group, I know that earnest music students turn to jazz as a means of livelihood; and I also know that their search for positions could be made much easier if the conservatory that sends them out were willing to give them their first experience in the sort of music to which they will look for jobs. No first rate dance band can afford to accept players without experience, and many fine talents are allowed to go to waste when lack of experience closes the doors to necessary and dignified positions. It would be an excellent thing for our conservatories to investigate this point, if only for the sake of keeping instruments in our young people's hands.

Supposing that our candidate has proven himself to be the possessor of solid musicianship and jazz experience, he enters a good dance group and finds very special problems awaiting him. Rhythm-playing, as we call it, is quite different from ordinary music. In symphonic works, the performer is called upon to read only what is before him and to blend his own individualities of style with those of his coworkers. In rhythm-playing, the performer is responsible for more than what is marked into his score. He must, through experience, feel the complete pattern, the complete swing of the whole phrase. Here it is no longer a matter of note-to-note reading. While we play notes, of course, we think in phrases, and the entire phrase must be a perfect fusion.

Jazz music is played strictly in rhythm. Inexperienced students are not used to this. Often, in performing the great sonatas, an added effect is gained by an emotionally balanced *ritardando*. In rhythm-playing, the emotion is expressed by the reading of the phrase itself, never by any tampering with the set rhythm which, for dance purposes, must be as sharp and as regular throughout as that of a military march. Neither has the conductor anything to do with the *tempo* of the piece. That is in the hands of the drummer and the banjo player, and remains fixed from start to finish. The conductor, actually, is useful only in the rehearsals of jazz performances. There it is that he decides on the *tempo*, which is really decided, of course, by the dance itself; that he works out the phrasing, both of the melodies and of the various rhythms. At the finished performance, itself, the conductor might just as well be absent. He encourages his performers, of course, and uses his baton to remind them of all that has been developed at rehearsals; but he never can permit himself any last minute alterations of "inspiration." In rhythm-playing, it is always the rhythm and the pattern that count.

Otherwise the problems of the dance band are exactly the same as those of any other orchestral group. Technically there are no special points to be observed. Tone and fleetness make the same demands on a jazz violinist as on the soloist who plays Bach. Orchestral discipline and coöperation are also the same. Light music may be regarded as a sort of chamber music, in which the give and take among the performers is even more intently to be observed than in a full orchestra.

Yes, there are frequent queries as to why I play with an orchestra of girls. Is it merely a trick, to be different? By no means. Long ago, when I first set out on my experiments with popular taste, it was found that light music, to be entirely pleasing, must give the listener an impression of sweetness, of charm. And where in the world can you find a better exponent of charm than a charming young woman? The inherent personal chemistry of men is very different from that of women. Neither is superior or inferior to the other; they are simply entirely different. Their actions, their reactions, their mental and emotional approaches are different. If I were seeking an effect of power, of heavy beats, of the sort of military precision that convinces you against your will, I should certainly not go to work with a group of girls. But the effect desired was one of charm, of mellowness, of floating, elusive persuasion. And so it seemed the most natural and logical thing in the world to assemble a band of women and to ask them simply to go on being charming women in their playing. Depending upon the effect one wants, of course, there is a vast and relatively unexplored field in the matter of women orchestras.

More Worlds to Be Conquered

FINALLY, IN SURVEYING THE FIELD of light music as a whole there are great opportunities awaiting those of our students who will be convinced that jazz music is not the sort of thing to which to turn as a relief from serious study. Light music has its definite place in the world of art, and it requires serious artists to extract from it the full measure of entertainment and charm. The light part of light music, oddly enough, is perceivable only to the listener. Its performance requires the same study, the same thought, and the same devotion as the symphony itself.

Instead of trying to break into "swing" music at the top, the beginner should perfect himself in his work and gain experience. It is, however, a difficult task to advise as to where to seek this experience, since it is in itself a requisite for the sort of job that the young performer sets as his goal. It is, in the last analysis, in the hands of the musical authorities, to decide whether this experience is to be given as part of the course of musical training, or whether its lack is to continue sending ambitious and gifted young beginners into the lines of the jobless. It is not often that a nation's musical conservatories can have a share in shaping the economic destiny of the land; but in this case, at least, a fair consideration of light music, as part and parcel of gainful employment, can do much towards easing the burden of the young people who come out of the studios and know not where to turn. Give them experience in mastering the problems of rhythm-playing, and they will soon find desirable openings.

Fifty Years Ago This Month

EUGENE THAYER, MUS. DOC., one of the most brilliant organists, recitalists and musical journalists of his day, wrote thus for *The Etude Music Magazine*, on "The Art of Studying":

"In a series of brief letters it is my purpose to offer a few hints to young music students, for general guidance in their studies and practice. It will at first be objected that, as young people are mostly under the direction of some teacher, my advice cannot be followed. Perhaps then, some of the teachers can gain a few points by a leisurely perusal of these reviews. If we can ascertain what, when, how and where to study, we shall have gained at least something.

"Firstly, what? That is, what instrument, counting the voice as one of the instruments. Shall we study vocal music? When one looks about, with ears as well as eyes, the temptation is strong to answer in the negative. The army of persons with no voice, or at best a mere excuse for a voice, who still attempt to sing, would intensify our answer. Be very sure you have a voice, to begin with. The praise of our zealous friends or of interested parties is not enough to decide the matter. It is also well to remember that singers, as a rule, lose their voices at about the age of forty-five, and are consequently left useless in the world at the very ripest of their mental and artistic powers. Also an attack of diphtheria or other serious disease may at any time render nugatory the work of years. With women, maternity may at any time forfeit the results of long and careful study. For, let the doctors argue as they will, this advent proves rarely less than fatal vocally. We hardly need recall the recent instance of that wonderful singer, Madame Gerster. If the result is not always as sad as in her case, the fact that such a result is possible renders an affirmative decision certainly open to question. If you have a voice which is unquestionably above the ordinary, and can accept a life of celibacy, it may be advisable. Really, though, something besides voice is necessary. A strong physique, strong nerves and strong emotional powers must be inherited to insure any success which will be an adequate reward for years of the most arduous study. In face of all this, it is well to be guarded in your decision.

"Shall it, then, be that universal instrument, the piano? Excellent pianists are as 'thick as leaves in Vallombrosa.' It is said that there are over one hundred first-class pianists in New York City who cannot get a chance to be heard at any price or no price. Why enter a field confessedly so overwrought? The piano is essentially the home instrument of our country; and, if home improvement and fireside edification be the object, it may be well to choose this for your instrument. As our country is young, there are, of course, portions of it where good pianists can still find an open field for their labors. Consult your tastes, for nobody can well decide for you.

"Shall it be the organ? The organist has some advantage over other musicians. Especially is this true in a republic, where pianists and singers have no remunerative appointments at court or elsewhere. An organist usually has some church position which gives him stated and frequent opportunities of being heard. If he be also a teacher of music, he gains a wider circle of acquaintance, which is often of as great assistance in art as in worldly matters. As the organ is too large an instrument for ordinary dwellings, it will hardly become a home instrument until we can all afford palaces with music halls in them. The harmonium, or so-called cabinet organ, while most excellent in its proper place at the side of the piano, is, of course, too limited in its capabilities ever to take rank as an instrument for serious study.

"The violin must be counted as the most perfect instrument, all things considered, that has ever been invented by man. As the world has not yet produced over a dozen great violinists, you will see that your chances are small. The other instruments, used mostly in the orchestra, may be called instruments of utility and cannot be discussed at this time. My own choice was the organ and piano, and I have never had occasion to regret it. Excepting the voice, for reasons above given, the one you like best will bring you your greatest success. Of course, a musician must understand all of these instruments while choosing out one for a solo instrument. Space is lacking to give reasons for this assertion. The simple fact that you best work for what you like best must be a sufficient argument for our purpose at this time.

"Is it necessary to say that, whatever you choose, be first-rate? If you do not excel, you never can be excellent, and you will find life but a poor piece of unrewarded drudgery. There is always the most room at the top. Avoid the crowd by going up stairs."

JEAN SIBELIUS AND HIS WIFE

A Master as Seen by His Wife

An Interview With Mme. AINO SIBELIUS

Secured Expressly for The Etude *Music Magazine*

By PAUL SJÖBLOM

JEAN SIBELIUS, the man often described as the "greatest creative artist of our time," continues to baffle the already vast and ever increasing ranks of converts to his music. "What sort of man is this mighty maker of symphonies?" they ask; as though an intimate glimpse into his privacy were necessary to an adequate understanding and appreciation of his art. The answer has been vainly sought by countless pilgrims to the master's secluded forest retreat in Finland. The few elect, who have been admitted into his solitude, come away as baffled as ever. Their fingers tingle with the memory of his handshake; their eyes overflow with reflections of his expressive face; their ears and brains echo with his voice. They come back to tell the expectant world that the man is as noble as his best work. But, asked to interpret him, to describe him beyond the superficial incidents of the meeting, they fail.

While exhausting the power of portraiture in words, to describe the surface, none of the numerous articles and biographies on Sibelius penetrate very deeply into the mystery of his personality.

One person only, of the many who have known Sibelius, may have an answer to the question, "What sort of man is he?" At least this one should give a better and a more convincing answer than any other that has been offered. That person is the companion of his creative lifetime, the mother of his five daughters.

The Devoted Helpmeet

MADAME AINO SIBELIUS—slender, refined; with silver hair, kindly eyes, aquiline nose, a warm smile, and gentle manner—belongs to the ancient Järnefelt family, which claims countless famous figures in Finnish history. Eero Järnefelt, dean of living Finnish painters, is her brother. Armas Järnefelt, long conductor of the Royal Opera in Stockholm, later of the Finnish National Opera, and composer of numerous well known works in all forms, among them the popular *Praeludium* and *Berceuse,* is another brother. So was the late Arvid Järnefelt, author of *Kuolema,* the drama for which Sibelius's *Valse Triste* was composed as part of the incidental music—the *Valse* familiar to practically everybody who ever heard a note of piano or orchestral music. And the present Minister from Finland in Washington, Eero Järnefelt, namesake of the artist, is her nephew. Comparably gifted bearers of the name are too numerous to be listed here. All who have had the fortune to meet Madame Aino Sibelius agree that she shares the gifts of her family in many ways, especially as a memorably attractive human being and ideal hostess. Once they have exchanged a few words with her, they cannot forget her modest charm. Some, indeed, profess that in meeting her something of the composer himself has been revealed to them. Her lifetime by his side has left an unmistakable influence. During a talk with her, people say, one feels strangely close to the immortal master.

During all the years of their marriage she has steadily refused to breathe a word about her husband to the anxious public. But at last, upon the occasion of his seventieth birthday, celebrated in his native land as a national holiday, Madame Sibelius broke her long silence by consenting to offer the curious a word about the man behind what an ever growing body of critics consider the noblest symphonies since Beethoven.

In this only interview she has ever granted (in which all direct quotations were originally published in the Finnish language in the *Uusi Suomi* of Helsinki, Finland), one notices her typical restraint and modesty. Of herself and her own vital share in the creation of those masterpieces called into existence by Sibelius, she speaks hardly at all. Yet, it is well known among friends of the family that, if it were not for her self-sacrificing devotion to his welfare, Jean Sibelius might have expired long ago from his too headlong pursuit of the revealing chord. And although she dwelt at length upon the subject of her husband, ultimately it is only the barest glimpse of him that we see. If Madame Sibelius has penetrated into the secret depths of his mind, she chooses to leave untold what, after all, probably belongs to her alone.

The Glimpse

WHILE HIS DEVOTEES seem to consider it vitally important to know even the exact hour when each of Sibelius's works was put on paper, such is the man, Madame Sibelius tells us, that he has managed half his lifetime without watch or clock. He simply never has time to consult one. He does not even bother to ascertain what day of the week it may be—Sunday, holiday, or plain weekday, sometimes not even whether it is night or day. For him, time, as interpreted by clocks and calendars, does not exist. Yet so zealously does he heed the passing hour that every available instant is recruited to the cause of music. When the innocent onlooker would believe him casually resting in his chair, he may well be conspiring tonal revolutions with the muses.

He, if anyone, we learn, has withdrawn into himself. "Noli me tangere!" ("touch me not!") is the way Madame Sibelius sums up his social nature. He is anything but easy to approach; yet the fortunate few, permitted to pay him company, find him unexpectedly friendly and sympathetic. They say that in contact with him one is not made to feel at all like an intruder. On the contrary, he puts one completely at ease with his pleasant manner and sparkling wit. And, far from condescending to come down to one's own humble level, somehow he inspires the impression that one's self has been momentarily lifted up to his lofty plane. Indeed, the more impressionable of the elect exclaim about a strange enchantment felt in his presence, about a sensation of timelessness and boundless spaces.

Paradoxically enough, Sibelius strikes people both as a dynamic man of the world and as a retiring introvert. His conversation scintillates with humor and reflects a profound insight into affairs of the day. He often startles visitors with the accuracy of his knowledge of matters in no way connected with music; and they cannot fail to observe that he is always frank and outspoken in his views, but seldom cynical and never spiteful. In short, a good fellow and a jolly host. On the other hand, they also become aware that beneath all his joviality and lavish hospitality lurks an elusive, lonely spirit impossible to be lured into the open. The inquisitive and curious will always find themselves foiled by the enigma that is the real Sibelius.

Sibelius has a talent for finding charm in anyone he meets, however humble. Interviewers—many from distant lands upon leaving his presence suddenly become aware that somehow the interview has gotten twisted about. Although they had come often nearly around the world, expressly to surprise a magic word out of the master;

they, instead, did all the talking. Sibelius tactfully nurses each visitor's weak spot. His formula is simple enough: let a person talk about himself, draw out his fondest opinions and sentiments, compliment his self-esteem. All visitors seem to interest him equally, famous or obscure. Only afterwards, in retrospect, do they realize how their intended prey had cunningly concealed himself behind questions until the time alloted for the interview had elapsed. As though politely and tenderly he had turned them away from his mind's door. That door is closed to all visitors. What lies behind it remains a secret.

Works Spring from Inspiration

THE WORLD REMEMBERS many composers from portraits showing them seated at the piano, left hand resting upon the keys while the right records the notes upon a score sheet. Such a portrait of Sibelius would be sheer fantasy, Madame Sibelius informs us. He is one musicmaker who conceives his compositions within the imagination and never seeks advice from the piano or any other instrument. When one of his works has been committed to paper, most often not a note of it has yet been sounded. He even has sent compositions to publishers to be released to a public which hears them before the composer himself. During summer holidays in remote woodlands, where any kind of instrument exists only in memory, he would compose large works up to the finishing touch. At home, to be sure, there is a grand piano in the parlor, as well as a small upright in his workroom. These are not, however, used as crutches. Now and then he will sit down at one or the other and play, but only in a spirit of mutual communion with a friend.

"We at home know that he lives constantly in the realm of tone," says Madame Sibelius. "I generally never speak to him of mornings until he first addresses me. We do not want to trespass upon his thoughts, interrupt the flow of his creative imaginings. When he does address me, we are likely to talk about anything under the sun, even about the weather—a topic of no mean importance to us country folk.

"Music irritates my husband more than anything else. Forced to overhear a stray tune, a fragment of song, or some one whistling, he will throw his work overboard and wreck the inspiration. Afterwards he must begin again from the very beginning. That is why at home one never hears music. No one ever sings. No one whistles. That is, unless my husband chooses otherwise.

"I remember an incident during some recent repair work at home. A certain painter—of that estimable profession which it is hard to advise or correct—liked to whistle at his job. It was my duty to ask, very gently, that he desist, 'since it bothers the professor'. The fellow did not seem to understand. So I tried to make my meaning graphic. 'What would you say if some one came along with a broom just when you had finished painting that wall and swept a lot of dirt across it and ruined the whole job? The professor feels the same way when anyone interrupts his thoughts by whistling.' The painter understood.

"Our children have learned from earliest childhood to control their noise making. They have never sung at home. Not even our grandchildren, toward whom he shows much more tolerance. Our children learned at an early age that their father is hard at work. He is deep in thought. He composes music. And when he makes music there must be peace. All must be quiet. The family and home are consecrated to father's art.

"I have already remarked that time, in the conventional sense, means nothing to him. All is a single instant, or infinity. Routine behavior dictated by clocks and calendars is foreign to his nature. Usually he has not the least idea what day of the week it is. And at nights he resists the necessity of going to sleep."

Travelers relate how, when they pass the Sibelius estate in the small hours of the morning, they see a light dimly stealing through the trees surrounding his home. It shines from the master's workroom. One neighbor tells how as a boy he would sometimes wander abroad in the dead gloom of a Finnish winter's night and find that light alone with him in the sleep stricken world. Creeping near by and climbing a tree, he could see the master bent over his desk putting notes upon paper. All night long, until his candles burned into the sockets of their holders, and awakening time for ordinary mortals arrived (if not the belated dawn of the northern winter), Sibelius would thus express his devotion to his muse.

"He is unbelievably energetic," Madame Sibelius says. "He is still just as fiery and enthusiastic as in his youth." So original and bizarre were his ideas, with his mind often straying beyond the clouds, that the late Robert Kajanus, acknowledged supreme interpreter of his music, was once prompted to remark that as a young man Sibelius in his normal mood "was like the rest of us when drunk." "There is not the faintest hint of the peacefulness of old age about him. Often it strikes me that he is still the youngster of infinite hope. In him one, even now, can see a soaring aspirant. He lives at a terrific pace, intensely, boundlessly. His capacity for taking pains is unlimited. He works tirelessly. He obeys but one law, a merciless taskmaster, his conscience. Even this very day."

Friends of Sibelius's youth never believed that he would survive to the biblical age. Witnessing his furious struggle for self-expression, they predicted a "meteoric rise and sudden extinction for him."

"His various interests? He does not have any hobbies," continues Madame Sibelius. "Work proves all in all for him, his hobby too. Nevertheless he does manage to keep an eye on the world about him. The range of his interests is incredible. He reads much, always choosing his reading matter with discrimination. Recently we had the old nursery altered into a library, and it serves the purpose admirably. Since then we have had plenty of room for our books, many of which were dug out of hiding places in the attic. While arranging the collection I simply had to marvel at how much my husband has read in his time. During his stay in Berlin, as a youth, he purchased special editions of classics from all over the world. Some, true enough, remain unopened; others, however, he has absorbed word by word. Goethe, for example, he admires at no end. And old historical works appeal to him highly. He possesses a singularly retentive memory and can remember his readings for years.

"He follows current happenings all over the world, with a watchfulness people would not suspect in a composer. He absorbs the essential contents of newspapers with incredible speed. While I myself have barely scanned the headlines, he seems already to have read all and known all. Naturally music news interests him most; and of course everything about the other arts, too. Concerts he attends only upon special occasions. One of these exceptional concerts occurred when Koussevitzky conducted the Helsinki Symphony Orchestra. Koussevitzky, you know, has done much to make my husband's music better known. We own a radio, which allows Mr. Sibelius to hear concerts given in different parts of the world, particularly those including his own works. Quite often he is requested by letter to tune in on certain performances.

An Amiable Recluse

"BECAUSE OF HIS SENSITIVE NATURE and his inclination to solitary contemplation, he attends few social functions. Rarely does he even pay friendly visits. Why, you could count upon the fingers of one hand the number of times he has visited his own daughters. And when he does make one of his rare visits to Helsinki, it is upon imperative business, immediately after which he hurries back home to Järvenpää.

"Correspondence? Mail comes in a veritable flood. Letters of every conceivable description from all over the world pile in every day. Music publishers contribute a good quota, so do admirers and friends. I have procured a typewriter and act as a sort of secretary for my husband. I hack out his letters for him on the machine, and all he needs to do is sign his name."

One recalls the master's intense love for untamed nature. One recalls reading how as a youth he used to wander through the wilderness, soliloquizing upon his violin across virgin lakes, communing with the wild life, listening to the voices of the forest, learning its musical secrets. One wonders, "Does Sibelius still respond to the ancient call"?

"My husband still likes to wander about. The country road near our home has not changed appreciably with the years; but passing autos and bicycles have chased him deeper into the woods. Our son-in-law cut out a path for him in our own forest, and there he often walks alone. Fortunately our windows look out upon a landscape of many changing aspects, one of the most beautiful woodlands to be found in Finland.

"In certain respects he has changed his habits since youth: no longer does he suddenly dash off completed compositions; and no longer does he make pieces on the side, as of old, on order, in the maddest rush at times, to be finished for some special occasion." (Sibelius's family has often endured lean years, and the master himself has humorously referred to his rush pieces as "bread and butter notes"—pieces written for the sake of a commission, hurried to publishers in emergencies without the opportunity to run them through the grist mill of artistic discrimination.) "In olden days he generally did not refuse to fill an order upon request. Indeed, many of his most popular numbers have come to life in one of his frenzied outbursts to fill such an order. One of these popular pieces, dashed off in a moment, is *Snöfrid*.

"Our home centers about my husband. For the rest of us, his lifework has been all in all. I am glad to have lived near him. It seems that I have not lived in vain. I will not claim that it has always been easy. Merciless self-discipline has been always necessary. Yet, I consider myself a fortunate person. My fate has been a blessing, a heaven sent boon. How marvelous to think that a mere mortal should be given such a rôle in life! My husband's music is like the word of God. It springs from a holy source, and near that source it is good to live."

Worth While Music in the Movies

By VERNA ARVEY

IN FILMDOM'S SEARCH for new and interesting screen material, the great masterpieces of music are at last coming into their own; and, in one way or another, various studios are working out music visualizations for the screen, much as would a fine dancer for the stage. Paramount Studios will release Frederick Feher's short subjects, based on such famed masterpieces as Wagner's *Overture to "Tannhäuser"* and Schubert's "Unfinished Symphony." These are two-reelers, lasting about ten minutes each. In all there will be about four or five of them. These short films, strangely enough, are intensely dramatic; although they contain no action except that provided by the one hundred twenty-two piece orchestra which plays the music. The effect is produced by changing lights and a moving camera, to emphasize the inspiration and the contrasting moods of the music. In all these films, Feher's versatility enabled him to be author, director and conductor.

A similar venture is now being undertaken by the Walt Disney Studios, where good music always has been valued highly, even when it has been used only as a comparatively unimportant accompaniment. After the completion of "Snow White," Walt Disney announced that he intended to animate the "Sorcerer's Apprentice," Dukas' colorful symphonic poem. Immediately, Leopold Stokowski offered to conduct it. This he did before the film was animated, as is usual with all the Disney cartoons. After Dr. Stokowski and a large symphony orchestra had made the sound track, Disney recalled how, as a child, he had never had good music presented to him in any but an uninteresting way; so he resolved to animate more musical masterpieces so that for younger minds they would be enveloped in greater glamour. His resolve will undoubtedly result in six or more of these films, strung together as a single feature. The project offers unlimited opportunities for interesting screen action; Disney and his coworkers are growing more enthused over it each day. The greatest difficulty they are encountering is that of getting the screen rights to these various compositions. These are the other compositions that thus far have been suggested for screen treatment: Rimsky-Korsakoff's *The Flight of the Bumble Bee; Bell Song* from "Lakmé" by Delibes; Moussorgsky's *Song of the Flea;* Stravinsky's *Petrouchka;* Pierné's *Entrance of the Little Fauns* and Ravel's *Bolero.*

In all of the Disney cartoons there is a close relationship between action and music, for the music is arranged (by Frank Churchill, Leigh Harline, or any of the other composers under contract to the studio) to fit the actions of each cartoon character as demonstrated by those men whose business it is to get ideas and to work out complete scenarios. It is only after the music has been composed and recorded that the animators begin their work, following the music beat by beat, in perfect synchronization. As a matter of fact, if one were to listen to a Disney sound track, without viewing the film, he would have a fairly clear idea of the action, so descriptive is the music. Disney's underscoring each bit of action has become a by-word in studio music departments.

Lou Forbes, at Selznick-International, refers to every bit of descriptive music that follows an action closely as "Mickey-Mouse Music." Some musical directors like this procedure, even in serious films. Others deplore it as being too obvious. Marvin Hatley, however, at Hal Roach Studios, is called upon to do it continually in his composing for such comedians as Laurel and Hardy. Such graphic music is a definite aid to their pictures.

If there is an enthusiastic response to this plan for presenting musical masterpieces in films, Hollywood will produce many more of them. So when you see these films and approve of them, by all means write to the producers and ask for more.

The Threshold of Music

The Most Famous Chord in Music: The Dominant Seventh

By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

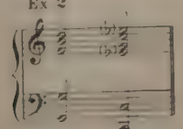
This article is the eighth in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter.*

TO CONTINUE OUR DISCUSSION of the seventh chord, which dovetails major and diminished triads, we already have discovered that this particular chord occurs on only one floor of the scale, the fifth, or dominant. Hence it has been named, rather prosaically, the Dominant Seventh.

There! By telling you its name we have let the cat out of the bag. For who has not heard of the dominant seventh? It is the most celebrated chord in music—and the most overworked. It stands godfather to all barber shop harmonies, rules the popular song like an autocrat, and even hovers in constant benediction over such orchestral masterpieces as César Franck's "Symphony in D Minor." Probably the chief reason why it has won and held such favor in the world of music is that it is more successful than any other chord in making music listeners tonality conscious, and in enabling them to grasp just what key the music is in at any given moment.

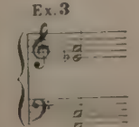
To illustrate: When we hear a major triad by itself we have no idea what its context is. We have no way of telling whether it is a Do chord (tonic), or a So chord (dominant), or a Fa chord (subdominant), or even the La chord (submediant) belonging to a minor key. And we have no way of finding out until we hear the chords that follow. It is as if we were in a strange city, with no idea as to whether we were standing to the east, west, north or south of the City Hall.

But the dominant seventh chord presents no such problem. The instant we hear it we know our bearings. This distinctive combination of triads (the interlocking of a diminished triad above a major triad) can be only a seventh on the dominant, no matter where it occurs or how it occurs, since this type of chord can not be formed in any other position. Hence, whenever we hear it we know absolutely what key we are in. To go back to our previous simile, we can be certain we are five blocks due north of the City Hall. We may not know whether the key is major or minor; but, as to the key note itself, we can be certain.



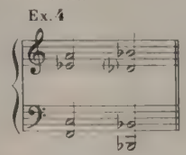
For example,

Ex.1



is a G-B-D-F chord (diminished above major); therefore a dominant seventh with G as its root. G is the dominant of C, and therefore we are in the key of C, and it may be major, or minor by using the flats in the parentheses.

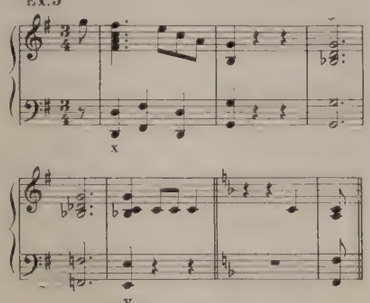
Ex.2



The next which we shall introduce is an F-A-C-E-flat chord.

Ex.3

and its root, F, is the dominant of B-flat (either major or minor), so one of these is the key we are in.

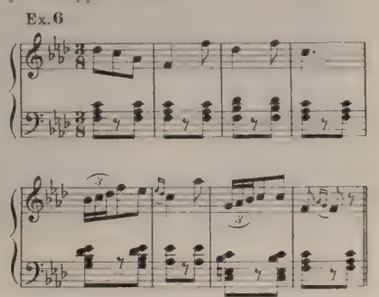


Ex.4

The parentheses around the flats mean that you can play the tonic chords as either major or minor.

Thus, when in the course of listening to *On the Beautiful Blue Danube Waltz*, we hear the following passage,

Ex.5

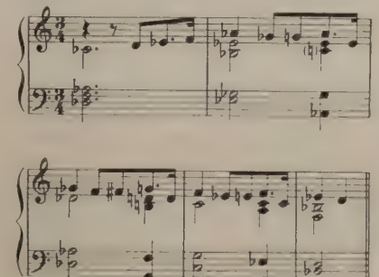


our subconscious mind (if it is a musically trained one) reasons something like this:

At the point marked by the letter x we meet a dominant seventh on D (five notes above G). So we know we are in the key of G. But in measures 3 and 4 come two chords which obviously do not belong to the key of G. Their flats brand them as foreigners, and they sound as if they were taking us to another tonality. The first of the two is a minor triad which might belong to any one of several keys—F major, E-flat major, B-flat major, G minor, or D minor. The second is a seventh chord (G, B-flat, D-flat, F), a dovetailing of diminished and minor, which could belong either to A-flat major or to F minor. So far, confusion and uncertainty. But at the point marked by the letter y a new chord appears. It is a dominant seventh on C. At this point the well trained ear instinctively knows that the waltz is poised for a leap which can land in only one place, the key of F (major or minor). And sure enough, that is where it goes in the very next measure.

Musicians will tell you that in this transition passage Johann Strauss has used decidedly blunt methods for modulating from G to F. Many of "The Waltz King's" harmonic shifts are similarly abrupt—almost naïvely so—but they do achieve the desired result of setting our imaginations on a new tonal level in preparation for the passage to come. This particular bridge passage from *The Blue Danube* seems particularly bluff, almost unmannerly; but who will dare to deny its effectiveness in making us aware of the new tonality?

We pointed out a few paragraphs ago that the dominant seventh is the most important chord in music. It is even safe to say that it is more important than the major triad, since it occupies an equally dominating position in both major key and minor key music. In nearly every composition it is used as the next to the last chord. For instance, take this little eight measure phrase, which is a complete tune in itself, from the famous "war horse" of *coloratura* sopranos, *Ah! fors e lui*, from "La Traviata" by Giuseppe Verdi.



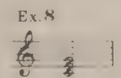
Ex.6

In the fifth and sixth measures the melody wanders clear out of the key of F minor and into A-flat major. The cause of this deflection is the dominant seventh on E-flat in measure 5. But in the very next measure a dominant seventh on C brings us back to an F frame of mind, with the firmness of an outraged wife leading her errant husband back home. Upon the appearance of this chord we expect an F triad to follow, and when it does (F minor, it turns out to be) we accept it with an air of finality. The *aria* continues on from this point, but it could stop right here, so satisfying is the close.

The dominant seventh is likewise important as a trapeze in the art of harmonic acrobatics—the technic of leaping from one key to another, called modulation. The *aria* just quoted furnished an illustration of this. One of Wagner's most haunting themes—the *Motive of Love* in "Die Walküre"—is nothing more than a succession of dominant seventh chords which swing the melody from one key to another, each time carrying it either a half-tone or a full-tone lower. The motive makes its first full fledged appearance in this form:

Ex.7

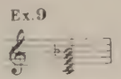
Notice the succession of triads—first on E-flat minor, then in D-flat major, then C minor, then B-flat major. Each time a dominant seventh chord, just before it, has called the key.



Why should the dominant seventh chord be so universally popular? For an answer to this question we must go back again to nature—to the mathematics of the overtones.

A True Son of Nature

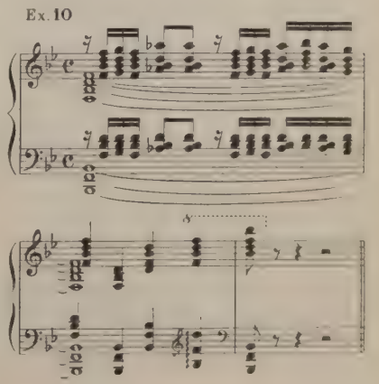
WE ALREADY HAVE FOUND the major triad to be a natural chord which sounds faintly whenever the sound of a single tone sets in motion the delicate series of overtones. The three tones of the triad, you remember, are those of the fourth, fifth and sixth tones in the harmonic series.



We now discover that the dominant seventh chord is equally a chord of nature. It, too, exists in the overtones and is heard with imperceptible faintness in every tone that sounds. In fact it is the same chord as the major triad, only carried one step farther. Its four tones are the fourth, fifth, sixth and seventh tones in the harmonic series. If you need convincing on this point, refer back to the table of overtones in Chapter I (THE ETUDE for January, 1938). Here are the three overtones which form the major triad on C:

Ex.8

The next overtone above G is B-flat, and when that is added, this is the result:



Ex.9

Here, in a nutshell, is the underlying cause for the popularity of the dominant seventh.

If our ear is sensitive enough, we can hear a faint B-flat whenever the tone C—or the triad on C—is sounded; and any piece of music which ends on a major triad has, in its overtones, the extra note that makes it a dominant seventh chord. This scientific truth may explain why many "blues" songs end on a chord of the dominant seventh. Notice, for instance, the last three measures of Gershwin's *Rhapsody in Blue*.

Ex.10

This quotation is published with the special permission of the Music Publishers Holding Corporation, owners of the copyright of the *Rhapsody in Blue*.

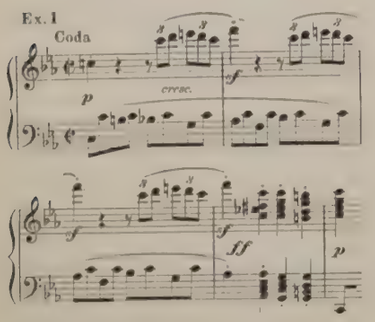
Listeners in Haydn's time would have been dismayed to hear a piece of music come to its conclusion on an "unresolved seventh chord," which was then about the last word in dissonance. But we, who have become accustomed to "blues" singers and the modern jazz idiom, look on the A-flat at the close of the *Rhapsody in Blue* as a perfectly proper note. Musically speaking, it is nothing more than a harmonic enrichment of the final triad.

In illustrating the use of the seventh overtone to enrich a closing chord, we do not need to limit ourselves to XXth Century music. Chopin, who was well versed in harmonics, did the very same thing back in 1838, when he wrote the following closing measures to his *Prelude in F Major, Op. 28, No. 23.*

Ex. 11

Tucked away in that left hand arpeggio is an E-flat, so mild and unobtrusive that we cannot accuse the composer of intending a seventh chord, yet distinct enough to bring to the major triad close an added glow of warmth. That added glow, when it becomes pronounced enough, is the distinguishing characteristic of the dominant seventh.

Three Notes Against Two



By NELLY B. SMART

THE QUICKEST way to arrive at a satisfactory solution of the difficulty of playing three notes against two is to practice each hand alone, until the beat is mechanically perfect in both; then try the hands together. If they will not run easily, try them alone again and then together. As soon as this becomes wearying, leave it for the next practice period and then try again.

Try each day for at least five minutes. Stay with it, hands alone then together. Do not let weariness be the conqueror. Try again and again till the two hands run smoothly and true to the beat. Then smile contentedly in the knowledge that you have conquered a difficulty

A good exercise may be found in these eight measures from the last page of the "Sonata Pathétique," by Beethoven.

Ex. 1

Play three measures before the ones shown and play slowly at first to get the beat perfect.

Another good exercise is *No. 15* of Heller's "Studies Op. 47."

Ex. 2

This is perhaps harder because the first note of the two is sustained by a dot and the second of the two is apt to be played with the third of the three, instead of half way between the second and third of the triplet. In getting both hands perfect here, always count, saying *and* between the 1, 2, 3, 4, all through the study. Play the left hand persistently, then the right hand. When they are put together play the right hand very softly and the left hand more loudly. Soon the two parts will run together in perfect time.

* * *

"I often feel as though a mysterious genius were whispering something rhythmical in my ear, so that when walking I step in time and all the while seem to hear faint tones like the accompaniment to some song which, in one way or another, agreeably presents itself to my consciousness."—Goethe.

Major John A. Warner, Superintendent of the New York State Troopers, at the piano; and Leopold Godowsky, Jr., son of Leopold Godowsky, the world famous pianist; as they play the great Brahms' "Sonata in G" for violin and piano.

Major John A. Warner

New York State's Notable Musical Police Superintendent

THE ETUDE has surprised its readers for years with the number of eminent men with careers in all callings, who have earlier in life had a fine training in music. One of the most gifted and experienced of all the recent notables is the Superintendent of State Troopers of the State of New York, Major John A. Warner, who, in the following frank and modest statement, gives readers of THE ETUDE an account of his musical career. Major Warner is a son-in-law of the ex-Governor of New York State, Alfred E. Smith.

"During the time I lived in Rochester, which was my birthplace, until I went to college, I studied the piano with Miss Carrie E. Holyland.

"After entering Harvard in the autumn of 1905, I studied each winter for a few months with Carlo Buonamici, and one winter for several months with Wallace Goodrich on the organ.

"Also the summer of 1906 I went abroad and studied the piano for six weeks with the elder Buonamici, at his summer place, Badia a Prataglia, which is in the hills about thirty miles from Florence.

"The year after I left college I again studied for three months in Florence, with the elder Buonamici, and for four or five months with Harold Bauer in Paris, and the organ with Charles-Marie Widor.

"In the summer of 1913 I studied at Igls near Innsbruck, with Leopold Godowsky, and it was there I met his son, Leopold Godowsky, Jr., a skillful violinist.

"I also studied for a few weeks at Middelkerke, near Ostend, in 1914, but this was interrupted by the outbreak of the World War.

"I entered the State Troopers at their beginning early in 1917, as a lieutenant, and was later made Captain of Troop 'K', in 1918, and Superintendent in 1923, which position I have occupied ever since.

"Having been without a piano since 1917, until three or four years ago, I dropped my music entirely; but recently in leisure moments I have been taking it up; and I now have an occasional lesson with David Saperton, who is a son-in-law of Godowsky and the head of the Piano Department at the Curtis Institute under Josef Hofmann.

"I knew Leopold Godowsky, Jr. very well, while in Igls and Middelkerke. During recent years, since he has been connected with the Eastman Kodak Company, with Leopold Mannes, pianist and son of the violinist David Mannes, I have seen him frequently on my visits to my family in Rochester, where he is now living, and we have often done chamber music in an informal way together.

"Incidentally, Mr. Leopold Godowsky, Jr. and Leopold Mannes are the inventors of Kodachrome, the color photography process used by the Eastman Kodak Company.

"This winter I have played six or seven times with orchestra and on the radio, having done the Schumann 'Concerto in A minor' and the César Franck 'Variations Symphoniques.'

"At a concert which was given here as part of the Albany Civic Music Association series, on March 25th, Mr. Godowsky, Jr. and I played the 'First Piano Concerto' of Beethoven, the 'Sonata in G' for violin and piano, by Brahms, and the 'Variations Symphoniques' of César Franck.

"My repertoire includes a considerable amount of Bach, Chopin, Debussy, Ravel, Schumann, and other standard things, together with the two concertos mentioned above, and the 'Concerto, Op. 1' of Rachmaninoff and the 'Concerto in F minor' of Chopin.

"On the radio this winter I have played from the Radio City Music Hall with Erno Rapée; with Howard Barlow and the Columbia Orchestra, and with the Rochester Civic Music Orchestra under Guy Harrison.

"I am also one of the Board of Directors of the Philharmonic-Symphony Society of New York."

"Among the instrumentalities of love and peace, surely there can be no sweeter, softer, more effective voice than that of gentle, peace-breathing music."—Margaret Teller.

Radio Flashes

By PAUL GIRARD

A WIDER INTEREST in old music, music of the days of powdered wigs and instruments of delicate tone, days when sentiment and beauty were less realistically exploited, and the greater discipline of the soul made for equal enjoyment of religious and secular beauty, is growing daily. The tranquillity of the early music offers a welcome contrast to our own hectic times.

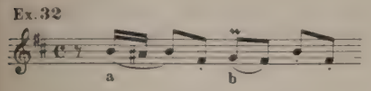
There is a program, heard on Sundays and usually at 11:30 A. M., E. S. T., NBC Red Network, which has been called a friendly oasis in modern radio's fare—"The Madrigal Singers with Yella Pessl, harpsichordist." This delightful half-hour broadcast features madrigals and motets as well as harpsichord music of the fifteenth, sixteenth and seventeenth centuries. The group consists of five singers: Elizabeth Fackiner, and Elizabeth Newburger, sopranos; Virginia Walker, contralto; Charles Harrison, tenor; and Earl Waldo, bass. The director is Lee Jones, a Georgian, who since his eleventh year has been highly interested in music. Mr. Jones majored in the study of music and specialized as a student of the organ at Yale University. It was while at Yale that he became interested in the madrigal, and it is in the interests of its revival that he is conducting this series of concerts on the air. His program was first organized a year ago, and has since attracted nationwide interest.

Miss Pessl, his harpsichordist, hardly needs introduction to readers of THE ETUDE, for she has been often mentioned in our record reviewer's columns. She is, according to Mr. Jones, one of the most honest and spontaneous musicians now in her field. Besides being an accomplished harpsichordist, with a predilection for old music, she is a proficient pianist and organist. She studied music in all its provinces in her native Vienna, at the Academy of Music. Since 1931 this charming artist has made her home in New York, where she teaches harpsichord as well as appreciation and interpretation of the music of the period to which this program is pledged. Miss Pessl regards herself as entirely American, as she has adopted this country as her own.

"While the madrigal is generally regarded to be of secular nature," says Mr. Jones, "its direct opposite is the motet which has been applied to every part of divine worship. The motet is usually ultracontrapuntal (composed of several opposing melodic lines) in its construction and had its beginning long before the madrigal." The madrigal form familiar to us seems to have been well established late in the XVth Century, not the early part of the XIVth Century as the printed literature of the NBC states, in connection with this program. (This information, unfortunately, is not too accurate in its dates or facts.) The interest in this type of polyphonic writing spread with great rapidity from Italy to France, Germany, Spain and England. The madrigal, sung by the members of almost every well bred household in Elizabethan England, was one of the earliest forms of vocal chamber music (music for a small salon). The great flowering of English musical art in the time of Queen Elizabeth can be traced to the early madrigalists, such men as Byrd, Farnaby, Weelkes, and Morley. The madrigal flourished and then, as a musical form, disappeared toward the latter part of the XVIIth Century.

"The return of this type of singing is not only unusual," says Mr. Jones, "but also refreshing in its contrast with the music of our times."

What Did Bach Mean?

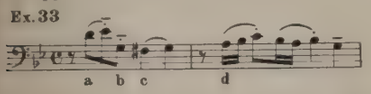


How Each of His Motives Construes a Thought

By FLORENCE LEONARD

PART II

The more one looks into the motive scheme of Bach, the more one finds combinations of joy and sadness. In the fifteenth Invention (B minor) is one of these frequent alliances.

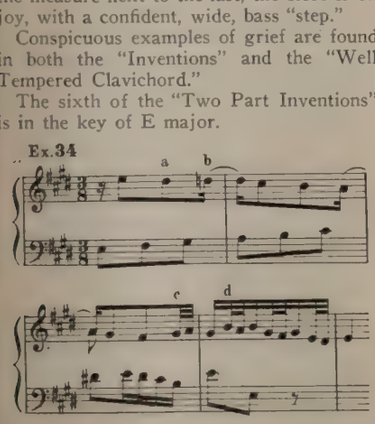


Ex. 32

The first subject is made of a joy motive (a) and the "sighing" motive of grief (b). This short composition continues with the "tumult motive" (measures 8-10), the "step motive" (8-10, counterpoint), the wide skips and turns of sadness (measures 16-17), and ends with confident joy in the bass.

The beautiful *Fugue in G minor,* from the "Well Tempered Clavichord," displays the opposite order of combination.

Ex. 33

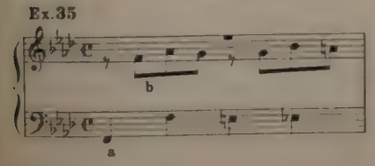


It begins with the sighing motive of noble grief (a), with wide, downward skip (b), and then a chromatic, grievous sigh (c). Then follows the motive of joy (d). This downward skip and turn is used many times with the words "kneel" or kneeling. Rubinstein said, "One could kneel to the beauty of this fugue." As the fugue continues, the syncopation of uncertainty and grief is added to the sighing and chromatic motives; but in all the last part, "joy" predominates and, in spite of the sighs of the measure next to the last, the close is on joy, with a confident, wide, bass "step."

Conspicuous examples of grief are found in both the "Inventions" and the "Well Tempered Clavichord."

The sixth of the "Two Part Inventions" is in the key of E major.

Ex. 34



It sets forth the "torturing grief" of the chromatic line, and the "faltering uncertainty" of syncopation (a, b). Against these two stalks the confidence of the "step motive," in conflicting, contrary direction; and the whole theme ends with the motive of joyous agitation (c, d). Arpeggiolike skips, in syncopation, then alternate with the "joy motive" and close the first section.

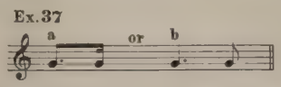
After the double bar the first theme returns (measure 21), but the joyous motive takes possession in measure 29 and is continually interrupting grievous thoughts till measure 43. There the original conflict recommences and ends with a double assertion of the joyous agitation.

The *Three Part Invention, No. 9*

Ex. 35

unites the "intense grief" or "sad longing" of chromatic notes (a) with the "sobbing" of "realistic grief" (b) and finds no mitigation throughout its course. In the 3rd measure, and often thereafter, is the peculiarly expressive diminished third

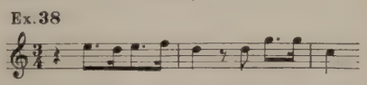
Ex. 36



which, though it appears as an ornamental resolution of a suspension, has, nevertheless, its poignant quality.

Examples of "grief motives," not only typical, but in elaborate combinations and with elaborate development, are among the most interesting numbers of the "Well Tempered Clavichord."

Fugue, No. 24, Book I, in B minor, begins with sighing motives and wide skips of "sobbing grief." The close of the subject is a rising motive of tranquil joy. A serene "step motive" accompanies it. But in the measure 17 one is surprised by an interlude of joy motives. The conflicts of these various motives, to which a long "simple joy" motive is added, are most interesting to follow. But the close is made by the original theme ending in the "joy motive."

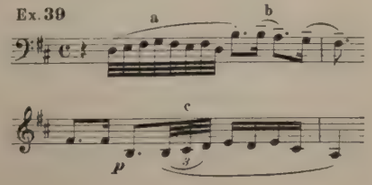


The characteristic motives of the dotted notes

Ex. 37

(when the effect at (b) is *alla breve*) are vividly expressive in both the "Inventions" and the "Well Tempered Clavichord." The *Three Part Invention, No. 5, in E-flat* is in the major, but it has the dotted eighth rhythm of "grievous passion." It is strikingly like the theme of *What Grief of Heart* in the "Cantata, No. 38."

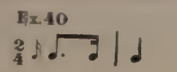
Ex. 38



The left hand, however, brings a fortifying figure of consolation and strength, a short, rising arpeggio on the common chords.

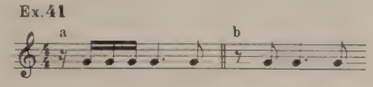
The *Two Part Invention, No. 7* expresses heaviness of spirit, rather than extreme sorrow.

The very familiar *Fugue in D major* of the "Well Tempered Clavichord" has a twofold subject.



Ex. 39

The first section contains two motives, the "upward striving" (a) plus the dotted rhythm of "solemnity" (b). Then follows a "calm, downward moving" motive, similar to peace and patience motives of the cantatas (c). The close of the fugue emphasizes striving and solemnity, even majesty (dotted rhythms).



The *Prelude in E-flat minor* is a striking example of the effect of the dotted rhythms. Although it is written in quarters and eighths, yet the effect with reference to the measure must be considered as

Ex. 40

The motive actually begins on the second beat, as is plain from the fact that it ends on the first beat of the second measure. It is, therefore, the motive of "grievous passion." The wide intervals confirm and intensify it. This subject, again, may be compared with *What Grief of Heart.* The rhythm of measure 5 (Ex. 41a) is but a variant of 41b

Ex. 41

and finds its counterpart in many examples from the cantatas, as in "Overwhelming with Heavy Bonds," No. 139.

Ex. 42

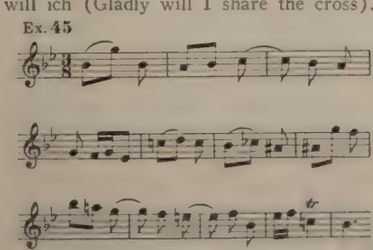
The motive of the repeated note (fear, horror) is plainly of great significance. The line of the steplike sixteenths is not the line of joy. The one motive of assurance is in the eighth notes in measure 18; and, even at the end, the upward striving of the sixteenths is finally overcome by the syncopation and dotted note motives.

The favorite *Prelude in B-flat minor, No. XXII,* from "Book I," should be played, in Schweitzer's opinion, in a "large and pathetic style," not delicately and sentimentally. It should begin "with a vigorously shaded *forte.*"

A study of the motives may reveal his reasons. The chief motive is a joy motive, a version of which may be found in "Cantata No. 129, 'The Lord Be Praised.'"

Ex. 43

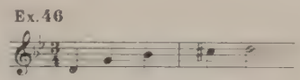
But in the cantata the skips are extremely wide, implying extreme joy. The *prelude,* on the other hand, has repeated notes (b),



Ex. 44

which affect the mood, which may therefore be called mystical joy. The repeated notes of the bass also qualify the joy. Yet the insistence of the joy rhythm is unmistakable. The third motive is the "step-reassuring" (c). The fourth is the sigh of measures 3, 8, 9 (d). The prelude ends as it began, with the "mystical joy motive," but the last chord is B-flat major, instead of minor; so that the mood is lightened by that ray of sunshine which Bach loved to release.

How impressively a joy motive can overcome conflicting motives may be observed in a theme from "Cantata, No. 22, Gerne will ich (Gladly will I share the cross)."



Ex. 45

Here the syncopation is subjected to the influence of the rising intervals of joy, in order to express the meaning of the words.

Similarly in "No. 56" the rising intervals and "step" rhythm overcome the syncopation at the end of the theme, *I will gladly carry the cross.*

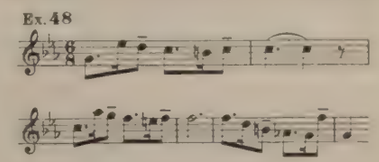
Ex. 46

These analyses may serve as a guide to the meanings of the rhythms discussed. But what of the subjects of many of the dance forms, inventions, preludes and fugues, where the rhythm is less broken, the intervals, too, are less irregular? What of the gigue themes?

Many of the themes in sixteenth notes are founded on the step motive of confidence or peace, and the longer motive of either simple or ecstatic joy. Constant return to one or two notes indicates some form of the "tumult" idea, whether it be mere gaiety or combat. Such motives appear in the Two Part Inventions, Nos. 1, 2, 3, 4, 5, and 8 ("tumult"); in 12, 13, 14 ("typical joy"); and in the Three Part Inventions, Nos. 1, 10, and 12; and also in the preludes in C minor, C-sharp minor, D major, D minor, the bass idea of E minor, F major, F-sharp major, F-sharp minor, the first part of B-flat major, of B major, and in portions of many of the fugues.

Arpeggio forms, especially rising ones, are of the cheerful mood, intensified always if the intervals become wider. Likewise, the phrase with emphasis on the up turn of such a figure as

Ex. 47



the motive of small skips or steps in which the trend of the whole, or even the conclusion is upward turning; these may all be classed under varied aspects of happiness, and they range from simplicity through quiet peace to the "unconquerable joy of life, and song of triumph."

The gigue form, whether it has the rhythm of dotted notes or of even triplets, designates, according to its *tempo,* as moderate or headlong, the idea of placid or ecstatic happiness, or the gaiety of "animal spirits." It occurs in the preludes in E major and G minor; in *Two Part Invention, No. 10;* and in "Three Part Inventions," Nos. 6, 11, 15; and, of course, in the Suites.

Gigues with dotted note rhythms sometimes have the lighter sixteenth note, which must be joined with the eighth preceding it, not with the one following. In the *siciliano* of the "Fourth Sonata for violin and clavier," is an example of this rhythm.

Ex. 48

Schweitzer compares it with the wonderful aria, *Have Mercy,* from the "St. Matthew Passion."

Ex. 49

"A sob runs through both of these," for here the rhythm is not the lyric rhythm of

the dance. But the line of the melodies, as well as of the rhythm, breathes sorrow.

Among the great examples of joy must be classed the glorious *Organ Fugue in G minor*, with its confident step and joy rhythms, its wide leaps, overcoming the rhythm of the countersubject, which has the faltering movement, the chromatic intervals and the downward skips of grief. Here, too, belongs the *Presto giojoso* of the "Italian Concerto," here the close of the great *Chromatic Fugue*, with its joy and conquest motives overcoming the chromatic progressions of its first subject. Here also belongs the song of triumph of the great *Passacaglia in C minor*. What significance has each successive counterpoint as the composition progresses from the simple opening to the very complex close!

The subject itself is the very epitome of strength and confidence (measures 1-8, d'Albert edition). The first countersubject (8-16) has doubly grievous rhythms, of the dotted note in one voice and the sighing pairs in another. Then follows a counterpoint in eighth notes, upward striving, yet turning about and *down on the accent* (16-24). In measure 24 enters the true joy rhythm, uncontested, and expanding in measure 32 into the wide leaps of extravagant joy.

In measure 40 it is replaced by the ascending fragments (in sixteenths) of a scale, which are only a different aspect of assured happiness. These sixteenth notes continue, with less and less interruption, to measure 64, where they break into chord-fragments; and in measure 72 the scale passages of triumphant joy take possession.

An interlude, *piano*, such as Bach loved to write, is formed of merely this simple scale, against the subject (measure 80). The next counterpoint, *forte* (measure 88),

Ex. 50

of ascending scale fragment, Ex. 50a, and descending confidence, Ex. 50b, leads to the more complicated development, in which joy and strength gain more and more ascendency.

But in measure 141 a sudden check is put upon the triumph (*thema fugatum*). The subject (*piano*) has a new counterpoint of the sighing motive coupled with downward and chromatic intervals and the repeated note of fear. The great fugue continues with the conflict between these elements of fear and grief and the ever strengthening confidence motives, until measure 185 is reached. Here begins the mighty ascending motive of broken thirds which finally overwhelms the grief motive in a paean of triumph.

It may be that other students, tracing these Bach pictorial motives, may draw different conclusions in some cases. But it does not seem possible that, after once having considered them, anyone can stop at analysing Bach's works into *mere* "real answer, tonal answer, inversion, augmentation diminution" and the like, without searching more deeply still for the meanings within these devices, which, as manifestations of intense feeling, set the immortal Bach so far above his contemporaries in "The Art of Fugue."

Training the Little Finger

By HAROLD MYNNING

I AM CONVINCED that a lot of pianists never achieve a fine technic because they have never acquired the knack of using the little finger in the right way. One great virtuoso says that his little finger seems to lead the other fingers of his hand around the keyboard. For most pianists this would be impossible as this little finger is not relaxed.

Because of the way the hand must be held on the keyboard, it is natural to stiffen the little finger. But it seems that teachers frequently fail to warn their pupils of this tendency, with the result that most piano students play with a stiff fifth finger. Thus, if one acquires a loose fifth finger, it is by accident. There are several exercises which, if practiced correctly, will enable the pupil to go far toward acquiring a relaxed, skillful little finger.

Select a finger exercise—any finger exercise so long as the fifth finger is used frequently—and play it softly several times. While playing move the wrist up and down every now and then.

Then play exercises wherein the little finger is held down while the other fingers do the playing. Do not press down on the key bed. Apply just enough pressure to hold the key down and no more.

It is suggested also that use be made of scales and arpeggios, and of passages from pieces wherein the last note played is touched very, very softly by the little finger and slightly *staccato*. This is a very useful exercise not only for the fifth finger but also for the whole hand.

Broken octaves also supply good practice for the fifth finger.

Rhythm for Clearness

By ERNA BUCHEL KOEHLER

WHILE there are many differences in the playing of professional and amateur pianists, the two most outstanding of these are perhaps in rhythm and clearness.

By professional-like rhythm is meant a well defined accent on the first beat of the measure. In four-four time a secondary accent is placed on the third beat, in six-eight time, on the fourth beat of the measure. If one would play in a professional manner, he should make sure that the secondary accents *are* secondary; otherwise he may achieve that "digging potatoes" effect too common among amateur pianists.

Now as to clearness—meaning by this term, the clarity which comes not only from independence of fingers but also from independence of one hand from the other. These, in the last analysis, are the result of clearness and independence of thought.

Clearness embraces clean, crisp finger work, correct phrasing, and a due regard for each melodic group, whether in right or left hand. Each melodic progression must remain independent, just as threads of various colors weave through the warp and woof of a glorious tapestry, each tracing an independent pattern, yet together producing a rich and harmonious whole.

The quickest and best way to achieve these coveted qualities in playing is by persistent slow practice, very slow practice. Raise the fingers high, give a clean, firm stroke, neither loud nor harsh. Repeat a short passage many times, then take another and proceed similarly. Finally an entire page or movement is played, always very slowly, with due regard to time and perfection of every detail, to professional-like rhythm, and, of course, without the use of pedals. This slow practice is always insisted upon by great masters. Incidentally, it is the greatest soother of nerves of which we know.

For this study, Bach is the strongest ally, with Mozart and Haydn next.

RECENT RECORD RELEASES

By PETER HUGH REED

THE RECORDED REPERTORY OF MOZART considerably exceeds that which is generally heard in the concert hall. The public's predilection for the music of Bach and Mozart grows stronger all the time; and well it may, for in a restless and unsettled era like our own, the music of these two men offers a refuge to the spirit, because it owns an inner harmony and peace, a spiritual beauty and a happy brightness and assurance of ultimate harmony.

Mozarteans will find much to gratify their admiration of him in two symphonies, recently recorded: the obscure "Symphony in A major" (K. 201), and the more familiar "Prague Symphony in D major" (K. 504). The first is a truly delicious work, written in the composer's Salzburg days, when his orchestra was largely confined to oboes, horns and strings. Mozart's genius in overcoming the limitations of instrumentation is here well set forth, and his ability to make the horns speak tellingly is demonstrated again and again. The opening theme has all the earmarks of one of his tunes outlining a sprightly operatic character. The work has been compared in spirit to his "Violin Concerto in A major." The recorded performance by Beecham and the London Philharmonic Society is all that one could ask.

The "Prague Symphony" dates from 1786. It was composed between "The Marriage of Figaro" and "Don Giovanni," and recalls both operas, whose greatness it shares in its own field. It has been overshadowed by the composer's last three symphonies, but in the estimation of many deserves to be ranked with them. It owns only three movements, since there is no minuet.

Opening with a foreboding and extended slow section, the work has an alert and skillfully contrived *Allegro*, and a lovely *Andante* which has been compared in mood to the idyllic summer night stillness of the garden scene in "The Marriage of Figaro." The *finale* is exhilarating, pure Mozartean magic, recalling, as Blom says, *Susanna's* grace and laughter, and in one portentous moment the stone guest in "Don Giovanni" entering as it does in the midst of the festivity. Bruno Walter and the Vienna Philharmonic Orchestra play this work in an appropriately straightforward manner. The recording, save for an occasional evidence of reverberating echo, is rich and full (Victor set M-457).

A Mastery Supreme

TOSCANINI'S GENIUS for polished precision and scintillating verve was never displayed to better advantage on records than in his performance with the N. B. C. Symphony Orchestra of Haydn's "Symphony in G major (No. 88)" (Victor set M-454). "The quality of Haydn's inventiveness is nowhere higher and its economy nowhere more remarkable than in this work," says Tovey. The themes throughout are all notably lovely, and nowhere does Haydn let us down, for his spirited *finale* is as skillfully devised and as effective as anything that went before. What Toscanini does for this finale must be experienced to be appreciated. It is unfortunate that the recording of this work is not on a par with its performance, for it is both shallow and lacking in essential tonal mellowness, in no way comparable to Victor's usually unmatched symphony recordings. The fault lies in the fact that it was recorded in the broadcasting studio instead of in a concert hall.

Victor set M-455 recalls to mind one of radio's lost programs of marked distinction, that of the N. B. C. String Symphony, which, with other similar worth while features, was taken off the air last Fall to help pay for the N. B. C. Symphony Orchestra. The N. B. C. String Symphony was one of the most honest studio-originated programs ever featured on the air; and its loss is one that many have lamented.

This new set is the second recorded program of Black's string ensemble. Like its predecessor, it presents an ingeniously arranged program. Opening with Brahms' *Liebeslieder Waltzes* in a string arrangement, it further presents Sibelius' early suite, "Rakastava (The Lover)," and Roussel's "Sinfonietta." Brahms' waltzes gain much in this arrangement; their Viennese charm is enhanced by the more even singing quality of the strings. Sibelius' early suite is a lyrical one divided into three sections—"The Lover," "The Lover's Path," and "Goodnight, Farewell." Black extracts much from this music, particularly in its moving *finale*, his performance being far more expressive than an earlier one made in England. The Roussel work is full of heightened color and piquant modern harmonies. The recording here is tonally warmer than the one above.

Weingartner's performance of Beethoven's dramatic *"Egmont" Overture* (Columbia disc 69159D) is by far the best released. It was made with the Vienna Philharmonic Orchestra before the arrival of the Nazis and Weingartner's forced retirement. The performance is marked by splendid declamation, building to the promise of victory which *Egmont* visualizes in prison in a remarkably delineative manner.

The Comfortable Czech

THE GENIALITY and heart-warming qualities of Dvořák are rewardingly set forth in his "Concerto for Violoncello" (Victor set M-458). The work is superbly played by Casals and the Czech Philharmonic Orchestra. The violoncello, with its plangent beauty of tone, proves an appropriate instrument for Dvořák's love of sensuous sound and his richly human feeling.

The piano student is well served by the phonograph. There are many notable interpretations of great piano works, which can inspire the aspiring young pianist to perfect his own performances. It is one of the privileges of this age that great artistry can be heard in the home under the most desirable and intimate conditions, as well as in the concert hall. Among such recorded performances must be rated that of Louis Kentner, regarded as one of the foremost living exponents of Liszt's music, in that composer's *Ballade in B minor* (Columbia set X-97). It is a work as portentous and forceful as the celebrated "Sonata in B minor." Then there are the performances of Arthur Rubinstein of Schumann's *Romance in F-sharp major* and Brahms' *Rhapsody in G minor* (Victor disc 14946). The hackneyed Schumann piece, which is more often than not beyond the comprehension of young people who attempt it, is given a distinguished and expressive interpretation by the noted Polish pianist, and so too is the intensely passionate rhapsody of Brahms.

Chamber music enthusiasts will find much to enjoy in the graciously melodic character of Boccherini's "Quartet in D major," played by an Italian group, the Poltronieri Quartet (Columbia set X-99); and also in Nathan Milstein's purely poised playing of the classical "Devil's Trill Sonata" by Tartini (Columbia set X-98).

Interpretation of Musical Figures

WHEN CONSIDERING THE ELEMENTS of interpretation it seems quite customary for many of us to confine our thoughts to such principles as phrasing, *tempi*, agogics, dynamics, *nuance*, and general effect. While these factors are of prime importance and indispensable to the artistic interpretation of any worth while musical composition, there is another element which contributes seriously to the general effect and that without doubt should be considered as a fundamental of interpretation. This element is the correct reading and interpretation of the various rhythmic figures contained in the compositions which our bands and orchestras are daily rehearsing and performing.

Proper stress or emphasis is essential to correct interpretation. Emphasis, improperly placed, is likely to change the musical meaning of an entire phrase. Yet daily we hear bands and orchestras playing various rhythmic patterns, with the accent or emphasis placed incorrectly and thus giving the phrase a meaning never intended by the author. Emphasis upon certain tones is a means to correct interpretation and expression in our rendition of musical phrases, just as emphasis upon certain words serves as an aid in the expressive qualities of our daily conversation. Nothing is more uninteresting than a lecture delivered in a dull, monotone voice; and just as unsatisfactory is the musical selection which is delivered in a similar manner. Emphasis, properly placed, can serve as a definite aid to the achievement of good style and correct musical taste, whereas emphasis improperly placed will play havoc with the interpretation of any musical work.

Since a closer study of our subject finally resolves itself into the correct reading and interpretation of various rhythmical patterns, it perhaps behooves us to give considerable thought to this phase of our musical efforts and to the technics and practices employed in the teaching of these figures. Let us take a few of the patterns which are most often incorrectly interpreted. Here is a figure  which occurs many times during the course of our daily rehearsals; and, although the figure is a comparatively simple one, it is often misread and should be given careful consideration. The usual performance finds this figure played as if of this rhythmic pattern,  or, in some instances, as 

Usually the ♪ is played as a 𝅘𝅥𝅯, at the same time that it is too heavy.

In the teaching of this figure, it is advisable to approach it from a more extended form. The ♩. ♩ will serve as an aid in getting the correct value realized. Gradually the *tempo* can be increased so that the ♩. ♩ becomes either the ♩. ♩ in two-two measure, or the ♩. ♪ in two-four rhythm. It also is suggested that, in the first attempts, the ♪ following the ♩. be played *legato* into the tone which immediately follows. This will avoid the tendency to rush the ♪. Emphasis upon the dotted quarter note, with a hyphen-like line above it, is also essential for the proper interpretation of this figure. I prefer writing the ♩ (observe the line above the note) instead of the customary manner of ♩, since the accent mark over the note is generally interpreted in such a manner as to bring a sharp, blatant attack from the young wind player. The line over the note indicates a breath emphasis, or accent (for wind players), which is much more musical in effect. There are times when the > is desired; this depending, of course, upon the character of the composition or the passage being played.

Another figure, which our groups fail to read with correct interpretation, is the , or *saccade* Too frequently we hear this played as if it were in meter like this,  . The ♪. is usually played too short and light, whereas the 𝅘𝅥𝅯 is too heavy and long Here again we find that properly placed emphasis serves as a guide to the correct interpretation of this figure. The figure, properly interpreted, is played  , with the emphasis placed upon the long tone ♩. and the ♪ played as a 𝅘𝅥𝅯. It is advisable to play this figure in the extended form of the ♩. ♩ to the ♩ ♪, then to the ♪ 𝅘𝅥𝅯, keeping in mind the proper placing of the emphasis on the longer note, and playing the short tone *legato* into the long one This figure is perhaps the most abused by our wind players, since it is rather difficult to articulate the 𝅘𝅥𝅯 without emphasizing it.

A most excellent teaching technic in the mastery of this figure is to begin on the ♪ thus,  pronouncing the syllable *tu* on the ♪ and *du* on the ♪. note. The *du* serves as an aid in the development of the *legato* style, from the ♪ to the ♪. note.

As a rule string players do not experience great difficulty with this figure, since the bow partially takes care of the problem. It is customary to teach the pattern in slow *tempo*, at first, so that practically the entire bow is consumed in the playing of the ♪ with approximately but an inch remaining for the ♪. This use of the bow may be employed as a teaching aid, in explaining the correct interpretation of the figure to wind players. We will also note that our professional organizations play the ♪ more like a 𝅘𝅥𝅯, "tipping" it, without pause, into the following tone. What a difference this interpretation gives to this figure; and what an improvement is noticed in our organizations when this figure is finally mastered!

The  is another pattern that has been responsible for many "headaches" among the instrumental teachers and directors. This figure is usually found in the counter melodies of the euphonium, trombone, bassoon, and lower voiced saxophones. Unless its interpretation is carefully observed, we find these parts played without rhythmic precision and with incorrect accent. The figure is commonly played as  ; the last three eighth notes being played as sixteenths, or at least accelerated as already indicated.

There seems to be a tendency among our school musicians to curtail the value of the  and to hurry over the  which complete the figure. Wrong emphasis is also noticed. The average young player will place the accent upon the  rather than on the  . The proper interpretation of this figure is  , with the last three notes very even; and the players should avoid continuing the  into the  , and also give attention to the sixteenth rest. It is important that the emphasis be placed upon the  , and that the  be played lightly and distributed evenly, without accent. Again, it is recommended that the initial presentation of this figure be confined to the pattern in such a more extended form as  , with the stress, or emphasis, placed upon the long tone, by means of breath accent, rather than by the accentuation of the tongue.

Another figure which is too often played incorrectly is the triplet. Whether played in a consecutive pattern,  , or in connection with other rhythmic patterns, our young musicians seem to develop the faulty trait of playing the triplet unevenly. The most common fault is the tendency to hurry the triplet, as well as the figures following it. The distribution and length of the triplet must be divided and played evenly. The figure  is often played as  , which is of course incorrect. This figure is also frequently heard performed in this manner  ; and, occasionally, it has been heard from our young bands and orchestras as  .

As a form of practice to overcome these distorted performances of this figure, it is recommended that the first few attempts be confined to  , which may proceed to  , and then to . This will eventually reduce the tendency to rush the triplet figure. We also find that the figure becomes even more distorted when it is accompanied by a rhythmic pattern of a different design, such as  or  . In this case the student generally hurries the  as distributing the  improperly This figure is often played as  , with the notes of the triplet as if with an *accelerando* beneath them. Sometimes it is well to use such words as *Saturday, cheerily, merrily* and *happily*, as examples for the correct interpretation of the triplet figure. Editing the figure in this manner  , and suggesting that each eighth note be broadened slightly, until the proper interpretation is achieved, is one effective way to eliminate this erratic reading.

The , in the *detaché* style of playing, should be executed as if ; that is, the eighth note should be connected to the two sixteenths. Yet we hear students daily playing this figure with the eighth note connected to the two sixteenths, and too often placing the stress, or accent, upon the sixteenth instead of on the ♪.

Syncopated figures, also, require accurate execution, and are too often played with incorrect emphasis. Such simple notations as  or  are often played as if or . These two figures are but a minute part of the numerous syncopated patterns which need our serious attention, before our young musicians can be expected to perform them with good musical taste. The correct reading of the is , while the correct interpretation of the notation calls for such performance as . Here again we find it necessary to call the student's attention to precise reading and proper emphasis.

The rhythmic pattern is seldom played with the strict rhythmic precision which it requires for artistic interpretation. The tendency is to hurry the , while in some instances such a rendition as with the last four sixteenth notes unduly hurried, is heard. The only technic, which I have been able to discover to remedy this misreading, is the process of slowing the *tempo* until the pattern can be played evenly, with proper emphasis upon each tone.

Time and patience, spent on rhythmic drill with our bands and orchestras, will prove to be an aid in the development of precise rhythmic feeling, as well as correct emphasis and interpretation of these figures. When one observes the serious consideration that noted musicians accord this phase of performance, and what a difference this careful attention makes in the general musical effect, then it is wise for us to regard this subject with just as much thought.

It is indeed a difficult problem to adjust one's rehearsal schedule in such a manner that all of the necessary elements are treated with the proper consideration due them. Yet it is this ability that spells the difference between the competent and the mediocre conductor and musician. It is the so-called "little things" that make the difference between the ordinary performances of some groups and the highly artistic interpretations of others. Just as an accomplished artist of the stage studies the interpretation and emphasis of his lines, so should we as musicians give serious thought to the same features of our equipment.

Faulty rhythm and incorrect interpretation of the various musical patterns are without doubt partially responsible for the lack of clarity and the poor musical taste found in many of our school music units. Careful attention and drill on these elements of performance will soon clean up the ensemble, while proper emphasis will lead to a better musical interpretation. Articulation is doubtlessly responsible for many of the wind player's difficulties in executing the rapid figures with irregular spacing and incorrect emphasis.

A Monthly Etude Feature of practical value, by an eminent Specialist

MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Music appearing in the Music Section of this Issue

DANCING FAWNS

By LAWRENCE KEATING

The *hors d'oeuvres* on October's Etude musical *menu* are decorated with arpeggiated groups divided between the hands, well seasoned with *crescendi* and *diminuendi*, and served in *allegretto grazioso* style. The pedal may be used freely with good results. The hands cross gracefully, and it should be kept in mind that the interpretation of this music is essentially descriptive.

The *tempo* should not be too fast; about ♩-126.

Summon to mind a picture of dancing fawns in an October forest, and allow that picture to color the entire performance of the piece.

The figures will be found to lie comfortably under the hands, and are easily memorized.

This piece is best played from memory; as, to insure accuracy, it is important to have a clear view of the keyboard when the hands cross.

MARCHE CARNIVAL

By FRANCISZEK ZACHARA

The feeling of a solid foundation, which characterizes this march, makes an instant strong appeal.

Play it in a manner to suggest the carnival spirit, with freedom and yet keeping strictly within certain rhythmical confines. Of particular importance are accents, *staccati*, and tonal climaxes, all clearly marked in the text. The forearm touch is recommended, both for *staccato* and sustained chords. Pedal as marked, and contrast *forte* and *piano* strongly.

In the middle section, beginning with measure 33, toss the figures from one hand to the other, and contrast the slurred groups and the following *staccati*. In the closing measures notice the sustained note, F, tied throughout the duration of the last three chords.

THE BOATMAN'S SERENADE

By FRANK GREY

This singing boatman, for a change, is a baritone. His melody is heard in the upper voice of the bass clef, but is played by the right hand.

Establish a good six-eight swing, to suggest the swaying of the boat; and play the melody with good singing tone, against its background of arpeggiated chords in the treble and single basses in the lower staff, all played by the left hand.

Note that the text reads, *andante cantabile*, slowly in singing style.

It is suggested that, instead of counting six to the measure, that is, one count to each eighth note; it will be found better to count two to the measure, or one count to each dotted quarter of time. This procedure makes the two-note groupings in measures 13 and 14 much easier to play, since it obviates a mental "two against three."

The first theme is in F major and the second in the relative D minor, after which the first theme reënters, D. C. to end at *Fine*.

MARCH OF BRIAN THE BRAVE

By G. A. GRANT-SCHAEFER

The march as a form is military in origin but has been adapted to other uses. Whether it be a funeral march or one of military character that is under consideration, it must be remembered that the primary purpose of the march is to move groups of people from one point to another, in orderly procession. It stands to reason, therefore, that the *tempo* is of first importance and must be rigidly preserved to be in character.

This march commemorates Brian Boru, a very early king of Ireland, and merits a certain regal interpretation and a performance mentally associated with long gone days of pomp and pageantry.

IN A JAPANESE TEA GARDEN

By ELIZABETH L. HOPSON

Miss Hopson is a well known contributor to the list of worth while piano teaching material, and this month she offers in THE ETUDE a number which should captivate the imagination of young pianists at its first hearing.

The *staccati* represent obviously the mincing dainty steps of the Geisha girls, professional dancers of Japan. Notice particularly the two note slurs, and also the accented pause in measure 12.

The character of this piece changes in the second section. It assumes the lyric instead of the dance form, and the meter changes from four-eight to four-four. The *tempo* slows and the pedal is used to sustain the chords, while both hands are engaged in playing the upper figures.

The first theme reënters at measure 41 and is used as a *finale*.

VALSE JOYEUSE

By CHARLES DALLIER

It may be remembered that in an earlier issue of THE ETUDE it was explained that Charles Dallier is a *nom de plume* of Constantin Von Sternberg, noted Philadelphia pianist, teacher and composer. The composition here represented is in waltz form and has a quality of spontaneous melody that is intriguing.

Rubato, well controlled, will add elasticity to the rhythmic line and will carry the melody along with a touch of coquetry. Proper significance should be given to the descending basses beginning in measure 17 and continuing to measure 23. The middle section, in F major, carries the melody for the most part in the upper voice of the left hand.

This waltz strongly suggests the style of Godard, and Godard treatment will not be amiss in playing it.

DRAGON FLIES

By JACQUES WEISSHEYER

Mr. Weissheyer undoubtedly cherishes a deep admiration and love for Chopin, whose style haunts every measure of this charming number, although the composer has cleverly managed to retain originality for all that.

The sudden upward and downward swoops of various figures are descriptive of the title of the piece, and they should stimulate the player to try for the grace and flashing color of dragonflies in flight.

The many *sforzandi* occurring on the third beat of the measure are of importance, as are also the various swells and *diminuendi*, which should be played exactly as marked.

The second section, with sixths in the right hand, should be accorded bolder treatment. Phrasing throughout this section is of major importance.

NOBODY KNOWS THE TROUBLE I'VE SEEN

By FLORENCE B. PRICE

This ancient Negro spiritual has been a universal favorite for many years and has, of course, many "arrangements." This one by Miss Price presents an interesting piano solo version which is very playable; and for the student it has the undoubted virtue of sounding much more difficult than it is.

Note that the reëntrance of the first theme at measure 29 carries the melody in the tenor voice, played by the left hand. Treat this as a violoncello solo. Then be careful lest too much pedal blur the changing harmonies.

THE BROKEN PROMISE

By CHARLES HUERTER

This piece provides excellent practice in melody playing with the upper or fifth finger side of the right hand. Use a deep pressure touch for the melody tones and the *sostenuto* basses; and accord the inside voices a touch of normal depth. Necessary tonal contrast and general color will be added to the performance by this procedure.

Espressivo allows for elasticity in rhythm and *tempo* as well as in tonal *nuance*. Most effects are indicated in the text by the composer.

PRELUDE IN F-SHARP MINOR

By FREDERIC CHOPIN

Chopin, as we all know, wrote twenty-four preludes, in all the major and minor keys, and published them all together as "Opus 28." Many weighty authorities consider this set of preludes his outstanding contribution to the piano literature. They are often heard on the concert platform, sometimes collectively, often singly. Each one is a complete gem in itself, and together they offer a rich field to pianists.

The one in F-sharp minor, here presented, was a great favorite of Vladimir de Pachmann recognized the world over as a Chopin player *par excellence*. The very eccentric mannerisms of de Pachmann on the concert stage led to a nickname bestowed originally by the brilliant James Huneker, who dubbed him the "Chopinzee." From this "Chopinzee" all of us, who were so fortunate as to hear him play the *Prelude in F-sharp minor*, received a master lesson in Chopin playing and the thrill that comes not often in a lifetime.

The melody in the *Prelude in F-sharp minor*, as can be seen at a glance, lies on the thumb side of the right hand. The figures in thirty-second notes, in the right hand, as well as the triplets in the left, provide a colorful background without in the least obtruding on the melody.

May we suggest that two books by Huneker, "Chopin, the Man and His Music," and "Mezzotints in Modern Music," will prove of invaluable aid if read before playing this prelude, or any of Chopin's music for that matter. Chopin traditions and style are intangible things, but of vital importance to proper interpretation of this master.

BOAT SONG

By FELIX MENDELSSOHN

This beautiful song without words, from the pen of Mendelssohn, is not nearly so well known as it should be among pianists. The tuneful Mendelssohn has in these hectic modern days gone somewhat into eclipse. He is a little "out of style" on modern programs. It is the writer's belief that this is a temporary misfortune, a passing phase which comes to most great composers at one time or another.

We may live to see a "back to Mendelssohn" movement, just as we now are in the midst of a Bach and Mozart vogue, and meanwhile this *Boat Song* (*Gondolied* in the original version) is an interesting addition to any balanced piano repertoire. Certainly it is a welcome change from the *Spinning Song*, *Spring Song* and *Rondo Capriccioso*, which make their monotonous appearance on almost every student program or recital where Mendelssohn is represented at all.

MY PUPPY

By MYRA ADLER

Here is a short but descriptive tune in the second grade. The accented *staccato* chords at the beginning of each line depict the barking of the puppy, while the intervening measures represent his chasing the cat, searching for elusive fleas, burying a bone, and so on through the canine repertoire. Words are appended so that it can be done in the style of a song.

TWILIGHT HOUR

By RENÉE MILES

This little nocturne in grade one and a half provides a very interesting study in melody playing for the right hand. The left hand has a moving accompaniment in the first section and a chord background in the second section. The first theme is in G major and the second in C major—the subdominant key.

COPY CAT

By N. LOUISE WRIGHT

The name N. Louise Wright has long stood for things worth while in piano teaching literature. This short example from her pen is characteristically melodious and simultaneously develops pianism—a secret of successful teaching material.

The three-note *motif*, repeated in different registers of the piano, gives excellent practice in graceful cross hand playing. To execute the phrase properly, remember the words, *drop, connect, roll*, and the result will be automatically satisfactory.

THE BIRDS AT MORN

By BERNARD WAGNESS

As suggested in the title, the right hand figures of this piece are intended to represent bird calls. The *tempo* indication reads *Andante con moto*, which means "slowly, but with motion."

In the last line the bird figures of the right hand are echoed an octave lower in the left. Naturally, the echo effects require softer tonal treatment.

ONE HAPPY DAY

By LILLIE A. HANSEN

A short number, to be played cheerfully. It contains passages which call for interlocking between the hands, and thus the piece becomes an excellent little etude for the development of this particular phase of pianism.

HALLOWE'EN

By W. BERWALD

A Hallowe'en piece is particularly apropos at this season of the year, and here is one which offers a change from the usual *Witch's Dance*, *Broomstick Ride*, *Spooks*, and so on. Rather, it depicts the *spirit* of Hallowe'en—and incidentally it brings in unobtrusively some valuable practice in finger *legato*.

First learn this piece slowly and, when accuracy is assured, play it with carefree abandon.

An interesting addition to the recital program.

THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Interest in Piano

I have heard that there is not so much interest in piano study as formerly. Is this true?
—V. F., Washington.

I know of only one way to give a satisfactory answer to your question—the net result registered by the many letters from teachers everywhere which reach this department. At least ninety percent of them speak enthusiastically of steadily growing classes and increasing interest in the piano; in fact, most of the teachers report bumper crops of students. I only wish it were possible to quote from some of these inspiring communications. One excerpt must suffice—a note from a very competent teacher in a Michigan town of seven thousand:

"This little town has gone piano mad. Everyone and his brother want to take piano lessons. The more I charge, the more pupils I have—that's the part of it I can't understand."

The explanation is easy. This alert teacher is also an inveterate *student;* she travels one hundred fifty miles once or twice a month for lessons with a well known pianist; almost every summer she takes a short or long course in teaching materials, technic, or interpretation; consequently she is well stocked with ideas, her teaching and playing perspective are kept clear, her enthusiasm undimmed. Go thou, and follow in her steps, if an overflowing class is thy heart's desire!

Three Students

1. I have been giving piano lessons the past year to my three children, ages fifteen, thirteen, eleven. The eldest daughter is in high school. She plays very nicely and is now working on Clementi, "Twelve Sonatas"; Czerny, "School of Velocity" and Mathews, "Graded Course, Vol. V"; she has completed almost everything in "Piano Pieces the Whole World Plays." What do you suggest as follow up material for the next two years?

2. The second daughter always has had a certain clumsiness in her hands—perhaps a lack of coördination, as she is left handed. She is very bright and reads readily. She is working now on Kohler, "Sonatina Album," Vol. 51 and is reviewing Hanon, "Book I" the third time to gain ability, control and speed. Her touch is very firm, heavy. What do you suggest for her next two years?

3. My son, aged eleven, is doing about second grade work. All three of them began their piano study with teachers other than myself. They are difficult to keep interested, though they have plenty of talent. I have had a reasonably good musical education and while none of these children may ever be marvelous musicians, I expect them to have a good understanding of the joy of playing and I intend to keep them studying until they leave high school and then they may choose whether to continue or not. Do you think this is right?

The girls are taking violin from another teacher—doing about fourth grade work. Could you please outline a course of piano study for these three, or if not, direct me to some information? How much time at the piano do you think they need to make reasonable advancement?—S. V., Kansas.

You are another shining example of a successful parent-music teacher; and I am happy to print your letter in full, (Correspondents, *please* keep your letters short!) to show how admirably you are working out your job. No one knows better than I how difficult it is to feed, clothe, keep clean, discipline, and get the children off to school and church, not to mention such minor matters as pushing them in and out of bed, turning off the radio, yet keeping them amused and out of mischief. If, after all this, you can face music lessons, you must be a paragon of parental virtue! I also know how insurmountable it seems, after teaching piano playing all day long to other people's children to tackle one's own offspring at night. But evidence is offered from all sides that this has become a familiar practice. More honor to you and those other parents who have the vitality and patience to put it through!

I do not see how you can expect more than from forty-five minutes to an hour of daily practice from each of your children; and I am afraid you won't be able to continue both violin and piano study much longer. Do the children play much violin and piano ensemble? This would seem to me to be the only way out for the next few years. It would be ideal too, if you could get a second piano for four and eight hand playing. The publishers of THE ETUDE will gladly recommend interesting ensemble material for all combinations and grades.

1. For technical material use "Czerny-Liebling, Volume II"; for general pieces give her plenty of romantic and modern compositions — Chopin "Preludes," "Nocturnes" and "Waltzes." Contemporaneous material of her grade is frequently suggested on this page.

2. Take her off of all "dry" material and put her on something like "Studies in Musicianship", (Volumes I or II), Heller-Philipp; or "Folk Tunes Near and Far," Bunting, fifteen familiar melodies attractively arranged; or "Musical Visits with the Masters," sixteen good arrangements from classic composers; "Keyboard Attacks," Thompson, twenty-four examples from the classics to develop interpretation and expression.

3. Your son will, I'm sure, like seven "Famous Strauss Waltzes," arranged by Rovenger; "My First Song Book," Richter, forty well arranged school, church and folk songs; "Under the Big Top," a collection of twenty circus pieces; "Ten Descriptive Sketches," compiled by Edith McIntosh, a set of pieces to develop style, at the same time to provide drill in a variety of technical problems.

Helpful Books

I took piano lessons for about five years—quitting at the age of thirteen. I am now nearly sixteen, and in that period of three years I did very little piano practicing. When I stopped taking piano, I started violoncello lessons with the high school orchestra and have been working hard on it ever since.

Though I am very anxious to renew my piano work, I cannot afford any lessons. I want to teach myself as well as I can, but do not know exactly how to do it. I thought you might be able to help me some in working out a plan. I'll try to give you some idea of what I covered while I was taking lessons. The exercises are: "The Virtuoso Pianist, Parts 1 and 2," by Hanon; "Studies for Velocity, Book 1," by Czerny; "Studies for Piano," by Burgmüller; "25 Etudes, Opus 47," by Heller; "Keyboard Harmony for Juniors," by Elizabeth Gest. My last piano pieces were *The Venetian Love Song* and *Gondoliers* by Nevin. We have the book, "Masterpieces of Piano Music," from which I hope to learn several pieces.

My main difficulty, it seems, is not going to be lack of practice, but just not knowing what my shortcomings are and how to correct them. Can you give me any suggestions about teaching myself, or a list of books and music that would be helpful?
—M. L. B., Missouri.

With your ambition and apparently excellent training in both instruments, it is unfortunate that you cannot have lessons from a good piano teacher. It is almost hopeless to try to make progress without careful supervision. When there is no objective, no lesson to prepare, and no set task to accomplish in a given time it is next to impossible to forge ahead. Couldn't you inveigle your violoncello teacher to help you a little in your piano work? If he is a good musician his ears will certainly be able to keep you on the right musical (if not pianistic) track. Do not attempt too much: stick to one book of etudes such as "Czerny-Liebling, Volume I or II"; from the "Masterpieces of Piano Music" which you already possess, study only those which will do you most good musically or technically, as, for instance—*Alla Turca,* Mozart; *Prelude in C* and *Bourrée,* Bach; *Gypsy Rondo,* Haydn; *"Minute" Waltz,* Chopin; *Prelude, No. 20,* Chopin; *Spinning Song,* Mendelssohn; *Waltzes, Op. 39,* Brahms. And don't neglect your "meat" diet; the Bach "Inventions" (Busoni edition) offer the best musical as well as technical vitamins for a growing pianist.

Technic and Bach

1. For some years I have been working at the piano (just for my own satisfaction) without a teacher. As a child, I had lessons for several years and I think had a fairly good foundation. I can now play the grade four music in THE ETUDE quite well at sight. I have worked through Cooke's "Mastering the Scales and Arpeggios." Could you suggest a good book of technic?

2. I do not seem able to appreciate strictly classical music; I find Bach very dry, possibly because I know very little theory. Having a great fondness for good chords, I find most of the music of Bach's period rather thin. Apparently I prefer the emotional to the intellectual in music. Could you suggest a few pieces in Grade 5 or 6 that would be suitable for me?
—K. M., Canada.

1. Philipp, "Complete School of Technic."

2. I shall have to be severe with you! Of all composers Bach is the richest in content and nourishment; therefore your "musical physician" prescribes the following for you—all by Bach; *Adagio from Organ Toccata in C Major* (Hess); *Blessed Jesus, Here We Stand* (Rummel); *Prelude in E minor* (Beard); "Twenty Pieces from the Clavier Book for Friedemann Bach" (Maier); *Awake, the Voice Commands* (Busoni); *Jesu, Joy of Man's Desiring* (Hess); "Preludes and Fugues in B-flat minor (Vol. I) and F minor (Vol. II)"; *English Suite in A minor.*

You may choose any three kinds of the above medicine, which must be taken in daily doses to give the required amount of Vitamin B. I am sure after a few months you will find your musical stature greatly increased, And, best of all, the medicine tastes like nectar of the gods—each dose better than the last—and the bottle will never be empty!

A Talented Pupil

One of my pupils, starting at the age of ten, finished Williams' "First Grade" in five months and has had one month in the "Second Grade" of which new work she is able to take five or six pages at each lesson. Although I keep up the review work in the book, at each lesson her new assignment is thoroughly learned as to time, expression, fingering, and so on. She has had the major scales, tonic chords and inversions and arpeggios of the first group, and F, B-flat and E-flat, with chords, and so on, of the second group. She averages about an hour a day of practice. Is this pupil exceptionally talented? Can you give me any suggestions as to the type of work I should give her?
—M. G., Ohio.

How all of us would like at least a dozen pupils like your gifted ten year old girl! Push her along just as fast as you can, for she evidently has a fine zest and enthusiasm for work. Why not experiment with some new and unusual publications like Diack's "Round the World in Twelve Hops," a series of attractive "geography" lessons; or "Musical Visits with the Masters," compiled by Carleton, sixteen short, easy arrangements—mostly new material, one piece by each composer ranging from Gluck to Verdi; or "Plantation Songs," arranged by Thomas, a set of twelve negro spirituals in simple, beautiful, moving versions; or "Twelve Folk Songs for Boys and Girls to Play," Brahms-Maier, a delightful set which Brahms made for the children of Robert and Clara Schumann, adapted, freely translated and arranged by me for first and second graders. The amusing Brahms drawings in the book are made by my twelve year old son, Teddy. For technical work you might examine Florence Goodrich's "Preludes," consisting of forty-two short, original musical fragments, each presenting some phase of technic or touch.

Two Piano Numbers

I have a student fifteen years of age who wants "semiclassics" (she refrains from saying jazz) arranged for two pianos. Please tell me if there are such arrangements, and where to get them.

Will you also suggest some attractive two piano numbers for me to play with another adult pianist? We want something that is not too difficult or too long. And I prefer runs—something brilliant.
—L. B. C., Mississippi.

If it is out and out two piano jazz that you want for your pupil, I am sorry not to be of much assistance in the lists here given. Only the first can frankly be called "popular".

I. *Bug Burlesque,* Rodick; *Nola,* Felix Arndt; *Frasquita Serenade,* Lehar (Arr. by Sucra); Two well known Russian tunes (a) *Dark Eyes* (Paraphrase), (b) *Yablotchko* (Soviet Sailors' Dance) (Arr. by Stone); *Saint-Saëns Tid Bits,* (Arr. by Stone) (Appropriately called Jazz Classique!); *Bolero Moderne,* Gould and Shefter.

II. Charming, light music—not too difficult: *Norwegian Dance No. 2,* Nevin-Werthner; *Polish Dance,* Scharwenka; "A Day in Venice" (Suite), Nevin; *Sea Gardens,* Cooke; *Entrance of the Clowns* (from "Midsummer Night's Dream"), Mendelssohn-Sutro; *Orientale,* Cui-Luboschutz; *Morris Dance* (easy), Gest; *Tango* (easy), Albeniz-Gest; *Prelude* (slow, easy, short), Pietsch.

III. Brilliant (yet not too difficult) two piano pieces for you and your friend to play: *Danse Macabre,* Saint-Saëns; *Scherzo,* Arensky; *Feu Roulant* (Pin wheels), Duvernoy; *Rush Hour in Hong Kong,* Chasins; *Valse Viennoise,* Parrish; *Bolero,* Moskowski-Kramer; *Malaguena,* Lecuona; *Flight of the Bumble Bee,* Rimsky-Korsakoff; *Ritmo* (Spanish Dance), Infante; *Valse Brilliante in E major,* Moskowski-Gruen.

Any of these pieces may be secured through the publishers of THE ETUDE.

"History teaches us that music is a movement, and one that does not so much depend upon human agency as upon its own natural laws."—Basil Maine.

Caring for the Vocal Instrument

By GIOVANNI MARTINELLI
Leading Tenor of the Metropolitan Opera

A Conference Secured Expressly for The Etude *Music Magazine*
By R. H. WOLLSTEIN

GIOVANNI MARTINELLI

NATURE ASSUMES but one responsibility in a singer's life. She puts the voice into his throat. After that the singer himself is alone responsible for the health, the strength, and the length of life of his vocal organ. As a usual thing, people do not lose their voices. Diseases of the respiratory tract and, of course, of the general physical system, can destroy voices; but it seldom happens that a healthy organ suddenly becomes "lost." What happens in such cases is probably that the organ has been forced, misplaced, or badly treated. Counting my two years of training, I have been singing since 1908—thirty years. My voice is strong, and I am still able to put it to use in long, exacting rôles. I do not take credit to myself for this, except in one point—I always have treated my voice sensibly.

The first consideration in the care of and conservation of the voice is, of course, good health. The young person, who would look forward to many years of sturdy, good singing, must have healthy lungs and healthy vocal cords at the outset. This is just another way of saying that he must be a healthy person. Apart from localized throat ailments, the vocal apparatus is highly sensitive and reflects the ups and downs of general well-being more quickly, perhaps, than any other organ of the body. As soon as one gets tired, run down, nervous, underfed, the voice shows it. And there is nothing to be done about it, by way of vocal methods.

The Healthy Body

IT IS FAR BETTER to keep healthy than to have to build back one's health. Let me give you a few sensible "do's" and "dont's." Live as normal a life as you possibly can. Eat regular meals, and see that they are properly nourishing. Diets for beauty and rigorous reducing regimens are harmful, because they tend to break down normal physical resistance. Naturally, I do not advocate the sort of diet that is definitely calculated to put on weight. An overdose of sweets and starches in the diet is unwholesome in a different way; not because they make one fat, but because they create an overacid condition which, in its turn, can break down the body's best resistance. The singer who looks forward to hard work (and any phase of a singing career is hard work, because it depends upon sheerly muscular activity and therefore requires strength and resistance) should accustom himself to a good, wholesome balanced diet —meats, vegetables, fruits, some starches, some sweets, some fats. Eat regularly; keep strong and well nourished; and do not worry about that extra half pound of fat.

MARTINELLI *as Othello*

To keep in regularly good physical form, the singer must get proper rest and sleep. For some unknown reason, the popular conception of the professional singer's life stresses the glamorous aspect and pictures him as engaging in a never ending round of pleasure—theaters, night clubs, gay parties, crowds of adoring admirers. Nothing could be farther from the truth. The professional singer's work requires him to keep hours that are different from those of persons engaged in other callings; but his life is none the less regular. Our working hours may begin and end later than those of the average business man; but that is just another way of saying that we take for rest and sleep such hours as find him at his desk. We cannot work all night and then spend the remainder of the day amusing ourselves; and we do not even attempt to do so.

A Nutritious Diet

BUT EVEN A PROGRAM of balanced food and well regulated rest is not enough. There are special precautions we must take. Chief of these is a rigorous avoidance of crowds, especially during the winter months, when colds and other respiratory infections are epidemic and an entrance into such crowds means the risk of germs. I love the theater and the motion pictures, but seldom dare to enjoy either. And each time I do, I know in advance that I am taking a chance. Hot, stuffy rooms; air that is being used by many other people; and the presence of persons who may cough or sneeze at you; all these are dangerous to the health of the singing organ. This means a sacrifice, of course, but one cannot have everything.

I have never smoked; and I avoid rooms that are laden with smoke. When I visit my friends, or they visit me, they know that, during the time of our being together, smoking must be avoided. I drink an occasional glass of wine, as every Italian does, but I keep rigorously away from what is generally meant by drinking. Alcohol is harmful to the voice. But tobacco is worse.

There is also the matter of quick changes of temperature. The rapid shift from a warm room to icy cold air gives the entire bronchial tract a shock that jolts the voice. A thermometer is kept outside my window; and I never go out, in winter time, without consulting it. Anything down to freezing point (thirty-two degrees) is on the safe side for me. As soon as the mercury slips the least bit below that, I stay indoors; or, if I have to go out, for appointments or rehearsals, I get into a vehicle as quickly as I can and drink in as little as possible of the air that feels icy and shocking as it enters my nose.

The singer should have exercise, of course, and should take as much of it as he can in the open air. Long walks are my favorite form of sports. Another thing I have found helpful toward keeping my vocal organ fit in these thirty years, is to have a proper and complete vacation from singing, during some part of the year. Regardless of tempting engagements, I always manage to have two months of complete rest. During this period, I never even practice. Thus, the entire vocal and respiratory tract has a wholesome and tonic rest, and I find myself strengthened when I go back to work again. But—and this is important—I never try to begin a full schedule of work immediately upon resuming

MARCH OF BRIAN THE BRAVE

The March of Brian the Brave refers to the Irish hero and leader, Brian Boru (926–1014), who is generally regarded as the chief king of Ireland. The march should be played in bold and majestic fashion. Grant-Schaefer is one of the best schooled writers of educational pieces for the pianoforte. He has the gift of making everything he writes very playable and at the same time interesting. Grade 3.

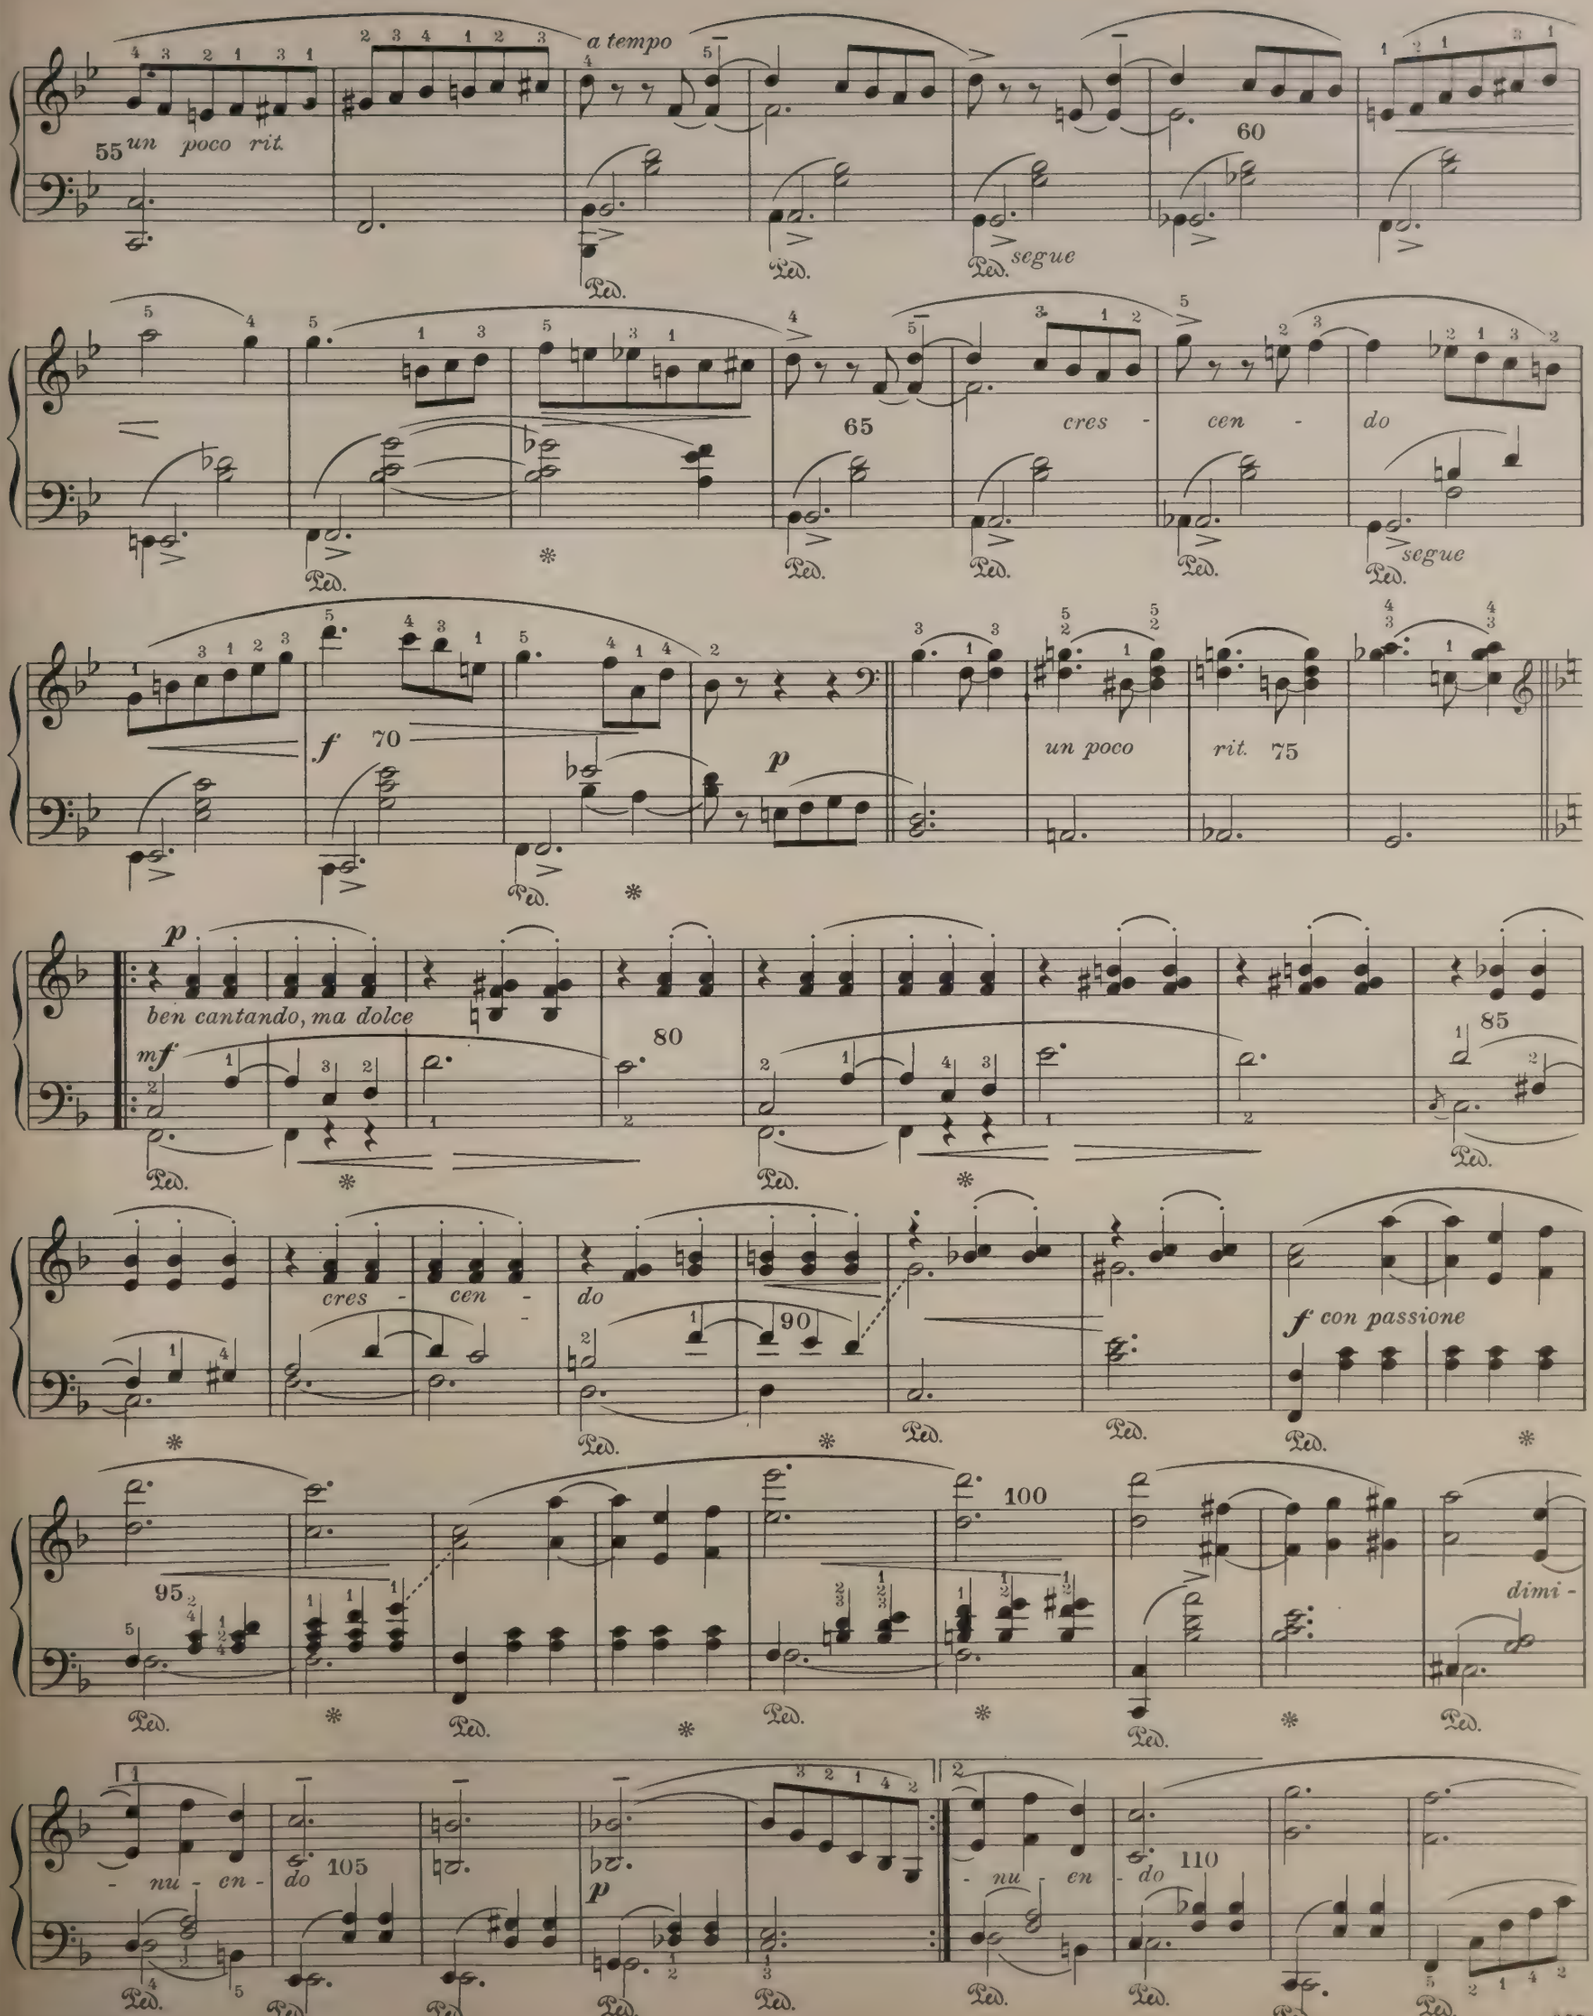
VALSE JOYEUSE

Those who knew Constantin Ivanovitch Sternberg (1852-1924), famed pupil of Liszt, long active as a teacher in Philadelphia, were continually fascinated by his marked melodic gifts. This gay waltz, written under the pen name of Dallier, is one of his finest works. The charming cello-like melody in the left hand part of the second movement is peculiarly effective. Grade 5.

CHARLES DALLIER



Bass-notes that are too long to be held by the fingers must be sustained by the pedal.

PRELUDE, in F♯ minor

Chopin's mastery of the expressive potentialities of the piano is nowhere better evinced than in this exquisite work with its delicate lace - like background. The personal thrill of being able to play this effectively is one of the finest intimate experiences in music and affords the student who achieves it many times the delight that comes from merely hearing the composition. Vladimir de Pachmann once said about this piece, "I would rather have written this Prelude than any symphony I know."

Theodora van Doorn's Hints on Platform and Personal Appearance

ADVICE ON MAKEUP

Forty percent of those requesting samples in August asked for a well-known theatrical cosmetician's stage make-up manual. We have therefore concluded that this column can provide a much-needed service by offering advice (in print only) on the tricky problems of platform as well as personal make-up, such as appear in the column directly below. Suppose you write me telling some of your problems. I will reply through the column as fully and as promptly as I can.

LET'S MAKE UP

Breathes there a musician with soul so dead, who ne'er unto herself hath said, "would the song I sang, the composition I played, or the dance I performed have been just a little more authentic, if I had given this performance its natural setting and costume?" Or is this too unconventional a suggestion for ultra conventional musicians?

Certainly the reverse is true, namely that a musical rendition of an opera without appropriate costumes can lose something of its very essence, because of their absence. I recently attended the performance of a well-known opera which was beautifully sung in concert form. The lack of scenery, costumes and appropriate makeup dulled my usual appreciation of the spirited music. Both solos and choruses lacked conviction. The singers seemed strained and self-conscious. I went away as unsatisfied as I did from my first encounter with Shakespeare in modern dress.

Picture three Hawaiians playing guitars in American business suits. Then see the difference when each of the trio carelessly drops an orange-colored *lei* around his

neck. The music takes on a faintly more plaintive note. The musicians themselves become, as they should, a part of the tone picture they are trying to paint.. Even a bandana around the neck of a man singing "Ol' Man River" suggests the toting of bags and the lifting of bales.

All of which is my feeble way of suggesting that character make-up should have a more accepted place in music.

Let us say, for instance, that one part of your forthcoming recital contains selections from "The Mikado" and "Madame Butterfly." Wouldn't it be enjoyable as well as convincing to do this group in Japanese costume and make-up?

Although this is supposed to be a difficult make-up, it is really quite easy if you follow instructions carefully and see that everything is blended smoothly with no harsh lines. The complete Japanese feminine grease paint make-up procedure is as

(*Continued on Page 666 Column 2*)

TEN MORE APPEALING PERFUMES
deserving mention in my Fall Parade

SONATA

There is a definite association between music and perfume. Music is an emotional experience, in which the senses are quickened or retarded at the will of the artist or composer. A perfumer similarly plays on the senses and the imagination in the blending of his varied ingredients and he too emerges with a composition that is fragrantly stimulative to the emotions. And so at last, we come to a perfume which is even named for musicians. *Daggett & Ramsdell's Sonata.* Its odor is as elusive as a faintly remembered Beethoven chord. A chord of floral notes blends into a pleasing and slightly wistful, dreamy sense harmony. One can conjure up the tinkle of a clavichord; the far-off wailing of violins in a flower laden conservatory. One can, in short, quite easily match one's tempo to *Sonata.*

EMERAUDE—"PARIS"

If I had wanted to make a European perfume tour, I could not have done better than to include as one of my stops the trip to Ireland's luxuriant shores, which is reflected in *Coty's Emeraude.* Inspired by Paris, it personifies the Emerald Isle. One finds in *Emeraude,* a touch of the Blarney stone kiss, more than a hint of the Lakes of Killarney, the saucy laugh of a coleen of Cork. There is the smell of the peat in it, as positive as a Donegal tweed, yet the sweetness of Ireland is there too, as its dominating characteristic. Its new packages are ravishing as are the new packages for that other famed *Coty* odor, *Paris.*

CHEVRE-FEUILLE—TOUJOURS MOI

Have you ever wished that some magic formula would keep the luscious scent of full-blown honeysuckle at your fingertips throughout the year, that exquisite fragrance which comes down the breeze on a warm spring morning after a rain? *You* doubtless can smell it just as poignantly almost any morning from the tumbled clusters on the walls in your own neighborhood. It is such a fresh and natural smell. *Corday,* famous French parfumeurs, have imprisoned the very heart and soul of this humble fragrance in their *Chevre-Feuille* (Honeysuckle). *Chevre-Feuille* is a lasting perfume, too, one which should be a part of every out-door loving woman's perfume collection.

Corday also produces the ever popular *Toujours Moi* (always my own self). Everyone knows *Toujours Moi* and its insouciant subtlety. It has a touch of the tropics, a suggestion of Tahiti, which the woman of mystery (and what woman is not?) has loved through time immemorial.

R. S. V. P.

As impeccably refreshing as a formal garden—as provocative as a flirtatious miss—is *R.S.V.P.*—a new perfume by *Richard Hudnut,* whose toiletries have been known by women everywhere for more than a generation. It has a certain crescendo-like permeation which starts faintly and is brought to the surface at its best through its contact with the body or the handkerchief. Certain perfumes smell differently on every individual. *R.S.V.P.* is one of these. Hence its odor to me might not be its odor to you. If you like a scent with a speck of come-hither in it, yet with a demure foundation that holds all in check—try *Hudnut's R.S.V.P.,* soon to be available at all stores, everywhere.

TROPHEE—LE DANDY

Remember the movie "Wings of the Morning" in which the gypsy horse of that name romped home to victory under the training of an Irish landowner's nephew, who fell in love with the boyish gypsy princess? This was what flashed through my mind when I first smelled *D'Orsay's* appropriately named odeur *Trophee,* which has the sweet glamour and sublime audacity of the gypsy coupled with the smell of camp fires, pipe tobacco and well-tended turf. *Trophee* is a winner, as a perfume to use with tweeds and tailored suits.

On the other hand, *D'Orsay's* odor *Le Dandy* is the scent of formal drawing rooms, the Hunt Ball, the diplomatic reception. You can use it with confidence at an evening musicale or wherever you find yourself of an evening.

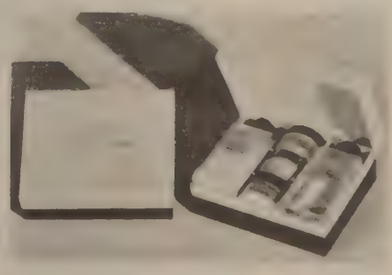
ORGANDY—RYTHM

Parties and picnics and the lovely pink organdy dress they wore for best are perhaps some of the most cherished memories our grandmothers regaled us with, when we were at the wide-eyed, tell-us-a-true-story age. For years I planned the puffed sleeved, high waisted, full skirted, pink organdy I would wear to my first party, and never did. Sweet pictures of a loved past crowded my thoughts when the old fashioned sweet, appealing floral scent of *Kathleen Mary Quinlan's* perfume *Organdy* greeted me as I lifted the simple crystal ball cap from the slim bottle whose soides suggest the layers of hoops and petticoats of a gone era. *Organdy* is a demure perfume for a very modern mademoiselle or madame.

Kathleen Mary Quinlan has caught something of the flowing smoothness of a fine waltz in her honey-scented *Rythm,* which brings to thought the odors of a field of sweet wild flowers on a brilliantly sunny day, with the bees buzzing rhythmically. *Rythm* is certainly a perfume in the classical musician's mood.

Ideal Xmas Odors—to give or to receive! (T. V. D.)

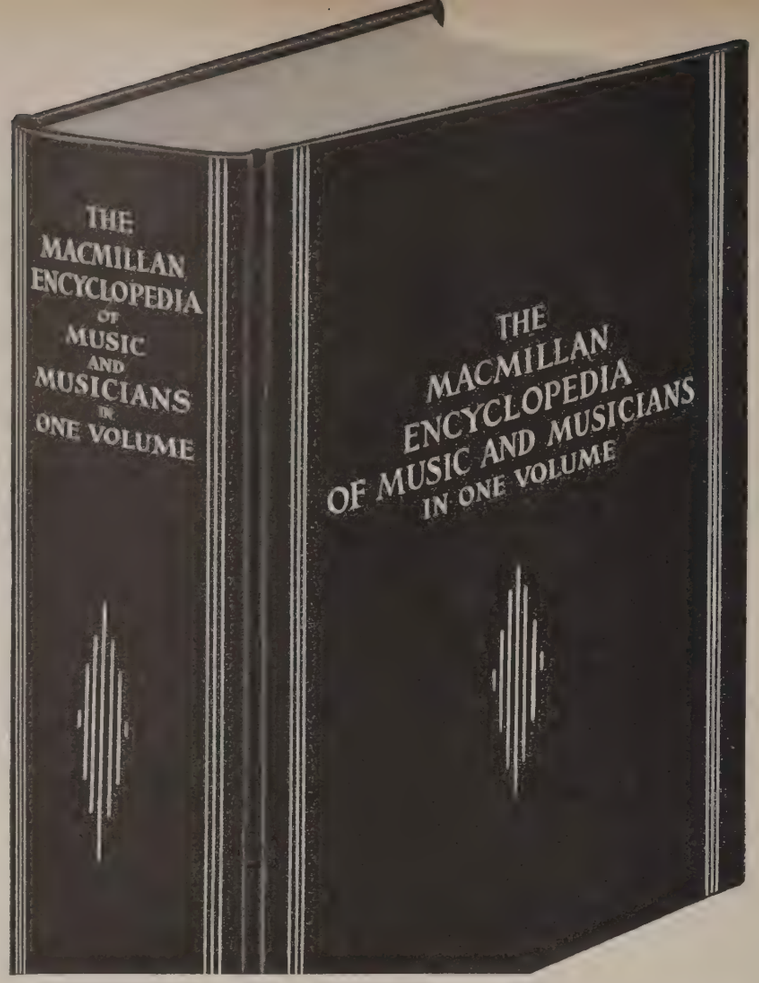
"SAMPLER" NOTICE



Your requests for samples through my August "Sampler," which totaled more than 15,000, simply snowed me under. Over 1,000 requests came in the first week. Because of limited supplies of certain free samples, you may not receive all that you asked for. Better luck next time! You must forgive delays in delivery from some manufacturers, who had to order additional lots of samples for the huge demand. All 10¢ samples will finally be supplied. Please be patient! Thank you.

KITS FOR CHARM

If you have the same urge as I have for those compact cosmetics ensembles, through which the more advanced manufacturers are now permitting new customers to try their finer products, you'll find the various kits which I propose to show you between now and Christmas, well worth reading about and if your reactions are anything like the response to my August "Sample," you'll probably head for the nearest good cosmetics store with fire in your eye and your allowance in your hand. And if by any chance he doesn't happen to have the one that appeals to *you,* I'll give you the name of the manufacturer. You *should* see them, so to speak, both in and on the flesh. And you'll adore them as Christmas Gifts (yes, the season *will* be on us before we know it), both as a recipient and as a giver. Here are several kits from the many coming on the market that I though you would want to see:



THE PERFECT FIVE

Years ago, even before I began to use cosmetics myself, I used to hear my uncle, whose hobby was chemistry, tell my mother that she should use *Daggett & Ramsdell's Cold Cream.* He had analyzed it, privately, and said that it was the purest product of its kind on the market at that time. Presumably, *Daggett & Ramsdell* have continued their search for cosmetic perfection. They have just announced a new kit called *"The Perfect Five,"* a clean-cut, modern, business-like, yet beautiful ensemble of five basic cosmetic needs, i.e.: their new *"Golden Cleansing Cream,"* a delightful non-liquefying type of cream which contains colloidal gold (your face is more than

ever your fortune); *"Perfect Foundation Cream,"* which makes your powder adhere smoothly; *"Perfect Tissue Cream,"* which is a very acceptable cream for over-night use; *"Perfect Skin Tonic,"* a mild astringent lotion; and *"Perfect Hand Lotion,"* for the absolutely necessary, soft, smooth and white hands. The sizes are generous.

HINTS ON PLATFORM AND PERSONAL APPEARANCE

(*Continued from Page 664 Column 1*)

follows. Put a thin film of cold cream all over the face. Spread evenly a thin film of pink grease paint over the cold cream, leaving the eyelids and eyebrows uncovered. Cover eyebrows with cosmetic white to block them out. When dry, put pink grease paint over this. Now cover the entire face, except the eyelids with a small amount of Mikado yellow soft grease paint. Light moist rouge should now be blended high on the cheekbones to lift and accentuate them. Rouge the tips of the ears lightly and the area from the eyebrow to the eyelid very lightly. Apply green lining color (shadow) to the eyelid, blending it slightly beyond the outer tear ducts. Now pat on white powder to dry the make-up. Do not rub. Brush away all surplus powder. With a black pencil outline the lower lid of the eye, ending with a short upturned line at the outer point. Draw another black line through the middle of the upper lid, joining the upturned line, to give the almond shape. With the black pencil, start sketchy lines for the eyebrow along the side of the nose on a line with the inner tear duct and continue in a sweeping upward curve to a point slightly beyond the eye. Brush the eyelashes with black mascara. An orange tinted lipstick should be used to draw a small cupid bow mouth. Be sure to draw a widow's peak from your black wig with the black pencil, and to cover the exposed part of your neck with a yellowish liquid powder. With a little practice, this make-up can be put on in ten minutes. It can easily be removed by covering with cold cream and wiping it off with tissue or a soft cloth. This is obviously the make-up for a finished stage production.

A less complicated Oriental make-up for concert or small stage appearance can be had with a yellowish base cream and powder and the same rouge, shadow and line effects or even more simply with amber lights and the pencil shadow and rouge.

STEIN'S THEATRICAL MAKEUP KIT

Here's a kit that no amateur or professional musician who has any need for stage or platform character make-up should be without. It's called *Stein's Midget Make-Up Kit,* and it's a real professional kit in miniature, containing the ten essential articles in handsome tan, red and green tin containers, viz. *Alpine* Cold Cream, Face Powder, 3 Grease Paints, pink, red and brown, Liner for shadows) in dark blue, Black Wax for blacking out teeth, Burnt Cork for negro impersonation, Clown White for Pagliacci, and Nose Putty for changing the shape of the nose.

It might also be called a practice kit, for it provides all the essentials for stage make-up experiment, such as you are bound to need for appearance in amateur theatricals, in operettas, in Hallowe'en, Thanksgiving, Christmas and New Year's parties, for pageants, masquerades, etc. The ten generous containers, holding enough for many make-ups of many characters, are all packed in a good looking green imitation alligator, heavy board, buttoned flap kit, 7" x 9" x 2" in size. *Stein's Theatrical Manual* (25¢) is enclosed. Price of kit mailed—$1.00. You'll be fascinated with it. I was. Excellent for teachers to have in reserve for helping to make up pupils on such occasions. Write to M. Stein, 430 Broome St., New York City, enclosing a dollar.

(*Continued from Page 664 Column 4*)

This compact easy-to-carry kit sells for $1.00. *Daggett & Ramsdell* would of course prefer that you buy it through your local dealer. But if you cannot get it there and he will not order it for you, I have arranged that you can get it from the manufacturer direct. *Daggett & Ramsdell* also has a small booklet called "Beauty Aids" which contains hints on how to make up—and the proper shades for your particular coloring, which will be sent along with the kit you purchase, (or separately). Address Daggett & Ramsdell, 214 W. 14th Street, New York City.

PETALSKIN $2.50 DELUXE KIT

Glamour, swank, utility and value are four words that I seldom use to describe a single item. Yet, picture a lovely ivory coloured, embossed, gold-clasped oblong chest, 8" x 3¾" x 3½". Unclasped, the interior is revealed by the dropping of the front side of the box and the lifting of the top. It is a treasure chest, made of stiff board, entirely lined in a soft gleaming metallic substance, remindful of the translucent glow of fresh orchids with dew on them. Arranged in specially cut insets are the following: an orchid glass jar of *Petalskin Face Cream,* which is rich in Vitamin F and is a deep pore cleanser and tissue cream with unusual penetrating and nourishing qualities, orchid capped bottles of that splendid neutral powder base, of which, if you were fortunate, you had a trial through my August "Sampler," *Petalskin Cream Pastelle, Petalskin Face Tonic,* which is a fine mild astringent and which will not dry or coarsen even the most delicate skin, *Petalskin Hand Cream* to keep your hands young and lovely, or restore them to smooth white petal-like softness; and a box of *Petalskin Face Powder,* in your particular shade, i.e. Natural, Rachel, Peach, Petaltan, Roseaire or Brunette. Seldom do I find myself stopped for words, but there is a rich beauty and quality about this kit and its contents which needs your inspection to picture it adequately. A truly glamourous gift for the person to whom you want to express top appreciation. $2.50, available through the manufacturer, if you cannot get it locally. There will be a limited number of these sets available this Christmas. So send your request in early—to Petalskin Company, 67 W. 44th St., New York City. Be sure to specify color of powder desired.

X CREAM

In algebra, "X" is the symbol used for designating the unknown quantity in an equation. "X" is also a part of the name of a cream deodorant called *"X"-Cream*—and it is a comparatively unknown quantity among women. This despite the fact that it is decidedly a quality product, made by a famous old firm of proprietary chemists, *Hall & Ruckel,* of New York. I predict that *X-Cream* will not be an unknown quantity for many more moons. Good products, once used by the "talkative" sex, have a habit of forging ahead fast.

No woman of good taste will risk the possibility of unsavory body odors, when so simple and effective a preventive is at hand. It has a suavely smooth cold cream texture and a delicate pleasing odor, yet it loses none of its potency because of this delicacy. It comes in a clean cut flat white jar with a blue and white tin top, and exceptionally large jar (a sixty day supply for the average person), which retails at 35¢. There is also a very generous blue purse-size tin which can be had for 10¢.

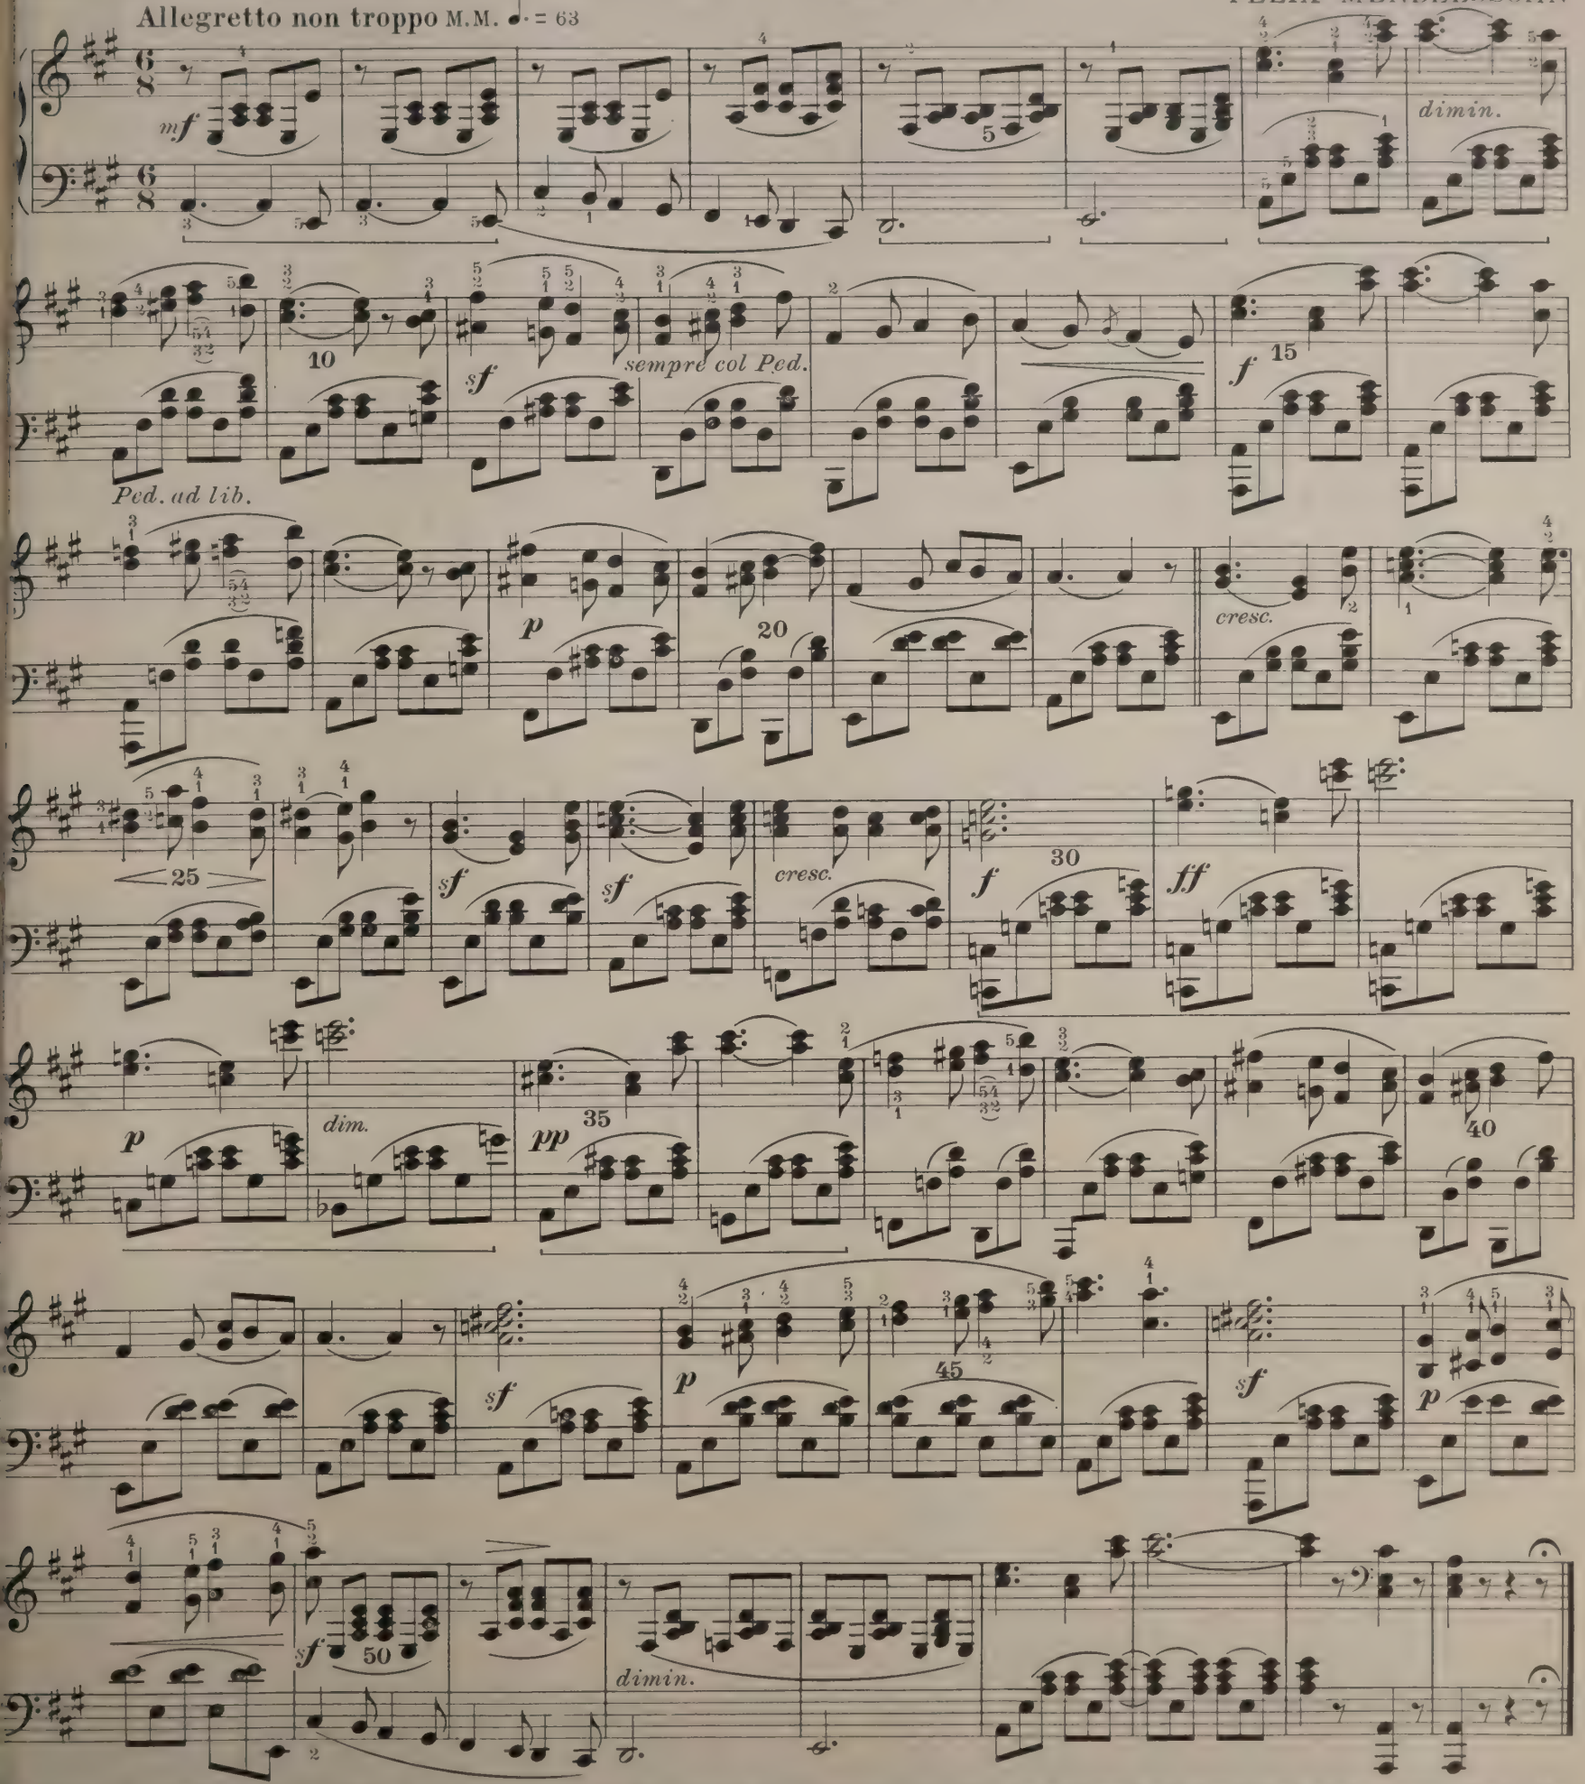
Because I believe you will want to try the *X-Cream,* I have arranged, through the makers, a very generous introductory offer. For a limited period, they will send you (not more than two to any reader), the regular 35¢ retail size at 25¢ including all mailing costs. Or the 10¢ size if you prefer. Write directly to Mr. Richard Ulmer, Treasurer, Hall & Ruckel, 136 West 52nd St., New York mentioning my name and he will see that it is sent to you.

RITESET #1035 IN A KIT

The only way a comb manufacturer can keep ahead of his competitors today, is by constantly designing new "models"—models that will do new jobs or will do old jobs better. *Ace Comb's* latest idea is *No. 1035 Riteset,* a high quality coarse and fine comb, with a thumb indentation in its center. It has a double advantage: (1) It combs freely without disturbing or snagging adjacent waves or curls. (2) The center finger rest provides a better, firmer grip which means that the thumb and fingers do not tire so easily. Originally designed for hairdressers, 7¼" long, it has achieved such popularity with the professionals, that it was decided that really conscientious hair combers (like yourselves) would all want one also. And so it is available singly at 50¢, or in a small combination kit, containing a regular comb of similar size and of equally fine quality for 75¢ *Riteset No. 1035* makes hair parting easy, gives the correct spacing for orderly sleek appearance and it is heat resistant (a professional feature which makes it desirable for use in close contact with a curling iron, etc.) In procuring this comb you will add a real worker to your comb wardrobe. Send 50¢ (or 75¢ for the Kit) to American Hard Rubber Company, 15 Mercer St., New York City.

HARRIET HUBBARD AYER BEAUTY CADDY

When I saw the words *Beauty Caddy by Harriet Hubbard Ayer,* smartly and modernly embossed in maroon on a simple blue-grey box, 6½ x 4½ x 1¾, I was intrigued, for the word "caddy" suggested two different pictures; tea in the twilight or the golf greens in brilliant sunlight. The *Harriet Hubbard Ayer Caddy* is obviously named after the golf variety. It carries your essential cosmetics with a similar minimum of effort on your part: Three white and gold capped glass jars hold respectively, (1) "Luxuria," described as the essential cleansing cream, (2) *"Beautifying Make-Up Film,"* a flattering powder base, which conceals little blemishes and holds the make-up fresh for longer hours, (3) Face Powder in Flesh, White, Rachel, Rachel #2, Peach, Ayerblonde or Ayerbrunette, an ivory, gold and brown mottled composition capped bottle of sweetly perfumed *"Skin Tonic"* and a small, pink capped phial of *Harriet Hubbard Ayer's* intriguing, true floral odor perfume, *"Pink Clover." The Harriet Hubbard Ayer Beauty Caddy* can be purchased through your local dealer for $1.00 and would make a nice Christmas gift from you to you and others on your list. This set is not available through the column nor through the manufacturer. Therefore if you cannot find it in the stores, it will be necessary for you to write me and I will try to get the name of a nearby dealer for you. Specify your powder color preference if you write.



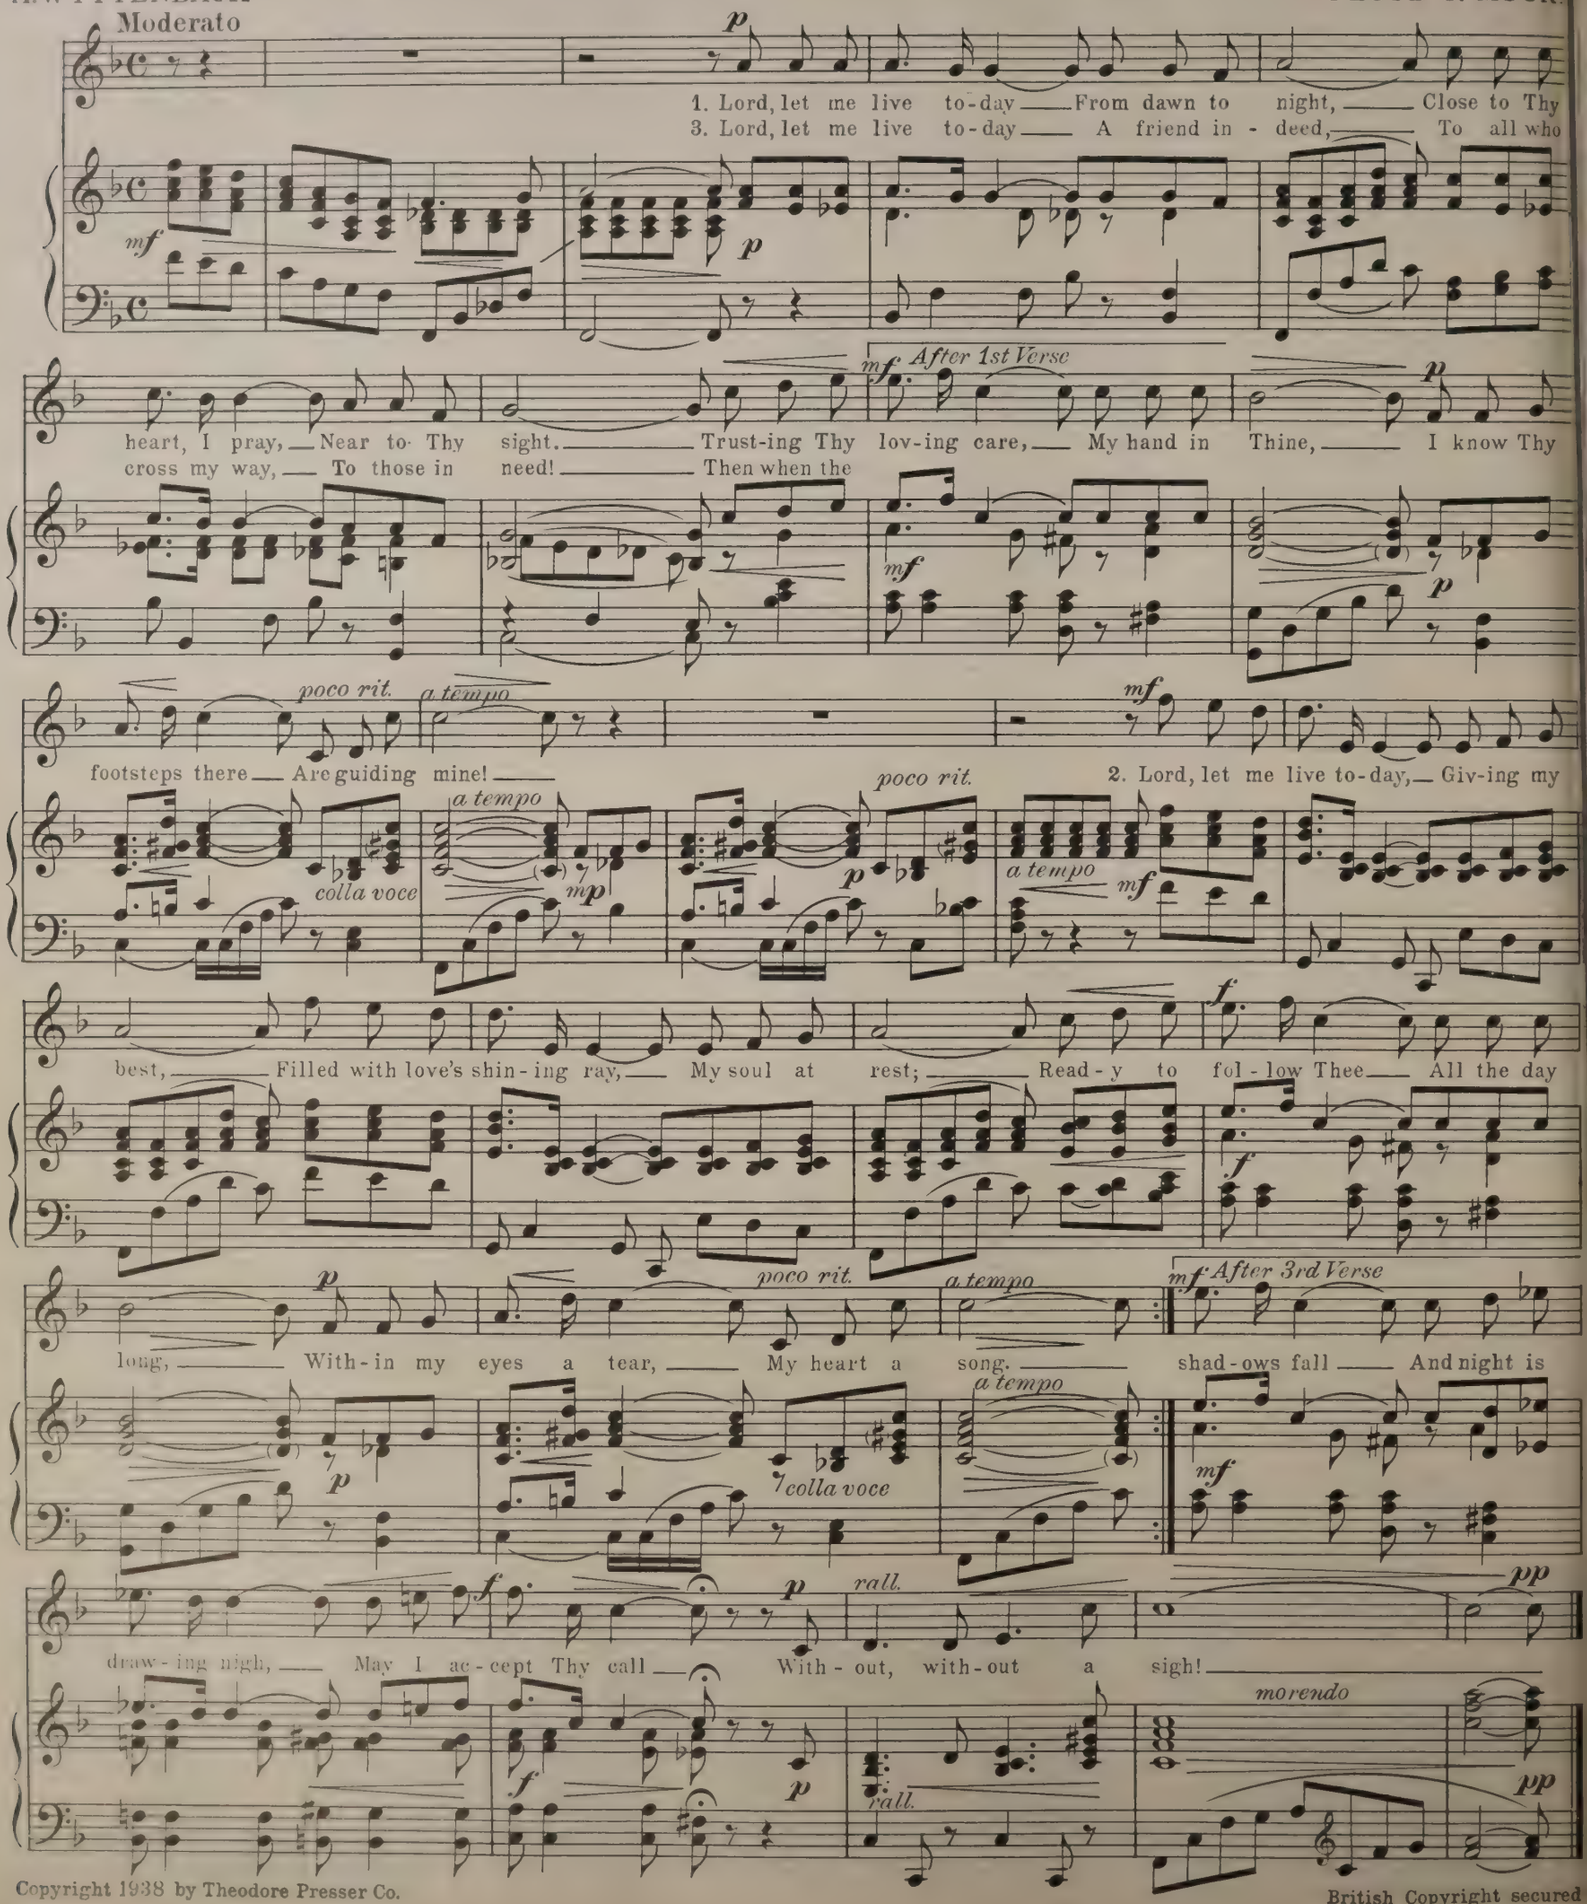
If you cannot secure any of the articles described in my department through your local dealers, write direct to the manufacturers themselves, mentioning my name and ETUDE'S, *and your order will be handled promptly.*

BOAT SONG

POSTHUMOUS

his lovely Mendelssohn barcarolle is, for some peculiar reason, very rarely heard. It is not included in many of the collections of Mendelssohn's ongs Without Words" because it was published after his death. The fine deft touch of the joyous and spiritually minded master is splendidly il- trated in this little masterpiece. Be careful of the tempo, it should not be dragged. Grade 3½.

FELIX MENDELSSOHN



1) Published in the "Neue Zeitschrift für Musik," in January, 1842; published singly in January, 1851. To be played with gentle but earnest expression; the melody prominent, and the lowermost bassnotes somewhat accentuated. The pedal is necessary, throughout, but must be carefully used.

Caring for the Vocal Instrument

(*Continued from Page 650*)

y singing. After my vacation I take two three weeks for the rebuilding of my ice, its technic, its general fitness. If I ve been resting up to September first, t us say, I accept no engagements until e end of the month. The first weeks I se, by myself, for practicing and polishg up.

And Now to the Voice

O MUCH FOR GENERAL COUNSEL on physial health. Important as they are, however, ey are not sufficient to insure vocal fitess. No matter how healthy a singer may e, he must apply certain purely vocal egulations to his work, if he would look orward to long years of good singing. First of all, the voice must be correctly laced. Many a fine natural organ has been ompletely ruined by incorrect placing (which, invariably, leads to later forcing). The term placing the voice is, perhaps, a misnomer. What really happens is that the tones are placed into the voice. This is important, and very difficult besides, for the reason that the process is so entirely a matter of individual sensation that there can be no set method for going about it. There are excellent methods for using and exercising the voice; but the initial placing is always a matter of individual sensation and comprehension. Tone by tone, the voice must be made to contain, as it were, the notes of the scale. It must surround each tone and must approach it directly in the center.

Voice placing has nothing whatever to do with range. Often someone may be heard to say, "I began to sing as a baritone, but my voice was incorrectly placed, and now I am singing tenor." These facts, in themselves, may be correct; but the inference that voice placing determines or controls range is false. A voice is dependent upon its natural *timbre*. This never changes, and it never can be changed. The singer who had his voice placed as a tenor was probably a tenor all along and confused himself into thinking he was a baritone simply because he had a deep range. It often happens that a tenor and a baritone (or a soprano and a mezzo) are able to sing exactly the same notes. This does not mean, however, that the baritone who can manage to reach a high tenor tone is really a tenor. It is the color, the *timbre*, the quality of his voice which will make him and keep him a baritone, regardless of the scale he can sing.

These extremely difficult and delicate problems can be settled only between the individual teacher and the individual pupil. And it is absolutely vital that the teacher shall make himself understood by his pupils; and that the pupils, in their turn, make their vocal needs and problems and symptoms perfectly understood by the teacher. A master, who can produce magnificent results with one pupil, may be a total failure with another; not because he does not know his territory, but because he is being in some way, and for some reason, misunderstood. I can speak very feelingly of this because I went through it myself. Let me tell you something of my own vocal start.

I have sung all my life, of course, but never thought of taking it seriously until I entered the army. There, I played the clarinet in the military band, and took great delight in the public concerts we used to give. Our programs included operatic arias, of course, and I would sing them in the barracks or in our recreation hall, making up my own words. Our bandmaster heard me and believed I had a good natural tenor voice. Thus he took me with him to friends of his in Milan, to see what could be done about my singing. I had never had a lesson and I was already a man, of military age. These friends entered into a sort of contract with me. As soon as I was discharged from the army, they agreed to bring me to Milan, to furnish me with board, lodgings, and lessons with a celebrated vocal *maestro*, and to give me two years in which to prepare myself for an operatic début. If I failed at the end of that time, I was to be sent home. If I succeeded, I was to begin repaying my debt, out of my earnings. There was a horrible feeling of nervousness and of fighting against time in this; but I was grateful to have any lessons and any chance at all. Let me add that my debt was soon and amply repaid.

Mistakes and Recovery

WELL, I SET TO WORK with this excellent teacher. At the end of six months my patrons wished me to sing for them, to convince themselves of my progress. At first my teacher would not permit this, but in the end he did. I came, I sang; and what followed was pure disaster. My tones were harsh, my range was short, my pitch was insecure, nothing was right. I was disgraced and felt even worse than disgraced. My patrons were horrified. If this was the best that I could do, then those first six months had been wasted and as for the rest of my term of study . . .

Then there came to my rescue one of the guests at this little audition. He was not a singing teacher at all. He was an elderly man, employed in a commercial capacity by my patrons; but he had in his earlier years sung light opera, and he knew something about singing. He stepped forward and said that it was impossible for a healthy young man to have lost his voice in six months. What had happened was that this excellent teacher and my promising voice simply did not get along together. He offered to teach me himself, for the remainder of my study contract, and we set to work at once. No fixed, rigorous method at all. He taught me to relax and release my voice naturally, trying me out on all different vowel sounds, letting me set my own range, forcing nothing, inhibiting nothing that was natural. This was *bel canto* at its best, and at once my voice felt and sounded differently. At the end of three months he took me back to my patrons, permitted me to sing the very same songs I had bungled so badly before, and showed them that my voice had not become lost at all. Exactly two years after I first went to Milan, I made my operatic début in Verdi's "Ernani." Since that time, I have had no formal teaching whatever. Coaching, yes. But actual lessons, no. I have worked entirely by myself, applying those excellent natural methods of my second teacher, and developing myself with my work.

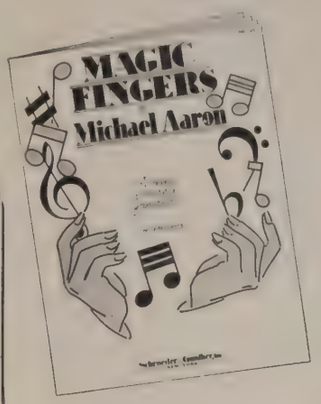
Lengthening the Career

THE WORKING PART of the singer's career is as vital to his development as his study years. It is in this that he should learn to guide himself. Each rôle, each song should be for him the working basis of new development. He must learn what he can do and what he cannot do. One must never assume a rôle that is not suited to himself, vocally and temperamentally. All of us have seen fine voices go to pieces through the assumption of rôles that were too heavy, or too light, or too high, or too low, or too something for their natural use. And this is always a sorry thing to observe, because it is so unnecessary. Is it ambition which impels the young singer to work out a rôle for which he is not suited? Well, it is the wrong sort of ambition. Success ought not to be measured in terms of rôles. It comes only in terms of

(*Continued on Page 692*)

Refreshingly New

PIANO TEACHING MATERIAL



Schroeder & Gunther, specialists in the publication of the better piano teaching material, have been alert to the more discriminating demands of the piano teacher and the piano student of to-day. These NEW publications cleverly combine melodic interest with technical values.

Comments from Teachers—

"I like the way you print your music—it is easy to read, well phrased and fingered."

"The new publications received last week are 'finds' everyone of them."

"I wish to compliment you on the high-class of music, and the attractive way it is published."

MAGIC FINGERS
By—
MICHAEL AARON

A melodic presentation of technics in the second grade of difficulty. Each idea is incorporated in two separate piano pieces—the first piano piece being a single version of the idea although complete in itself. The second one a little more difficult and slightly elaborated. Thus one number prepares the student for the other and eliminates preparatory exercises.

Price 60 Cents

COMMENTS

"Should meet an enthusiastic reception, very musical and interesting."

"I recommend Magic Fingers, which I consider practical and effective."

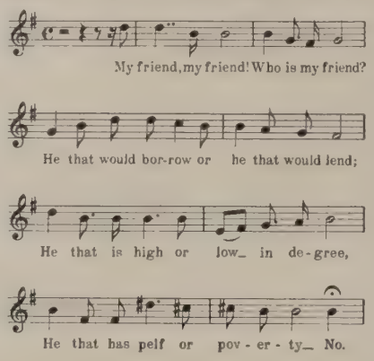
THE SINGER'S ETUDE

Edited for October by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

Cavities, the Magic Transmitters

By LOTTI RIMMER



THE SINGER'S SOUL is recorded in the sounding board, or vocal cavities, by means of a complicated system directed by the brain, which places the voice in these cavities.

Power, or largeness of tone, depends upon the proper use of these resonance chambers. The vibration of increased sound has to have the support of breath which creates the rush of air that makes active the sounding walls of the bony frame of the nose and skull.

Tone will be wasted if the resonance of this sounding board is weak. The cavities of the head, nose and skull, which control the sonority of the tone, must be neither flabby nor hard; and still they must not be inactive but in a state of receptive tension.

Many singers forget this important adjustment and clutch the tone at every word, thereby losing the spinning quality of tone and breaking into rugged, or forced, singing. In such a condition the words are cramped, and expression is made difficult if not impossible.

Perhaps the following study will help our interested readers in keeping these resonance cavities open. The student should try to keep the throat open, and to keep up the resonance until the next note has been sounded. Sing these exercises, at first rapidly, and then slowly, until the open spaces seem filled with sound.

Keep the resonance unbroken and the throat open in the first measure, between the words *friend—my;* in the second measure, between *that—would;* in the third measure, between *he—that;* in the fourth measure, between *high—or;* in the fifth measure, between *low—in;* and in the sixth measure, between *pelf—or.*

As is well known, the principal vibration of the upper expansion exists in the space in the mouth (the chin should be dropped and the tongue forward) while the lower expansion exists in the larynx, the pharynx, and the trachea (with the throat opened wide as in yawning).

Now through all these hollow spaces the air has to pass; and in this it is controlled into a restrained breath. Projecting the lips forward (bell shaped) and lifting the lips from the teeth adds considerably to the resonance of these cavities; for in this way the sound waves have free play.

Jean de Reszke advocated the lifting of the nose with the forefinger, while practicing the scales, which helps to keep the sound vibrant and round. Pressing back the collar bone is also of great importance, as this increases the space of the cavities.

As already mentioned, the principal vibrations are above the larynx, in the bony framework, with the breath supporting the column of air. Great singers have said that they sense these vibrations in every part of the body, with the lower expansion as well as the high ones.

All the resonance cavities may be shaped, or altered, by will power and muscular movements—which is the secret of the arts of the ventriloquist. Sometimes the entrance to these resonance cavities is blocked by adenoids, which affects the sonority. A tone may be distorted also by weak and incorrect use of the muscles, often to the extent of closing the cavities.

To master the art of admirable singing requires great perseverance and energy; and these are especially required in mastering the use of the sound cavities.

A Working Key to Bel Canto

By HOMER HENLEY

THE ART OF *BEL CANTO* has enjoyed so universal and so unfailing a success over the centuries that it has come to be recognized as the one system worthy of unquestioning confidence on the part of the vocally ambitious and of those interested in their progress. But how may any student of the voice know that he is receiving teaching based upon and actually derived from the principles of true *bel canto?*

A fair question, and one that has long been in need of a definite answer. And so, with this in mind, we shall attempt a resume of the characteristic fundamentals of this art, with lesson form amplifications of their always cautious brevity. These amplifications are not only the generally accepted extensions in practice in the teaching of the best modern followers of the art of *bel canto,* but they also have been ratified, personally, to the writer by the testimony to him of almost every great singer now in the world.

1. Principle of Breathing. *"The art of singing is the school of respiration."*—Porpora.

The chest should be high; the shoulders down and back; the abdomen slightly retracted. There should be a buoyant expansion of the chest felt at all times. Muscular breath-control should be felt at the sides of the torso, under the shoulder blades, and in the small of the back where the muscles are used to press the breath against the arch of the chest and to maintain it there. The "singer's push," for control of both tone and breath, comes from the tensing of the diaphragm. The entire chest should expand, for a singing breath, from the lower line of the ribs to the shoulders; but the shoulders must never rise. If the chest be held high, it will be found that but little intake of breath is necessary to fill the lungs, as the expanded position of the chest automatically retains a good portion of the breath in continuous reserve. Inclining the upper body slightly forward frees the shoulders and induces the sinking in of the abdominal wall—one of the vital principles insisted upon by the old masters of *bel canto.*

2. Principle of Pronouncing. *"He who knows how to breathe and how to pronounce, knows well how to sing."*—Pacchiarotti.

The school of pronunciation is the school of the vowel. But even before words are considered, one must be mindful of the great principle that "starting every note on the exact pitch intended" produces a freedom that favors and, in many instances, guarantees the production of unconscious pronunciation and expression.

Of the thirteen or more vowel sounds, the most fundamental are: *Ah* as in father; *ă,* as in hat; *ē,* as in meal; *ĭ,* as in mill; *ĕ,* as in met; *ā,* as in may; *o͞o,* as in shoe; *ō,* as in go; *aw,* as in saw; and *uh* as in up. All other auxiliary and intermediate vowel sounds grow out of these.

In harmony with the following, after the necessary preliminaries of right breathing and exactitude in tuning the voice (for these prepare the way by opening the throat, and by depriving the lawlessly interfering muscles of their power of obstructing the free passage of the tone), there are certain positions of the mouth, tongue, jaws and lips, which operate for greater freedom in the shaping and emission of the vowels. Here is a little lesson in them:

Vowel *Ah* (father): The jaws are to be a thumb's breadth apart; the tip of the tongue to be just touching the back of the lower front teeth; the smiling muscles to be raised to display the upper teeth—for this act, in turn, raises the soft palate, and so aids in opening the throat. Many of the great singers have told the writer that their own *ah* is horizontally placed, and seems to them to emerge through both their ears, rather than from their mouths.

Vowel *ă* (hat): In all senses the same as *ah,* except for the sound being brighter and more silvery.

Vowel *ē* (meal): Teeth a fingerbreadth apart; the tip of the tongue lightly touching the lower front teeth; a pleasant half smile raising the upper lip; the sound pointed, but escaping any shrillness. E is often, and perhaps rightly, said to be the most refining of the vowels.

Vowel *ĭ* (mill): The same as *ē,* only a shade wider in formative size.

Vowel *ĕ* (met): The same as *ē* and *ĭ,* only still wider in shape.

Vowel *ā* (may): The same as *ē, ĭ* and *ĕ,* only still wider. It should be kept in mind that all of these four dental vowels are tapered to a point on the upper middle front teeth.

Vowel *o͞o* (shoe): The jaw is dropped to oval the lips. Remember that the lips are "the painters of the tone." They should be rounded and slightly advanced, and should feel the vibrating influence of the tone. As the voice ascends the scale, the lips are used less and less; and the mouth should open gradually more and more to free the sound.

Vowel *ō* (no): The same as *o͞o,* only the lip orifice should assume a longer oval.

Vowel *aw* (saw): The same as *o͞o* and *ō,* except that the oval should take on a still more lengthy oval.

Vowel *uh* (up): The mouth to be opened a thumb's breadth; with no special pattern of tongue or jaw; and with the lips spread for a half smile. The sound of the *uh* is to be felt in the front part of the dome of the mouth—in the indentation just above the root ridge of the upper front teeth. *Uh* is an embryonic, formless sound, physically considered; but in the ear it assumes a definitely valuable contour peculiar to itself alone, there being no permissible substitute for its authenticity in such words as *love, above, shut, shove,* and *come.*

3. Principle of tuning. *"Unerring tuning places the voice."*—William Shakespeare. Tuning means sounding a vocal tone in comparison with a reliably pitched instrument, such as the pianoforte or violin, until the vocal tone is brought with perfect exactitude into the very center of the note sounded on the instrument. It will be found, after the tone is tuned, that the resultant sounding of the voice on that note has been established in the corridors of the head spaces, those cavities of resonance behind the nose. It is just here that may be found the line of demarcation between the so-called nasal teaching of many present day vocal pedagogs, and the school teaching of the old masters—the word "school" implying insistence on nothing less than absolute tonal perfection and purity. Present day teachers attempt to place the voice in the head cavities, by means of physical manipulations of the soft palate. The old Italian masters of *bel canto,* by tuning the voice, automatically prepared and opened the way for it to flow unhampered, in

resonant and beautiful currents, through all the available spaces of the head. The singer, who tunes his voice unerringly on every note, will find his tones soaring in a perfected beauty quite impossible of attainment under any system of muscular adjustment.

4. Principle of Joining. *"He who knows not how to join, knows not how to sing."*—Johannes Adam Hiller.

Joining, the essence and fountainhead of *legato*, is mastered by causing the voice to leap with lightninglike celerity from the old note to the new (but only after the old note has lived its entire life) and without breaking the sound. It will be found that thereby the long curve of beauty remains undisturbed, and that the line of song is preserved quite free from the vulgar taint of scoop or slur. As Jenny Lind once phrased it, "It is as if one were, so to speak, singing both *staccato* and *legato* simultaneously; and this is above all things almost impossible to express in words." But the lightningleap of legato accomplishes the seemingly impossible; and the feat, with sufficient practice, becomes in the end the beautiful commonplace of good singing.

5. Principle of agility. *"The voice should be cultivated by correct performance of exercises in agility. Then it will be at the command of the singer."*—Pietro Tosi.

The old masters well understood that the voice never reveals itself in all its native purity and freedom until it has undergone the strictest regime of exercises that promote flexibility; for in flexibility lies the secret of the true flowing liberty of *cantilena*. All scale work must be predicated upon the principle of accenting the first note of any group and singing the intermediate notes, between accents, lightly. This is the key to both flexibility and fleetness in those passages which demand control of *coloratura;* and it may be added that the most flexible voice will own the steadiest control of straight tone.

6. Principle of Swelling and Diminishing the Voice. *"Until the singer has learned how to use his breath so that he can swell from the softest piano to the loudest forte, and again diminish and divide the sound into a thousand parts, pressing and letting it sway, he cannot say he is master of his breath."*—M. Crescentini.

Practice augmenting and diminishing the tone on the lowest note of the voice, and on all vowels. Thereafter proceed upwards by careful semitones in the same manner. Let the *pianissimi* at either end of the tapers be started and concluded with the smallest possible sound. When an altitude is reached where the voice finds difficulty in negotiating the principle, it will be found that intensifying the head resonance in the nasal corridors will operate to bridge whatever break or interruption of the tone may occur.

7. Principle of expression: *"The aim of the singer should be to touch the inmost soul."*—Manstein.

This principle has been held to the last—although indeed it is by far the most important of them all—for the excellent reason that expression, to touch the inmost soul, can scarcely be achieved until the voice is so sufficiently freed and made beautiful that its very tone moves the hearts of its hearers, even before the text it utters has begun its sway. Expression in singing must arise from:

1. A comprehensive knowledge of the best music.
2. Cultivation of the artistic personality of the singer.
3. A study of controlled emotions.
4. Clothing the bodily emotions and the facial play of the performer with that inner grace which the world recognizes as charm.
5. And finally, teaching one's self so to live the experience he is striving to portray that controlled technic may be forgotten for the duration of the performance—for it has been well said that *"Technic is learned only to be forgotten."*

Herein there has been an effort to set down the governing ideas of all the best known modern methods of cultivating the voice.

If one can be said ever to reach any reliably definite conclusions in the immensely elusive business of training the human singing voice, then it must appear that the preponderant scale of evidence is on the side of ancient *bel canto;* for its exemplars have been, through all vocal history, the greatest singers of their several periods.

A Vocal Abomination

By D. C. PARKER

AND THEN we have the wobble. I read with joy that the B.B.C. has set its face against an abomination which is quickly found out by the wireless. Nevertheless, the very fact that such an action has been taken and remarked upon testifies to its prevalence. At this point I would ask how many singers appear for a season or two only to be lost in oblivion. Our modern methods do not, apparently, make for a very long vocal life.

If anyone imagines that I am exaggerating, let him inquire into the question more closely. He will find that the singer able to do justice to Handel is a very rare bird. It is not easy to collect a reliable quartet for the "Messiah." How many tenors in England can sing *Comfort ye* and *Every Valley* flawlessly and without "adjustments"?

What is true of Handel is even truer of Mozart, vocally the most deceptive of all composers. How many of our native singers can sing him as he should be sung, and as the best Mozart singers of the continent sing him; with absolute control and the steady tone which comes therefrom, with emotion held in check, with beauty of phrase? How many are capable of getting to the core of Brahms and Wolf *lieder*, of making us feel they have lived with these exquisite outpourings of the human spirit?

I search in vain for the successor of Gervase Elwes. If we are badly off for tenors (most countries are), we seem to be hadly off for contraltos, also; and contraltos, I fancy, should not be scarce in England. I search in vain also for the successor of Kirkby-Lunn. I ask myself how many of the singers one hears to-day are going to be actively engaged in their profession when the years have passed over their heads. I call to mind such veterans of the past as Santley and Battistini; such veterans of the present as Henschel, Ben Davies, Hedmondt, and John Coates. Are the singers one customarily hears likely to have singing careers as long as those of the men I have just mentioned? I think I know the answer to that question.—*The Musical Standard.*

THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

The Choirmaster and the Clergyman

By FREDERICK C. GRANT

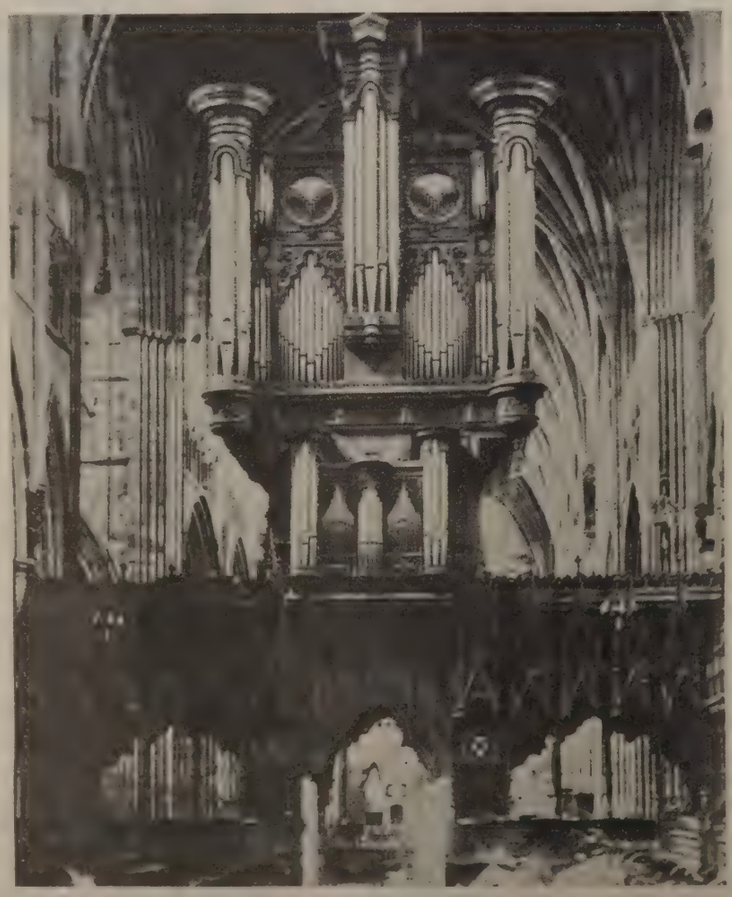
THE 'MINISTRY of music' is more than a profession; it is a 'calling,' a vocation, in just as real a sense as that of the priest, who must answer at his ordination to the question, 'Do you think in your heart that you are truly called, according to the will of our Lord . . . ?' In fact, in ancient Israel, and in the ancient church down to the sixteenth century, the ministry of music was a sacred order, not on the same level as the priesthood, but on a distinct one of its own; not as a stage en route to the priesthood, either, and therefore secondary and relatively less important, but as a fully recognized ministry in itself, in the conduct of public worship. In the middle ages, for example, a monk was not necessarily a priest; he might be a cantor or choir-librarian or copyist or a teacher in the choir-school or only a singer in the choir. (It is a complete misconception, popular to-day, that all monks were clergymen; vast numbers of them were not.)

But someone will say, 'I have no desire to be a clergyman, or, as you put it, I have no "vocation" of the sort.' Precisely! That is just what I am trying to say: You ought not to be a clergyman, or to want to be one—if you do, your place is in a divinity school, if you can get in, not in the School of Music. 'Magnify your office!' What I am saying is that your ministry is just as real, and your vocation should be just as real, in music as in the ministry at the altar or in the pulpit. 'This one thing I do,' said St. Paul; and again, 'Woe is me if I do it not!' That is what vocation means—a calling to do some one thing, for God and for the world, which burns in a man's bones until he works the fire out. The great men and women, the creative geniuses, the born leaders, have been those who simply had to do their task, fulfil their calling, for they found no peace nor joy in anything else.

The Office of the Choirmaster

A CHOIRMASTER IS SOMETHING MORE than a man who makes his living by running a choir, which sings once or twice on Sundays, and with a rehearsal or two a week—for a consideration in cold cash. He is more even than a professional musician who has chosen to specialize in this field, and who, high as his standards are, still takes a detached and somewhat critical attitude toward the church. Instead, he is a man who chooses to serve the church because he honestly believes in it, and shares its ideals with real enthusiasm. He does not ignore details of salary, or overlook fees for lessons, and the like; nor does he abandon his professional standards, or fall into sloppy, haphazard ways; but he consecrates his talent, skill, and standards to a ministry which seems to him utterly and absolutely worth while.

There are other rewards, of course; but his truest, most satisfying reward is to create something in the lives and minds of men, women, and children about him, something that is to be their possession for ever. He faces the situation squarely and says, 'I am working for the church; and the church, as I conceive it, exists to bring human life into touch with God; to fill human life with power, beauty, goodness; to stabilize it and give it intelligent direction, in response to the wisdom and the will of God; to give it unity, and to set up an order of life in this world somewhat nearer to the vision seen in the mount by all the great seers and prophets of the present and the past. At the very heart of its activity is worship, not a passive state of receptivity but a tremendous concentration and outpouring of spiritual energy, which like an oscillating wave comes back renewed ten-fold to the worshippers—in fresh strength and vitality drawn from that endless source of all life and being, God.



That is a somewhat mystical experience, it is true; not fully comprehended by anyone; for into the glowing depths of that primal light no human eye has ever peered. Somehow, at the very apex of it is a communion with the divine, a playing back and forth of the spirit of man with the Spirit of the Eternal—as in that ancient prayer: "O God, who hast prepared for those who love thee such good things as pass man's understanding; Pour into our hearts such love toward thee, that we, loving thee above all things, may obtain thy promises, which exceed all that we can desire." My task, as choirmaster, is to be an assisting minister at these Great Mysteries, wherein the inmost lives of worshipping folk are renewed, transfigured, filled with fresh hope and strength. As a minister of music, as an artist, I must be sensitive to this fact, I must guide my choir to realize it and share in it, I must contribute everything I can to advance and enhance it, I must remove every obstacle, every discord that would stand in its way.'

The Technic of the Art of Worship

THAT IS THE FIRST THING. If a man is to rise to the full height of his vocation as a choirmaster, he must be a professional and something more. He must have sympathy, understanding, and insight; he must be aware of the religious values, as we say, and cognizant of what is really going on, in the spiritual world, at a service of worship. Merely 'putting on a program' does not suffice—if it did, you might as well turn on a radio or phonograph, with amplifier, in lieu of a choir. The art of worship is a true art, and one of the most difficult to master; it has as rigid a technique as painting or the organ. The fact that slapdash amateurs are found attempting it is not surprising in a day when technique and discipline are dispensed with in other arts—with similar results: 'By their fruits ye shall know them.'

The choirmaster is a servant and minister of the church, then: the 'minister of sacred music'; and his ministry, like that of the pastor, gets its proper balance and unity only when he puts first things first, and realizes that the center of the church's life is worship; everything else in the church's activity must spring from that. Its charities, its pastoral and missionary work, religious education, social service, preaching and teaching, all find their center here.

How important, then, the work of the choir, ministering at the very gateway of the holy of holies of the church's inner life! What reverence and devotion, what high standards, what determined self-discipline, should characterize the church choir! And this is possible only if the choirmaster is a man or woman with an eye for real values, and earnest devotion toward their actualization in practice. It is not rhetoric, but the plainest first principle, that the center of our life is in God; and our work obtains perspective and intelligent direction from the adoption of this principle. It carries with it the requirement that the music of the church, the architecture, the lighting, the conduct of the service, should all be as beautiful as possible: for God is the Supreme Beauty of the universe, as St. Augustine wrote in his *Confessions*. There are many churches which stand for this, and more as time goes by. I was in one recently—an exquisite gem, set down in an ugly neighborhood. It is almost the only touch of beauty in the drab lives of its parishioners; and what must it mean to the forty-odd choir boys who sing there Sunday by Sunday, and come to rehearsal twice a week!

The magnificent Choir Screen and Organ of the Cathedral of Exeter, England. The Cathedral has been for many decades equally famed for its Glorious Architecture and Great Musical Festivals.

Overcoming that Which Is Bad

WE AMERICANS are beginning to realize that ugliness and vulgarity are not necessary evils; that by using a little thought we can remove them and put beauty in their place—sometimes at almost no cost in money. We are also beginning to realize that the blasé anti-intellectualism and materialism of much of our modern life are cheap and tawdry—note how the protests of two university presidents are welcomed in many circles: Hutchins of Chicago, in his volume of essays and papers, Conant of Harvard, in his Ter-centenary address. Modern religion has to some extent been infected with this anti-intellectualism and materialism—not least in our church music! But the tendency is now the other way. And religion is, at the very least, one of the greatest potential forces in overcoming the bad ways of the past. The music of public worship may be one great medium.

along with preaching and the service itself, including the prayers, by which to lift human life up to a higher level. Fortunate the man who can share in this great task, and, as we say, 'give to it all he has got.' The choirmaster's own sense of beauty, his own philosophy of life, his own ideals of character, all centered and summed up in the adoration of the Eternal Wisdom, Beauty, and Goodness, are quite as essential, in this ministry, as his knowledge of harmony or of voice-production.

And happy the man with such ideals who finds a clergyman with a similar outlook! But alas, sometimes he may not! And so I propose to deal practically with some of the problems arising when either (a) the clergyman or (b) the vestry or the music committee is not sympathetic.

(*To be continued Next Month*)

Teaching the Choir to Offer a Reverent Service

By Edna Faith Connell

A VITAL PROBLEM which confronts many churches, and which is of supreme importance to every attendant, is the conduct of the choir. This is especially true when the choir is composed of a volunteer mixture of young people.

Most of us have attended, at one time or another, devotional services where we might have been led to believe that the members of the choir were holding a party instead of being assistants in a service of worship.

There are always some members of any choir who, through home teaching and example, or from a natural tendency, are standards of perfection. It is unnecessary to reprove them by look or word, and, needless to say, they are admired not only by the director, but by the entire church body as well. They give a certain prestige to the choir that all similar organizations should establish, and are often instrumental in influencing other members to become more worthy of the position they fill.

However, there are other young people (and an occasional older person) who, more from thoughtlessness than from any desire to misbehave, fail to show the reverence that should be required and demanded from every choir member.

As the duty of discipline falls entirely on the director, the music committee should choose for this position a person who, at all times, shows proper deference toward the church; otherwise no amount of suggestions or lecturing on his part will take effect. So granting that his attitude is a creditable one to follow, the first step he should take is to emphasize that, whether or not the choir is visible to the congregation, no laughing, whispering, or any unnecessary movements which will detract the mind from the service will be tolerated. If this procedure is enforced at all rehearsals, little trouble will be encountered at regular services.

To obtain a proper standard of behavior, he should give occasional general talks when the choir is together, on the duties of the members, placing great stress on the important and outstanding position that the choir holds in the church. He should always hold to the fact that the choir, next to the preacher, is expected to promote and carry out all of the church principles, and that unless each and every member shows due reverence at the time such teachings are taking place, a just criticism of disapproval will take place in the minds of the onlookers.

A sufficient interest in the words of the hymns and anthems (which, of course, should always fit in with the sermon) should be created so that the minds of the

(*Continued on next page*)

Children develop a deeper appreciation of music WITH A HAMMOND ORGAN IN THE HOME

IN A WORLD whose future is so hard to forecast, you can give your child no richer, more lasting gift than the ability to get real pleasure from good music.

Even young children are fascinated by the Hammond Organ. They find endless delight in its variety of voices . . . and their interest leads them on to a broader understanding and pleasure.

The Hammond is easy to play; before you know it, your child is playing simple little tunes for himself. Even scales and simple exercises sound so *interesting* that he usually needs no urge to practice. And the child who grows up hearing the beautiful tones of the Hammond Organ in his own home will develop a high standard of musical taste. The Hammond has won the praise of eminent artists and composers; is played with great symphony orchestras and in thousands of churches.

Let your nearest Hammond dealer explain more about this revolutionary organ; you'll find him in the Classified Directory. Dealers are located in the principal cities of the United States and Canada and in 38 countries throughout the world. Or write The Hammond Organ, 2929 N. Western Ave., Chicago, Ill. *In Canada*, address Northern Electric Company, Ltd., Montreal.

Piano teachers—send for this book

"Playing the Hammond Organ" does not attempt to be a complete organ course. But it will be valuable to you in adapting your piano technique to the Hammond and useful later on in teaching. It also gives a comprehensive view of the potentialities of this extraordinary instrument. Price $1.00, postpaid.

THE HAMMOND ORGAN $1250 and up, f.o.b. Chicago

OCTOBER 1938 — MAY 1939

For the *really gifted* Music Student

The Curtis Institute of Music accepts students talented sufficiently to work toward a goal of highest artistic attainment.

JOSEF HOFMANN, Mus.D., Director

THE CURTIS INSTITUTE OF MUSIC

Rittenhouse Square

Philadelphia Pennsylvania

FIFTEENTH SEASON

choir will follow the entire service with sympathy and reverence.

While admitting that the greater part of the regular rehearsals must be spent in mastering the vocal requirements, there are times when a competent director feels that a few words of instruction along the line of reverence are needed. He should not hesitate to follow the dictates of his conscience in this matter.

If there are those who continue to offend, a tactful director will arrange for a private interview, and explain fully his own attitude, answering and asking questions, as well as volunteering information that he feels is for the benefit of the individual member.

He should not lessen, to any degree, the firm stand he has taken, and he will find that as a rule he will be treated more courteously and with greater respect for his insistence upon a strict enforcement of church reverence.

Not until all other methods have been tried, should a choir member be discharged, but there are occasions when even this is necessary rather than permit the practice of such irreverence as is all too common in many choir lofts.

Making a Just Right Prelude

By MARY B. ROUNDS

I NEEDED an organ prelude, or voluntary, for a special occasion. Nothing that I had seemed exactly right. Frantically I turned to my stack of *Etudes*, covering issues of the last ten years. In the Christmas number of the year 1933, I found "Glory to God in the Highest," a Song for Christmas, by Louis R. Dressler.

It was a vocal selection, but the music was tuneful with deep, rich chords, and the *Maestoso* chorus was full and stirring. Moreover, it was written in the key of G, always a helpful item if the order of service calls for the singing of the *Doxology* immediately following the voluntary.

Now to make the just right prelude (the occasion was Easter) I found a place where the music modulated into the key of D for a few measures, and at that point I inserted the old inspiring Easter hymn with the *Alleluia* refrain, which in the church hymn book is written in two sharps.

Do you see how it is done? Now a very simple modulation brings us back again into the key of G, and we are all set to swing into the *Doxology*. On this particular occasion the choir assisted in the prelude by singing a couple of verses of the hymn before switching to the *Doxology*.

A just right voluntary may be made for any occasion by this method. Select a hymn to fit the day, then seek a musical setting in *The Etude*. It will be there.

* * * * *

"It is within the power of music to produce a certain condition of character by training the young in the faculty of enjoying themselves in the right way."– Aristotle.

ORGAN AND CHOIR QUESTIONS Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Please give a few combinations to be used for offertories. Stops on our instrument include Pedal—Bourdon 16'—Bass Flute 8'—Cello. Great—Concert Flute 8'—Wald Flute 4' —Violin d' Orchestre 4'—Viol d' Orchestra 8' —Open Diapason 8'—Principal 4' (this has an Open Diapason tone) and a set of Chimes. Swell —Bourdon 16'—Concert Flute 8'—Wald Flute 4'—Twelfth 2-2/3'—Piccolo 2'—Violin d' Orchestre 4'—Viol d' Orchestre 8'—Octave 4' (sounds exactly like Open Diapason on Great) and Tremolo.—M. A. P.

A. We believe your organ to be unified and duplexed—that is, a set of pipes is used to produce stops of different pitch of the same tone quality, and the stops on the Swell and Great are produced from the same sets of pipes. This explains your Principal 4' "having an Open Diapason tone" and your Swell Octave 4' (probably the same as the Great Principal) "sounding like the Open Diapason on the Great". The registration for offertories depends on the composition to be played. Some solo combinations you might try are Concert Flute and Wald Flute; Viol d'Orchestre 8' and Twelfth; Concert Flute and Twelfth; Concert Flute and Piccolo; Viol d'Orchestre 8' and Wald Flute. Use Tremolo where such use improves the effect. We should think the first combination you mention in your letter to be best adapted for congregational singing.

Q. I have taken for tutoring on the ordinary reed organ, a girl eleven years of age, and as I am really not an organist, I am somewhat doubtful as to the correct stops for a beginner to use. Enclosed is list of stops. Would it be advisable to leave all the couplers "in" until the pupil becomes somewhat advanced, and if so, for how long? I also had her leave "in" Vox Humana, Echo and Violo.—M. M. C.

A. The only reason for the use or non-use of the couplers is the question of desirability for the number being played, and the possibility of making the touch too heavy for so young a student. The Vox Humana in a reed organ is usually a Tremulant, and it is wise to omit its use except where the effect is suitable. As your "Violo" is a 4' stop, and apparently speaks only in the lower portion of the keyboard, it s probably wise to omit it in ensemble effects. For your general information 8' stops produce normal pitch (same as piano) while 4' stops speak an Octave higher.

Q. Enclosed find specification of the organ in the church where I act as assistant organist. Will you give me your opinion on arrangement and approximate cost. I have played on later built organs and find the combinations more convenient and the effects more satisfactory. Can dual expression be arranged on this organ, and can we substitute or change any of the present set up? Would you recommend chimes? —M. B.

A. Your specification is fairly good for an organ of the size. We cannot give you the original cost of the instrument, and if it were being built at this time there would be additional couplers and so forth, and the price would depend on the builder. It is to be expected that you would find later organs more convenient as to combinations. It might be arranged to make your Great organ expressive by enclosing it. The only change we might suggest would be a brighter reed—such as Cornopean—in place of the Oboe. The addition of chimes is entirely a matter of personal preference.

Q. I have been a student of the organ for more than eight years, and have played for Chapel services many times, also for friends weddings and funerals, but do not ever seem to have an opportunity to do some regular work. At present I am studying the "Symphonies" of Widor, but feel that if I could play regularly at some place, it would be advantageous to me. I should appreciate it if you can tell me of any way that I might go about obtaining a church position. Can you tell me where "The American Organist" can be purchased?—G. O.

A. It is difficult to advise you just what to do—other than to let your wish for a position be made known. Perhaps you might bring your wishes to the notice of proper parties by advertising in some daily paper, or some organ magazine, or perhaps your organ teacher might assist you. "The American Organist" is published by Organ Interests, Inc., Box 467 Richmond Station, Staten Island, New York. Your subscription can be placed with them, or an inquiry to them might bring you information as to where in your locality you can purchase single copies.

Q. I have had in mind becoming a member of The American Guild of Organists. What requirements and qualifications are necessary? —N. H.

A. There are three classes of active membership in The American Guild of Organists—Colleagues, Associates and Fellows—secured in the order named. The first membership is that of Colleague—for which application is made—candidate proposed and seconded by two active members. Associate and Fellow membership is gained by the candidate successfully passing the respective examinations required. Details as to these examinations, and the Chapter to which you should make application may be had by addressing the Guild headquarters, R. K. O. Building, Rockefeller Center, 1270 Sixth Avenue, New York City.

Q. I have the Handel "Tenth Organ Concerto," arranged for organ by Guilmant. Are the other nineteen Handel concertos arranged for Organ without orchestral accompaniment? If so, will you kindly give me the name of the arranger and the publisher?—M. B.

A. There are two sets of six concertos, edited by Best and published by Novello and Boosey, respectively. The so-called "Cuckoo and Nightingale" Concerto is published separately, and there are also movements from the different concertos published by The Oxford Press.

Q. In playing hymns as solos on the organ, I often play chords in going from one hymn to another in a different key. I wonder whether one hymn should be finished, a stop made and then another hymn started in a different key? Will you give me a list of some preludes, interludes and postludes?—D. L.

A. If hymns are played as solos, we advise interludes between them, including modulation if the hymns are in different keys. You might examine the following, for use as preludes, interludes, and postludes: "Seventy-two Interludes," by Nevin; *Retrospection*, by Hogan; *Intermezzo*, by Rogers; *The Guardian Angel*, by Pierne-Gaul; *Jubilate Deo*, by Silver; *Melodie*, by Matthews; *Pastorale*, by Matthews; *Toccatina*, by Barnes; *Scherzoso*, by Rogers. Books: "Organ Melodies," by Landon; "The Chapel Organist," by Peery; "Organ Repertoire," by Orem; "The Organ Player," by Orem; "Presser's Two Staff Organ Book"; "Church Music for the Smallest Organ," by Nevin.

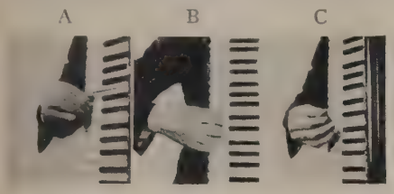
Q. Do you think the use of the pedal is advisable in the accompanying of a soloist—with a soft stop—say 4' Stopped Diapason on Choir organ? I am of the opinion that use of pedals rather helps the soloist, but I have been disputed.—M. R.

A. We see no reason why the pedals should not be used in accompanying soloists, where such use is effective; but we would not advise the use of a 4' Stopped Diapason, as it is likely to interfere with the manual parts by reason of its high pitch. We advise the use of a soft 16' stop, such as Bourdon or Lieblich Gedackt, with soft 8' stop, or with one of the manuals coupled—probably the latter would be preferable.

Q. I am a boy sixteen years of age and very much interested in becoming an organist. Six years ago I started piano lessons and play fifth and sixth grade piano music. I think I should now start organ lessons. What is your opinion? Are there any books I might read to become acquainted with the organ before I start lessons? Recently our church purchased an organ of which I enclose list of stops. What do you think of it? Do you think that I could play it without organ lessons? There is a possibility that the organist may resign in the near future. Should I offer my services? There is no salary. What are some good combinations for offertories, preludes and hymn-singing? How are the swell and crescendo pedals used? Are there any scholarships available in my community? Are there any magazines which would be of value beside THE ETUDE, *which I already receive? Have you any specifications of large organs available, or do you know where they could be secured—particularly the organ at Philadelphia and the Radio City Music Hall Organ?*—R. C.

A. If you have a well developed piano technic, we see no reason why you should not take up the study of the organ. You might read "Organ Playing; Its Technique and Expression" by Hull. The instrument you specify is, no doubt, unified and duplexed. You might be able to play it without organ lessons, but we advise the lessons. We do not know the requirements of the position in your church, therefore cannot advise you as to offering your services. The combinations for offertories and preludes depend on the numbers to be played. For congregational hymn-singing we think you might use full organ—possibly omitting Nazard and Fifteenth. The Swell pedal is used to make crescendos and diminuendos on steps being used—while the Crescendo pedal brings on and takes off the stops gradually or quickly, depending on the manner in which it is operated. You might inquire of the musical conservatories near your home as to scholarships—notably The New England Conservatory of Music, Boston, Massachusetts. Organ magazines that you might find interesting include "The Diapason," 1511 Kimball Building, Wabash Avenue and Jackson Boulevard, Chicago, Illinois; and "The American Organist," 467 Richmond Station, New York. Specifications appear in these magazines. We presume you refer to the large organ in the Wanamaker Store, Philadelphia. We are not aware of any publication of the specifications of this instrument, but you might secure some information by addressing John Wanamaker's, City Hall Square, Philadelphia. You might also secure the specification of the organ in Radio City Music Hall, by addressing an inquiry to Station WJZ, Radio City, Rockefeller Center, New York.

THE ACCORDION DEPARTMENT



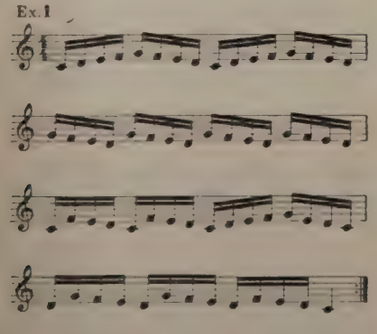
Some "Dodges" in Accordion Practice

By PIETRO DEIRO

As told to ElVera Collins

THE ROTATING SYSTEM upon the piano keyboard of the accordion is most essential, if one wishes to develop agility and speed. This important feature is often neglected by pianists who have begun to study the accordion. Although they employ the rotating system when playing the piano some have thought that it is impossible upon the accordion, due to the position of the keyboard.

For the benefit of all pianists who are studying the accordion, and also for accordionists who have neglected this phase of their study, let me emphatically state that the rotating system is even more essential on the accordion than upon the piano. There is no other way that one can master the art of smooth passage playing. The accompanying illustrations will provide practice material in the rotating system.



In the first picture of the illustrations, the thumb on C is leaned toward the body of the player. Each succeeding note then rolls the hand naturally away from the body. The second illustration shows the third finger playing E. Notice that the hand is now level with the fingerboard. Continuing the exercise, the hand rolls away from the body until the fifth finger plays G as shown in the third illustration. When the notes progress downward, the procedure will naturally be reversed. The fifth finger will be leaned away from the body and, as the notes progress downward, the hand will come down with each note until the first finger is again in the same position as in the beginning.

This is called the rotating system, as the hand rotates from a low to a high position. The principle of this system is to obtain speed quickly but to keep the hand relaxed at all times. The illustrations were taken from "The Master Method."

Exercise 1, for the right hand, will develop the rotating system.

Ex. 1

It should be practiced very slowly and then the *tempo* gradually increased. A metronome will be found useful in building up the *tempo*.

The fine smooth technic and velocity we admire in many professional accordionists was not acquired at random. It was built up, step by step. A part of it was developed by routine practice. The balance was accomplished by the use of little aids, or we might call them tricks. Every musician has some of these up his sleeve; and the interesting part is that he usually is quite unconscious of them.

I recently discovered a little trick of my own. When playing in a seated position, my knees are spread apart and the accordion rests against the inside of the left and right thigh. When the bellows action is outward my left heel is raised very slightly and when the bellows are being closed the right heel is raised a little. These movements alter the position of the knee just enough to give a slight impetus to the action of the bellows. Although scarcely noticeable, this slight movement is a definite help in manipulating the bellows rhythmically. Accordionists who endeavor to practice this little aid must be careful not to exaggerate the movement or a very jittery bellows manipulation will result.

The illustrations accompanying this article are photographs of my right hand in a playing position. Close observation will show that the first joint on the fingers is well developed, in fact one might almost say enlarged. This was caused by another unconscious habit developed during many years of playing. The fingers of the left hand are equally developed. Before striking a bass button my finger tip is prepared so there is sufficient force to make the responding bass or chord sound full and distinct. Note carefully that although the force is in the finger tip, the rest of the hand is absolutely relaxed. I merely direct the strength to the finger tip. The reason why so many accordion bass accompaniments sound draggy and wheezy is that there is not enough force back of the finger when the button is pushed. Give the button a sharp tap and then release it. Do not push it as though sticking the finger in bread dough.

In a similar way the fingers of the right hand are prepared to strike the keys. When playing a full chord each finger is prepared and in its position over the individual keys before they are struck, so the complete chord sounds distinct, not as a sort of arpeggio with first one tone sounding and then another while the fingers grope for the keys. Get ready in advance and then play the chord so that all tones sound simultaneously and with equal force.

Accordionists should analyze their playing as they practice, by constant listening and striving for improvement in every branch of their playing.

Accordion Questions and Answers

Q. I have purchased a new accordion and am progressing rapidly, as I am a pianist. One teacher uses the third and fourth fingers for accompaniments; but another teacher claims that the second and third fingers should be used. Which is correct?—Margot B., Ohio.

A. The following system is now recognized as standard. In straight bass and chord accompaniment, the second finger is always used to play all chord buttons, while the third finger is used to play bass buttons, whether fundamental or counterbass. All fingers except the thumb may be used to play bass solos. Unusual chord positions occasionally require a different fingering than the foregoing. As you are a pianist you will make rapid progress by devoting some concentrated practice to bass work. Books which specialize on bass solos and passages, as well as unusual chord positions are obtainable.

Q. As a piano teacher it seems that another instrument will be to my advantage and I believe the accordion will be best. Please advise what kind of an instrument to buy.
—M. E. B., Colo.

A. I sincerely regret that we cannot recommend any particular accordion in these columns. Consult the advertisements appearing in THE ETUDE and write to the various manufacturers for catalogs and prices.

SMART *Styling* FOLLOWS THE AMAZING PERFORMANCE ACHIEVEMENT OF THE SOPRANI Ampliphonic

Two years ago, Soprani invented the Ampliphonic reed block, bringing to the accordion the same improvement in tone quality, volume and response as that accomplished 400 years ago when a sound chest was first added to strings, making a violin. Reduced bellowsing, lightness and ease of playing are also noticeable results. Now Soprani Ampliphonic accordions glorify their amazing performance achievements in smart modern styling. See these new models at your local music store or write direct for descriptive literature.

THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

Accurate Sound Post Fitting

By HERBERT SANGER

THE SOUND POST is perhaps the most simple unit of the violin, but its thickness, uniformity of grain, and proper placement in the instrument are of the greatest importance to the tone.

When a violin comes from the factory or maker, the sound post is usually well fitted and properly placed. Sometimes, however, hard playing or an accident may cause it to shift or collapse. When this occurs, an immediate refitting is necessary because normal string pressure upon the unsupported top of the violin is not at all advisable.

The first step in the operation is to remove all the strings, the tailpiece and the end pin. The removal of the tailpiece and the end pin is necessary because in order to determine how the sound post fits against the inner side of the top and back of the instrument, one must peer into the violin through the end pin hole.

Some repairmen use the commercial types of sound post setters, but for really fine fitting there is nothing perhaps, that compares with ordinary silk sewing thread. This should be cut into two lengths of ten inches each, and the four ends made into four locked slipknots that are to be tightly fastened to the top and bottom of the sound post.

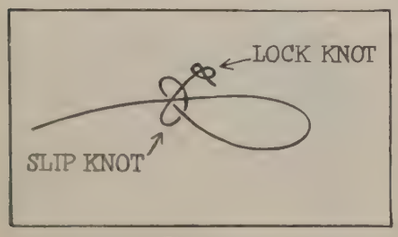

Figure 1

Figure 1 illustrates the manner of making the locked noose, and Figure 2 shows the knots fastened at opposite sides of the sound post.

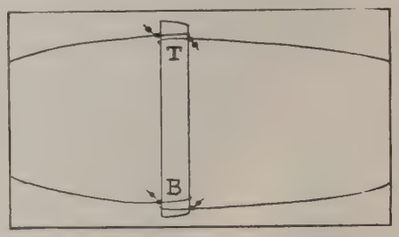

Figure 2

The violin is placed in a horizontal position on a table or high bench so that it is possible to look comfortably into the instrument through the end pin hole. Then one loop of string and the sound post are inserted through one of the *f* holes. With a buttonhook or some similarily shaped piece of wire, the inserted loop is pulled out through the other *f* hole. Then with the four controlling forces at one's fingertips the sound post is manipulated until it stands erect in the violin at a point about one-quarter of an inch behind the right foot of the bridge.

Figure 3, illustrates the approximate position of a properly adjusted sound post.

In fitting this unit of the violin, there are several important things to be kept in mind. A sound post must glide perfectly into its place without making a creaking noise; in short, it must not force the top and back apart when placed at the position shown in Figure 3. Neither should it fit so loosely as to require string pressure to hold it from falling over. The different curvatures of the top and back will require very accurate beveling of the ends of the post. This is best done with a sharp safety razor blade.

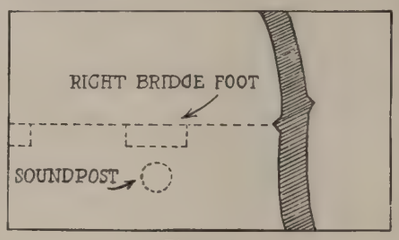

Figure 3

When the proper slant has been attained, both ends of the post should make a perfect contact with the top and the back. Figures 4 and 5 illustrate correct and incorrect adjustments, respectively.

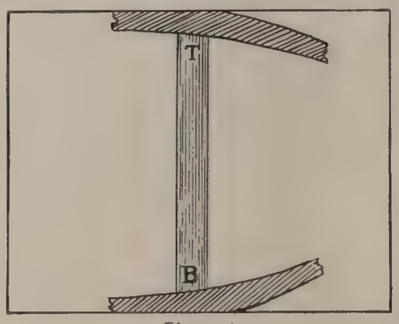

Figure 4

Another fact to bear in mind is that the sound post should be made of old, fine grained spruce or white pine. It should be cylindrical, and it gives the best tone when made one-fourth of an inch in diameter. It is not advisable to tie heavy cord string to the sound post because this is so strong that it would resist breaking if the sound post were being bound by pressure from the top and back, and hence too tight an adjustment likely would result.

In the event that the sound post is made too long, silk thread will break before the pressure becomes undesirable, and thus a perfect fitting is more easily obtained.

After the sound post has been fitted, the silk threads may be removed by means of

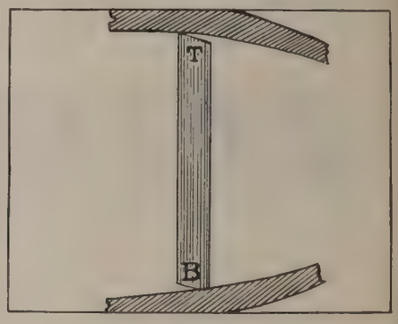

Figure 5

a safety razor blade glued to a slender stick. However, leaving the strings on the sound post for a future adjustment will not noticeably affect the tone of the instrument.

One advantage of the string method of adjusting the sound post is that the workman can see accurately and feel the pressure exerted by the violin upon the sound post, a thing not possible when commercial tools are used, or when the sound post is adjusted with the strings under tension. Also, there is no danger of scratching the varnish or damaging the *f* holes with metallic instruments when only the silk strings are used.

How to Make Practice Efficient

By MABEL W. PITTENGER

DO WE TEACHERS concern ourselves enough about the efficiency of our pupils' home practice? Do we blame much of the difference in our pupils' accomplishment on variation of talent and mentality when the cause is largely inefficient practicing? Do we, and also the parents, stress the time element so much that the students feel that an hour of practice is always twice as good as half an hour? Remember that a half hour of intelligent practice is better than an hour of careless playing. The following experiments have immensely helped the writer's violin pupils in interest and accomplishment in their practice. They will be useful and applicable not only to violin practice, but suggestive to any instrumental work.

"How do you practice? When you start your daily practice, do you know just what you are going to do? Have you found the practice routine which is most efficient and interesting to you personally?" With these questions before him, each student was asked to try this very profitable experiment:

"Write down a practice order or routine with which you think you can accomplish the best results with your practice time. Then follow this routine for a week, making any changes to improve it. For example, you may have placed your memorizing in the afternoon half of your practice, then find that you can do it better in the morning when you are more rested. When you have worked out what seems to be the best routine for you, we shall let John try your method for a week while you try his."

Naturally, the routines varied in value and in the ease with which they were worked out. This mimeographed list of practice suggestions, which the students had possessed for some time, was helpful.

1. Practice slowly. Start the day's practice with a few open strings, working for good tone. Practice at least one scale and triad a day.

2. Concentrate. Think only of your practice while you are playing, and think critically. Be your own teacher while you practice.

3. Bow straight. Crooked bowing causes whistles and bad tone.

4. Let no day pass without practice. Twice as much practice on Saturday will not make up for practice missed on Friday. Memorize something each day, if only one section of an etude.

5. Relax. The muscles of both right and left hands must not feel tight or stiff. Stop and relax for a few seconds when your arms feel tired.

6. Keep your tools in working order. Have strings in tune; bridge straight; bow rosined and screwed to correct tension; fingernails filed short; music at height level with your eyes; know just what your lesson is; do not practice in a room where others are talking or where the radio is turned on.

7. Play everything in time and rhythmically.

8. Always try to produce a beautiful tone. People prefer simple melodies with beautiful tone to difficult pieces with bad tone quality.

9. Play in tune; above all else, play every tone in tune.

After each student had worked out what he considered the best method of practice for himself, exchanges were made each week. The discoveries from trying other students' routines were amusing as well as enlightening. Let me give some comments verbatim.

"George's and Nancy's routines both work better than mine. I guess my ideas weren't so hot."

"I'd like to work on memorizing my concerto first, as John does, but my fingers aren't limber enough. Guess I'll have to stick to my idea of doing my scales first."

And, most important of all— "Why, I like several of the routines. Wouldn't it be a good idea to use different routines at different times?"

Thus came about our resulting decision: Our best practice is done when we have

BACKED BY AN IRON-CLAD GUARANTY
The FRANZ ELECTRONOME

The metronome that operates electrically

When you invest in an Electronome, you buy a perfect precision instrument accompanied by a five year service-guarantee in writing. Electrically controlled by one of the world's finest motors, the ELECTRONOME insures absolutely correct musical tempo, graduated from 40 to 208 beats per minute. Unlike the old-fashioned wig-wag metronome, it has no springs to wind up—no tension to weaken. Virtuoso, teacher and pupil all find it invaluable in mastering music. For A C current only; will work anywhere an electric clock will.

SATISFACTION GUARANTEED *Price* $10 DIRECT OR FROM MUSIC DEALERS

SEND $1—good-faith deposit to have the Electronome shipped to you C.O.D. for the balance of purchase price, all express charges paid by us; your money stays right in your local express office for six days, ready for prompt refund if the Electronome doesn't please you in every way.

Or—SEND NO MONEY and we will ship the Electronome C.O.D. for $10.00 plus express charges, on the same 6-days' trial basis.

AXEL CHRISTENSEN, 752 KIMBALL HALL, CHICAGO.

an ordered routine to follow. But let us not keep the same monotonous order week after week; better to find a number of good routines and use them according to our needs. We have found it profitable to follow the same routine for one week, choosing the week's routine according to what we wish to stress, how much time is available for practice, or how imminent is a recital program.

For example, the following sample routines have different values.

I Stressing technic.
1. Ten minutes of whole notes on open strings for tone production.
2. Ten minutes of an etude for left hand facility, such as *Rode No. 8, Kreutzer No. 9, Kayser No. 22*, and so on, according to the advancement of the student.
3. A new etude, with new technical problem, done very slowly.
4. An old etude up to *tempo*.
5. Pieces in remaining time practiced from a musical, interpretative standpoint.

II Contrast for following week, routine stressing pieces.
1. Scales—twenty minutes.
2. New piece, in sections, from technical viewpoint, slowly, each section as a technical study.
3. Older piece—memorize—polish.
4. Pieces already in repertoire; review as if for imminent program.
5. Familiar etudes in remaining time for review.

III Routine with a balance of stresses.
1. Fifteen minutes—scale and triad, different key each day, from very slow to faster *tempo*, in variety of bowing.
2. One new etude, practiced analytically, slowly, carefully.
3. One old piece, memorized, with style and finish.
4. One old etude, up to *tempo*, being careful for intonation and detail.
5. One new piece, as in Routine II.

IV Routine to use just before a program.
1. Group of studies, such as "Ur Studien," by Carl Flesch, for variety of bowing and left hand technic.
2. Pieces, memorized, up to *tempo*, checking weak spots.
3. Slow practice on weak spots.

Because of the feeling of original accomplishment, we have mimeographed cards of our best routines made. These were named "John's Routine," "Betty's Routine," and so on. At lessons the routine card for the week is chosen. Students have an anxious curiosity as to who is using their routine each week. The time element in home practice is being superseded by an experimental interest in accomplishment in efficient daily practice.

The Art of Shifting

By NELLIE G. ALLRED

IF A DOZEN or more violinists of average ability were asked why they use the higher positions, probably ten of them would answer, "To play high notes." In one respect, of course, this is true. For when the range of the notes extends above C, second line above the staff, the player must shift on the E string to reach the higher tones. Yet shifting should not be confined to the E string alone. The positions should be used to beautify certain passages, regardless of the highness or lowness of the tones. There is nothing particularly expressive about playing on the open strings, and the use of the positions eliminates these dull, open tones. How many school orchestra leaders are daily driven to despair by carelessly interpolated open E's, A's, or D's in the string sections, when playing in the key of A-flat or E? For the more sharps and flats there are, the more necessary it is to use the positions, so as to avoid inadvertently bowing an open string, and thus playing out of tune.

After all, shifting is a simple matter. The violinist shifts when he moves from one position to another, whether the notes are written to be slurred or played with separate bows. He must be sufficiently acquainted with the positions to feel at home in them, so that, when a shift is made, he will hit the tone squarely "on the head," and not go beyond it, or not quite reach it, as the case may be. The *portamento* is "the passing from one tone to another in a continuous glide through all the intervening tones, with one bow." It adds to these two tones a special emotional value. When two tones in different positions are joined by a slur, the violinist plays *portamento* in connecting them.

The rules for shifting and obtaining a good *portamento* are simple. If one is to shift from a tone in the first position to one in the third, with separate bows, the position and bow should be changed simultaneously. If an open string should come between certain tones in different positions, the left hand must prepare itself for the new position while the bow plays the open string. To connect two slurred tones in different positions, heed the following rule: If the tones are played by different fingers, as from the first to the second or third, the hand must be carried on the finger which has played the first tone, towards the new position and the new tone. Sometimes, for certain effects, this rule may be disregarded. Then it is necessary to shift into the tone on the finger which is to play the second tone. It is obvious that two tones can be played by the same finger on one string with a *portamento* effect.

The idea of the *portamento*, of course, is to produce the beautiful, expressive emotional effect so common in vocal music, and so adaptable to strings. In fact, one can make the violin sing only through the skillful and artistic use of the positions. And the prerequisite of an artistic use of the positions is the adroit manipulation of the bow and the left hand. The violinist must train his muscles to coördinate perfectly, for the simultaneous performance of both the left hand and the bow.

* * * * *

The Fascinating Fugue

"In our performance of the Fugue in G minor *by Bach, the little journey through the orchestra will be especially fascinating. A* Fugue, *you know, is a musical form built like an old 'round' song. The same melody is introduced in succession by one voice of the orchestra after another. The word 'fugue' comes from a verb in the Latin meaning 'to fly.' So in a* fugue *the leading melody pursues itself through the orchestra at different levels and in different instruments. All continue weaving their threads of melody to the mighty climax at the conclusion.*

"The fugue *is consequently one of the musical forms most difficult to write, and most fascinating to hear—if you know what is taking place."*—Leopold Stokowski.

OUTSTANDING!

This interesting volume is "new" from cover to cover. It is of particular appeal in view of the growing demand for music of the modern school of composition, not alone in concert programs but also in the home and studio repertory of the average pianist. Includes a large group of selections of recent origin, as well as a select number of favorite classics, many of which do not appear in any other collection. A graded index has been included for the assistance of teachers and students. Newly engraved, large page size with large notes. At all music stores or direct (except Canada and Europe).
Price $1.50.

MUSICAL AMERICA says:

"Miscellaneous collections of piano music have always been more or less suspect because of the padding that formerly characterized them. But a well selected and well edited group of compositions in one binding has a specifically useful place in the musical scheme of things and such a one emphatically is the "Piano Pieces for Everyone." The compiler has brought together many of the current favorites with both those who are serious students and those who play only for their personal pleasure. The general accessibility of the contents is indicated by the fact that while ten of the pieces are of Grade III difficulty and a few of Grade V and still fewer of Grade VI, the majority are of the fourth grade. They have been carefully edited and are printed spaciously and attractively on good paper."

AMERICAN CONSERVATORY OF MUSIC

CHICAGO 53rd SEASON

Founded in 1886 by John J. Hattstaedt, today The American Conservatory of Music is outstanding among institutions for music education in this country. Its graduates are to be found occupying positions of honor and responsibility in every department of music.

Member of the National Association of Schools of Music

The Faculty—One hundred and thirty artist teachers of national and international reputation comprise the faculty.

Accredited Courses are offered in Piano, Vocal, Violin, Organ, Orchestra and Band Instruments, Public School Music, Children's Piano Work, Class Piano, Musical Theory, Dramatic Art and Dancing.

Certificates and Degrees are conferred by authority of the State of Illinois and recognized the country over. Degrees conferred are those of Bachelor of Music, Bachelor of Music Education, Bachelor of Speaking Arts, Master of Music and Master of Music Education.

Dormitories—Desirable living and boarding accommodations can be secured at the Conservatory Dormitories at surprisingly low rates. Particulars on request.

Professional and Teaching Engagements—Although the management does not guarantee positions, it has been most successful in assisting students to find remunerative situations in colleges, academies, music schools and in concert, orchestra, lyceum and choir work.

Tuition is reasonable in keeping with the times and may be paid in convenient installments. Complete particulars given in catalog which will be mailed on request.

Students' Self Help—The management makes every endeavor to assist needy students to find part-time employment. Many find work as teachers, accompanists, or part-time positions working for commercial houses, etc.

Fall Term Starts September 15th

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

Again Francesco Rugieri

E. W. S.—Yes, indeed, the violins of Francesco Rugieri, one of the ten greatest makers of Cremona, are valuable, and they sell for very high prices, as much as seven or eight thousand dollars for especially fine specimens. He has been very widely copied by imitators in this country and Europe; and if you try to sell your violin you must first find out if it is genuine. A prominent dealer in old violins would be able to secure the information for you. Rugieri was born in Cremona in 1645, was a pupil of the celebrated Amatis, and died there in 1700. He made violins of two types, some small, slender instruments, and others large ones, similar to the grand pattern of Nicola Amati. All his instruments are exceedingly handsome and very rare indeed.

An Adult Beginner

R. De L.—If you were starting violin study at the age of twenty-five, without any previous study, and with the idea of becoming a professional violinist, I should advise against it; as I fear that you would meet with disappointment. However, as you have had some previous lessons, and violin experience, at the age of fourteen and fifteen, I should not like to hazard an opinion without hearing you play. My advice would be for you to play for some good violinists to get their opinions. 2. The pain in the throat when you play, which you ascribe to gland trouble, is a matter for the opinion of a good doctor. Consult the best physician available, and get his opinion. It may come from pressing the violin too tightly against the throat when you play. 3. I do not think an expert could judge the quality and identity of a violin by listening to it as it was played in an orchestra. He would have to have the violin in his hands, and make a close examination of it.

Varnishes and Their Use

L. N.—As you are making a careful study of violin varnishes, and methods of varnishing violins, I would advise you to get the little book, "The Violin and How to Make it, by a Master of the Instrument." This book can be obtained through the publishers of THE ETUDE.

A Violin by Eberle (?)

C. C. C.—The violin you inquire about (if genuine) was made by Thomas Eberle, an Italian maker, who made violins in Naples (Italy) from 1720 to 1780. A good authority says of Eberle, "He was a pupil of and good imitator of Ferdinando Gagliano." The labels in his violins read, "Tomaso Eberle Fecit Nap. 17." Translated this means, Thomas Eberle made this violin in Naples 17. The latter part of the date signifies the exact year when the violin was made. Eberle was not a great maker, but constructed some excellent violins. Show the instrument to several reputable dealers in old violins in your city, and they will tell you whether it is genuine, and its present market value.

A Chappuy Violin

E. W.—I find this information about the Chappuy violins: "Chappuy, Nicolas Augustin, Paris, 1762-1794. He made some very good violins, but some very poor ones, also. Sometimes he used a label, and sometimes he stamped an 'N' on the bottom of his instruments. His labels read: 'Augustinus Chappuy, Olim, Parisiis Nunc Mirecurtio, Fecit Anno 17—.'" Dealers recently quoted good specimens of these violins at from $350 to $500; but this was for genuine instruments by this maker. You will first have to find whether your violin is a genuine Chappuy. Large dealers usually have experts who are competent to pass on the genuineness of a violin for which service they charge from five dollars up.

A "Tannhäuser" Medley

W. B. M.—For a fantasia of airs, of medium difficulty, from Wagner's opera, "Tannhäuser," you might try the arrangement by Singelee, for violin and piano. This makes a concert number suitable for pupils of medium abilities.

For Self Study

B. B. C., Guatemala, C. A. 1. You are working on some very fine material in your practice, but the studies you mention are advanced and rather difficult, and I am afraid you will not get much good from them without a good teacher to guide you. The book by E. L. Winn, giving directions for studying these works, is very good, and you can get many hints from it. Still, no book can take the place of a good teacher, standing by your side, illustrating, and correcting, and showing you *how* to play the various passages. Kreutzer, Fiorillo, Carl Flesch, Ševčik's works, and others which you say you have practiced, are not easy; and I fear you could not learn to play them well without instruction, and very good instruction at that. Can you not arrange to spend a few months, at least, in some city near your home where you can get instruction? 2. As to developing speed which you are so anxious to do, the best way is to pick out an exercise in sixteenth notes, such as the second study (bowing exercise) in Kreutzer, and play it very slowly and evenly, with uniform speed. Then try it a little faster, then faster still. If you have a metronome, set it to a very slow *tempo* and, play the exercise at that. Then set the metronome a little faster, and play the exercise to that. By slowly increasing the speed of the metronome, and playing the exercise to it, you will gradually learn to finger with increased speed.

An Unknown Name

C. M. G.—I fail to find the name of the maker of your violin in the lists of well known makers; but it may be an excellent specimen for all that. As you no doubt know, there are thousands of makers in all parts of the world; but only a few of them have more than local reputation, and less are really famous. You might submit your instrument to some widely known dealer in old violins, who perhaps would be able to trace it.

Aids to the Vibrato

H. M. N.—The book, "Violin Teaching and Violin Study," by Eugene Gruenberg, which contains much valuable material on learning the vibrato, and the work on the vibrato by Eberhardt, are both excellent, and are as good as anything I know on the subject. You complain that some pupils find it difficult to bring the vibrato movement up to a good speed. You might try laying the violin aside and also the bow. Have the pupil hold the left arm in the same position as that used in playing the violin. Have him to hold the wrist perfectly still, and to move the hand to and fro, as if playing the vibrato. This should be done slowly at first, and the speed increased little by little. When this can be done successfully, try having him hold the violin lightly, without *gripping* the neck between the finger and thumb. If he fails, have him to go back to the hand movement, without holding the violin. I have tried this method with many pupils, and it invariably has been successful.

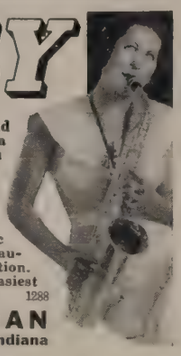
Strike the Nail on the Head

By ANNA MELONI

No ONE ever intends to hammer a nail into the woodwork crookedly, or deliberately to aim so poorly that the nail is bent so that it cannot be used; but this often happens. The trick is to aim squarely. The same thing applies when we attack the keyboard. The fingers often attack the key and then slide off; that is, the performer draws the fingers off the key like a cat pawing at something. This is especially true of the second finger which is so much longer than the first. Regardless of the reason, however, we must learn to prepare the attack upon the key, make the attack, and hold it without any further action of that finger until it is time to make the next attack.

It is not unusual to find performers "pawing" the keys even in the attack of double notes and chords. The attack should be the same as in single notes, and the touch must be firm and deep even if *pianissimo* is required.

In no case then should the fingers be drawn from the center of the key to its outer edge. Observe closely and make sure that you do not do this.



* * * * *

"The musician who refuses to make certain concessions to the public, gives proofs of courage, but not necessarily of wisdom."—Ferdinand Hiller.

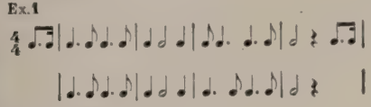
Bands and Orchestras

(Continued from Page 647)

Much can be learned in the matter of correct interpretation, emphasis, and artistic phrasing from the world's great singers and actors. It is, indeed, interesting as well as educational, to observe the attention which these artists devote to this part of their performance. It is these elements which mark the difference between an artistic and an ordinary performance.

This phase of our teaching should be attended to during the student's early experience, since it is quite difficult to correct erratic rhythm, after it has become a part of the student's technical equipment. Just as good English is a matter of habit, so are proper emphasis and the correct interpretation of rhythmic figures in the execution of music.

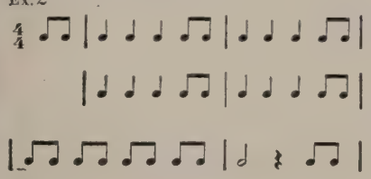
A Game of Rhythms



By RUTH ANN ROGERS

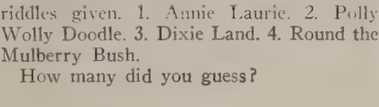
HAVE YOU EVER played guessing games? Of course you have and it was lots of fun.

Now, this time, instead of asking a riddle or acting out a charade, use the tapping of the rhythm of well known songs, such as *Old Black Joe* or Victor Herbert's *March of the Toys.*



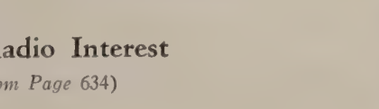
Take the cloth off the table and all sit around as if you were having a feast. Indeed, you are to feast on musical rhythms. First player taps—observing the accents by louder taps.

Ex.1



Player number two taps

Ex.2



Player number three

Ex.3

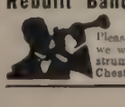
Player number four

Ex.4

Your favorite songs should be used. The examples given will get you started playing the game and it can continue as long as you like. The person who guesses the most nearly correct answers wins, of course.

These are the answers to the musical riddles given. 1. Annie Laurie. 2. Polly Wolly Doodle. 3. Dixie Land. 4. Round the Mulberry Bush.

How many did you guess?



Maintaining Radio Interest

(Continued from Page 634)

of mystery about it. They want to go to the piano, the violin or the wind instrument, and to try out some of the lively melodic and harmonic material which they have heard first through the radio. The smart teacher of these days is the one who listens to the radio regularly and picks up "pointers" for new material. There is just as much danger of the teacher's work becoming humdrum as of some of the programs on the radio. Moreover, the teacher himself must preserve a lively interest in his work; and he cannot do this by the incessant repetition of a limited repertory of teaching pieces, without the continual introduction of fresh material. For this purpose, teachers have found the music section of The Etude priceless. The Etude staff labors exhaustively to secure desirable and interesting new material for this section. Of course it is no better than the composers permit us to make it. There are fine inducements for real composers who can make a reputation by the production of original, human, charming works which the public now needs and demands more than ever.

The broadcasting companies spend millions yearly in sustaining programs from which there is no possibility of any immediate return. The organization of the great NBC Symphony Orchestra and the promotion of a historical series of radio concerts under Toscanini, Rodzinski and Monteux, are, like the engagements of the Philadelphia Orchestra and the New York Philharmonic, only a fraction of the immense investment made by the broadcasting companies to maintain the highest standards and to insure a variety and interest second to none in the world. It is interesting to know that with the major broadcasting companies, the average time given to the rehearsal of a program of one hour in length is ten hours.

My "Very Own" Song

By GLADYS HUTCHINSON

ALMOST EVERY child at some time or other, will come to the teacher and say, "I've made up a song of my own. Would you like to hear it?"

Of course the teacher is delighted.

The pupil rarely constructs a tune that is harmonized correctly; and there is seldom any rhythmical pattern to his attempt in making a song of his own; however nothing but praise should be given for the effort. By no means should there be criticism of such first attempts.

The pupil will enjoy selecting a short poem from the "Children's Garden of Verses"; and the teacher should portion out a line at a time and send the child home to supply a melody for that phrase. One phrase a week will be enough to gratify the desire to create a piece. At first the teacher should determine the meter, because inexperienced writers of melodies have to learn where the accents fall in poetry, and they must also learn to observe the same accents in the music. Otherwise they may start the music on an accented beat, whether the words call for it or not. For example, in the following the accent comes on the third syllable; but children may not realize this unless it is called to their attention.

Ex. 1

After the melody has been written the harmony must be supplied. Unless the pupil has studied harmony, only the simple triads of the tonic, subdominant and dominant should be shown as accompaniment for the first little tune. A little later the dominant-seventh may be introduced. If the pupil has learned these chords in the key in which the melody is written, he may be trusted to supply the right chords for the different tones of the tune.

As progress is made the pupil should learn how to use the chords in their broken forms.

Ex. 2

Such a procedure will satisfy the desire of most children to make their own music, until they are ready for a more serious study of harmony. The teacher will find "Musical Composition for Beginners," by Anna Heuermann Hamilton, a most helpful little book as a guide in such work.

If children will spend time in trying to do this original work, with no idea as to how to go about it, they should be encouraged by helpful instruction.

A Scale "Track Meet"

By ELLIOT EVEREST HUNTER

"HUMAN NATURE" is "Human Nature," whether it is eight years or eighty years old. My boy pupils, of whom I had near twenty individuals of many types, all under fourteen, gave me a great deal of trouble when it came to their scale playing. Two were natural born grubbers; that is, give them a job of weeding, digging, painting, scale playing, anything, and they would have stuck to it, because in the first place they liked work, and in the second place they wanted to please me by coming up to the mark.

As for the others, well, they were just boys, like all other boys, and I had to convince them or "sell' them on the value of scale playing. To quote Periander's motto, "Practice is everything," did not make scale practice seem any less like punishment to them. Then, I thought of the boys' enthusiasm for a "track meet," and this solved a host of problems.

Soon I had contests with regular score cards. I separated scale playing into many divisions, such as:

1. Legato scales.
2. Staccato scales.
3. Scales in groups of three, four, six and eight notes.
4. Scales in contrary motion.
5. Scales in thirds, sixths and octaves.

The boys were rated by counts from one to ten—not by credits or percents, as these suggested school. Then, finally, there was an all around prize for the one who got the most credits in all classes. The boys themselves dubbed him the "champ."

Altogether, I felt that my adoption of the "track meet" idea produced at least fifty percent more practice than any other method I had ever tried. Best of all, the boys learned that the old proverb of Publius Syrus, "Practice is the best of all instructions," really meant something. That is, they got something from practice which surprised them and made the playing of pieces far easier and far more fun. The enormous success of the great Boy Scout movement is due in great measure to the competition and merit system. Give boys a mark to hit and watch their increased interest.

Mendelssohn's Accomplishments

SOMETHING has been said of Mendelssohn's accomplishments, and it may here be added that he played chess and billiards with ardour and skill. He was a fine draughtsman, and his sketches and watercolour paintings were far above the usual amateur level. In those days it was a very uncommon thing for a musician of distinction to be remarkable for scholarship, but now the case is different; still, Mendelssohn's literary attainments were more than respectable, and he could turn a verse with the best. His letters form an enduring monument to his literary power, and may be compared with those left by William Cowper, Charles Lamb or Edward FitzGerald—to name only easily accessible English writers.—*From "Mendelssohn," by Stephen S. Stratton.*

MUSIC *for* CHRISTMAS *Arranged by* BERNARD WAGNESS

This beautiful book contains 17 beloved Christmas Carols; each illustrated; 40 pages; with words; postpaid price, 50 cents.

Single Piano Christmas Pieces

With titles in Two Colors Each, 20¢ cash postpaid

Silent Night & Jingle Bells
Joy to the World
The First Noel
Deck the Hall
Away in a Manger
O Come All Ye Faithful
God Rest You, Merry Gentlemen
Good King Wenceslas

Each piece illustrated inside also and with words; arranged by Frances Williams.

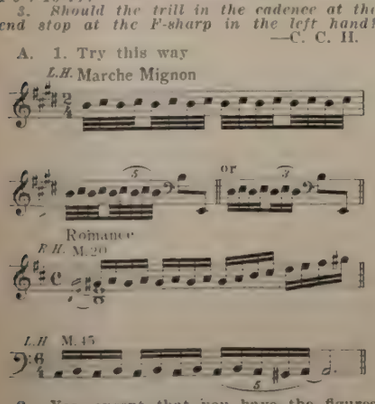
Two hundred and fifty-sixth Notes.

Q. My music teacher taught me that the smallest note was a 256th. I have found in works of Bach and Beethoven some 128ths but I have been unable to locate any 256ths. Will you kindly name some compositions in which the latter appear?—F. G.

A. There are said to exist a few compositions containing 256th notes but I never have happened to see them. Ordinarily the smallest denomination is the 128th note and even this is very seldom used.



How to Play Trills.

Q. 1. Would you kindly show me how to play the trills in Poldini's Marche Mignonne *and Brahms'* Romance, *Op. 118, No. 5?*

2. In playing the last beat of the trill in measure sixteen of Grieg's "Holberg Suite" should it be practiced giving each note its proper value; that is, according to the common denominator of 20, counting for the right hand 1-6-11-16, and for the left hand 1-5-7-13-17?

3. Should the trill in the cadence at the end stop at the F-sharp in the left hand?
—C. C. H.

A. 1. Try this way

2. Yes, except that you have the figures wrong for the left hand. Since you are playing five notes against four, the figures should be as follows: L. H. 1-5-9-13-17; R. H. as you have it. If you have trouble playing these you will never get it by counting in this manner. It must be felt; that is, think the note on each beat strongly and try to forget those that come between.

3. The trill continues up to the sixteenth note G, which should be held as if marked with a *fermata*. Here is an interesting pedaling for this ending: Hold the sixteenth note G with the finger until it is caught with the next pedaling on count one of next measure. In this way you avoid the awkward break between the two G's and they melt smoothly into each other.

QUESTION AND ANSWER DEPARTMENT

Conducted

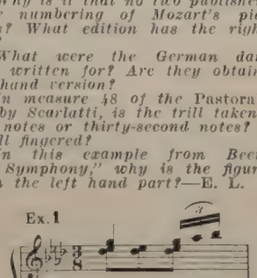
By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Many Questions.

Q. 1. Where can I obtain a thematic catalog of the complete works of Haydn and Mozart?



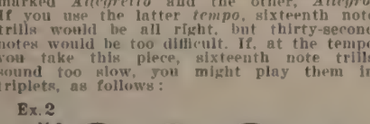
2. Why is it that no two publishers agree on the numbering of Mozart's pianoforte sonatas? What edition has the right numbering?

3. What were the German dances of Mozart written for? Are they obtainable in a two hand version?

4. In measure 48 of the Pastorale in G major *by Scarlatti, is the trill taken in sixteenth notes or thirty-second notes? How is the trill fingered?*

5. In this example from Beethoven's "Fifth Symphony," why is the figure three used in the left hand part?—E. L.

Ex. 1



A. 1. The only complete catalog is the one by Köchel. Try Breitkopf and Härtel, New York.

2. The Köchel Edition numbering is considered to be the standard.

3. The German dances were composed for the Court of Austria. I can find no two hand version listed in any catalogs that I have, but you might try the publishers of *The Etude*.

4. One of my copies of this *Pastorale* is marked *Allegretto* and the other, *Allegro*. If you use the latter *tempo*, sixteenth note trills would be all right, but thirty-second notes would be too difficult. If, at the tempo you take this piece, sixteenth note trills sound too slow, you might play them in triplets, as follows:

Ex. 2

5. This is a mistake. It is not so marked in the orchestra score.

Note: I could not answer all of your questions because of lack of space so I have answered the ones that seemed to me to have most general interest.

Should One Study Piano before Violin?

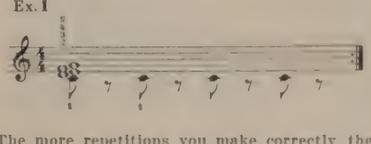
Q. 1. What are the advantages in studying piano before taking up the violin, and what should be the preliminary duration? One year? Six months? or less?

2. Are there any special proceedings for one having difficulty in executing trills?

3. I have a book of rondos of which the first page is missing. Who is the author? Of what value are they (Figaro, Op. 31 No. 21, Maurer *and* Schlosser, Op. 84 No. 3, *and so on)?*—F. M. L., Quebec.

A. 1. The advantage of studying piano first is that it gives the pupil a chance to learn to read music on an easier instrument and it also serves as an aid to the appreciation of harmony. The violin is so difficult because the player has to form his own tone whereas in the case of the piano the maker and the tuner have provided the tone, and all the beginner has to do is to look at the note and find the right key. Another important preliminary step is to learn to sing. If the pupil has learned to produce a true and beautiful tone with his voice he will then be able very quickly to transfer this tonal concept to his violin. As to length of time I should say that there ought to be at least a year of piano study before the violin is begun.

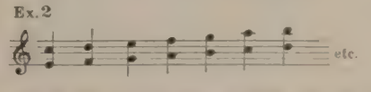
2. Sometimes players do not trill easily because they cannot conceive the rhythm of the rapid notes; however, the usual trouble is that they play with too heavy an action—no doubt, this is your fault. Keep the hand very still, fingers close to the keys, and trill very lightly with *action from the knuckle joint*. While trilling see that the hand does not bob.



3. I know nothing about these compositions, and I cannot find them listed in any of the catalogs of the various publishers; perhaps it is a foreign edition. There was a Ludwig Maurer born in Germany in 1789, and a Louis Schlosser in 1800. Both were violinists and nothing is said about their having written any piano compositions.

How to Cure an Inverted Thumb.

Q. What can be done for an inverted thumb?—L. E. P.



A. As you say nothing about a sunken-in joint, you must mean that it is difficult for you to keep the thumb curved while playing. This is not difficult to correct, but it needs constant watching. If you can depress a key once with a curved thumb you can do it a thousand times—if you are always conscious of its curved position. You will find Ex. 1 good to start with.

Ex. 1

The more repetitions you make correctly the better. See to it that the thumb stays curved as you lift it. You will find playing several octaves in sixths to be very beneficial.

Ex. 2

Whether you cure yourself of your bad habit is entirely up to you. You must concentrate on the curved position of the thumb and never let it strike any other way.

"Overture 1812"

Q. "I should very much appreciate it if you would answer the following question about Tschaikowsky's *Marche Solennelle:* Is the orchestral work, *Marche Solennelle*, known also under the title, *Overture* (or *March*) *"1812"?* If so, which of the two titles is correct?"—M. P.

A. Groves Dictionary of Music and Musicians (under *Tschaikowsky*), lists an orchestral overture entitled "The Year 1812," as Op. 49, and also lists under "works without opus numbers," a composition called *Marche Solennelle*, so evidently these are two entirely different compositions.

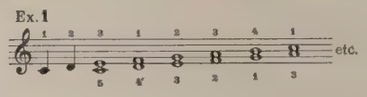
Preliminary Notes for Scales

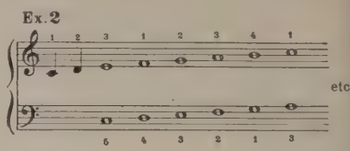


By GLADYS M. STEIN

INTERMEDIATE piano pupils, who can play their scales easily in the parallel forms (hands an octave apart), often become confused when they begin playing these same scales in thirds, sixths, or tenths. They seem to think that because one hand always starts on the third note of the scale, this changes the fingering.

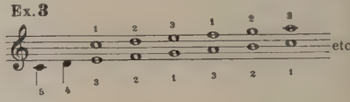
The writer has found it very helpful to have such pupils to practice these scales in the manner described below until they have become quite familiar with them.

When beginning a new scale, the pupil should first play it in the parallel form, to locate exactly where each finger belongs. Then she should begin the scale in the form of thirds by playing the first two degrees of the scale with the right hand alone; joining in with the left hand on the third degree, as may be seen in this example showing the C major scale in thirds.



Ex.1

Fingering for the right hand is written above the notes, and that for the left hand below:



The same plan may be used for the scale in tenths.

Ex.2

When playing the scale in sixths, the left hand plays the two preliminary notes before the right hand joins in.

Ex.3

With this simple plan to guide them, even young children can solve the fingering problems of any scale in thirds, sixths, or tenths.

The Camera of Music

Candid Snaps from Everywhere

The Biggest Bell in the world has never been sounded. It is the Tsar Kokolol in Russia, nineteen feet high and weighing two hundred and twenty tons. While being cast, a large piece broke from its rim, so that it never has been used.

The Rivalry of Great Orchestras, to secure special players for special chairs, has been intense during the last year, due largely to the competition established by the NBC Symphony Orchestra. The rarer instruments, the oboe, the flute, and the French horn, bring their players the highest prices. Yearly engagements at three hundred dollars per week, for especially gifted players, will seem like a dream to many musicians; but we have it on good authority that it is happening.

At John Hopkins University, in Baltimore, Dr. Henry Ernst Siegist gave a program of historical therapeutic music; that is, pieces that had been used in the past to cure a large variety of ailments.

Ben Harney, who died in March, of heart disease, in a rooming house in Philadelphia, is said to have been the first man to convert the ragtime style of the southern Negroes to paper. His *Mr. Johnson, Turn Me Loose* long antedated Irving Berlin's *Alexander's Ragtime Band.*

Crown Prince Frederik of Denmark is an able conductor. At a concert of the past spring, he conducted Tschaikowsky's "Symphony Pathetique" at the Royal Opera House at Copenhagen.

Caring for the Vocal Instrument

(*Continued from Page 679*)

artistic development. A small, light organ will have a greater artistic success in small, light rôles than in spending itself on an attempt to sing *Radames.*

In preserving the voice, nothing should be forced. I spoke of range, a little while ago, in connection with voice placing. Let us consider it now in the light of common sense. Certainly we all know that certain ranges bring with them more attractive and more interesting parts. But, if we are sensible, we will also know that these ranges and these parts cannot be forced into the voice. Each voice has its own natural range. This is there before the first vocal lesson is begun. And it is best to stay within that natural range. One, two, even three notes, perhaps, may be added, after years of careful study. But that is about all that can be safely done. To try to make a voice sing in ranges that are not natural to it, is equal to breaking that voice.

The matter of endurance is also an individual affair, but I do not think it wise to overtax the voice by too much singing, too much practicing, even too much talking. In everything that pertains to singing, the more naturally one proceeds, the better. Too much of anything is bad. Indeed, the best way to keep the vocal organism in strong and healthy condition is to set to work slowly and treat the throat and the entire physical system as wholesomely as can possibly be done. I have done this, and thirty years of hard work find me still fresh and eager to go on.

* * * * *

Correction—A Chicago Orchestra

We are very sorry that, through having followed a supposedly authentic statement, we added editorially on Page 474 of our July issue that Frank St. Leger had succeeded Ebba Sundstrom as conductor of "The Women's Symphony Orchestra" of Chicago. He had been but chosen as a guest conductor, and Gladys Welge is the new leader.

VOICE QUESTIONS
Answered
By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Meet Our New Editor

The Etude Music Magazine takes pleasure in announcing that the eminent Dr. Nicholas Douty has been secured as Editor of this Department. Dr. Douty was born in Philadelphia; and he studied singing with Osgood Dexter and William Castle in America, and with Alberto Randegger in London and Giovanni Sbriglia in Paris. For twenty-five years he was, from the very first performance, the solo tenor of every festival of the famous Bach Choir at Bethlehem, Pennsylvania, and was widely known throughout America as a concert and oratorio tenor soloist. In addition to his vocal attainments, Dr. Douty is a brilliant and scholarly musician and accompanist, a composer of widely recognized ability; and he has been recognized with two honorary degrees of Doctor of Music.

DR. NICHOLAS DOUTY

The Troubled Tenor

Q. For the past six months I have been taking vocal lessons. My teacher is taking a vacation, and I write to ask what to do during this period. I was in the local high school glee club and Mercer University Glee Club. My vocal range is from B on the second line of the bass staff to G on the third line above this staff or on the second line of the treble clef.
—F. M. B.

A. You give me very little information about yourself or about your voice in your letter of May 4. Is your voice lyric or dramatic? What exercises have you been singing? What songs? What do you know about voice placement, breathing and resonance? Without these important data it is very difficult to give detailed advice.

I would suggest that your teacher, before she starts upon her six weeks' absence, should leave with you a detailed plan of daily exercises, together with enough new vocalises and songs to keep you busy until she returns. In the meantime read books upon the voice: "Common Sense in Singing"—Kennedy, "Guide to the Male Voice"—Root, "Resonance"—Fillebrown. Shaw's book, "Educational Vocal Technic" and my small volume, "What the Vocal Student Should Know," contain advice and exercises which might help you solve your problem. The publishers of THE ETUDE can supply you with any or all of them.

Practice faithfully and with thought, so as to lose no time.

The Tenor With a Limited Range

Q. What would you advise me to do to improve the power of my high notes? I am a tenor and my range is from C below middle C to G above middle C. Have a very nice quality and when I go above the G I use my head tones which are not as strong as my lower register. I sing a good B natural, only I have no power in comparison to the lower tones.—M. B.

A. You ask the age old question, "How can a tenor improve his high tones," and his whole career depends upon its correct solution.

Is it that your highest tones are produced in the so-called *falsetto* register instead of the head voice? Or do you sing your lower and middle tones with too much force of breath and too dark a quality, too much like a baritone? Remember, please, that the vocal cords must be firmly approximated through the entire range of the voice. Upper tones sung in a real *falsetto* are usually breathy and weak and no increase in the breath pressure will help them. Try singing the following exercises:—

Ex. 1

being sure the upper tone is firm, without forcing or breathiness and that you preserve the same quality and volume throughout your entire range. You should have the criticism of an experienced teacher, to remedy this serious and difficult defect.

How to Sing and Speak Italian

Q. I am starting lessons in the use of the Italian language in singing. My teacher is vague regarding pronunciation and meaning, seeming only to regard the vowels. I would like a dictionary of Italian words especially useful for singers.

2. Please explain something about Vaccai's Vol. 279.—N. L. R.

A. There is no easy way to learn a foreign language. If possible find a teacher who knows how to pronounce the Italian words and also to tell what they mean, even though he may not speak the language fluently. Sauer's "Pronouncing Dictionary of the Italian Language" gives a good idea of the grammar and indicates the pronunciation fairly well. There are also phonograph records from which you can learn the usual consonant and vowel sounds. But the best and quickest way to learn a foreign tongue is to study with a teacher who can both sing and speak it.

2. Vaccai was a celebrated opera composer and singing teacher, who lived and worked in Italy during the early part of the nineteenth century. He believed that the Italian tongue was best suited to the singing voice, especially to the style called "Bel Canto." Therefore he wrote the "Metodo Pratico," or "Practical Method," in which a few simple Italian poems are set to music which is designed to give the student practice in almost every department of his art. There are exercises in single tones, seconds, thirds, octaves, scales, trills, turns, the *appoggiatura*, and even an explanation of the recitative. It is a truly remarkable book which has lasted about one hundred years.

Is It Possible to Sing With An Infected Throat?

Q. Four years ago I took up singing and my teacher said I had great possibilities. About three years ago I caught a severe cold, which left me with what I thought was sinusitis. One doctor gave me nose drops which helped me, but I wanted to sing and I could only squawk. Another doctor operated, giving me an antrum drainage and taking out my one remaining tonsil. While my nose is better, the mucous still drops back from it into my throat. Do you think I can become a great singer with this affliction?—J. E.

A. It seems as if you still had some infection in the frontal sinuses, and some post nasal catarrh, which has infected the turbinate bones. The continual dropping of mucous, especially at night when you are sleeping, may also have inflamed the vocal cords and the internal muscles of the larynx, causing your voice to tire easily and interfering with its power, its quality and your control of it. Do not waste your time and money in patent nose drops and other nostrums which may palliate your affliction but cannot cure it. You need the advice and help of a skillful throat specialist, and you cannot hope to become a great singer until you are completely well.

The Action of the Tongue During Singing

Q. I am a tenor and I studied with the same teacher for three and one half years, but I changed teachers six months ago. My first teacher told me to ignore my tongue and not try to control it in any way. My present teacher prefers me to keep my tongue flat. I try to keep my tongue down but find it difficult to do. The color of my voice changes and I tire quickly, while my voice is clear and easily controlled when I ignore my tongue. Should I keep my tongue down and how can I do it?—M. L.

A. Every vowel sound requires a different position of the tongue, while every consonant sound requires that the tongue shall leave the vowel position and touch a different part of the mouth. Alexander Graham Bell, the inventor of the telephone, calls the attention of the reader to this fact, in his small book about vowel and consonant formation. Perhaps your teacher has made you practice upon *a*, as in father, and *aw* as in law exclusively, because the tongue naturally lies comfortably flat in the mouth when you sing these vowels. *A* as in cat, *a* as in bay and *ee* as in meet, all require that the tongue shall progressively rise for their correct formation. Therefore, if you wish your words to be understood (and who does not?), you will have to allow the tongue, lips and throat to be very free and comfortable, so that they may move easily with each changing word. Try for freedom of tongue and mobility of all the speech muscles rather than forcing them into one fixed, theoretical position, and I think your difficulty of production, which quickly leads to hoarseness, may disappear. A frank talk with your teacher will help both of you to understand each other better.

HARMONY
Is Your Next Step
Towards Pre-eminence in Music

A practical knowledge of Harmony—the Grammar of Music—will immeasurably widen your musical horizon. It will open up many new and bigger opportunities to you—*a higher standing and recognition, and greatly increased financial returns from your work.*

Musical authorities and representative musical publications emphasize the necessity of a knowledge of Harmony in an adequate musical education.

Thousands of musicians and teachers have found the University Extension Conservatory Course in Harmony to be a real and highly profitable investment. The course has been prepared by authorities of world-wide recognition—Mr. Adolph Rosenbecker and Dr. Daniel Protheroe—and is given under the personal direction of highly qualified experts.

Each lesson is clear, thorough and correct; not the mere mechanical application of rules, but an interesting, intelligent and thoroughly practical method. A written examination on each lesson, in addition to ample original work throughout the course, will develop your knowledge and firmly fix the important principles in your mind.

Qualify for Higher Positions in Music

If you feel that you have gone as far as your present musical training will take you; if you are ambitious to make further progress, enjoy greater recognition, and increasing financial returns, then you owe it to yourself to find out what this great Musical Organization has to offer you. At a very small cost and with no interference with your regular work, you can quickly and easily qualify for higher and more profitable positions in the musical world. Our simple and easy Extension Method of teaching the higher branches of music right in your own home has stood the test of 35 successful years and has made enthusiastic friends all over the world.

Send for Free Sample Lessons

We want you to know how interesting and valuable the training of the University Extension Conservatory will be to you. We want you to be the judge—without any risk or obligation whatever on your part.

Return the Coupon and we will send you a number of sample assignments of any of the Conservatory Courses in which you are interested, for your examination—ABSOLUTELY FREE.

These Sample Assignments will prove to you why University Extension Conservatory Courses have gained and held such a high place in the Musical world, and have meant so much in real money and recognition to so many ambitious musicians. Send for them today.

FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

Franz Schubert, Guitarist

THE LIFE OF FRANZ SCHUBERT has been the subject of many historians and it is not the object of this article to restate what is already known to most music lovers throughout the world, about the struggles and triumphs of this veritable genius, creator of the immortal "Symphony in B minor," and peer amongst the writers of song. Only in rare instances, however, do we find references to his intense interest in the guitar, the instrument he loved, and played with great skill.

Schubert was born January 31, 1797 in Vienna, and died in that city November 19, 1828, the period which is often referred to as the golden era of the guitar. Sor and Aguado, the great Spanish guitarists were concertizing in European cities and the Italian virtuoso Mauro Giuliani was creating a furore in Vienna with his astonishing guitar performances. Together with J. N. Hummel and later Ignaz Moscheles, Giuliani performed original concertos for guitar and piano. Hummel wrote a number of serenades for piano, guitar, violin and violoncello and these were performed by Hummel, Giuliani, the violinist Mayseder and the violoncellist Merk. Frequently this quartet appeared at the musical soirees given at the royal castle Schoenbrun. No home in Vienna was considered complete without a guitar and most musicians of that period devoted some of their time to the study of this instrument. These were the years when the "family orchestra" flourished and in the evenings after the day's work was done and friends gathered together, the "making of music" was the all absorbing interest; and in these groups the guitar played quite a prominent part. Numerous compositions published during this period were written for small combinations of instruments, trios, quartettes, quintettes and most of them included a part for guitar.

In this guitaristic atmosphere Franz Schubert was born and received a thorough musical foundation from his father and older brother on piano, violin and guitar. Even as a boy he began setting poems to music and singing them to the accompaniment of his guitar. When sixteen years of age he composed in honor of his father's birthday a cantata for three male voices with guitar accompaniment. It was Theodore Koerner, the poet and liedersinger, who induced Schubert to devote more time to the serious study of the guitar and from all accounts he must have acquired a technic bordering on virtuosity in a comparatively short time.

In straitened circumstances during most of his life, frequently changing his lodgings, often deprived of the use of a piano, Schubert found solace in his guitar and it became his constant companion. Most of the accompaniments for his songs were conceived on the guitar and only later were they transcribed for piano. Quite a number of his early songs and many appearing during the years 1822-23-24 were originally published with guitar accompaniments. Amongst these are the well known *Ungeduld, Das Wandern, Heiden Roeslein, Lied der Mignon, Morgengruss, Wiegenlied, Geist der Liebe,* for four male voices and guitar, Op. 11, No. 3 and many others.

The greatest contribution Franz Schubert made to the literature of the guitar is undoubtedly his "Quartet for Flute, Guitar, Viola and Violoncello." The original manuscript of this composition was accidentally discovered in the attic of a country home belonging to Karl and Marianne Feyerer in "Zell am See," in 1918 and published in 1926 by the "Drei Masken Verlag" in Munich. According to George Kinsky, the music historian, a great uncle of Feyerer, Ignaz Rosner, was a friend of Schubert. He was an excellent flutist and violoncellist and a fairly talented composer of songs. There were also Friedrich Stenzl, a government official, who played viola in the orchestra of the "Friends of Music," and a sister of Stenzl, who was a clever guitarist. It is supposed that the quartet was dedicated to this lady, who later became the wife of Rosner and this no doubt accounts for the manuscript coming into possession of the Feyerer family. The published version includes a facsimile of the first page of the manuscript, with a notation that it was first intended as a trio for flute, guitar and viola, and it appears that a violoncello part was added, before it was completely finished. Similar to most of Schubert's manuscripts it is dated, showing that it was begun February, 1814, and the handwriting from first to last is unmistakably that of the master. The quartet is in five movements: first, *Moderato,* second, *Menuetto,* third, *Lento e patetico,* fourth, *Zingara* and the fifth, *Tema con variazoni.*

From the appearance of the manuscript it was evident that several more pages belonged to it, but these have not been found. They possibly contained more variations and a final *coda* to bring the quartet to a proper close, as was his custom in compositions of this type. Next to the flute, the guitar has the most important part, containing many solo and obbligato passages and other characteristic effects generally associated with the guitar. It calls on all the resources of the instrument and also proves that Schubert was a consummate master of guitar technic. From beginning to end the five movements are gems of musical invention and contain melodies that are typically Schubert at his best. The initial public performance of the quartet was given on June 6, 1925, at the Fourth German Chamber Music festival held in the music room of the beautiful castle, "Zu Bruehl," near Cologne, with the guitar virtuoso Heinrich Albert playing the guitar part. On May 4, 1926, it was again heard in Vienna at a concert sponsored by the Schubert Society of that city.

Schubert frequently found his way to the workshop of Stauffer the celebrated guitar maker, whose instruments were quite popular at that time. Stauffer had also constructed a so-called guitar-cello, an instrument about the size of a small violoncello, with fingerboard raised above the sounding board, and to be played with a bow. It had six strings, the fingerboard was fretted and its tone is said to have resembled that of the Viol d'amour. Schubert was quite taken with it and composed for it a "Sonata in A minor" with piano accompaniment.

Of the guitars that had been in Schubert's possession, three are still in existence. One is owned by the Schubert Society and may be seen in the Schubert Museum of Vienna, another is in possession of Richard Schmid and the third is in the hands of Major Hans Umlauf, of Vienna.

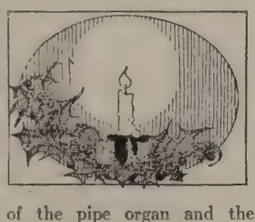
Advance of Publication Offers

— October 1938 —

All of the Forthcoming Publications in the Offers Listed Below Are Fully Described in the Paragraphs Following. These Works Are in the Course of Preparation. The Low Advance Offer Prices Apply to Orders Placed Now, with Delivery to be Made When Finished.

Fragments from Famous Symphonies—Piano—Baines	$0.30
Manual of Fugue—Orem	.40
One-String Solos—for Violin Beginners—Harper ..... Violin Part Piano Part	.15 .20
Organist's Resource—Flagler	.60
Penitence, Pardon and Peace—Cantata for Women's Voices — Maunder — Warhurst	.30
Play and Sing—Piano—Richter	.25
Reward Cards for Music Pupils—Second Series	.35
Sixteen Modern Etudes—Trumpet—Huber	.40
Ten Studies in Black and White—Piano—Mana-Zucca	.20
Twenty-Eight Miniature Etudes—Piano—Ketterer	.30
Youthful Baritone, The—Song Album	.35
Youthful Tenor, The—Song Album	.35



The Longest Music Counter in the World

● In every issue of The Etude, many compositions and books of a vast range of composers and publishers are mentioned. For over half a century, the Theodore Presser Co. has welcomed the challenge to secure any of these for its patrons. Only rarely (usually in the case of works long out of print) do we fail to get the patron just what he wants, in the quickest possible time, and at the lowest possible rates. Our success has been built upon this service. If the work is not in our own stock, the largest musical reservoir in the world, we have unsurpassed international facilities for securing it. Try us. It is sure to be a pleasant surprise. One of our mail order patrons in the heart of the Middle-West said last year, "I think that the Theodore Presser Co. must have the longest music counter in the world as I never seem to fail to get just what I want."

Christmas

The Festive Day That Has Inspired So Many Fine Musical Compositions

Christmas without music is unthinkable. From the first tinkle of Santa's sleigh bells and the nocturnal carols of the waits wafted on the early morning air, to the glorious tones of the pipe organ and the choir's glad anthem, every moment of the day seems filled with music. It is in the background when the children shout and dance in glee over their gifts, the tunes of the old, familiar carols virtually ring in the ears of grown-ups as they celebrate more quietly this most beautiful of Christian feasts.

Every church choir, from the small group of volunteers to the trained organization of professional singers, strives to present the most attractive program possible. Maybe there will be a special church celebration with the performance of a cantata; possibly a few well chosen anthems will supplement the regular service; surely some of the beautiful traditional carols will be heard.

For those who plan the performance of a cantata or special anthems, it is none too early to choose material so that rehearsals may be begun promptly. The Theodore Presser Co. will be glad to supply FREE special literature on Christmas Music. Ask for Circular P-2. School music educators and piano teachers planning programs of Christmas Music can obtain much valuable information about children's songs and piano solos from Circular P-10, also obtainable FREE for the asking.

In another note on these pages will be found a brief description of a new Christmas cantata *The Manger Prince* by Louise E. Stairs, the composer who last year produced the successful cantata *The Child of Bethlehem* (60c). This new cantata will be ready for delivery this month. Copies of it and its predecessor may be had for examination, as may also the following:

The Christ Child (Hawley) 75c
The Light of the World (Forman) 60c
The World's True Light (Stults) 60c
Hosanna in the Highest (Wooler) 60c
The New-Born King (Loveland) 75c
The Birthday of the King (Dale) 60c

Also the following for Women's Voices:

The Awakening (Baines) 60c
The King Cometh (Stults) 60c
The Christ Child (Hawley) 75c
The Festival of the Nativity (Baines) 60c

Of course, but a few of the many fine cantatas available can be mentioned here. A complete list of Presser publications, with descriptions, will be found in the above-mentioned Circular P-2. This circular also gives lists of anthems, carol collections, organ solos and Christmas services for Sunday school or church.

Important to Listeners of Grand Opera Broadcasts

When music lovers enter the lobbies of Opera Houses in any of the large cities where Opera performances are given they come upon attendants offering for sale copies of the Libretto for the Opera to be performed. Since the average Opera House accommodates between two and three thousand people, and only the large cities can support Grand Opera performances, there are many thousands who perhaps do not know just what is contained in the usual Opera Libretto, or just how reasonable such a Libretto may be purchased.

Now that broadcasts of many of the famous Grand Operas are being made, Opera Librettos can mean much to radio listeners. Suppose, for instance, there should be a broadcast of Verdi's "Aida" sung in Italian. Despite the explanation given by a commentator between scenes or between the acts the listener loses much in not being familiar with the import of what is being sung.

A Libretto of this Opera, which may be purchased for only 30 cents, would provide the listener with the full text of the Opera, both in the original language and in an English translation. The identification of the characters and the story of the Opera, which also usually are given in the Libretto, help prepare the listener for an intelligent enjoyment of the broadcast.

Librettos for practically all of the Grand Operas in standard operatic repertoires may be obtained at a cost of 30 cents for each Opera. There are a few exceptions, these being in the cases of some copyrighted Operas —such as "La Boheme," "Madame Butterfly," and a few others where the Librettos may cost 50 cents or more.

Librettos for any desired Operas may be obtained at local music dealers by those living in large cities; those not having a music dealer in their communities may obtain Librettos by ordering from the Theodore Presser Co., Philadelphia, Pa. Opera Librettos are not sent for examination. They are supplied only on outright order.

Since major broadcasting companies usually announce opera performances well in advance of the broadcast date, listeners generally have ample time to obtain desired Librettos. Make sure that your order for any desired Libretto or Librettos will be handled with the utmost dispatch by directing it "Att: Special Service Department."

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

By **Ella Ketterer**

It is indeed fortunate for the members of the teaching profession and for students of the piano when in one individual are combined a talent for composing and a successful experience in teaching. The extensive use of Miss Ketterer's piano compositions and educational works proves that teachers and students appreciate this.

Her Adventures in Music Land (1.00) and *Adventures in Piano Technic* (75c) have been stepping-stones to the technical advancement of many an ambitious student; they will be used by progressive teachers for years to come.

This new work presents study material for third grade students. Each study is just one page in length and each covers something of importance that must be learned at this period—triplets, suspensions, syncopation, broken thirds, the trill, repeated notes, arpeggios, wrist study, etc. Each study is in the form of a piece, attractively titled.

Single copies of *28 Miniature Etudes* may be ordered now at the special advance of publication cash price, 30 cents postpaid.

The Cover for This Month

There is a fortunate tie-up this month between the cover on this issue of The Etude and one of the feature articles within the issue. Jean Sibelius, the subject of the cover and the mentioned article, was born at Tavastehus, Finland, December 8, 1865. Levander, who was the band master of his home town, began teaching Sibelius the violin when the boy was fourteen. The lad's natural love for music started him on his first composing efforts before he had any instruction in the theory of music.

Music held such a sway over his life that after being sent to the University at Helsingfors in 1885 to study law he soon forsook law study to take up violin study under Vasiliev and Csillag, and composition study with Wegelius at the Helsingfors Conservatory. There he studied from 1886 to 1889. The next season he went to Berlin and became a pupil of W. Bargiel and A. Becker. The following season, 1890-91, he went to Vienna for the study of composition under R. Fuchs and the study of instrumentation under K. Goldmark. In 1893 he was back at the Helsingfors Conservatory, but this time not as a pupil but to fulfill his appointment as teacher of composition. He also taught at the Philharmonic Society Orchestra School.

Sibelius has the honor of having composed the first Finnish opera, "Tornissa Olija Impi" (The Maid in the Tower); but the reason for his world-wide fame is so well known, even to young school children, that it seems hardly necessary to mention here his famous symphonic poem, "Finlandia." The greatness of Sibelius as a composer does not rest upon this one composition as indicated by the fact that in 1897 the Finnish Senate stipulated that he should receive annually from the government for a period of ten years 3000 marks, this being approximately $600.00 in United States money.

Sibelius, already in his career as a composer, was in demand everywhere as a conductor of his own works, his first extensive tour for this purpose being through Scandinavia, Germany, France, and Belgium with the Helsingfors Philharmonic Orchestra. He conducted in the United States in 1914 as a result of his having written the symphonic poem "Daughters of the Ocean" especially for the 28th annual Norfolk (Conn.) Festival. During that visit to America Yale University conferred upon him an honorary degree of Doctor of Music.

Compositions by Sibelius embrace a violin concerto, seven symphonies, many chamber music numbers, numerous songs, orchestral suites, male choruses, piano pieces, and symphonic poems. While Sibelius glorifies folk music of his native land in most of his composing, his music is full of original themes which have all the feeling and characteristics of genuine folk melodies. Sibelius handles his themes with a gloriousness of eloquent musical expression, and with great resourcefulness handles the development of his themes. The inherent power of Sibelius' compositions is apparent to everyone who hears his numbers, even including the musically uneducated, and it was a glorious treat to the nation-wide audience of radio listeners of the National Broadcasting Company when, in the autumn of 1937, they conducted a series of broadcasts presenting the seven symphonies by Sibelius.

The rendition given the Sibelius portrait on this month's issue of The Etude Music Magazine is the work of Mr. Fred Chance, noted artist of Haddonfield, New Jersey.

Ten Studies in Black and White

For the Piano

***By* Mana-Zucca**

Only a teacher of large experience and unusual composing ability would be qualified to prepare technical material sufficiently interesting, practical, and melodious to compete with the masterworks of such writers as Clementi, Loeschhorn, Heller, von Bülow, Cramer, etc. Mana-Zucca, distinguished teacher, composer, and concert pianist, has proved herself equal to this task in this above book.

Here we have ten original studies that are gems of melody and technical worth, about fourth grade and higher. Notice the following titles and characteristics:

A Sky-Line (to develop the stretch of the hand); *A Misty Scene* (melody and accompaniment in legato style); *Autumn Leaves* (octave study in crisp staccato); *The Dancing Spray* (wrist attack); *A Seascape* (left hand arpeggio study with right hand melody); *A Spanish Scene* (study in contrasting rhythm); *Clouds Over the Ocean* (double notes); *Still Life* (study in legato); *Flowers in Bloom* (study in quick attacks); and *The Fountain* (study in velocity).

It is needless to say that this new work will add greatly to the already enviable reputation of the composer.

This book will be published in the Music Mastery Series. Single copies may be ordered now at the special advance of publication cash price of 20 cents a copy, postpaid. Copies will be delivered upon publication.

Fragments from Famous Symphonies

Compiled and Arranged for the Piano

***By* William Baines**

The impression we get on hearing the word "fragment" is usually that it is something of little consequence, being (as the dictionary defines it) "a part broken off"; "a small detached portion." But if the detached portion should happen to be the most interesting part, it immediately grows in value. It is this fact that regulates the worth of certain antiques.

This principle is especially applicable to music. The greatest musical compositions, our great symphonies, are replete with interesting and melodious themes. Most of these are comparatively simple in form, so simple that they are within the comprehension of children, and are now being taught as an early step in musical appreciation. The average symphonic theme is short enough to be remembered easily, and one reason for its being liked is because it *can* be memorized.

We now have in preparation an unusually interesting collection of these fragments from famous symphonies, to supply the increasing demand of those whose interest has been aroused by widespread radio broadcasting of these master compositions. Material has been drawn from the favorite works of such composers as Beethoven, Mozart, Haydn, Schumann, Schubert, Brahms, Tschaikowsky, and Dvorák. Twelve selections in all give a pleasing variety. The arranger of this fine collection is William Baines, a well-known teacher and composer of long standing.

Single copies of this book may be ordered now at the low advance of publication cash price of 30 cents a copy, postpaid. Sale of the book will be restricted to the U. S. A. and Its Possessions.

The Youthful Tenor

An Album of Songs for Studio and Recital

Guidance in the proper use of the voice in singing now is part of the education of practically every youth in the United States. The radio and the sound films perhaps have much to do with the fact that the average youth of to-day seems more inspired toward voice study than the average youth in previous generations.

In making use of his development in the first stages of voice study the young singer needs something of a repertoire that is acceptable for musical programs in the home, or in connection with church, school, or community social programs. It is more desirable to sing a song or ballad of the better type in a perfectly fitting manner than to present poorly, and with obvious weakness in various portions, songs which belong in the repertoire of matured and accomplished singers able to do full justice to the range, technic demands, and interpretative requirements.

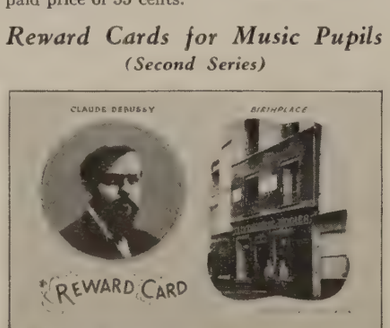
This album, *The Youthful Tenor*, now in preparation will provide the young singer, who is but a few years away from the light treble voice of his childhood, a dozen such songs as will be very useful to him if his voice is now of a tenor quality but not as yet mature enough to be taxed in the range of the top notes and lower notes possible to the more mature tenor. Songs in this collection are well worth the attention of mature singers, but they have been selected for this album because in such points as singability, voice range, and text types they have an especial appeal and high degree of usefulness to young men with tenor voices.

Immediate ordering will secure single copies when published at the special advance of publication cash price, 35 cents, postpaid.

The Youthful Baritone

An Album of Songs for Studio and Recital

The Youthful Baritone like *The Youthful Tenor* album is also to be found among the Advance of Publication Offers this month. *The Youthful Baritone* album is being brought forth to meet a definite need that is apparent everywhere to-day.



Many fine young baritone voices now in need of songs for successful solo efforts will win more acclaim to-day, and will be more certain of well developed voices, and the attainment of greater vocal accomplishments in maturity, if repertoire selections now are restrained judiciously to songs which make no extreme demands upon the voice, which have a melodic appeal, which have desirable texts, and which show unmistakable evidences of musicianly craftsmanship behind their creation.

About a dozen such songs as will give the youthful baritone a repertoire of such judicious character will make up the contents of this volume, *The Youthful Baritone*. While it is natural that the youthful singer himself will look about for songs that he might use and he himself might find much pleasure in the songs in this collection, the publishers can not refrain from making mention of the fact that its best use will be when the youthful singer finds how to make the most of each of these songs through studying them under the guidance of a teacher of singing. Every teacher of singing having young men as private or class pupils will find this *The Youthful Baritone* album a real teaching aid.

In advance of publication we are booking orders for this work at the special cash postpaid price of 35 cents.

Reward Cards for Music Pupils

(Second Series)

Bizet	Gluck	Rimsky-Korsakow
Chaminade	Grieg	Rossini
Debussy	MacDowell	Rubinstein
Dvorák	Massenet	Saint-Saëns
Elgar	Moszkowski	Sibelius
	Moussorgsky	

The original series of *Reward Cards*, 16 in number, has been used by teachers for many years to stimulate interest in music study and induce faithful practice. It includes the following: Bach, Beethoven, Brahms, Chopin, Gounod, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Tschaikowsky, Verdi, Wagner and Weber. With each set a handsome *Prize Card* is included. This *Prize Card* is reproduced from steel engravings and contains the portraits of 8 great composers linked together by an artistic design and background. The *Reward Cards* usually are given for lessons well learned and the *Prize Card* after the pupil has earned all 16 *Reward Cards*. There is space on the *Prize Card* for the pupil's name and other data and for the teacher's signature.

As in the original series these *Reward Cards* (Second Series) will be about the size of a U. S. Post Card; in fact, they also will be published as *Music Post Cards*, all ready for mailing. The latter have on one side the picture of the composer and his birthplace, or other scene of interest, and on the reverse the usual post card mailing form; the *Reward Cards* are, as illustrated above, lithographed in the style of a water color painting, and on the reverse there is a condensed biography of the composer, a facsimile of his manuscript, and a reproduction of his signature. A *Prize Card* will accompany each set of *Reward Cards* (Second Series).

The Original Series, with *Prize Card*, sells for 50 cents. In advance of publication orders may be placed for sets of *Reward Cards* (Second Series) at the special cash postpaid price, 35 cents. A *Prize Card* also will be supplied with this new set.

Manual of Fugue

***By* Preston Ware Orem, Mus. Doc.**

Although faced with an exceptionally heavy publication schedule, as evidenced in part by the number of new works announced in these pages, our Mechanical Department is making progress in the preparation of this work completed by Dr. Orem before his sudden passing several months ago. Those who have studied Dr. Orem's previous works, *Harmony Book for Beginners* (1.25) *Theory and Composition of Music* (1.25) and *The Art of Interweaving Melodies* (1.25), and teachers and schools of music using these as textbooks, will be glad to know that copies of this final work soon will be ready.

As in the above-mentioned texts Dr. Orem treats the art of fugue as a delightful means of making beautiful music. Interestingly, yet thoroughly, he covers canon, imitation, double counterpoint and the various phases of fugue writing giving, from his rich experience in the fields of teacher, composer and music editor, many fine examples.

Pupils who have mastered Dr. Orem's earlier works will be well prepared for study of this book, but any student of music theory who has advanced to this stage may take it up with profit. In fact, many who have had some difficulty in maintaining interest as their studies become more intricate, may find this fascinating presentation just the tonic to spur their ambitions. Surely, no student can hope to become a successful composer without a thorough knowledge of this important subject.

There is still time this month to order copies of *Manual of Fugue* at the special advance of publication cash price, 40 cents postpaid.

Penitence, Pardon and Peace

***A Lenten Cantata by* J. H. Maunder**

Arranged for Women's Voices

***By* James C. Warhurst**

It's a little early to be thinking about the Lenten season, with rehearsals for the Christmas program just getting under way. But the publisher must prepare new Lenten publications now if they are to be ready when church musicians start to build their Lenten and Easter programs after the Christmas holidays.

That is why we are devoting space in these notes to a forthcoming publication that we believe will be welcomed by many choirmasters; not only those who have under them choirs of women's voices, but also directors of volunteer choirs where the male section is weak, or not dependable as to attendance.

Practically all church-goers are acquainted with Maunder's beautiful cantata. It has been given with greater frequency, probably, than any other cantata appropriate for presentation during the penitential season. Each of the three parts into which it is divided may be given separately as an anthem; the entire work may be given without a break at or after a service, or it may be given as a separate service with collects, lessons and addresses, some of which may be interpolated between the parts. The time of performance for the work itself is about 35 minutes.

Mr. Warhurst has made an admirable arrangement of *Penitence, Pardon and Peace* for singing by women's voices. There are solos for soprano and alto, and the fine organ accompaniment. Those who wish to become acquainted with this new arrangement have an opportunity to do so by ordering a copy now in advance of publication at the special cash price, 30 cents postpaid. Copies will be sold only in the U. S. A.

Organist's Resource

***A New Collection of Organ Music Selected from the Compositions and Arrangements of* I. V. Flagler**

Organists, especially those holding church positions, appreciate the value of convenience of access to their music library. As a time-saver nothing has proved more satisfactory than well-selected albums of music. When the extent of the repertoire demanded of the average organist is considered the album form of music is a real economy, too.

Most organists, especially those of the older generation, remember the comprehensive series of books published under the title *Flagler's Collection of Organ Music* in 5 volumes and containing many masterpieces of organ literature as well as original compositions and arrangements. It is the purpose of our editors to select from these volumes the very best numbers by composers such as Dubois, Lemaigre, Bizet, Guilmant, Beethoven, Widor, Meyer-Helmund, Massenet, Rubinstein, etc. and publish them in the convenient 12 x 9 inches oblong-size book.

When completed this will give the organist a volume that should be of much value, both for church and recital use. Teachers seeking repertoire material for their advancing students should not overlook this collection. Single copies of it may be ordered now at the special advance of publication cash price, 60 cents postpaid. Copies will be sold only in the U. S. A.

One String Solos

For Violin Beginners

***By* Kate LaRue Harper**

Novelty seldom fails to interest and attract. If the novelty has value, the interest holds. Upon this principle this violin study book has been prepared, but in reverse order; the value of the idea came first, and then the novelty of presentment followed.

It is surprising what can be done on one violin string, limited by its open tone and its varying depressions by the first, second, and third fingers. Melodious effects obtained by simple means eventually arouse the desire to explore the possibilities of all four strings, the additional use of the fourth finger, and the limitless potentialities of what may be found in the higher and more difficult positions.

Having gained the interest of the pupil at the outset, it is essential to hold it to the end; therefore in this work interest is stimulated, as the student advances, by fascinating story texts and attractive illustrations.

One String Solos will be issued in two separate volumes, one for the violin (for juvenile students), the other for piano (for teacher or accompanying pianist). The work has been prepared so that it can be used either in private or class teaching. For greater convenience, the books will be oblong in shape.

Single copies may be ordered now by those who wish to avail themselves of our special advance of publication cash price: 15 cents for the violin part, 20 cents for the piano part, postpaid. Copies will be delivered when the work is published.

16 Modern Etudes

For the Advanced Trumpet Player

***By* John Huber**

The trumpet player of today is required to do many things with his instrument that the performer of a quarter century since would have considered practically impossible. The improvements in the instrument itself and the demands made by modern compositions and arrangements are largely responsible for the increased proficiency among trumpet players.

Realizing the task that confronts the teacher of advanced students of this instrument in selecting suitable study material, the author of this work has produced a set of etudes that are designed, if properly used, to develop interpretative ability, proper breathing and correct tone production, besides flexibility in triple tonguing. Practice is given in playing triplets, chromatics, trills, mordents and in various rhythms. Velocity, of course, is ultimately achieved in each etude.

While the work is in preparation for publication a single copy may be ordered at the special advance of publication cash price, 40 cents postpaid.

Play and Sing

Favorite Songs in Easy Arrangements for Piano

By Ada Richter

Slightly more advanced in difficulty are these arrangements than those in the author's most successful *My First Song Book* (75c), the collection that brought to so many young piano beginners their first opportunity to play the songs almost everybody knows and loves.

In *Play and Sing* the easy piano arrangements of favorite songs also are grouped into various classifications, such as: School Songs, Songs of Other Lands, Songs of My Country, Songs from Operas and Songs My Grandparents Sang Long Ago. All will be within the playing capabilities of students in their second year at the piano.

There will be over forty songs in the volume and those wishing to obtain first-off-the-press copies when the book is completed should order now at the special advance of publication cash price, 25 cents postpaid. This book will be sold only in the U. S. A.

Advance of Publication Offers Withdrawn

Timely, indeed, are the publications released from the press of Theodore Presser Co. this month. Two books of Christmas music and two for youngsters just beginning the study of music will be mailed to those who ordered copies in advance of publication. As is the custom, the special prices at which these works have been offered are now withdrawn and they will be obtainable at any music store at a fair market price. Copies may be had for examination from the Publishers.

Traditional Christmas Carols for Junior Choir is a collection of lesser-known carols arranged for unison singing. These have been drawn from various sources—Welsh, Bohemian, English, Kentish, French and Austrian. All are within the limited voice range of the average junior choir member, but they will make excellent material for carolers, or waits, to sing on Christmas Eve. Price, 15 cents.

The Manger Prince, Christmas Cantata for Mixed Voices by Louise E. Stairs is a work especially written for the average volunteer choir, easy to learn, easy to sing. Solos, duets, trios, recitatives and choruses follow each other in pleasing variety. The text has been selected from the Scriptures' accounts of the Christmas story, interspersed by appropriate hymns. Price, 60 cents.

Cinderella, by Ada Richter is a "story with music" written as a development of the author's teaching experience with tiny tots in music study classes. It may be read and played for youngsters by the teacher or by the mother in the home. For piano classes it may be used as supplementary material for "extra work" and the illustrations colored for "busy work." Best of all, it may be used as the basis of a most fascinating recital program. The pieces are about second grade. Price, 60 cents.

Child's Own Book of Great Musicians—(Brahms-Tschaikowsky-MacDowell) by Thomas Tapper, brings three new books to this series of composers' biographies for young students. These are gotten up in the same manner as the previous thirteen books in the series, each accompanied by a sheet of cut-out pictures to be pasted in and materials for binding the book after the pupil has written his version of the story. Price, 20 cents each.

Changes of Address

When changing your address, advise us at least four weeks in advance, giving both old and new addresses. This will insure against copies going astray. If magazines have been following you to your summer home, and you now wish them delivered to your winter address, please let us know at once, giving both addresses and we will immediately take care of the change to prevent inconvenience to you.

Here is Good News for Magazine Buyers

From September 1st, and up until November 10th, readers of various magazines may purchase their favorites in combination with THE ETUDE at a very substantial reduction. Place your order during September and October and make this desirable saving.

If you wish to make Christmas gifts of magazine combinations, you can place the order now in order to make the saving and the subscriptions will start with any issue you indicate. By following this suggestion you may avoid disappointment later when the holiday rush is in full swing. We will be glad to make quotations on any specially selected combinations of magazines with THE ETUDE if requested.

First Floor Importance

America is a nation of homes and, therefore, despite the thousands who in recent years have turned to apartments and bungalows, ranging from very modest up to the most sumptuous establishments, the great majority of folk in the United States still "go upstairs to bed."

As a result more concern usually is given to the furnishing of the first floor, since here it is that visiting friends and relatives are entertained. The furnishings of the first floor, therefore, are so important that they are the best that can be afforded.

With music teachers and other active music workers the results they must obtain with pupils, or the reception they desire for programs presented, necessitates their keeping in mind a "first floor importance" in selecting materials. Those publications which win favor from such music buyers are the ones which become the best sellers and it is the best sellers which come up for reprintings. The following list contains some of the more important representations on the Publisher's Printing Order of the last thirty days.

SHEET MUSIC—PIANO SOLOS

Cat. No.	Title and Composer	Grade	Price
26341	Here We Come! March—*Forrest*	1	$0.25
26115	Heads Up! Forward March!—*Copeland*	1½	.35

The Etude Historical Musical Portrait Series

Followers of this unique serial feature of THE ETUDE will find this month's instalment, on page 630, especially interesting because it includes pictures and brief biographies of so many noted figures in music. For example, there is Sigismond Stojowski, renowned composer and pianist; Leopold Stokowski, celebrated orchestra conductor; R. S. Stoughton, talented composer; Antonio Stradivarius, master violin maker; the Strauss family, of Waltz fame; Igor Stravinsky, eminent Russian composer; Lily Strickland, composer and authority on music of the Far East; and many others well-known in musical circles.

These 44 pictures with brief biographies are an important addition to the collection and will prove highly valuable for reference and scrap book purposes.

If you would like to have a separate copy of this instalment, or any of the 80 previous instalments in the series, we will be glad to supply you with reprints at the rate of 5 cents for each instalment.

Valuable Premiums for Securing Subscriptions to the Etude

Many of our musical friends secure fine rewards simply by taking subscriptions to THE ETUDE MUSIC MAGAZINE. The season for holiday gift-giving will be on us before we know it. Let THE ETUDE help you in filling out your Christmas gift list without any cash outlay on your part. As a reward for securing subscriptions, THE ETUDE offers fine merchandise guaranteed by the manufacturers; every article is sure to please. Ask your relatives, friends and neighbors interested in music to subscribe, collect $2.00, the regular price of THE ETUDE, from each and send to us with the name and address of the subscriber, the amount collected indicating the premium desired. Each subscription secured counts as one point toward any premium. Send post card for complete Premium Catalog.

Beware of Magazine Swindlers

We again caution our musical friends when placing subscriptions for THE ETUDE MUSIC MAGAZINE to take every precaution if money is paid to strangers. Read any contract offered you before paying any money. Do not permit an agent or canvasser to change the conditions. Pay no more money than the contract calls for, and do not pay any money unless you are convinced of the responsibility of the canvasser. If you are in the least doubtful as to the responsibility of the agent, take his name and address, and the name and address of the company for which he works, send the money directly to this office and we will see that he receives credit for the subscription. Help us to protect you from unprincipled swindlers.

HARMONY BOOK FOR BEGINNERS

Supplies a superb foundation for future musicianship. Its exposition of the fundamentals of harmony is given in a clear, concise, colloquial manner.

Flush Cloth Binding—Price, $1.25

THEORY AND COMPOSITION OF MUSIC

Those who have studied the author's "Harmony Book for Beginners," or any other course in the elements of harmony, can be given no better guide than this book for going on to actual composition of music.

Flush Cloth Binding—Price, $1.25

THE ART OF INTERWEAVING MELODIES

When a thorough knowledge of harmony has been attained the student may begin with this book the study writing music "horizontally," an art so essential in modern musical composition.

Flush Cloth Binding—Price, $1.25

THEODORE PRESSER CO.

1712 Chestnut St., Philadelphia, Pa.

World of Music

(*Continued from Page 632*)

THE CONTEMPORARY MUSIC FESTIVAL, which opened on June 17th, in London, introduced two works by American composers: a "Sonata for Violin and Piano," by Werner Josten, won an ovation; and the *El Salon Mexico* of Aaron Copland is reported to have been "an outstanding success of the whole festival" when conducted by Sir Adrian Boult.

WILLIAM BENBOW, F. A. G. O., celebrated on May 25th his sixtieth anniversary as an organist; on which occasion the Buffalo Chapter of the American Guild of Organists presented Mr. Benbow in a recital at Westminster Church. This eminent American organist has been long a valued contributor to The Etude.

THE "LES TROYENS (The Trojans)" of Berlioz has had its first really competent production as a continuous musical drama of nearly five hours on a single evening, when recently given at the Strassburg Opera House, with Mme. Suzanne Véron as *Cassandra*, Victor Forti as *Aeneas*, and with Paul Bastide conducting. The work was given a garbled performance in Paris in 1863; Berlioz died the next year, and it was not satisfactorily heard till Felix Mottl in 1890 produced it at Karlsruhe, without cuts but divided as "The Capture of Troy" and "The Trojans in Carthage," with these performed on successive evenings.

ISTANBUL, TURKEY, has had a particularly brilliant musical season, with visits of such famous artists as Mischa Elman, Jacques Thibaud, Lazare-Lévy, Borovsky, all of which drew large and enthusiastic audiences.

ACCORDION BANDS are features of the musical activities of the DeKalb Township High School at DeKalb, Illinois. On a recent program were their Rural Grade School Accordion Band, with seventy-two members; the Girls Accordion Band, of thirteen members; the Boys Marching Band, with twelve members; and Anderson's Senior Accordion Band, with twenty-seven accordions, three saxophones, three guitars, and one each of the electric guitar, xylophone, horn and piano. The leader in this enthusiasm is Eskil H. Anderson.

TO WELCOME HITLER TO ROME a grand concert was presented in the Piazza di Sienna of the Villa Borghese, with the participation of one hundred and eleven choral societies, forty-five bands, and nine hundred orchestral players—a total of ten thousand performers. Gino Marinuzzi conducted the program including a *"Hymn to the Empire,"* by Blanc; *Overture to "Die Meistersinger,"* by Wagner; and the *Guerra, guerra* (*War, war*) chorus from Bellini's "Norma."

* * * * *

COMPETITIONS

AMERICAN COMPOSERS are asked to submit works to Howard Barlow, Columbia Broadcasting Company, 485 Madison Avenue, New York City, to be considered for performance on the Everybody's Music orchestral series over CBS. Having begun with July 24th, each program now includes one American composition—a fine recognition and opportunity for our creative musicians.

THE PADEREWSKI PRIZE of one thousand dollars, for an orchestral composition, is again available to American composers. Manuscripts must be received not later than March 1, 1939; and complete information may be had from Mrs. Elizabeth C. Allen, Secretary of the Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

THE H. W. GRAY COMPANY PRIZE of one hundred dollars is offered under the auspices of the American Guild of Organists, for an anthem of any difficulty or length (with about eight printed pages given the preference). Submissions close January 1, 1939; and further information may be had from The American Guild of Organists, 1270 Sixth Avenue, New York City.

THE JUNIOR ETUDE

ELIZABETH A. GEST

A Marionette Recital

By E. A. G.

Have you ever been to a marionette, or puppet show?

Puppet shows flourished in the fifteenth and sixteenth centuries, specially in Italy; and they have become extremely popular in their present day revival. People are talking about them, going to see them and even making them.

So why not get one up for your club or recital? You can help your teacher to make and operate one.

There are various ways to make the tiny theater, but one easy way is to get a large wooden grocery box, remove one end and saw a large square hole in the front side. Also remove or saw out the upper half of the back. Stand it on end on a table and cover the table with something reaching to the floor. The box may be painted, covered with paper or left "as is."

Another easy way to make the marionette stage is to take an old wooden screen and cut a hole in it, and adjust the box behind the screen.

In either case, make a dark curtain to go across the little stage, put it on rings and let it open and close on a string or rod. Make or procure several small dolls, and to the arms, legs, and body of each fasten dark threads. Attach these threads to short sticks (two for each doll), leaving the threads long enough to reach from the dolls when on the stage nearly to the top of the box. The dolls are operated from above by holding the little sticks, one in each hand, so the characters may be made to move about the stage, as lifelike as possible. (If the operators are so tall that their heads might be seen by the audience, a screen or curtain should be arranged to conceal them. Facing the theater in doorway makes the upper curtain easier to handle.)

On the miniature stage place a toy piano and some toy chairs (cushions would do if chairs are not easily obtained).

Several dolls should be seated. One doll may be operated to come to the front of the stage, bow, announce name of solo, composer, and performer, then seat itself at toy piano, while real performer plays a selection on a piano behind a screen or curtain. After the selection the doll is made to bow, while one of the other dolls applaud (by manipulating the threads attached to her arms).

The next selection is given in the same way by another doll. Duets may also be included.

The "voice" announcing the selections, composers and real performers may be the voice of the teacher, or of one of the pupils. One of the boys might have a good voice for this.

The real performers must play unusually well, as the audience will not see them, and mistakes will show up very clearly.

At the end of the recital the real performers may come forward and take their bows together.

A marionette recital is lots of fun and may be done very simply or on a more elaborate scale, as desired.

Try one of these Marionette Programs for your next recital.

Miss Wilson Settles the Dispute

By DAISY LEE

WENDELL, a young violin student was spending the week-end with his cousin Gerald.

"Don't you ever use your fifth finger in playing the violin?" Gerald asked as he looked over some of Wendell's music.

"There isn't any fifth finger used in music!" declared Wendell. "There are just the first, second, third, and fourth fingers!"

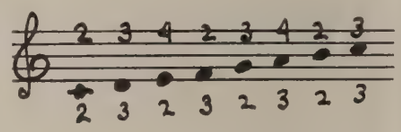
"You're wrong!" retorted Gerald as he pointed to several figure fives in his piano music.

And so the dispute raged until they decided to call on Gerald's piano teacher, and find out who was right.

"If she's teaching, and cannot talk to us," said Gerald on the way over, "we can look up the word 'Fingering' in the set of Grove's 'Dictionary of Music and Musicians' which she keeps in the reception room of her studio."

Miss Wilson was not busy, and she listened thoughtfully to what the boys had to say. Then she said: "You are both right."

"How could that be possible?" asked Gerald.



"There are just four fingers marked in Wendell's violin music," she explained, "because he has to use his thumb in holding the neck of the violin, and that leaves him only four fingers to play with."

"Oh, I see," remarked Gerald.

"Before you boys go home," she added, "I'd like to show you some other fingering systems which have been used in playing instruments of the piano family. In the oldest system," she went on, "they did not use the thumb at all, and the other four fingers were numbered the same as in Wendell's violin music:"

"I don't see how they could have played scales without using their thumbs," Gerald remarked.

"Well, they did," replied the teacher. "But to do so they often had to cross their fingers over the top of one another like this:

"Later on when they began using the thumb it was indicated by the letter 'o.' This fingering was employed in Germany as early as 1571.

o 1 2 3 4

"The English musicians marked their thumb with an 'x' instead of an 'o'."

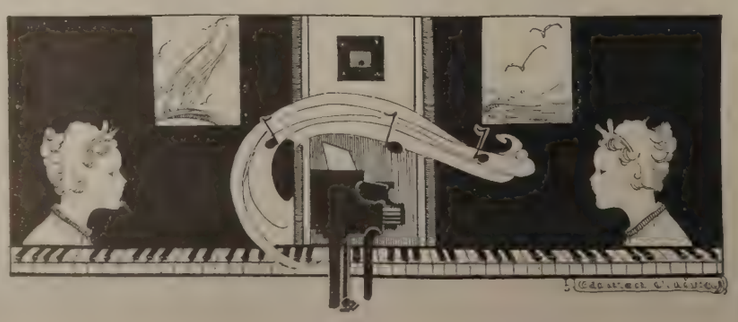
x 1 2 3 4

"And who invented the system which we use?" Gerald wanted to know.

"Johann Sebastian Bach taught his pupils the modern system of numbering the fingers 1, 2, 3, 4, and 5," answered Miss Wilson, "but he did not publish it. This was done in later years by Karl Philipp Emanuel Bach, his third son."

"I certainly am glad to learn about these queer fingering systems," said Gerald, "because I have noticed little o's and x's in some old piano music that I found up in grandmother's attic, and I never understood before what they meant."

"Well, that means the music you saw was an old edition, printed many years ago with the old fingering," explained Miss Wilson.



"I'm glad we do not have that kind of fingering now, and I'll be more careful about my own thumbs, too," promised Gerald.

On the Piano

By CARMON VIRGINIA LIVSEY

The waves sing a song on the beaches,
The wind sings a song in the trees;
And soon I will learn to play songs, too,
Upon the piano's smooth keys.

Perhaps I will play about wavelets,
That sing as they roll on the shore;
Or some of the things that the wind says;
Perhaps—if I just practice more!

On the Music Train

By Monica Tyler Brown

I have been in many lands
In one short afternoon;
Over burning desert sands,
I saw a tropic moon.

On the MUSICAL EXPRESS
Each piece, a change of scene,
(Sharps and flats and notes and clefs;
And bars, of course between.)

Venice, with a Barcarolle,
And old Cathedral bells,
Gems and gold the pirates stole,
And wares the peasant sells.

Down in Spain, a tango dance,
Then, Norway's midnight sun;
Chinese temples, weird low chants,
And tall, lean coolies run.

Persian markets, rugs for prayer,
And palms with giant fans,
Dark skinned natives kneeling there,
And camel caravans.

Then, a rousing jolly song,
Brought me to earth again!
Then I heard the dinner gong,
And I got off the train!

Studio Etiquette

By Gertrude Greenhalgh Walker

BARBARA felt real grown up. She was going to take her first lesson at Miss Brown's studio. "Of course, Barbara, you must be very careful and observe studio etiquette," said her mother. "Why, what do you mean," answered Barbara. "Don't I always say good morning, Miss Brown, and good bye, and also thank her for helping me?" "Oh, yes, indeed, and more," replied mother. "The first thing to remember is always to be on time. Punctuality is a necessity for both teacher and pupil. When you arrive at the studio, ring the bell once, or gently knock, and then enter the studio quietly. If Miss Brown is teaching, just nod to her; do not disturb her by greeting her aloud. Then softly as a little mouse remove your coat and hat. Get your music ready so as not to keep Miss Brown waiting when your turn comes. Sit still. Some people fidget and walk around the room or go over to the piano and look over the music the other pupil is playing. Miss Brown prefers to have all pupils read THE ETUDE or the Bulletin Board while they are awaiting their turn. Be sure to turn the pages noiselessly! Another thing you must remember—Never hum or sing, unless you are playing. When your lesson is over, put on your wraps quickly and quietly and leave the studio immediately, unless Miss Brown asks you to remain to hear the next pupil's lesson. Of course, I do not need to remind you to close the studio door softly and securely. Remember studio etiquette is being as polite to your teacher and fellow students as you would wish them to be to you." "Oh thanks! I'll remember, Mummy. That seems like a lot to remember but I will not forget it."

Little Ludwig Van Beethoven

By GLADYS HUTCHINSON

ONCE UPON A TIME, a little over one hundred and fifty years ago, there was a boy by the name of Ludwig Van Beethoven. He lived in the beautiful town of Bonn, Germany, which is on the banks of the Rhine River.

Ludwig was very, very poor, but there was music in his heart and beautiful flowers in his tiny garden; and so he was not as unhappy as you might imagine.

Ludwig's father, a member of the Court Band, determined that his son should be a great musician and he was very severe with him about his practicing. He kept the boy at his exercises for hours at a time.

When Ludwig was nine years old a musician by the name of Tobias Pfeiffer took lodging in the Beethoven home, and that was when the fun began for Ludwig. Tobias Pfeiffer and Ludwig played together for hours at a time every day, and they even took time out for improvising.

Little Ludwig dreamed of Vienna and loved its beautiful music. He wondered if he would ever be able to go to Vienna.

One day Ludwig's mother became ill. The Beethoven family was so poor that there was not money enough to pay for proper care, and Ludwig, who was only ten, conceived the idea of going on a concert tour to earn money for the doctor's bills and to give his mother the necessities required to help her recovery. All the hours of practice did not seem in vain now. Ludwig worked harder than ever and played in many cities in Holland, and finally when there was money enough for all the extra expenses, he came home and a year later received a position as second court organist. He was chosen also to lead the Court orchestra and to play the piano.

For five years Ludwig held this position and then his dream came true. A friend arranged for him to play for the great Mozart in Vienna.

Vienna! Vienna! All the drudgery was forgotten and Ludwig was very, very happy.

If everybody will only remember this pretty little story, work hard and do the very best that is possible, the effort will surely reap its reward and make life more beautiful in some way, even though all can not become as great as Beethoven.

JUNIOR BAND
Willow Hill, Illinois

Fred's Coöperative Practice Plan

By Gladys M. Stein

"SAY, what are we going to do about our piano practice hours?" Fred inquired one afternoon when he was walking home from school with Harry and Richard, his two chums.

"What do you mean?" demanded Harry. "I don't want to give up my music lessons!"

"I'm not asking you to," Fred answered, "but you practice in the morning before school, I practice at noon, and Richard here does his after school. This means that we three seldom get together for any fun."

"I don't see as there is anything that we can do about it," replied Harry. "We enjoy our music, and if we don't practice our parents won't let us go on studying it."

"But, if we three could only arrange to do our keyboard work at the same hours," Fred answered, "then we'd be free to have our fun together when the practicing was finished."

"A very good idea!" Harry declared. "I know it would please my Mother. She gets so provoked when you fellows stand outside of our house and call for me during my practice hour."

"My Mother scolds about that too," Richard confessed.

"Very well then," said Fred, "let's decide on our practice periods, and then get started on them to-morrow. How about practicing a half hour at noon?"

"Suits me fine!" Harry agreed. "And just think," he added, "we'll have all that time after school left for play!"

Making Music

By J. Lilian Vandevere

I touch a key, and something strikes
A wire inside that rings.
The keys up here
Sound high and clear,
Quite like a bird that sings.

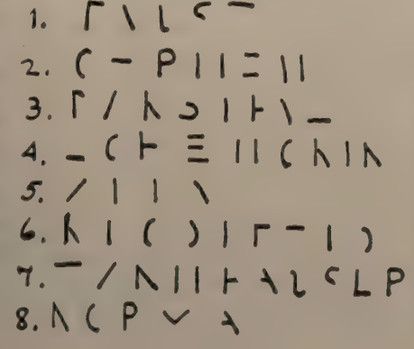
The rows of keys in black and white
Are spread out, side by side.
These keys below
Are caves, I know,
Where deep-voiced giants hide.

I've learned the names of all the keys,
And now I'm sure that soon,
When I can choose
Just which to use,
I'll find I've played a tune!

DEAR JUNIOR ETUDE:

I am an old reader of THE ETUDE, but this is my first letter.

I am a music lover, and am historian of our music club. The name of our club is "The Better Music Club."



I am writing this small letter merely, to thank you, THE ETUDE, for publishing *Andante Con Moto* from "Fifth Symphony," by L. Van Beethoven.

THE ETUDE, now, is rugged but the composition is as beautiful as ever.

From your friend,
VIRGINIA TRUE, Tennessee.

Broken Letter Puzzle

Fill the letters with pencil strokes and find the names of eight operas.

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl, under sixteen years of age may compete, whether a subscriber or not, and whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen: Class C, under eleven years.

Subject for story or essay this month "Inside of my piano." Must contain not more than one hundred and fifty words and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Penna. by October eighteenth. Names of prize winners and their contributions will appear in the January issue.

RULES

Put your name, age and class in which you enter on upper left corner of paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper do this on each sheet. Write on one side of paper only.

Do not use typewriter and do not have anyone copy your work for you.

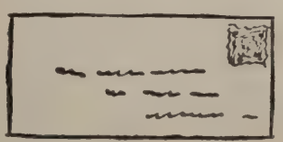
When schools or clubs compete, have a preliminary contest first and send in no more than two contributions from each class, A, B and C.

Competitors who do not comply with all of the above rules will not be considered.

Answer to May Puzzle

Lei—P—zig
Rh—I ne
Cl—A—ra
So—N—gs
Bo—O—ks
Ger—M—any
Fa—U—st
Dre—S—den
Mus—I—cal
Zwi—C—kau

Prize Winners for May Puzzle:



Class A, Helen S. Hartley (Age 14), Washington.

Class B, Margaret Hoffman (Age 11), Saskatchewan.

Class C, Joan Ubbink (Age 8), Wisconsin.

Honorable Mention for May Puzzles:

Betty Sue Judy; Frances King; Ruth Raasch; Donald Pippin; Lillian King; Mary Katherine Bayless; Mary Ann Franklin; Jean Katz; Kathryn Kane; Thomas Petrick; Murrel Brite; Jacqueline Noreyko; Anne Friedly; Sara Cable; Rita Scogna; Theodore Wolfe; Betty Madigan; Leonie Dangroise; Adeline Walker; Mildred Morris; Anna May Bounter; Leslie Keef; Sydney Mallon; Eleanor Ribson; Laura Downs; Patsy Deering; Anna Marie Painter; George Yost; Wills Brook; Charles Brackman.

DEAR JUNIOR ETUDE:

I started taking piano lessons when I was eight years old. I look forward each month to receiving your magazine. I enjoy THE ETUDE very much, and I learn a piece each month from it. One of my girl friends and I try very hard to learn to play duets. I am enclosing a picture of myself, but it is not very good.

From your friend.
MARY E. FITZHERBERT (Age 12),
1 Marcell Ave., Corner Brook, Newfoundland

Game of Opposites

By Gertrude Greenhalgh Walker

PLAYERS are divided into two sides, each side having a captain. The captains alternate in calling a musical term to which a player on the opposite side must give the opposite term. If *presto* is called, the player answers *largo*, and so on. Failure to answer promptly puts the player "out" and the side having the most players standing at the end wins.

Some opposites are: *legato-staccato;* major-minor; soprano-bass; *accelerando-ritardando;* prelude-postlude; but see how many more you can think of.

Radio Concerts

(Prize Winner)

I HAVE JUST FINISHED listening to a great orchestra giving an all Wagner concert. There are millions of people to-day who would never hear this and other great orchestras of the world were it not for radio.

I am just an ordinary music loving boy and to me it is more fun to jump from one part of the country to another and hear the best music the country has to offer, just by turning the dial, than anything else I can think of.

One may even direct these orchestras. Try it some time and see for yourself how much fun it is. Another advantage of radio is that rich and poor alike may enjoy the music of the masters superbly given.

How vulgar and void do some of the other programs seem when compared to the music of the masters heard on the finest of the broadcast programs.

MURREL BRITE (Age 15), Class A, Kentucky.

Radio Concerts

(Prize Winner)

RADIO CONCERTS are some of the very fortunate things that have occurred since the invention of radio. These programs bring happiness, pleasure and a very essential education towards appreciation of music. There is one program frequently heard where the conductor gives an explanation of the next composition to be played, and this gives a better understanding of the music itself.

The kingdom of music is brought into the lives of many people who have never before been enriched by the beauty of music. How simple to turn on the radio and receive some of the finest music in the world; yet many people do not take advantage of this opportunity, but turn their dials to the trash.

In my opinion one way to enlarge the population of the music world is to continue giving the people of this earth the enjoyment of high class radio concerts.

BETTY WORTHY (Age 13), Class B,
New York.

Honorable Mention for May Puzzles:

Phyllis Jeanne Adams; Clara Hymanowska; Margaret Anderson; Jane Creswell; Frances Eileen Little; Lucy Fortman; George Imbraglia; Billy Browning; Patricia Hansen; Aurora Sirois; Jeanette Gaylord; Anna Marston; Yvonne Keen; Murcia Matson; Mildred Wriston; Charlotte Tufts; Helen Wilkinson; Gertrude McCluny; Paul Demming; Julia Andrews; Adele Bronson; Jane Silliman; Clara Bennett; John Hemans; Adrian Douglas; Hilda Benners; Paul Tucker; Bruce Campbell.

JOLLY TRIO
San Francisco, California

LETTERS FROM THE ETUDE FRIENDS

A "Recital" Lesson

My little girl of twelve is beginning Grade III of "Mathews' Graded Course" and, as we live on an isolated ranch, we resort to various devices to keep the lessons from becoming monotonous. Last month instead of the usual procedure of assigning ten minutes' scale work, ten minutes on arpeggios, and so much on finger exercises, along with review and a new piece I gave a "vacation" assignment which she found a lot of fun.

I picked out thirty first grade pieces from old issues of THE ETUDE, figured out the speed for each, using the minute hand of a watch, and told her to learn as many pieces as she could daily, first playing from sight and then picking out any measures she could not play readily, for particular practice. She used the entire music period for this and by the end of the week she gave us a recital, choosing six of the pieces she had mastered.

—MRS. PAULINE K. MITCHELL, Wyoming.

Musicians of October Birth

(*Continued from Page* 636)

(1835), Florence Easton MacLennan (1887)

26th—Arthur Friedheim (1859), Polibio Fumagalli (1830), Joseph Mayseder (1789), Nathan Clifford Page (1866), (Peter Martin) Cornelius Rubner (1855), Domenico Scarlatti (1685), Henry Smart (1813)

27th—Antoine de Kontski (1817), Niccolò Paganini (1782)

28th—Henri-Jérôme Bertini (1798), Howard Hanson (1896), Louis Leslie Loth (1888), Vassily Yulievitch Villoing (1850)

29th—Gustav Eduard Engel (1823)

30th—Oliver Ditson (1811), Allen Spencer (1870), John Smith Van Cleve (1851)

31st—Georges Barrère (1876), Max Pauer (1866), Julie Rivé-King (1857), Oscar Seagle (1877)

The Care of the Piano

By Esther Dixon

EVEN THE BEST piano can be ruined by poor care. A certain well meaning old lady put a can of water inside her piano because it was too dry. The strings rusted and some of them broke. The water should have been put over the register or on top of the radiator; for what the piano needed was moisture in the air.

Another lady put a kerosene lamp in her piano to dry it out during a damp season. She went to the neighbors and forgot the lamp. The piano became too dry and the sounding board cracked.

Lemon oil polish will clean the piano but it will not leave it checked, as some inferior furniture polishes will.

Keep the piano in a room of as even temperature as possible, since the sudden change from hot to cold is very detrimental to the instrument.

* * * * *

Great Art Makes Its Rules

"There are no definite rules for creating great work, nor, on the other hand, is the abandonment of all rules or criteria an infallible source of inspiration. As the great French art critic and philosopher, Taine, remarked to his class in Art History, the only rule to be observed is 'that the artist be born a genius, a matter that concerns his parents and not his instructors.'"

—Edgar Stillman Kelley.

Behold! The Rare Parent!

By DORIS B. SHARP

"THE FIRST TIME I have to tell that girl of mine to practice, her lessons stop right then and there!" Just about every so often, some such ultimatum comes from some discouraged parent.

Now I happen also to be the parent of two lively youngsters; and in the swiftly passing years I am learning that parents are never through with making their children do as they should.

This begins in the morning, with "Children, it's time to get up!" And, half an hour later we urge, "Mary, are you not dressed yet? Do hurry."

If Mary is seven or under, said parent will be lucky if she does not find some of the small garments on inside out, or wrong side front, which will have to be righted, clothes buttoned, and so on. Then there is the process of brushing hair; tying ribbons and sashes; brushing teeth, clothes; and even shoes. At the last minute the little rascals will sometimes have to be fairly pushed out of the door for school.

But, tell them to practice?

Never!

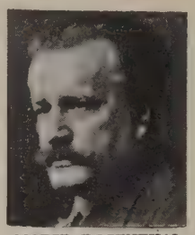
We cajole and badger them into washing dishes, making beds, hanging up clothing, putting away toys, sweeping the walks, or carrying out the ashes. We intrigue them into eating what they should, even to the detested daily dose of Cod Liver Oil.

But do we do anything to entice them to their practice, or reward them when it is done? Mostly, we do not!

A mother will gladly and proudly spend half an hour curling a head of lustrous red hair; but will she ever sit down for half an hour by its owner, and help her faltering fingers over those tantalizing notes?

Parents will buy expensive sets of books for their children, paying monthly installments for a year or more, to cover the bill. Just let the music teacher suggest that the teen years pupil would be much more interested in good music if he had an up to date way of keeping in touch with what is going on in the musical world, by some such means as, for instance, THE ETUDE? They will have to take time "to think about it," or "May be we can get that for him next year." Why do they not do it now, when it costs less than a half dozen visits to the movies, and when it may help Jimmie to get more than twice what he is acquiring from lessons.

We buy the children expensive clothes, that will have to be changed every time they go out to play; we pay heavy taxes for their public school education; we buy their school books; we even pay a truant officer to keep them in school when the parent cannot do so; we tell when they may play, and when they may not; we expect them to obey in other things; but, to the end of things, we apply none of these methods to their music study.



We simply will not make them practice their music lessons; we won't even tell them to do so. In the name of all that is sane and sensible, will someone tell me why these things are true? For the sake of what is refining, uplifting, character building, and beautiful—in other words, for the sake of holding their interest to the study of music—why is it not worth just as much enticing, urging, and sacrificing, to get the young folks to do their music practice, as it is to lead them to do these other incidentals of their every day lives? Let us give every child its privilege of knowing good music.

Next Month

THE ETUDE for November, 1938, will be an issue of great human interest, as well as of practical value and pedagogical importance.

THE APPRENTICE YEARS OF A MASTER

Ho! for the splendid era when pianists were made by long study and concentrated effort, not by manufacturing blue prints. Moriz Rosenthal who, at the age of seventy-five has been astounding American audiences, tells of his invaluable apprenticeship under Mikuli, Joseffy, and Liszt.

MORIZ ROSENTHAL

STEPHEN FOSTER OF TIN PAN ALLEY

Dr. Sigmund Spaeth contends that in his day Foster was looked upon as a kind of musical high brow and that he made his vocal wares with a very keen eye upon the popular market represented by the Tin Pan Alley of that day. The article is of very pronounced interest.

WHAT MUSIC MEANS TO SING SING PRISON

Stephen West, a gifted writer, delved into the musical life of the great New York penal institution and found why the heads look upon the art as of great importance in improving prison conditions. This unusual article will fascinate our readers.

MADRIGALS OF THE TIME OF GOOD QUEEN BESS

Marian Bergman writes of those halcyon days when music was as much a part of the gentleman's life as his sword and his peruke. The great revival in recent years of interest in madrigal singing makes this article especially valuable.

ANOTHER MARK HAMBOURG MASTER LESSON

The distinguished Anglo-Russian pianist, with his rich pedagogical mind, takes Brahms' *Ballade, Op. 10, No. 1* for his master lesson in November. The average student, capable of playing Brahms, needs just such help as this, as Mr. Hambourg has the gift of making things "So clear!"

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of delightful new music to play and sing.

MUSICAL BOOKS REVIEWED

(Any of the works reviewed in this column may be secured through the publishers of THE ETUDE.)

A Century of Music

By EDWIN N. C. BARNES

When one endeavors to compress the accomplishments of one hundred years into a paper covered volume of fifty-two pages, it is very much like compressing ten tons of hay into a little capsule. Yet Dr. Edwin N. C. Barnes has accomplished a musical literary feat by doing just this thing in his "Should Lowell Mason Come to Town." As head of the Department of Music of the Public Schools of Washington, D. C., and in other important positions, Dr. Barnes has had remarkable opportunities for insight into many phases of music education in America. To anyone interested in Public School music, the book makes a valuable catalogue of the high lights in our major musical achievements in these years.

What Plato Said About Music

(*Continued from Page* 638)

rhythmical, and so more fitted for speech and action.[40]" "Every man and boy, slave and free, both sexes, and the whole city, should never cease charming themselves" with the fairest strains of music beautiful and good.[41] Moreover, there *is* music for all, for women as well as men, even for married women. All need music not, however, because they are male or female, married or single, but because they are human.[42] We must distinguish and determine upon some general principle, what music is suitable to women, and what to men, and then assign to them their proper melodies and rhythms. It is shocking for a whole harmony to be inharmonical, or for a rhythm to be unrhythmical, and this will happen when the melody is inappropriate to them. "Now both sexes have melodies and rhythms which of necessity belong to them; and those of women are clearly enough indicated by their natural difference. The grand, and that which tends to courage, may be fairly called manly; but that which inclines to moderation and temperance may be declared to be more womanly in quality.[43]" The age of thirteen is the proper time for a boy to begin to handle a lyre, and he may continue at this for three years, neither more nor less, and whether his father or (he) himself like or dislike the study.[44]" Not only should musical training, and education in the art of music, begin in the early years, but "it should be careful and should continue through life.[45]" Then when we get too old to any longer make music, we can tell stories "illustrating the virtues, as with the voice of an oracle.[46]" "Musical training is a more powerful instrument than any other because rhythm and harmony find their way into the inward places of the soul on which they mightily fasten, imparting grace." "And the man (or woman) who has the spirit of harmony will be most in love with the loveliest.[47]"

Entered as second-class matter January 16, 1884, at the P. O. at Phila., Pa., under the Act of March 3, 1879. Copyright, 1938, by Theodore Presser Co. for U. S. A. and Great Britain.

LEARN COMPOSING AND ARRANGING

RIGHT IN YOUR OWN HOME

DOUBLE YOUR INCOME NOW!!

Your earnings today are the result of the training you have given your natural ability. Are you still making rapid progress—each year seeing you occupying a more important position and making more money, or are you standing still? If you have exhausted the possibilities of your present musical training, then you owe it to yourself to give the future careful consideration. There are endless higher positions in music—easily within your reach—to which you can aspire.

Double up on another instrument, it will enable you to command more money. A knowledge of HARMONY and ADVANCED COMPOSITION will open important, highly-paid opportunities to you—leadership, the ability to arrange music, to make orchestrations, to transpose, and the many other HIGHLY PAID functions of the trained musician. Such training will take you out of the ranks—it will qualify you for leadership—for recognition in your community, and perhaps fame as a composer. Why not? We will help you to do it. Send for our catalogue and sample lessons today. Use the coupon below.

EDWARD ELLSWORTH HIPSHER

Printed in the United States of America

The World of Music

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

Sir Ivor Atkins

THE THREE CHOIRS FESTIVAL, oldest of such European events, held its 218th annual meeting at Worcester from September 4th to 9th, at Worcester Cathedral. The chorus of three hundred voices is made up of singers of Worcester, Hereford and Gloucester; the orchestra was the Philharmonic Society from London; and Sir Ivor Atkins conducted.

G. FRANCESCO MALIPIERO has been appointed to the chair of advanced composition in the Liceo Benedetto Marcello of Venezia (Academy of Benedetto Marcello of Venice).

NINETY PIANISTS, from twenty-four countries, are reported to have taken part in the Ysaÿe International Competition for Pianists held at Brussels in May. Emil Guilels, of Russia, took the first prize; and Maude Lympany (really Mary Johnstone), a young English pianist twenty-one and of Matthay training, won second place. Miss Lympany (as known to audiences) was the only candidate to play the required piece, a new "Concerto" by Jean Absil, from memory.

EUGENE GOOSSENS, popular conductor of the Cincinnati Symphony Orchestra, and one of the most able of Musicians that Britain has loaned to America, made his distinctly successful Chicago début in the latter half of the summer season of the Chicago Symphony Orchestra at Ravinia Park.

PIANOS IN AMERICAN FAMILIES are reported to have reached the number of 5,865,000; but forty per cent of them are said to be from fifteen to sixty years old.

THE WINDSOR FESTIVAL OF MUSIC, at the lovely St. George's Chapel of the Castle, was an innovation of the past summer. The choir is noted for its magnificent tone; and, under the leading of Dr. Harris, organist, it did some "especially good singing of Thomas Weelke's *O Lord Arise* and Adrian Batten's *Deliver us O Lord*. The choir and organist had, for this three days event, the assistance of the Carelle Trio in compositions of Purcell, Mozart and Beethoven.

Charles Munch

CHARLES MUNCH, a young Alsatian, was the recent winner in a competition for the much prized post of *Chef d'Orchestre* (pronounced *shay dor-kes'-tr*, the first violinist concertmaster) in the oldest symphony orchestra of Paris, the famous "Société des Concerts" composed entirely of Professors and *Premier Prix* (*prĕm'-ee-aye pree*) artists of the Conservatoire. Educated in the Leipzig Conservatory; concertmeister of the historic Gewandhaus Orchestra; later trained in Paris, and leader of the revived Orchestre Philharmonique; these are a tabloid of this comparatively young musician's achievements.

A PRICELESS LIBRARY OF MUSIC, including the only complete collection of Bach music in America, and said to be one of the only three extant, has been willed by the late Emma L. Roedter, one of the founders of the Cincinnati Symphony Orchestra, to the Cincinnati Public Library for the use of the Cincinnati Bach Society and other musicians.

JOHN McCORMACK is reported to have disposed of his real estate holdings in southern California and to have returned to make his future home in Ireland.

A THIRTY-ONE-BELL CARILLON, in a tower two hundred and ten feet high, has been recently completed at "Nemours," Wilmington, Delaware, as a leading feature of a mausoleum for Alfred Irenee duPont, former head of the Dupont dynasty of industrialists and civic benefactors, whose fortune was founded in the making of gunpowder. Pierre, of the present generation is a noted patron of music, art and civic beautification.

THE FONTAINEBLEAU SCHOOL OF MUSIC is reported to have enrolled one hundred and three American students for its eighteenth summer session. The faculty included, among artists well known to America, Nadia Boulanger, Robert Casadesus, Marcel Dupré and Lucien Muratore.

LILY PONS won a tumultuous ovation when she recently made her reëntry at the Colon Opera House of Buenos Aires in "Lucia di Lammermoor." It was the occasion of the traditional annual *gala* night commemorating Argentine Independence, with the President and all his ministers in the official box and the great theater packed with the elite of the national capital, all joining in acclaim of the petite prima donna at the close of the brilliantly warbled *Mad Scene*.

THE AMERICAN GUILD OF ORGANISTS will hold its 1939 convention from June 20th to 23rd, at San Francisco.

THE FAMOUS GRIFFIN STRAD, owned by Mrs. Olga Loesser, had been loaned for a period of four years to Jeno Lener, first violin of the Lener Quartet, at the end of which time Mr. Lener forgot (?) to return it. The violin, by a sequestration order of the Civil Tribunal of Florence (Italy), was claimed at the close of a concert of last March and deposited with a person named by the Tribunal, which in June ordered the restitution of the instrument to Mrs. Loesser and the payment of all costs by Mr. Lener.

GEORGE DUNBAR SHEWELL, widely known Philadelphia musician and composer, died on September 17th, at his home in Germantown, at the age of sixty-three. Born in Mt. Holly, New Jersey, most of his professional life had been spent in Philadelphia; and many of his best known compositions are in the catalog of the publishers of THE ETUDE. None of his works surpassed in popularity his *Majestic March* written when he was but fourteen.

JEAN SIBELIUS is reported to have accepted the honorary presidency of the Henry Hadley Foundation being organized in New York.

THE METROPOLITAN OPERA COMPANY announces an extended tour for the spring of 1939, on which Atlanta and New Orleans will be added to the Boston, Baltimore, Cleveland and Rochester visits of recent years.

CAMILLE SAINT-SAENS has been honored with a monument placed in the foyer of the Opéra of Paris. It is the work of the celebrated sculptor, Bouchard, and was recently unveiled after a gala performance of "Samson and Delilah," with the President of the French Republic in attendance. During the intermissions a program of Saint-Saëns' compositions was played by the famous Republican Guards Band.

"THE BROWNINGS GO TO ITALY," a quartet opera in two scenes, by Eleanor Everest Freer, was presented in a performance complimentary to the Board of Directors of the National Federation of Music Clubs, when it met during the second week of September, at the Stevens Hotel of Chicago.

SIR HENRY WOOD celebrated on October 5th his fiftieth anniversary as a conductor, in honor of which event a large committee of musical celebrities, with Lady George Cholmondley (*chumly*) as chairman, organized a monster concert at Royal Albert Hall, with Rachmaninoff among the many soloists, the proceeds of which event went to Sir Henry's fund for the endowment of hospital beds for musicians.

NEW YORK MANAGERS are said to have decided upon a plan for this season, whereby they will escape the usual ten per cent federal tax on concert tickets customarily given to students in order to fill the halls, by printing a price of but fifteen to twenty-five cents on these tickets—a movement in which they are asking the coöperation of artists.

THE OPÉRA, OPÉRA-COMIQUE, AND ODÉON, three musical and dramatic theaters sponsored by the French Government, have been voted a subsidy of twenty-six million francs (about five million dollars) to insure the running expenses of the three institutions till January 1, 1939.

THOMAS LEE RICKABY, familiar to readers of THE ETUDE as T. L. Rickaby, author of numerous articles which have appeared in our columns, passed away suddenly on August 31st, at Taylorville, Illinois, when on the way to his downtown studio. Born October 4, 1862, in England, he came to America at seventeen. All his adult life was given to the teaching of music; and for thirty years he was organist of the Presbyterian Church of Taylorville, till his retirement in October, 1937, when he was made organist emeritus with his full salary continued.

Clarence Dickinson

THE SIXTH ANNUAL CHURCH AND CHORAL MUSIC INSTITUTE met from August 2nd to 9th at Northwestern University, its sponsor, of Evanston, (Chicago), Illinois, when organists and choir directors from various states had the advantage of study under a staff headed by Clarence Dickinson, Mus. Doc., Litt. D., of Union Theological Seminary of New York. Other instructors included Robert G. McCutchan, dean emeritus of the School of Music of De Pauw University; Helen A. Dickinson (Mrs. Clarence); Horace Whitehouse, A. A. G. O., Mus. Doc., professor of organ at Northwestern University; and LeRoy E. Wetzel.

ARTURO TOSCANINI was accorded a historic ovation at the closing concert of the London Musical Festival of the past summer, when "The audience rose to its feet and cheered him to the echo."

A STOLEN OUVRARD VIOLIN, valued at eight hundred fifty dollars and owned by Prof. Claude Sammis of Texas Christian College, Fort Worth, was recovered within two hours by detectives, through a signature on a seven and a half dollar ticket of a downtown pawnshop.

THE NATIONAL ASSOCIATION OF NEGRO MUSICIANS held its Nineteenth Annual Convention at Kansas City from August twenty-first to twenty-sixth. Among the outstanding personalities in attendance as delegates or participants in the activities were Dr. R. Nathaniel Dett, Marian Anderson, Roland Hayes, Dr. Clarence Cameron White, Madame Cole Talbert, J. Harold Brown, Camille Nickerson, Dr. Carl Diton, and many other leading colored musicians.

TWO NATIONAL ANTHEMS, officially decreed by the Cabinet, were heard for the first time together at the recent opening of the Parliament of the South African Union, a member of the British Empire. When *Die Stem Ven Suid Afrika* became the national anthem of this Union of South African States, criticism of the omission of *God Save the King* on a public occasion led to this action.

Gisa Bergmann

GISA BERGMANN, celebrated Viennese soprano with a distinct gift for the interpretation of the Mozart *aria* and the Schubert *lied*, is reported to have planned to spend a large part of this season in America. After several seasons in Berlin, in the star rôles of such popular operettas as "The Circus Princess," "Die Fledermaus" and "Der Orlow," with solo appearances with the Philharmonic Orchestra and the chorus of the Berlin Staatsoper, Mme. Bergmann was for some years the prima donna of the *Theater An Der Wein* of Vienna, where she was also a leader in society and musical philanthropies.

A Symphony a Day

OVER fifty-two per cent of the National Broadcasting Company radio programs are given over to music, exclusive of those spoken programs in which music is an indispensable background. The same ratio applies, we are assured, to the programs of the Columbia Broadcasting System. Music's radio appeal, as indicated by the time devoted to the tonal art in its various forms, is nearly five hundred per cent greater than that of any other subject. It is over six times that of news, for instance, and ten times that of religion. The figures are those of the Federal Communications Commission. Obviously, if music were taken from this important means of public service, information, education and entertainment, radio would be seriously crippled.

Perhaps you did not know that your radio in your home conveys to you through the National Broadcasting Company, the Columbia Broadcasting System, the Mutual Broadcasting System and other companies, an average of over one symphony a day throughout the year. As a matter of fact, the aggregate is nearer two concerts of symphonic character.

Fifty years ago, the young musician in Europe, or in America, felt himself fortunate if he could hear one fine symphony concert a year. Your editor was a protégé of both Anton Seidl and John Philip Sousa, and, as a youth, particularly in the summer at Brighton Beach, New York, where the Seidl Metropolitan Opera House Orchestra played, and at Manhattan Beach, New York, where the Sousa Band performed, he had extraordinary daily opportunities to hear the great orchestral and band music of the world. No musical educational advantage he ever has had quite equaled that experience. Any youth destined for a musical career simply must hear a great deal of music and hear it understandingly—not merely as a kind of musical bath in which he splashes around, only to have the notes evaporate like drops of water after a few seconds. The Seidl Orchestra was really a remarkable organization, representative of the highest musical achievement of its time. Seidl, who was born at Budapest, in 1850, had been an intimate associate of Wagner for whom he had worked in preparing the score and parts of "Der Ring des Nibelungen." Imagine the effect upon an impressionable youth, of association with such a musical hero who played the masters' works usually at four concerts a day at Brighton Beach. Here it was that we met Victor Herbert when he first came to America to play as solo violoncellist in the Seidl Orchestra. Herbert, who now ranks with Balfe and Stanford as one of the trio of the most famous Irish composers, was fresh from Germany and spoke English with a pronounced German accent. In fact he prefered to speak in German.

It is now, however, the privilege of every musical young person to have right in the home, merely by turning the radio dial, advantages impossible only a few years ago. By means of a study course planned by a teacher, or of a self-planned course, the ambitious student may, in this day, learn more in a year about musical literature than he previously could have learned in ten years.

When THE ETUDE was founded, fifty-five years ago, musical education through the press was very limited. The circulation of THE ETUDE is to-day perhaps fifty times greater than that of any other musical paper existing at the time when THE ETUDE was founded. At the present time, literally acres of space are given annually to music by the newspapers and magazines of the country, which in many instances employ critical and educational writers with great charm and notable ability. In the same period useful books for music students have increased amazingly in number. Where formerly there was only a little shelfful of drab looking volumes, often dry as the Sahara, there is now a large library of attractive practical educational works upon

Rembrandt — *Leopold Stokowski* — *Sir Thomas Beecham* — *Eugene Goossens* — *José Iturbi* — *Serge Koussevitzky*

Frank Black *Pierre Monteux* *Alexander Smallens* *Otto Klemperer* *Howard Hanson*

all manner of musical subjects. Therefore, even if the student cannot enjoy the advantage of a fine teacher, anyone who is not indifferent or indolent may make splendid progress via musical books, musical magazines, the radio and the phonograph. But despite the enormous and obvious advantages of radio, there are still a noisy carping few who rail against it. Their principle complaints are "commercialism" represented by advertising and trite programs composed principally of jazz. Let us see what all this amounts to. What is the cost of this great radio opportunity? Who pays for it? The answer is—the advertisers, who sponsor a comparatively limited number of the programs "on the air." Americans continually hear that in certain European countries there is no radio advertising, as radio is subsidized by the government. That is true, but when a comparison is made of the number of fine radio programs in our country with the relatively meager number in all Europe, the American quickly decides that our system of broadcasting gives us far more and far finer programs. The fact is that in many European countries, where a government tax is levied upon all radios, the taxpayers are always very anxious to secure powerful short wave sets so that they may tune in for the wonderful American programs.

In journalism the system of using advertising, as a means of supporting the dissemination of news, information and literature, is by no means confined to America. *The Sphere*, the *Illustrirte Zeitung*, *L'Illustration*, the *Daily Mail*, *Le Matin*, are no different in principle from *The Saturday Evening Post*, *Collier's*, *Time*, *Fortune*, the *Chicago Tribune*, or the *Boston Transcript*. Without advertising, the cost of the very expensive news gathering service maintained by the *New York Times* might make the production of each issue cost a reader a dollar instead of a few cents. In the long run, the advertising subsidy plan in both publications and the radio has been of far reaching benefit to America as a whole, as it has speeded up our business turnover, increased production, and has raised the income of all classes so that nowhere else in the world does such a large proportion of the population enjoy the privileges of such improved living conditions, finer homes, gardens, radios, automobiles, schools, musical instruments, books, and domestic conveniences. The advertising subsidy plan has some shortcomings; but, on the whole, we are "strong for it," because it is so much more resultful than anything else we know. In business it has geared industry and merchandising to a great dynamo of human interest, increasing demand, creating larger sales volume and thus cutting down production costs. It has become a vital part of our economic system. Moreover, the American people with their keen and active minds, take an alert interest in the world's progress along every conceivable line, and the introduction of new merchandise is looked upon as news—interesting news. We are schooled to want to know about new products. Thousands of people scan the advertising pages of a magazine before they look at the text, because they are interested in finding out what is going on in the world that will contribute to their health, convenience and happiness. Except in cases where merchandise is misrepresented, or "dragged in" so that it is all too obvious that a commercial purpose is being masked by art, the public enjoys legitimate advertising.

John Wanamaker, when he put one of the largest organs of history in his Philadelphia store, was not moved entirely by humanistic ideals. He knew, and knew mighty well, that by aligning fine music with his establishment he was dignifying his business in the minds of millions; and that kind of good will has had a very far-reaching value as one of the assets of his huge enterprise. He once said to the writer, "A masterpiece is a masterpiece, whether it is heard in an American department store or in a great European cathedral." Naturally, great advertisers have seen the advantage of engaging fine artists and world famous orchestras to use in their radio appeal to men and women with progressive ideals, and, indirectly, to turn these people into active, potential customers.

"But these fine radio symphonic programs you talk about," says the musical purist, "are literally lost in the welter of cheap jazz and swing music that pours out over the radio all over the country."

This, of course, is largely nonsense. True, our taste and hearing have been, at times, defiled (*Continued on Page* 751)

The Apprentice Years of a Master

Some Recollections of the Distinguished Piano Virtuoso, MORIZ ROSENTHAL

A Conference Secured Expressly for The Etude Music Magazine

By R. H. WOLLSTEIN

MORIZ ROSENTHAL

MY FIRST INTRODUCTION to music study took place sixty-eight years ago. In the intervening time I have tried and discarded many methods of playing, reaching the conclusion, at last, that there is no one method of pianistic expression. The technical aspect of piano playing is a highly individualized affair, depending upon the individual gifts and limitations of each one who plays. One pair of hands needs one kind of guidance; another, differently constructed, pair needs entirely different control.

The only possible method to be advocated has its roots in music rather than in piano playing. Never permit the music to be overshadowed by the technical exigencies necessary for its performance. That, I find, is the usual danger among students. It is a natural enough danger, too. One is so eager to perform the notes fluently that there is a tendency to regard them as a goal in their own right, rather than as a means to an end. That end is music. Fingered passages are important, but not so important as the musical thought of the composer.

That first lesson for me took place when I was seven years old. Many musicians begin their studies at an earlier age; but I could not because we had no instruments in our home. My parents discovered my love for music in a rather accidental way. One of my sisters was fully ten years older than I, and when my mother was busy, this sister was entrusted with taking care of me on our daily walks. Often enough she brought me home later than was expected, and then she would explain, "There was a band concert in the park (or a street organ, or the sound of piano playing) and I couldn't get this child past it. He insisted on stopping and listening, and all the way home he has been humming the music they played."

This was so often the case that my mother would ask about it in an amused way, "Well, did it happen again to-day?"

"Yes. That is why we are late," became my sister's usual answer.

In Which a Genius Is Discovered

THERE NEVER HAD BEEN A MUSICIAN in our family, but when my father heard of this musical absorption of mine, he believed it deserved attention. Consequently, he bought a piano that he had seen for sale. It bore the famous name of Conrad Graff, but was old. It had not the finest tone in the world and was only five and a half octaves in range. But there it was. At first, it did not mean very much to me. I had seen pianos, of course, but had only a child's realization of the relation between this wooden box and the musical tones I loved so well. But I sat down before it and presently was playing melodies. Two days later my father engaged a teacher.

This first teacher, named Galath, was not a pianist at all. He was one of the violinists in the Civic Theater of my native city of Lemberg. But he was familiar with the piano, and he taught me the elements of what I needed to know—how to hold my hands, how to read notes, how to discover and understand the relationship between keys and scales and chords. Also he was a jolly man and told many jokes, some of which, as I recall them now, must have been difficult for a seven-year-old to grasp. However, he had a nice sense of music and an especial veneration for Schubert, and he started me on the way I have traveled.

In those days the piano did not interest me especially for its own sake. It seemed valuable only as an approach to music. I remember very well making this distinction in my mind. As a result I practiced only what I needed to and spent the rest of my time at the piano amusing myself. I loved to improvise, to try out new harmonies, to revel in the possibilities of modulation. Our then *Austrian National Hymn,* by Haydn, was a great comfort to me. It was too familiar to need much practicing, and I used it as the basis of great experiments in harmony. I played at music as another little boy might play at soldiers, and enjoyed myself prodigiously. To-day I wonder what sort of progress I made.

I must have performed satisfactorily enough, however, for when I was ten my father arranged for me to have lessons with one of the greatest musicians of the day. This was Carl Mikuli, eminent pianist and pupil of Chopin. Mikuli's edition of Chopin's works is still remarkable. Mikuli, or Von Mikuli (he was a nobleman), came to Lemberg with airs and manners which reflected the atmosphere of the elegant Chopin. All the Polish aristocracy made much of him, and his charges were, for that time, enormous. It meant sacrifice for my father to allow me to study with him; but the effort carried with it one compensation at least; after my eleventh year I was never again required to pay for my music lessons.

In Which a Teacher Is Found

MY FORTHCOMING AUDITION with Mikuli was a great event in our household. I had progressed to the point where I could play several of the Beethoven sonatas, and my father listened to me as I practiced and perfected them for the great event. But the day before my audition I left the house, ran around to a music dealer's, and asked him to let me see some interesting new works. Among the music he showed me was Chopin's "Sonata in B minor." I looked it through and became enchanted. Luckily, I was always able to read notes very fluently—an ability which can be cultivated by assiduous practice. But Mikuli refused to hear this tremendous sonata from a child.

Under Mikuli I made sudden progress. Mikuli was much imbued with the pedagogical theories of Kalkbrenner. Chopin once said that, of all the pianists he had ever heard (Thalberg, Hiller, and Liszt among them), the one who impressed him most was Kalkbrenner. Chopin imparted this admiration to Mikuli, and he in turn handed it on to me. Mikuli realized, perhaps, that my precious studies had concerned themselves more with music than with the piano; and he now set about giving me a purely pianistic grasp. It was he who made me aware of technic.

Technic, to him however, did not mean a mere passion for show or speed. He opened my eyes to the beautiful balance of notes in a scale; to the perfection of clean, clear, orderly playing. I had never realized that such beauties existed (indeed, I never have heard any sheerly pianistic achievement to surpass Mikuli's arpeggios), and I began to make progress at once.

In Which I Make a Début

IT WAS DURING MY TIME with Mikuli that I made my first public appearance. I was eleven at the time, and played Chopin's *Rondo in C,* for two pianos, with my eminent master. But my very first public performance had already occurred some weeks before this concert. In all honesty, I must say that nobody realized that I was performing. Mikuli was taking part in a concert and played upon the harmonium. His score included a rather difficult passage in which he was very busy with both hands high up in the treble, at the same time that an important B was to be caught deep down in the contrabass. That was where I entered upon the scene.

"You shall come to the concert and turn the pages of my notes for me," said Mikuli. "Always remember to rise when you turn the leaves. And when you come to this page—keep on standing and sound the B for me."

When I was twelve, Lemberg had a musical treat. Rafael Joseffy came there to play. He was very young at the time—barely twenty-two—but I have never heard a more elegant, aristocratic performer. Whatever Joseffy did, pianistically, was in the height of good taste. I heard him and became at once inflamed. At home I stormed about, declaring that I would study no more unless I could have Joseffy as my teacher. My father, who was always ready to encourage me in my musical ambitions, promised that I could have lessons from my idol. There was only one difficulty. Joseffy was to be in Lemberg for a limited time only. After that, he would return to Vienna. The upshot of the matter was that our whole family moved to Vienna. What a sacrifice for my father!

In Which I Meet Two Geniuses

JOSEFFY WAS EXTREMELY YOUNG to serve in the capacity of musical mentor, yet I learned much from him, both musically and pianistically. I learned much merely from listening to him play. It is inevitable that every young musician selects himself a model, at some time of his career, and proceeds with his own work under the aura of this influence. This is not imitation. It is a wholesome apprenticeship and brings with it the elements of comparative values and heightened ambitions. Joseffy was my model. I had progressed to the point where mere playing was no longer enough. I was now deeply conscious of the formation of a musical ideal; a conception of art to which I could devote my life.

At twelve, I gave a recital in Vienna. The piano manufacturer, Boesendorfer (who upon my father's death was to become my guardian), heard me and offered to take me to the mighty Franz Liszt. Liszt had an exceedingly sharp wit; and, after I had played, he said something to Boesendorfer which is a good pun in German *"In diesem Knaben steckt ein Kuenstler der nicht stecken bleiben wird."* In Englisl this needs a bit of explanation. The pun is on the word *stecken* and may be roughly rendered, "In that little fellow there has been stuck an artist who will never get stuck."

At the end of the interview the great master invited me to come to study with him at Weimar, and the following summer, on Joseffy's advice, my father took me there. On our way to Liszt's home, the Hofgaertnerei, we encountered a young man who wore his hair exactly like Liszt's. He was stocky and strong-looking, but he seemed sad.

"What are you going to do with that child in there?" he asked my father.

"He is going to study with Liszt."

"Heavens, you must not attempt that," warned the stocky young man. "It would be the death of the lad. Look at me! Twelve times in succession I have played *Erlkönig,* and it doesn't go right yet. Look at my swollen thumbs! A frail little fellow like that couldn't expect to live through it. What is he going to play for the *Meister?"*

My father told him that I would play some of Liszt's own transcriptions of Mendelssohn's works.

"Oh, no," cried the young man, again in terror, "the *Meister* would not like that. He is tired of those transcriptions. Let the child play something of the master's own."

It had seemed highly amusing to both my father and myself that a musician should measure his work by the size of his thumbs, or that he should expect to master a difficult work by playing it twelve times through. (The truth is that technical diffi-

(*Continued on Page 772*)

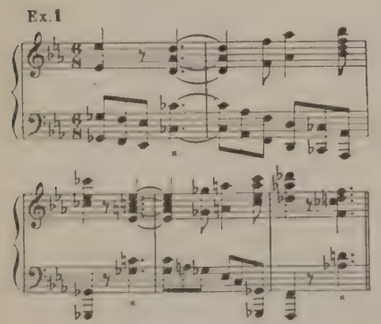
The Threshold of Music

A Stormy Seventh—And Some Even More Complex Chords

By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

This article is the ninth in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter.*

IN THE SIXTH CHAPTER of this series, when we were examining the four different varieties of triads, mention was made of a variation of the diminished triad, known as the diminished seventh. If the reader will recall, the diminished triad consists of two minor third intervals, one above the other. The diminished seventh chord, it was explained, has a fourth note above the other three, making a succession of three minor third intervals.

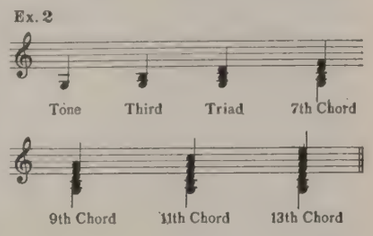


If we examine the seventh chord on Ti, in the minor key, as illustrated in Chapter Six, we will find that it fits this description exactly. It is a dovetailing of two diminished triads, we also will discover—which means that instead of being a blend of two flavors it is an intensification of a single flavor. So we are not surprised to find that this country house with an added wing edition of the diminished triad sounds much like the triad itself. It is stormy, restless, quicksandish; somewhat richer in tone, of course, but otherwise similar to the triad in its characteristics.

The diminished seventh has always enjoyed enormous popularity among composers, as a provider of tempestuous music for all occasions. Probably the peak of its popularity occurred during the latter half of the nineteenth century, when it was in the constant favor of such composers as Wagner, Liszt, Brahms, Tschaikowsky and Verdi. Yet it still is going strong.

Though its official home is the seventh floor of the minor scale, the diminished seventh is quite a gadabout. It is as likely to appear in some other key as in the one to which it belongs. It associates with major music as freely as with minor.

If you want to refresh yourself on its uses, turn back to Chapter Six where, of examples fourteen to nineteen, inclusive, all but one make use of the diminished seventh. Here is an additional one from the *First Movement* of the "Symphony in C Minor" of Johannes Brahms.



Ex. 1

The three x's mark the diminished sevenths. The first is a chord on the seventh degree of the scale in the key of E-flat minor. The first chord of the opening measure, a minor triad in skeleton form, has told us we are in E-flat minor; but the second and third diminished chords are on the rampage, and it would be fruitless to speculate as to the keys in which they belong.

There are chords still more complex than seventh chords. As we already know, chords are built of thirds piled one above the other. Two of these intervals linked together form a triad, and three of them form a seventh chord. The process can be continued still further, and chords of five, six and seven notes, each a third distant from the last, can be formed. Here are all the possibilities, starting with the note G as the root:

Ex. 2

Like the seventh chord, these additional chords are named according to the interval between the top and bottom notes—ninth, eleventh and thirteenth. It will be seen that a chord of the thirteenth is as far as one can go; for beyond that point we merely start repeating notes, since there are no more than seven different notes in any scale.

Chords of the ninth, eleventh and thirteenth have so many clashing tones that often some of the notes are left out, and the chords are simplified.

Ex. 3

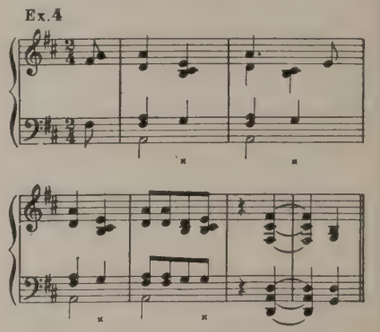
This chord can be called a thirteenth chord on G, with the notes B and D omitted, though it can also be considered a seventh chord on F with a pedal-point or drone bass effect in the left hand.

Ninth, Eleventh and Thirteenth Chords

JUST AS TRIADS AND SEVENTH CHORDS can be built on any floor of the musical house, so can ninth, eleventh and thirteenth chords. And just as seventh chords are more clashing and dissonant than triads, these chords of still greater complexity are still more pungent and biting than seventh chords.

Ninths, elevenths and thirteenths have been added to the vocabulary of music only in more recent years. Debussy used them frequently in his "Pelléas et Mélisande" and other works. In one phrase of two measures of Ravel's *Pavane Pour Une Infante Défunte* the composer has introduced a supertonic ninth, a supertonic eleventh, and a dominant ninth.

Ex. 3a

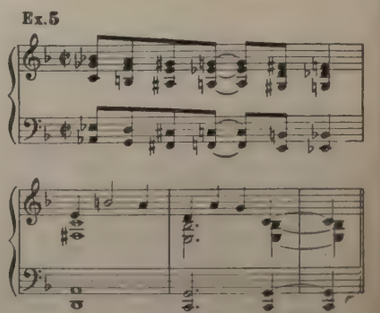


This quotation is published with the permission of Editions Max Eschig, owners of the copyright of Ravel's *Pavane Pour Une Infante Défunte.*

The Dominant Ninth Chord

THE DOMINANT NINTH CHORD—by far the most common of the ninth chords—is also the most respectable, being found in quite conservative musical circles. Like the dominant seventh, it is a natural grouping of overtones. The overtones found in this particular chord are the fourth, fifth, sixth, seventh and ninth in the harmonic series. It sounds like a richly ornamented version of the dominant seventh. It is sweeter than the seventh—sometimes so sweet that it is cloying, but not necessarily so.

In the following example, the dominant ninth chord has a lusciousness that tempts one (dangerously, perhaps) to compare it to the rich, sweet flavor of deliciously ripe fruit. It is from *Summer Evening* (Old Finnish Folk Song) by Selim Palmgren.



Ex. 4

The first three measures alternate between tonic triad and dominant ninth. Incidentally, see if you recognize the next to the last chord. It is a tonic seventh (1_7) leading to a subdominant (4).

The sensuous beauty of the dominant ninth has tempted both symphonic composers and popular song writers to harmonize whole stretches of music with this one chord. Do you remember the dance tune *Moonlight on the Ganges?* Its chorus opens with a downward sliding melody harmonized in dominant ninths. The same thing had been already done several years earlier, in another fox-trot, *The Japanese Sandman* by Richard Whiting. Perhaps the reader will recall these measures:

Ex. 5

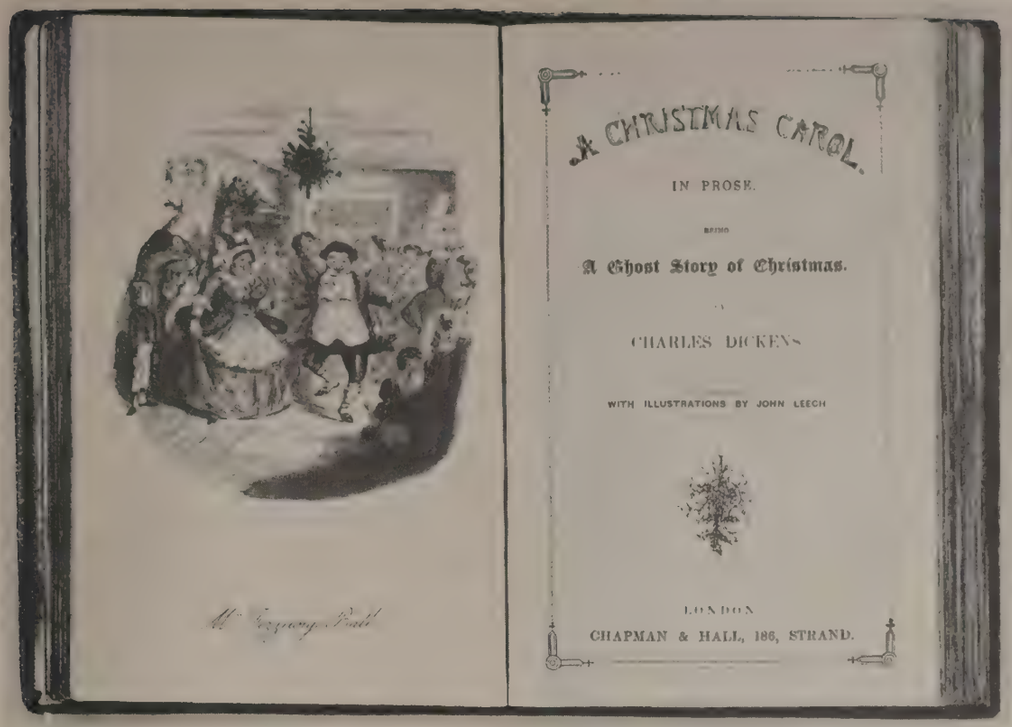
This quotation, from *The Japanese Sandman* by Richard Whiting, is reproduced with the special permission of the owners of its copyright, Jerome H. Remick & Co.

Every chord a dominant ninth!
Even a symphonic composer can become

(*Continued on Page 764*)

A RARE ETUDE FEATURE

To Begin in December



Lessons from Ossip Gabrilowitsch

By MME. CECILE DE HORVATH

Cecile de Horvath, American born pupil of Von Sternberg, Safanoff, Friedman, and Gabrilowitsch, after successful concert tours abroad settled in Chicago, where she has been for years one of the foremost teachers of piano playing. While studying with the late Ossip Gabrilowitsch, in Berlin, she made notes that carefully record his method of teaching, which has never before been given to the public. When she had finished her course of study under Gabrilowitsch, the great virtuoso, knowing the expense of launching a career, brought forth a little box containing every fee Mme. de Horvath had paid him and presented it to his pupil as a token of appreciation of both her native musical endowments and her fine spirit as a student.

Mme. de Horvath's articles are so full of meat that their publication in *The Etude* can be regarded only as a journalistic *coup*. The first of them will appear in our *Christmas Issue* for 1938.

We are hoping that our pianist readers will tell their friends about the appearance of these brilliant articles.

A reproduction of the Title Pages of a very rare Advance Copy of the First Edition of Dickens' "A Christmas Carol," from the private collection of Edward Ellsworth Hipsher

The Awakening of Ebenezer Scrooge

A Playlet in Three Acts

Adapted from Charles Dickens' "A Christmas Carol"

By MILDRED E. MYERS and MARGARETTA E. HOOVER

Presented in Time for Seasonable Preparation

CAST OF CHARACTERS

Ebenezer Scrooge
Fred
Fred's Wife
Bob Cratchit
Mrs. Cratchit
Tiny Tim
Two Street Urchins
Spirit of Christmas
Mary
Joseph
Angel
Wise Men
Three Kings
Shepherds
Mother
Little Boy
A Boy

Time—England in the nineteenth century.
Place—The living room in Scrooge's home.
Act I. Christmas Eve.
Act II. Early Christmas Morning.
Act III. Christmas Day.
Time of Performance: Forty-five Minutes.

SUGGESTIONS FOR STAGING

The operetta is arranged in such a way that it is very easy to stage. The same scene is used throughout. The furniture and costumes should be appropriate to that period of the nineteenth century.

No lights, except footlights and gleam from the fireplace, are necessary during Act I.

For the manger scene, have a strong white light come from the manger, and reflect upon the faces of the characters. A blue spot light is used for the Spirit of Christmas *and for the* Angel.

ACT I

(Before curtain rises chorus sings Adeste Fideles.)

Fred: A Merry Christmas, Uncle! God save you!

Scrooge: Bah! Humbug!

Fred: Christmas a humbug, Uncle! You don't mean that, I'm sure?

Scrooge: I do. *Merry* Christmas! What reason have *you* to be merry? You're poor enough!

Fred: Come, then. What reason have you to be gloomy? You're rich enough!

Scrooge: Bah! Humbug!

Fred: Don't be cross, Uncle—

Scrooge: What else can I be, when I live in such a world of fools as this? Merry Christmas! Out upon Merry Christmas! What's Christmas time to you but a time for paying bills without money, a time for finding yourself a year older, but not an hour richer? If I could work my will, every idiot who goes about with "Merry Christmas" on his lips, should be boiled with his own pudding, and buried with a stake of holly through his heart! He should!

Fred: Uncle!

Scrooge: Nephew, keep Christmas in your own way and let me keep it in mine.

Fred: Keep it! But you don't keep it!

Scrooge: Let me leave it alone, then! Much good may it do you! Much good it has ever done you!

Fred: There are many things from which I might have derived good, by which I have not profited, I dare say, Christmas among the rest. But I am sure I have always thought of Christmas time as a good time, a kind, forgiving, charitable, pleasant time—the only time I know of, in the long calendar of the year, when men and women seem by one consent to open their shut up hearts freely. And therefore, Uncle, though it has never put a scrap of gold or silver in my pocket, I believe that it *has* done me good, and *will* do me good, and, I say, *God bless it!* —Don't be angry, Uncle. Come! Dine with us tomorrow.

Scrooge *(gruffly, as he walks toward door):* Good-night.

Fred: I have made this trial in homage to Christmas, and I'll keep my Christmas spirit to the last. So, a Merry Christmas, Uncle!

Scrooge: Good night!

Fred: And a Happy New Year!

Scrooge: *Good night!*

(Exit Fred)

(Scrooge *walks slowly across the room and pokes the fire. Ragged children ring the doorbell.* Scrooge *reluctantly opens the door. Two street urchins slip in, eager to get warm.)*

Scrooge: *(blocking entrance):* What do you want?

Older child: Please, sir, a penny. Just one penny!

Scrooge: Nothing—I help to support the poorhouses. Children like you should go there. Now let me alone.

Both children: But, please, sir. . . .

Scrooge *(pushing them out the door):* Not one penny. Get out!

(Muttering to himself as he closes the door) I don't make merry myself at Christmas, and I can't afford to make street urchins merry.

(Scrooge *sits down and becomes engrossed in counting his money. Carolers approach singing* God Rest You Merry, Gentlemen. *When they arrive at* Scrooge's *windows he becomes conscious of their presence and, taking his cane, waves it as he chases them away.)*

Scrooge: Begone with you! Merry Gentlemen! Bah! Who could be merry? Who wants to be merry? Sing your carols to those who like them, but let *me* alone.

(Carolers hastily retreat, singing softly. A knock at the door. Scrooge *opens it and* Bob Cratchit *enters carrying* Tiny Tim *on his shoulder.)*

Bob Cratchit and Tim *(together):* Good-evening, Mr. Scrooge. Merry Christmas.

Scrooge: Humph. What brings *you* here?

Bob C.: If it is convenient, sir, I'd like a holiday tomorrow?

Scrooge: It's not convenient and it's not fair—paying a day's wages for no work.

Bob C.: It's only once a year, sir!

Scrooge: A poor excuse for picking a man's pocket every twenty-fifth of December. But I suppose you must have the whole day. Come all the earlier next morning!

Bob C.: I will, sir. Thank you. Good night.

Tiny Tim: Good night, Mr. Scrooge.

(Exeunt. Stage lights dim. Scrooge *walks over to chair, sits down, and resumes his counting of money. Drowsiness overtakes him as he slowly puts his coins one by one into the bag. As he drops the last coin into his money bag his head droops and sleep overtakes him.* Spirit of Christmas *enters from left and speaks.)*

Spirit of Christmas *(spot light):* Ebenezer Scrooge, it is not God's will that any human being should be heartless and cruel on Christmas Eve. *The doors of your heart shall be opened. You shall be filled with a spirit of brotherly kindness and goodwill toward all men.* We shall turn back the pages of time and once more you shall hear your mother's story of the first Christmas Eve. Let the beauty of the story of the Christ Child's Coming enter your heart and life tonight.

(Celestial Choir *softly sings* It Came Upon the Midnight Clear. *Curtain slowly closes during singing of the second verse.*

Between the first and second acts the furniture on the right of the stage is removed to make room for the Nativity scenes. When the curtain opens for Act II Scrooge *is asleep in a chair to the left of the fireplace and the* Mother *and* Little Boy *are seated to*

the right of the fireplace. A candle burns on a table beside them and the MOTHER *reads from the Bible.)*

ACT II

SCENE I

MOTHER *and* LITTLE BOY *seated on her lap.* MOTHER *reads the story of the first Christmas. As the story is being read, the actors review it in pantomime, at right of stage.)*

MOTHER: "And in the sixth month the angel of the Lord was sent unto a city of Galilee, named Nazareth, to a virgin espoused to a man whose name was Joseph, of the house of David; and the virgin's name was Mary. And the angel came unto her and said: 'Hail, thou that art highly favored, the Lord is with thee, blessed art thou among women. Fear not, Mary, for thou hast found favor with God. And, behold, thou shalt bring forth a son, and shalt call his name Jesus. He shall be great, and shall be called the Son of the Highest; and the Lord God shall give unto Him the throne of His father David; and He shall reign over the house of Jacob forever; and of His Kingdom there shall be no end.' And the angel departed from her.

"And it came to pass in those days, that there went out a decree from Caesar Augustus, that all the world should be taxed. And all went to be taxed, every one into his own city. And Joseph also went up from Galilee, out of the city of Nazareth, into Judea, unto the city of David which is called Bethlehem, to be taxed with Mary, his espoused wife."

(Curtain closes. Chorus sings O Little Town of Bethlehem—*two verses.)*

SCENE II

(MARY *is sitting on a low bench looking into a manger filled with hay.* JOSEPH *is standing beside* MARY, *also looking into the manger. A light, concealed in the hay, represents the glow of light from the child.)*

MOTHER: "And she brought forth her first born son, and wrapped him in swaddling clothes, and laid him in a manger: because there was no room for them in the inn.

(Children's Choir sings Under the Stars, *by Hollis Dann.)*

"And the angel appeared unto the shepherds as they were keeping watch over their flocks by night, and said, 'Fear not, for behold I bring you good tidings of great joy. For unto you is born this day in the city of David a Savior, which is Christ the Lord.' And the shepherds said, one to another, 'Let us now go even unto Bethlehem and see this thing which has come to pass.'

(Shepherds come in to the manger.)

MOTHER: "And they came with haste, and found Mary, and Joseph, and the babe lying in a manger.

(Song—The First Nowell. SHEPHERDS *enter and kneel at the manger. In rising and leaving, their eyes never leave the light in the manger.)*

MOTHER: "And the shepherds returned glorifying and praising God for all the things that they had heard and seen, as it was told unto them.

"Now when Jesus was born in Bethlehem of Judea in the days of Herod the King, behold, there came wise men from the east to Jerusalem, saying, Where is he that is born 'King of the Jews?' And Herod, being troubled, gathered all the chief priests together and demanded of them where Christ should be born. And they said unto him in Bethlehem of Judea; for thus it is written by the prophet. And he sent them to Bethlehem and said, Go and search diligently for the young child.

"When they had heard the king, they departed; and lo, the star, which they saw in the east, went before them, till it came and stood over where the young child was.

"And when they were come into the house, they saw the young child with Mary his mother; and fell down, and worshipped him. And when they had opened their treasures, they presented unto him gifts: gold, frankincense and myrrh.

(KINGS *enter. Chorus sings* We Three Kings.)

MOTHER: "And being warned of God in a dream that they should not return to Herod, they departed into their country another way."

(Chorus hums Silent Night *as children come on stage. Children gather round manger and sing* Silent Night.)

(Curtain)

ACT III

(MORNING. Bright lights)

SPIRIT OF CHRISTMAS *(speaking as chimes ring out the hour of eight):* Awake, Ebenezer Scrooge. It is Christmas morn. Let the world see how the Christmas spirit of goodwill has entered your heart. Find true happiness in making others happy.

(SPIRIT *vanishes and* SCROOGE *slowly awakes.)*

SCROOGE *(awakening):* A dream. It must have been a dream, but oh, how real! All these years I have been living blindly, selfishly; seeking for personal gain, forgetting all others, hating all mankind. And now this night, the *Spirit of Christmas* has shown me that true happiness lies in giving, not receiving; sharing, not withholding; in loving, not hating. *Ebenezer Scrooge,* from this very day you shall dedicate your life to making others happy. O bells of Christmas morn; ring out the old, ring in the new. (SCROOGE *goes to door and hails young boy.):* Hallo, my fine fellow!

BOY: Hallo.

SCROOGE: Do you know where Bob Cratchit and all the little Cratchits live?

BOY: Yes, sir, I think I do, sir!

SCROOGE: Tell them, that Scrooge, Ebenezer Scrooge, has a big surprise for them and he insists that they spend Christmas Day at his house. Be off with you. No, wait! Here's a shilling. Be back in less than five minutes and I'll give you half a crown.

BOY: I should hope I will.

SCROOGE: What a delightful boy! What a pleasure to talk to him! *(Frisking about the stage)* I am as light as a feather, I am as happy as an angel, I'm as merry as a schoolboy. What a grand party we shall have together.

(Bell at door tinkles. SCROOGE *opens door. Enter* FRED *and his wife.)*

SCROOGE: Welcome, my children—a Merry Christmas to you both.

FRED *(looking quizzically at wife, then at* SCROOGE): Why, Uncle what has happened—you're not ill?

SCROOGE: No, no, of course not. Never felt better in my whole life. Why shouldn't one feel happy on Christmas day?

FRED: But only yesterday—

SCROOGE *(interrupting):* Yesterday *was, today is,* and I'm a different Scrooge, a *better man,* and I hope, a more generous uncle.

FRED'S WIFE: Then perhaps, dear Uncle, you will come to our party!

SCROOGE: Come to *your* party! Ha! *(As their faces fall.)* You must come to mine. Bob Cratchit will be here, Tiny Tim, and all the other little Cratchits, and some more of my younger friends.

FRED: Why, Uncle, you are the Christmas spirit itself. Of course we shall stay!

(Boy, returning, rings bell.)

SCROOGE *(rushing to door):* My but you're a good lad! You certainly have earned your half crown. And now run quickly to the grocer at the corner and buy the biggest turkey hanging there. And, with it, tell the grocer to send all the fixin's necessary for a prime Christmas party. And all he has, too! And tell him Scrooge, Ebenezer Scrooge, will not haggle about the bill. Off with you now, and hurry back to join in the fun.

BOY: Yes, sir, Mr. Scrooge, yes sir, thank you, sir.

(Exit boy and enter CRATCHITS.)

SCROOGE: A Merry Christmas, Bob; and to you, Mrs. Cratchit. And you, too, Tiny Tim, God bless you! May this Christmas Day be the merriest and happiest you have ever had.

BOB: The same to you, Mr. Scrooge, and thanking you for your kind invitation.

(CAROLERS, *singing* Deck the Halls with Boughs of Holly, *as they pass by.)*

SCROOGE *(calling them from doorway):* Merry Christmas, my young friends. Come here, all of you, come in and join my party. Bring your songs with you, and forget the old grouch who died yesterday.

CAROLERS *(enter, carrying holly wreaths):* Merry Christmas to you, sir, and thank you!

(After the last caroler has entered, the BOY *enters, laden down with all the food.)*

SCROOGE: Ho, my friends, look what this lad brings for our party. I *think* there is a lad behind all those bundles.

(Some older ones help with the bundles, others talk; there being a spirit of merriment pervading the scene, while all sing Deck the Halls.)

SCROOGE *(claps hands and everyone gathers round):* And now my friends, I have a Christmas message for you, a message not for Christmas alone, but for all the year. You have all known me for a mean, miserly, grumpy and hateful old grouch.

(Everyone looks surprised.)

Now, now, I don't blame you; for that's exactly what I was. And now I hope to make amends for all that! *(Turning to* FRED) To you I have been a very ungrateful uncle, ungrateful for all the love and affection you had for me, despite my ill treatment of you. I hope from this time on to share all the comfort and happiness my little used wealth might bring. Last night I had a strange dream, in which the *Spirit of Christmas* showed me my boyhood, and the joy the Christmas story brought. It showed me my mother, the care, affection and love she had for me; and it showed me another—the Christ Child, who brought this happiness to all the world. I saw how the goodness and kindness which this should have brought me had been replaced by the idol of gold. Young people, never let it steal into your hearts—the fear of the world and the ambition to be beyond the chance of its sordid reproach. Keep love there. Do not, as I, let gain rule. And there—as my dream ended—I resolved to honor Christmas and to keep it all the year. *(Turning now to* BOB CRATCHIT.) And to you, Bob, I want this to be a merrier Christmas than I have given you for many a year. I'll raise your salary and endeavor to assist your struggling family, and we will discuss your affairs this very afternoon over a Christmas bowl of smoking bishop, Bob! And for Tiny Tim we will have the best doctor in all the land.

And now, away with seriousness on this merry day! Let us have some carols *(turning to the audience)* and all you folks join with us in this Christmas song.

(Audience, choruses and cast sing Joy to the World.)

SCROOGE *(stepping to front of stage, carrying* TINY TIM *on his shoulder):* And now, to all of you, a very Merry Christmas.

TINY TIM: And God bless us every one!

(Curtain)

Worth While Music in the Movies

By VERNA ARVEY

THE COMPARATIVELY RECENT showing in America of "The Charm of La Bohême" (an Intergloria film, based on the story Puccini used, including arias from his opera as well as modern Viennese tunes, and starring Jan Kiepura and Marta Eggerth) has raised again the old question of whether or not opera is advisable for films. People like Dave Dreyer, music head at R.K.O. Studios, feel that this particular film showed Hollywood the way to success in that medium, for in it operatic scenes motivated the story rather than retarded its progress. Surely, declares Mr. Dreyer, "The Charm of La Bohême" indicated that opera has come to films to stay—if it continues to be presented properly.

Since so many opinions have been advanced on this subject in the past, it may be well to consider briefly what filmdom's most powerful musical men have to say about it: the musical directors of each studio, for they are closest of all to film music in both its creative and commercial aspects.

Unlike many prominent singers, who see enormous possibilities for traditional opera on the screen, most of the Hollywood musicians are skeptical. They give different reasons for their skepticism. Charles Previn (Universal Studios) feels that the librettos are antiquated and faulty and that they would seem ridiculous to an American public which attends operas usually for one or two reasons, to hear a particular artist or a few favorite arias. Verdi's operas would not lend themselves well to the English language, though his music will always be popular. Puccini and Bizet, in Previn's opinion, would meet screen requirements without alteration. For the screen the test of a libretto would be if it could stand alone, without the accompanying music, as dramatic fare.

Leo Forbstein (Warner Brothers-First National) thinks that the main difficulty would be found in the fact that, with few exceptions, opera stars do not photograph well. In Boris Morros' (Paramount) opinion, the thing that retards opera on the screen is the fact that opera is not an American institution (the word itself is not American) whereas the films are. Analyzing the history of opera, Morros finds that it has become popular in countries which have produced their own vocal idols; among people who go to hear various singers, not to hear the music of certain composers. Thus the star system prevails, even in opera. America has not produced so many glamorous operatic stars, and those who are great are not able to sing well into a microphone. James O'Keefe, at Fox Studios, phrases his opinion bluntly: "Opera is old; films are new. Opera on the screen is a matter of determination, production, execution. Only people outside of the picture business feel that it is important. When it has a value, the films will do it."

Stephen Foster of "Tin Pan Alley" in Other Days

The Magic Story of America's Most Loved Composer of Folk Songs

By SIGMUND SPAETH

Dr. Spaeth presents a new and unusual aspect of Foster's relation to the public of to-day. Foster is now properly recognized as one of the Great Masters of Folk Song Literature.

STEPHEN FOSTER
(From a Daguerreotype)

AMERICA'S MOST FAMOUS COMPOSER is usually thought of either as a hopeless drunkard, who might have done great things in music if he had had any real character, or as an angel of sweetness and light moving through a world that did not appreciate or understand him.

Both of these conceptions are, of course, absurdly exaggerated. Stripped of mystery, reverential awe, and downright bunkum, Stephen Collins Foster emerges as a typical tunesmith of his day, with a career startling by parallel to those of our contemporary Tin Pan Alley. Compositions now enshrined as immortal inspirations were in their day treated with the same patronizing hauteur that to-day's highbrow bestows on popular hits. When a concert artist sang one of his numbers as an encore, a New York critic wrote: "Anna Zerr (shame to say) stooped to sing *Old Folks at Home*. One would as soon think of picking up an apple-core on the street." *Dwight's Journal of Music* remarked: "We wish to say that such tunes are erroneously supposed to have a deep hold of the popular mind; that the charm is only skin deep; that they are hummed *without musical emotion*, whistled 'for lack of thought'; that they persecute and haunt the morbidly sensitive nerves of deeply musical persons; that such melodies become catching, idle habits, and are not popular in the sense of musically inspiring, but that such and such a melody *breaks out* every now and then, like a morbid irritation of the skin."

A STATUE OF STEPHEN FOSTER, IN PITTSBURGH

Your modern composer of popular hits is as a rule a "natural musician," and in that category Stephen Foster surely belongs. Irving Berlin still picks out his melodies on the black keys of a piano which, with the help of modern science, automatically transposes them into the right key at the touch of a lever. Few if any of our "hit" writers are able to make a practical orchestration, and most of them leave even the simplest of piano arrangements to workers in the cubby-holes of the publishers.

These composers all started playing "by ear," and many continue to do so by choice. They are generally infant prodigies, like the majority of serious musicians, delighted to find in time that their talents have commercial value.

A Born Wonder Child

FOSTER HAD A SIMILAR BACKGROUND, musically, and although he went further than the average song writer of to-day, he never arrived at anything approaching the technic of a Gershwin or a Victor Herbert. A "Yankee Doodle boy," he was born on the Fourth of July, 1826, the same day that Thomas Jefferson and John Adams died. At the tender age of two he picked out chords on a guitar on the floor, calling it his "ittly pizani." At seven he surprised a Pittsburgh music dealer by experimenting briefly with a flageolet and almost immediately playing *Hail, Columbia* without a mistake.

Later he became a more than adequate performer on the flute, piano and violin, with some skill on the banjo and guitar, for the most part self-taught. He could write out his melodies without the help of an instrument, and could harmonize them in the form of a simple piano accompaniment, but he never attempted a more elaborate instrumentation or a development of his impromptu themes into the larger forms of music.

The Foster family, respectable business people, living on the outskirts of Pittsburgh, must have been aware of Stephen's gifts, but seem to have done little to encourage them. At nine he was allowed to sing *Jim Crow* and other negro ditties in an informal stock company, with an actual cash return of a few cents a week. His first composition, written at the age of thirteen, was the faintly saccharine *Tioga Waltz*, for four flutes. At sixteen he wrote his first song, *Open Thy Lattice, Love*, musically far better.

There are accounts of his playing variations on the flute while others sang his songs, which would make Foster a rather dignified pioneer of modern swing. His brother Morrison, naturally inclined to sentimentalize the family genius, credits Stephen with studying the scores of Handel, Mozart and Weber, and adds that he would "improvise by the hour beautiful strains and harmonies which he did not preserve, but let them float away like fragrant flowers cast upon flowing water." From contemporaries come fleeting descriptions of the composer "swaying rhythmically" and sometimes weeping as he played the piano. His mature voice has been called a pleasant baritone, and he was evidently unrivaled in the singing of his own songs.

He was a sensitive, emotional boy, easily moved to tears. There is much emphasis on his physical courage, proved in rough and tumble fights with street rowdies. Contemporary portraits dwell upon his brilliant, deep brown eyes, his thick, black hair, and the appealing expression of his hook-nosed, rather lantern-jawed face. Some Italian blood on his mother's side may have accounted for these characteristics, as well as for the gift for music.

Like most musicians, past and present, young Steve had to try his hand at something "useful" before he was allowed to devote himself to the thing he did best. He acted as bookkeeper for his brother Dunning in Cincinnati, and it was there that he made his first attempts to break into the field of the professional showman.

The modern song writer has the greatest difficulty in emerging from the amateur class. He is constantly told to "get a reputation," or, more directly, "get someone to sing your songs." Stephen Foster had the same problem in 1840. But at least there were companies of "Ethiopian Singers" traveling about the country, and if one hung around the stage door, it might be possible to persuade some minor artist to accept a manuscript for trial.

An Unprincipled Musical Theft

IT WAS THUS that M. J. Tichenor, of the Sable Harmonists, acquired the first copy of *Oh! Susanna*, when the composer was only twenty-one. But Stevie also gave a copy to George N. Christy, "Professor of the Bone Castanets," who calmly turned it over to a New York publisher, with his own name on the cover and no mention of the real composer.

A Louisville publisher named Peters brought out both *Oh! Susanna* and *Old Uncle Ned* "as a favor." Foster never got a cent from these popular hits, but they made over ten thousand dollars for Peters and set him up permanently in the music business. Similarly Firth, Pond & Company, who became Foster's regular publishers in time, acquired *Nellie Was A Lady* and *My Brudder Gum* by merely giving the composer fifty copies of each song.

Foster had that inherent naiveté that marks most of our popular composers, evidently essential to the production of terrific hits, but equally likely to produce terrific absurdities. Like the leaders of to-day's hit parade, Foster contributed his full share of both. He drew upon his own experience for subject matter, sometimes even permitting himself that artificial nostalgia which has produced so many songs about places which their creators had never seen and probably never wanted to see.

Old Folks at Home is itself an example of the unnatural geography that has at various times glorified Dixie, New Hampshire, California, Michigan and other places innumerable. Foster's original manuscript shows the name of the Pedee River, which obviously invited ridicule. His brother suggested Yazoo, which was even worse. Finally they took out a map of Florida, and a roving finger eventually stopped at the name of Swanee, an insignificant and by no means glamorous stream. "That's it," cried Steve, "that's it exactly"; and so the Swanee River became immortal. But the difference between *Old Folks at Home* (one of the world's most popular songs of all time) and the nostalgic outbursts of Tin Pan Alley is that Foster actually loved his own home to the point of adoration, and could express that love sincerely and convincingly, regardless of names or places.

Some Interesting Origins

IT HAS BEEN PROVED that he did not write *My Old Kentucky Home* at Federal Hill, in Bardstown, although he definitely visited it during his youth and must have had it in mind when the title came to him; nor is it true that his relative, Judge Rowan, the master of Federal Hill, was the object of negro grief in *Massa's in de Cold, Cold Ground*. These stories are preserved for the edification of tourists, and there is no harm in them.

But the many feminine names that adorn the Foster songs all have a biographical significance, headed by *Jeannie with the Light Brown Hair*, who also appears several times as Jennie, and is unquestionably Jane McDowell, daughter of a Pittsburgh physician, and responsible for one of Stephen's tenderest and most personal songs. He married Jane in July 1850, but the marriage cannot be called a happy one. The following April they had a daughter named Marion, and then drifted more and more apart. They tried living in New York, unsuccessfully, then boarded with the Foster family back at home, borrowing money from various members. Unsuited they may have been to each other, but it was during one of their temporary estrangements, when Stephen was living in New York, that he wrote *Jeannie with the Light Brown Hair*, perhaps more nearly an art song than any of his others.

Old Black Joe was an actual Negro slave in the McDowell household, and other characters in the Foster songs can be similarly identified. Even *Old Dog Tray* had a living model in a rather worthless hound presented to Stephen by a friend.

A Comfortable Income

IT IS A MISTAKE to suppose that Stephen Foster was unable to make a living by his song writing, or that poverty drove him to drink. By 1849 Firth, Pond & Company agreed to pay him two cents a copy on all his songs, and for the next ten years or more his income averaged at least fifteen hundred dollars annually, a respectable sufficiency in those days. Unfortunately, however, financial security made him lazy and careless. Only when he did not know where he would earn his next dollar could he work effectively.

His publishers were good-natured, and Foster constantly drew royalties in advance. When he fell too far behind, he would sell out all future rights in a group of songs for a flat sum.

Once launched as a professional composer, Stephen continued to follow lines that run remarkably parallel to those of modern tunesmiths. But where modern song writers and publishers indulge in the frankest bribery of performers and band leaders to secure "plugs" for their works, Foster was lucky in usually having at least a singer in readiness to pay for a "first performance." For the miserable sum of fifteen dollars he permitted E. P. Christy to have his name published as the composer of his finest song, *Old Folks at Home*. The falsehood was corrected as soon as Foster found what an enormous hit he had produced, but as late as ten years after the real composer's death, the name of Christy still appeared unchallenged on some publications of *Old Folks at Home*. All too often to-day credit is given to a "plugger" instead of to the actual creator of a song

An Orginal Creator

FOSTER'S METHOD OF COMPOSING was modern. The question is often asked, "Which comes first, the words or the music?" With songs of the widest and most immediate appeal, the two seem as a rule to have come simultaneously. But where the composers and lyricists of Tin Pan Alley work best in collaboration, Foster himself supplied both words and music. He would start with a phrase or a title, fully clothed in tones, as Berlin arrived at such musical slogans as *What'll I Do?* or *All Alone*. He is described as writing down words and music together, phrase by phrase whistling as he worked, and thus arriving gradually at "one harmonious whole."

Attempts have been made to prove that Foster borrowed his best melodies. Will Hays, a rival, claimed that he had a whole book full of German tunes, which he used freely. This is a ridiculous charge, although as a boy Stephen frequently heard Negroes singing in church, and later used some of the strains that he remembered. The tune of *Camptown Races* is practically identical with a folk song called *Hoodah-day*, but it is not certain which came first. On the other hand, Foster always insisted that his own *Ellen Bayne* had been stolen for the tune of *John Brown's Body*. When a man writes in such universal patterns of melody, the question of originality is not important.

The Lights Grow Dim

THE AMAZINGLY CONSISTENT RECORD of Stephen Foster as a popular song writer is completed by the manner and the mystery of his death. Little is known of the details of his later life in New York. He seems to have buried himself in the big city in a desperate effort to regain a foothold in the world of music. Tradition has long decreed that popular song writers die in obscurity. The men who wrote *Sidewalks of New York, Ta-ra-ra-boom-dcay* and *A Hot Time in the Old Town Tonight*, Blake, Sayers and Metz, were unknown to the American public, even by name, when they passed from the picture not long ago.

Nobody seems to have paid much attention to the man, still in his middle thirties, who walked the streets of New York between 1860 and 1864, peddling his songs where he could, and spending most of his earnings on drink. Foster had gradually lost control of his best sellers through the habit of selling out for a lump sun when he needed ready cash. His publishers no longer were willing to advance him money, and his creative gift had sunk to a low ebb.

Old Black Joe, the last of Foster's really successful songs, was copyrighted two days after Lincoln's election in 1860. From then on he seemed unable to produce anything above the average, and most of his attempts were pitifully weak. Wracked by the fever and ague of malaria, he found his only bodily and mental comfort in drink, and he drank as heavily as his income would permit.

Like many a modern composer whose inspiration has left him, Foster tried to revive a waning interest by the musical treatment of current events. But even his war songs were mostly conventional. There is no evidence that he made any attempt to get into active service during the Civil War, but his sympathies were with the North, in spite of the definitely southern atmosphere of so many of his songs.

The painful record of those final years can be read only in his songs. His once fine and straightforward sentiment turned into mawkish sentimentality. He no longer trusted his old power to weld the words and the music together, but allowed others to write his texts for him. Perhaps the most tragic failures were his attempts at comedy, so far removed from the effervescent absurdity of his youthful *Oh! Susanna*.

In the last three years of his life Foster turned out nearly a hundred compositions, all created in the most wretched surroundings. The utter collapse of his inspiration seemed to make him all the more prolific. Most of these songs were sold outright for whatever he could get.

George Cooper, later well known as a writer of song texts, who collaborated with Foster in some of these declining efforts, tells of one of their quick sales. They had just finished *Willie Has Gone to the War*. Stephen "rolled it up and tucking it under his arm, said, 'Well, what shall we do with this one?'" It was a cold winter day, with snow falling and the streets covered with slush. Stephen's shoes had holes in them, but he did not seem to notice it. They walked up Broadway together, and as they passed Wood's Music Hall the proprietor hailed them from the lobby. "What have you got there, Steve?" The song was immediately sold for twenty-five dollars—ten dollars in cash and fifteen dollars more at the box office that night.

It was in a run down grocery store at the corner of Hester and Christie Streets that Foster passed most of his last days. The back room was fitted up as a saloon, and there he spent what money he had on liquor, generally a cheap French rum mixed with sugar. Several visitors to the store speak of meeting him in the same spot. He wore "an old glazed cap," and his face "might have been that of a man of fifty instead of one in his middle thirties." They mention his "anxious, startled expression" and the "soft brown eyes, somewhat dimmed by dissipation." But Cooper insists that Stephen was never really intoxicated, although he drank steadily as long as his money held out.

The Curtain Falls

FROM A BOWERY LODGING HOUSE, Cooper received a message on January 12, 1864, that "his friend" had "met with an accident." (Foster was ill and undernourished and fell over the washbasin in a sudden fit of dizziness.) "I found him lying on the floor in the hall," says Cooper, "blood oozing from a cut in his throat, and with a bad bruise on his forehead. Steve never wore any night clothes, and he lay there on the floor, naked, and suffering horribly. He had wonderful big brown eyes, and they looked up at me with an appeal that I can never forget. He whispered, 'I'm done for; and begged for a drink; but, before I could get it for him, the doctor who had been sent for arrived and forbade it. He started to sew up the gash in Steve's throat, and I was horrified to observe that he was using black thread. "Haven't you any white thread?" I asked, and he said no, he had picked up the first thing he could find. I decided the doctor was not much good, and I went downstairs and got Steve a big drink of rum, which seemed to help him a lot. We put his clothes on him and took him to the hospital. In addition to the cut on his throat and the bruise on his forehead, he was suffering from a bad burn on his thigh, caused by the overturning of the spirit lamp he used to boil water. This had happened several days before, and he had said nothing about it, nor done anything for it. All the time we were caring for him, he seemed terribly weak, and his eyelids kept fluttering.

"I went back again that day to the hospital to see him, and he said nothing had been done for him and he couldn't eat the food they brought him. When I went back again the next day they said 'Your friend is dead.' His body had been sent down into the morgue, among the nameless dead. . . . I went around peering into the coffins until I found Steve's body."

It was Cooper who notified Foster's family. The newspapers seem to have carried no notice of the composer's death. In his pocketbook they found thirty-eight cents and a slip of paper bearing the words "Dear Friends and Gentle Hearts." Was it perhaps the germ of a song that would have brought him the sympathy and support he so greatly needed?

Stephen Foster remains a typical popular songwriter, regardless of time or changing conditions. But, unlike most of Tin Pan Alley's output, his music is as alive to-day, and as universal in its appeal, as though his simple spirit had not been snuffed out at the age of thirty-seven. A popular composer becomes classic through the test of time, and by that test the songs of Stephen Foster are established as unquestioned classics of their kind.

The December issue of The Etude will present many "Christmasy" features, which our readers, the world around, will surely find especially welcome this year.

What Music in Sing Sing Prison Means in the Lives and Reclamation of Many Inmates

By STEPHEN WEST

THE MOST WIDELY KNOWN penal institution in the world devotes an important part of its rehabilitation program to music—the kind of music which the inmates make with themselves as active participants. This is not accidental. At Sing Sing Prison music is regarded as something more than mere fun or pastime. It is felt to play a vital rôle in modern, progressive penology.

Warden Lewis E. Lawes, distinguished for his humane methods of dealing with the offenders against society who come under his care, and for his pioneer work with the theory that it is more important to society to reclaim these men than to punish them, expressed his views, as here presented, on the salvaging value of music in institutional routine.

"Our inmates are encouraged to turn their attention to music," says Warden Lawes, "because music helps them to become men again. I believe that musical activity serves a threefold purpose in an institution of this kind. It improves the morale of the men by encouraging them to keep a hold on better things; it provides them with the sort of entertainment that points upward instead of downward; and it offers them the chance of learning something worthwhile—something they can take a hand in themselves and which will therefore remain with them as the most accessible portion, perhaps, of every man's rightful heritage of spiritual worth.

"It is a profound mistake to deprive social offenders of the very things that can be of greatest use to them in helping them to find their places again in the pattern of socialized living. For the average inmate the very fact of being locked up behind bars is punishment enough. Unless a man shows himself to be an unusually hard case, I prefer to inflict no further punishment upon him. Instead, I like to prepare, from the day of his entrance here, to refit him for useful living. It is our hope that ninety-five percent of the men will one day take their place in the world again, and the process of making them ready to do so cannot begin too soon.

"Our best chance of accomplishing this lies less in an external imposing of authority than in bringing the men to look inward upon themselves and realize why they are here at all. Introspection is much more valuable than chain gang methods. And in inducing this attitude of self-realization, we have found music to be of great value.

Music a Refiner

"IT IS DIFFICULT to explain why these things are true; but the nature of music is the best explanation. We have other educational and spiritual activities at Sing Sing. We have an excellent school, a well stocked library, religious teachings of all denominations, and a course of lectures on politics, adventure, active personal experiences, and the like. But music is different from any of these. The books our inmates read and the lectures they hear bring them only the message which the authors and the speakers mean to put there. Music brings something more than this deliberate meaning. Music brings to each man what he needs most, and it gives him something personal to build upon. One man may hold his head higher when he hears some spirited rhythm; another may find his way back to long forgotten associations when he hears a melody his mother used to sing; a third may be inspired by the fact that Beethoven worked under a great physical handicap; a fourth may be awakened to a new realization of values by the stirring harmonies of rich chords. All of them find new incentives and new courage in listening to music and taking part in it. That is why musical activity is one of the most important parts of our program. I believe that it should be made an important part of the rehabilitation program of every penal institution.

"It will interest you to know that we have never had an active and accomplished professional musician among our inmates. We have had plenty of men who played at music in a desultory fashion, just as we have had a good share of broken-down prize fighters. But, in both fields of activity, the men in active training keep out of Sing Sing. I believe there is a sound reason for this. Men who think enough of their bodies to keep fit for hard sports, and men who think enough of their souls to keep fit for music, seldom fall prey to the temptations which convert men into prisoners. For that very reason, we encourage both sports and music in order to convert the prisoners back into men."

In Sing Sing, music is under the charge of a civilian director, Mr. Paul E. Clifford, veteran bandmaster, who began his career at the age of eight in England, served as bandmaster in the British Army, became a member of Sousa's Band, and later acted as bandmaster for the New York Police Department, the Knights of Columbus, and the Federation of Jewish Charities. Mr. Clifford plays all the instruments himself, gives the inmates instructions in them, directs the rehearsals and performances of the various musical groups, and provides the more ambitious of the men with special lessons in theory, harmony, and composition. Mr. Clifford has been in charge of Sing Sing's music for nearly five years.

Before the advent of Mr. Clifford, the institution's music was in a haphazard state, depending upon the interest (and the length of sentence) of such inmates as knew enough and cared enough to take charge. Warden Lawes' very positive views on the value of music as a character stimulant, however, determined him to give the men the advantage of continued and uniform instruction of the same high type as can be found in our leading conservatories. The only "revolution" which Sing Sing may be said to have undergone, under Warden Lawes' direction, is Mr. Clifford's revolutionizing of the institution's music.

A Working Organization

TO-DAY SING SING HAS FOUR separate and well organized musical groups: a band of seventy-five, an orchestra of twenty, a bugle corps of twenty-two, and a Glee Club of sixty voices. Some of the musically minded inmates take part in more than one of these groups, and several have made their own instruments. All devote themselves to their task with an enthusiasm that makes their playing noteworthy beyond the point of sheer curiosity.

All of the inmates (except those under sentence of death) are eligible for the musical groups, regardless of their offense or of the length of their terms. Mr. Clifford depends on volunteer service entirely, and finds himself confronted with a waiting list that only a lack of instruments compels him to maintain. If Sing Sing had more "things to play on," the musical groups could easily be doubled.

Some of the men come with preliminary musical training, some are fairly expert, while not a few find their interest stimulated for the first time by hearing what the others can do. Then they come to Mr. Clifford and ask him to begin their instruction. Some of to-day's most proficient performers began work under Mr. Clifford, without the first notion of breath and finger control or the meaning of notes. It generally happens that the men of this class learn more than one instrument, and keep on with their playing after they leave Sing Sing. Warden Lawes tells of an experience he had while visiting Dublin three years ago. A man who was earning his living in a professional band saw the Warden, hailed him with joy, and recalled himself as a former prisoner who had known nothing whatever of music when he entered Sing Sing, had studied under Mr. Clifford, and was now able to support himself with music.

LEWIS E. LAWES
Sing Sing Prison's Internationally Famous Warden

The men assigned to band duty work at music exactly as the other inmates work in the prison shops. Music is their job, and they have constant practice. At the end of the great recreation room is a large enclosure called the Band Room, where Sing Sing's musicians come together every day, from eight to twelve and from one to three-thirty, for individual practice and group rehearsals. All work is done under Mr. Clifford's supervision; and practice instruments are not carried to the cells. Mr. Clifford has no assistants. He gives personal directions as to all practice, takes charge of all rehearsals and all lesson giving; so that the men thus have the advantages of unified, unmuddled instruction. While one group is being drilled, the others go off by themselves and practice their individual parts. There is study of scales and exercises, and in the full repertory of the music library, a collection of over two hundred pieces, all of which are called by catalog number and "on tap" with remarkable facility. The writer was afforded an opportunity of hearing the Sing Sing Band play the *First Movement* of Schubert's "Unfinished Symphony," on short notice and without any preliminary rehearsal. Men of all ages and races, bound together by the gray prison uniform and an urge to make music, took their places in a semi-circle in the Band Room and gave a performance which needs no charitable tempering of judgment to rank it with those of our first class professional bands.

Before the final chords, Mr. Clifford called, "Come on, now, boys—all together." And the "boys," some gray haired, came on all together, and the listeners wanted to cheer.

A Man's a Man for a' That

AS TO DISCIPLINING this group, both Warden Lawes and Mr. Clifford proceed on the theory that every man deserves to be treated as a gentleman until he proves himself in need of different management. Mr. Clifford has yet to assert any authority more forceful than gentlemanly suasion.

These musical units are an integral part of prison life. The orchestra gives institutional concerts. The band gives concerts and plays at the summer reviews and the athletic meets. The Bugle Corps plays for the marching in to meals. The Glee Club takes part in the religious services and gives choral concerts of its own. All the

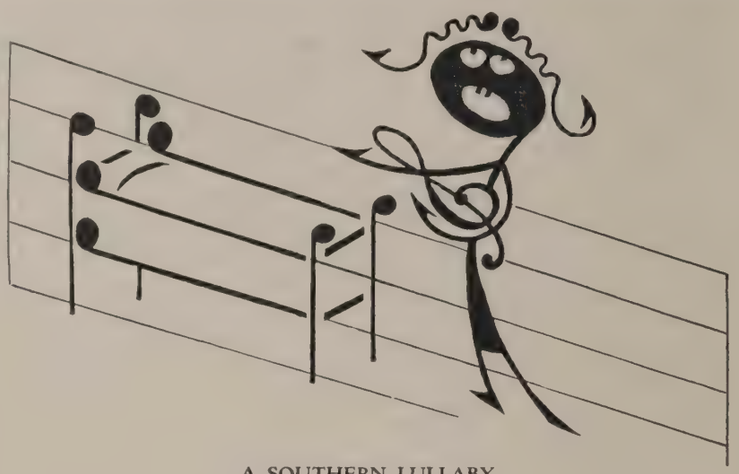
THE BAND AT SING SING
Paul E. Clifford, civilian bandmaster, seated in front row

units are on call for special occasions, and great enthusiasm resulted when the National Broadcasting Company brought in microphones and sent the *Soldiers' Chorus* from "Faust" out over a nation wide hookup. These institutional performances are of great importance. Nearly two hundred of Sing Sing's inmates engage in making music; and over two thousand others listen to the music these make and derive solace and encouragement from it. Mr. Clifford intersperses his concert numbers with brief talks on music, musical "schools" and styles, and the lives of the composers; and all of Sing Sing becomes a most interested class in music appreciation. And the facts which the men learn remain with them.

The instruments are housed in Mr. Clifford's office, off the Band Room, and the music library is stored there, the pieces neatly mended, stacked and accessibly cataloged. New music would be most welcome, along with new instruments. As yet, the state provides neither.

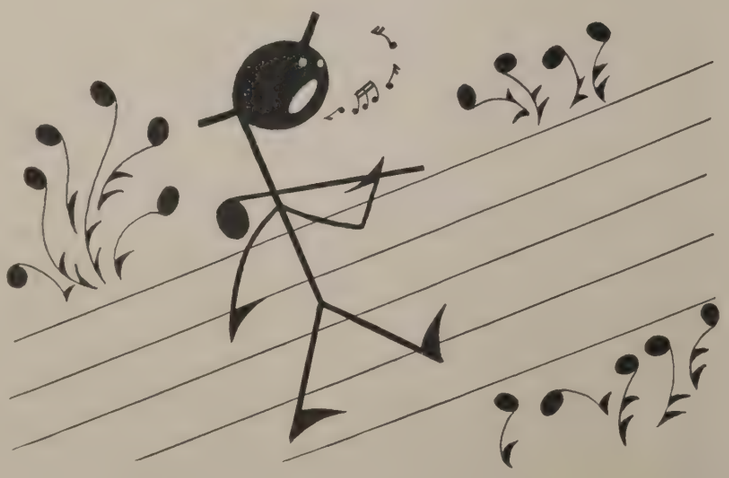
From Sing Sing to Paying Positions

ANOTHER INTERESTING FEATURE of Sing Sing's musical life is the private instruction which Mr. Clifford provides in musical theory. The men are not compelled to study. They come as volunteers, and there are many of them. Mr. Clifford arranges the work in single progressive lessons, individually mimeographed, which the men take to their cells at night, to study until "Lights Out" sounds. They bring their lessons to Mr. Clifford in the Band Room the next day, for individual correction. Mr. Clifford encourages work of this kind; "it keeps the boys from thinking of things that might not be as good for them as intervals and chord progressions." While most of the musical interest centers in the active playing, very notable results have come out of these private lessons in harmony. And among the most zealously played marches are several which were composed after hours, in the cells of Sing Sing. The regular repertory consists of marches, waltzes, hymns, overtures, symphonic movements, and operatic selections. Opera seems to be the most popular. Several candidates for first instruction have presented themselves as a result of hearing "the other guys" play "grand opera." The personnel of these musical groups displays a wide variety of age and race. The band which the writer was privileged to hear had in it more young men than old, with the largest proportion of Italians, with Jews and colored men next in order.



The men's course of musical training depends, of course, on the length of their sentences. There are two "lifers" in the band, with the sentences of the others ranging from two to twenty-five years. When band members come out of Sing Sing, Mr. Clifford makes every endeavor to gain them admission to the musical union, after which he tries to find employment for them as professional musicians. In the five years he has been in charge of Sing Sing's music twelve of his men have been placed in regular union jobs. In view of the time element, which is of first consideration, this average is a high one.

Under the encouragement of Warden Lawes and the supervision of Mr. Clifford, music in Sing Sing means pleasurable activity, either active or passive; educational uplift; and spiritual rehabilitation for more than two thousand men. It would be an excellent thing for other penal institutions to follow Sing Sing's example in this respect. And it is a still better thing to remember that "men who think enough of their souls to keep fit for music, seldom fall prey to the temptations which convert men into prisoners."



Music stands in a much closer connection with pure sensation than any of the other arts.—H. von Helmholtz.

A SONG OF THE OPEN ROAD

A SONG OF THE SEA

Radio Flashes

By PAUL GIRARD

FOR ITS FIFTH YEAR on the air, the Ford Sunday Hour expects to present an impressive season, with American and continental opera stars, including many new to the American radio and concert world, and with popular conductors of famous American Symphony orchestras. The Ford Sunday Hour, which returned to the air on September 11, is heard at the same hour as last year, 9:00 to 10:00 P. M., EST., Columbia Broadcasting System.

The array of artists is most imposing. Besides a long list of singers, conductors John Barbirolli, José Iturbi, Eugene Ormandy, Fritz Reiner, Wilfred Pelletier, and Franco Ghione will officiate over the large orchestra. Mr. Ormandy conducts the first eight concerts emanating from Detroit's Masonic Auditorium. With him during October will appear the following artists: Beniamino Gigli, October 2; Bidu Sayao, October 9; Richard Crooks, October 16; and Lawrence Tibbett, October 23. Besides the soloists and the orchestra, a mixed chorus of twenty-six voices is heard on the program, and Mr. Cameron again talks on topics of current interest.

When Fred Waring and his Pennsylvanians return to the airways on October 8 (NBC-Red Network, 8:30 to 9:00 P.M., EST.), his organization will be reënforced by an *a capella* choir of twenty men. Waring, already known for his emphasis on glee club work, plans a youthful choir, composed of men with previous college glee club or similar experience. This new choir will be heard in a series of arias from operas as well as the best in the semiclassic and popular field.

The Negro choral group, Men of Harmony, heard over the NBC-Red Network, Thursdays at 5 P.M., EST., has an unusual way of arriving at harmony. Every man is recognized as an arranger in his own right, and when a new arrangement is planned, the procedure by which harmony is attained is anything but harmonious in the beginning. The seven members of the group gather round a long table where they inharmoniously "argue and fuss," as one member says, until the arrangement is harmoniously satisfactory to everyone. Sometimes these harmony meetings last until the small hours of the morning. Men of Harmony specialize in old Negro spirituals; they have been most popular with universities and colleges. They have traveled throughout the United States for the past seven years, and have given concerts in twenty-one European countries.

The Lux Radio Theater, heard Mondays from 9:00 to 10:00 P.M., EST., Columbia Broadcasting System, began its fourth year on the air on September 12th. This program presents famous stars of stage and screen in hour long radio dramatizations of motion picture successes. The adaptations are produced by Cecil B. DeMille and are among the better broadcasts of this type.

A musical laboratory for jazz has been created by Raymond Scott, noted for his unusual jazz compositions such as *Powerhouse*, *Twilight in Turkey*, at the Columbia Broadcasting Studios in New York. It is a well known fact that the mechanics of broadcasting impose limitations on a composer; but, "much more important," says Scott, "they offer a world of amazing possibilities for fresh musical sounds." He hopes to assist the serious musician as well as the popular musician through his experiments. According to Howard Barlow, Musical Director of CBS, the technic of jazz orchestrators has provided something of a model for the serious composer in writing to suit the strictly modern demands of broadcasting.

Madrigals of the Days of Good Queen Bess

Polyphonic Masterpieces of the Elizabethan Era Formerly Heard by Few But Now Heard by Millions Over the Radio

By MARION BERGMAN, A.M.

THE TERM "MADRIGAL" refers to a specific type of secular composition, written for two or more voices, which attained its highest development in Elizabethan England. It evolved during the fifteenth and sixteenth centuries, in that era of expansion and development in every line of activity and endeavor throughout the whole of Europe. The origin of the word may be traced to the Italian word, *matricale,* meaning "mother song (or folk song)." This, in turn, is a descendant of the Latin *cantus matricalis* having the same meaning.

Madrigal composition made its first appearance about 1340. Its direct ancestor is the ancient *conductus* of the late twelfth and thirteenth centuries. This was a form of polyphonic composition, in which the *canto fermo* was not derived from the plain song of the Church. It was an original secular theme, or popular melody, in triple time, one or more parts being added by way of descant. The texts were varied. Many were of an amorous nature, some had satirical and political implications. Others mirrored the ordinary activities of the daily life of the period. Italian composers, of the thirteenth and fourteenth centuries and onward, devoted much time to this type of composition. The term *madrigal,* however, was not used at the time.

Petrarch was a poet whose texts were very popular. However the conditions of social life in Petrarch's day were very different from those of the Renaissance, when the madrigal type of writing received its greatest impetus; and this led to great affectation of style. This was remedied by Bembo, the greatest literary authority of this period. He came to the rescue and established the style of text followed by the later madrigalists—that the madrigal is bound by no rule as to the number of its lines or the arrangement of its rhymes. It usually consisted of a short poem, rarely exceeding twelve lines. Its rhymes could be arranged as the poet pleased, provided that the last two lines, which generally formed some sort of pointed *coda,* should rhyme together. The lines were free as to length.

By the end of the sixteenth century the works of the Italian and Flemish composers represented the most daring advance of madrigal composition. Usually the counterpoint was quite elaborate. Josquin de Près was the modernist of his time; and it is due chiefly to his influence that from his time onward secular music maintained its own independent life as free composition and did not consist merely of the harmonization of traditional tunes.

This movement, coupled with the improved choice of texts, made the madrigal type of music known as the *frotolla* the musical expression of the highly cultivated life of the small Italian courts; and so a definitely aristocratic type of music was created. The Netherland composers brought to it the contrapuntal technic of the motet, in which they excelled at the time. This technic soon adjusted its paces to the swift and supple rhythms of the new Italian poetry. Innumerable madrigals were composed for social events of the time, such as weddings, festivities held in honor of noted guests, and so on. Among the composers prominent in madrigal writing were Orlando Lasso, Arcadelt, Willaert, Palestrina, and Gabrieli.

The typical secular composition of this period was for five voices, which not only enriched the harmony but also allowed of frequent division of the singers into opposing groups. Counterpoint became the willing servant of emotional expression. Phrases were broken up by rests which emphasized the rhetoric of the words; and both words and music acquired a skillful technic of manipulation.

Traveling direct from Italy to England, this type of composition beame very popular with British composers. As early as 1500 a group of English composers had been writing three and four part secular vocal compositions, in a manner closely related to the later madrigal, though not yet known by that name. The folk song strain is very evident in the music of this early period. The style and harmonies, however, have an antique flavor that contrasts in a marked way with the Elizabethan madrigals. Even gay subjects are treated to the same sort of composition as those for the Church.

This is not surprising. The primary and adolescent stages of our musical civilization were entirely in the hands of the Church and were limited to the vocal variety. The art of combining melodies was discovered in the monastery; and rules and regulations for their use were developed within its walls, for the liturgy and ritual of the Church.

Music is a natural expression of the emotions of mankind, and human beings always have sung. To be sure, with the primitive peoples, the singing may be only a grunt; but it constitutes the germ of the highly complex music of to-day. Music has been throughout the ages predominant in the ceremonies and recreational activities of the various races of the earth. It was danced to as well as sung. Some authorities claim that the game of ball formed part of the performances, and derive the etymology of the words "ballet" and "ballad" from the root of "ball." With the passage of time, song and dance went their own respective ways, each developing an independent and separate existence. The words, "ballet" and "ballad" became differentiated, the former being applied to the dance, the latter to song.

In the ballad, words were the prime consideration. The ballad was the equipment of the bard, the minstrel and the troubadour. Indeed, in the early centuries the bard would recite the achievements of the chieftain and his ancestors on the battlefield, to arouse the warriors to greater deeds of valor. Very often, the bard was escorted to the battlefield by a group of harpers, who accompanied his narrative with the same inspiring effect as a modern brass band contributes to a football squad.

Minstrels and troubadours recounted their adventurous wanderings to eager ears. They were welcome everywhere. In the castle, the humble hut, yes, even in the monastery their visits were most cordially received. While there is no historical record available to prove that the lilt and vigor of minstrelsy injected new life into the austere style of the Gregorian chant of the early Church, or that the troubadour enriched his simple lute accompaniment with the polyphonic idiom of the clergy, it is a fact that, sometime after the late twelfth century, the music of the Church acquired more variety, and the simple songs of the troubadour and of the people were beginning to be interwoven with other melodies, after the contrapuntal manner of the ecclesiastical modes.

As various schools of music composition developed, the ecclesiastical style of composition was modified in accordance with the ideas of the composers. As previously indicated, we find Josquin de Près, the first composer whose music appeals to the modern sense, using counterpoint as a means of emotional expression.

When the madrigal type of composition became "naturalized" in England, the English language imposed its own rhythms, and English surroundings affected the style. The old Italian *frotolla* bore the stamp of the palace. Its expatriated English cousin, the madrigal was developed amid the atmosphere of the English manor and achieved its highest perfection during the time of Queen Elizabeth.

It is interesting to note that it was a layman who did much to popularize the Italian type of secular composition in England. Nicholas Yonge was a lay clerk of St. Paul's Cathedral in the early sixteenth century, and made a practice of hav-

THE DISGRACE OF MUSICAL IGNORANCE

In the time of Queen Elizabeth it was considered a disgrace for a gentleman not to be able to play an instrument or to sing creditably at sight. The singing of madrigals became a regular part of the social life of the day. Various groups of expert singers have revived this delightful art; and now millions, who never before heard a madrigal, hear them frequently over the air.

MADRIGAL SINGERS IN THE SIXTEENTH CENTURY
From a painting, known as "A Musical Entertainment," made about 1540, by Florigerio

MADRIGAL SINGERS OF TO-DAY
"The English Singers," a highly lauded group, which last toured America as singers of madrigals.

ing music books sent to him, at regular intervals, from Italy. He established the custom of gathering "a great number of Gentlemen and Merchants (as well of this realme as of forreine nations) . . . for the exercise of Musicke daily." This was perhaps the first "Madrigal Society in England. He is credited with publishing a set of "part books" ("Musica Transalpina") which contained a varied and representative collection of contrapuntal Italian secular songs adapted to English words.

Music was received in great favor at the court of Elizabeth. She set aside fifteen hundred pounds yearly for this purpose. Her father, Henry VIII, was also a great lover of music, and did much to encourage it. He not only was a spectator in the musical activities of his court, but on many occasions was an active participant. The royal sanction naturally was most encouraging to the composers of the time, and developed a notable group including Byrd, Weelkes, Morley, Gibbons, and others, all noted for their madrigal writing. The common people also had their music, but this consisted principally of songs to texts of their own composition, and the country dances with which most of us are familiar.

There was, during the latter part of the sixteenth century a great growth of wealth and consequent luxury of living in England. This led to a display of vulgar ostentation: and there was considerable rivalry among the nobility and newly rich to keep up with Queen Elizabeth. Since music was a favorite of their Queen, all wished to follow suit.

Perhaps an effective way to obtain an idea of the way in which music functioned in the time is to describe a fairly typical well-to-do household. Breakfast usually came at six-thirty. The work of the day commenced rather early. The House of Commons assembled at eight o'clock. After breakfast the men would spend the morning in sports of the field, hunting, hawking, and practicing arms. The women would busy themselves with embroidery and other domestic occupations. Afternoons were spent in games or country walks. Many of the larger houses had tennis courts and bowling alleys.

The popular hour of the evening meal was five-thirty. It was after this meal that the mistress of the house would pass out the song books, or "part books" as they were known, being written in music in several parts for different voices. She would then call upon her guests to join the family in singing. In his delightful "Plaine and Easie Introduction to Practicall Musicke," Thomas Morley gives a true picture of the music situation in his day. According to him, it was regarded as an essential part of a gentleman's education that he should be able to take part in a madrigal at sight. Morley gives an account of the predicament of a guest whose education must have been neglected in this respect, for he refused to take part in the singing. "The whole company," the poor victim explains, "condemn me of discurtesie, being fully persuaded that I had beene as skilfull in that art, as they tooke me to be learned in others. But supper being ended, the Musicke bookes (according to custome) being brought to the tables, the mistresse of the house presented me with a part, earnestly requesting me to sing. But when, after many excuses, I protested unfainedly that I could not, every one began to wonder. Yes, some whispered to others, demaunding how I was brought up." To those acquainted with the intricacies of the English madrigal of this period, it is apparent that the knowledge of music must have been of a high order to be able to sing the various parts at sight.

Thomas Morley was perhaps, the most popular of the Elizabethan madrigalists. His style was very attractive and characteristically English. He delighted in using cheerful subjects, and his madrigals present many vivid and fascinating pictures of English country life in those fine days.

Thomas Weelkes and John Wilbye were young men in their early twenties when they produced their first sets of madrigals. Both of them were influenced in their musical style by the extremely chromatic modes of composition of some of the Italians. Their madrigals showed remarkable originality and daring, together with unusual emotional expression. Weelkes was also a very picturesque and dramatic writer of descriptive music. In his "Ayres or Phantasticke Spirites" of 1608, he showed considerable talent as a satirist.

William Byrd published in 1588 a collection of "Psalmes, Sonets and Songs of Sadness and Pietie," which are of great interest in depicting the trend of music during this period. In the "Epistle to the Reader" he writes: "If thou delight in Musicke of great compasse, heere are divers songs, which being originally made for Instruments to expresse the harmonie, and one voyce to pronounce the dittie, are not framed in all parts for voyces to sing the same. If thou desire songs of small compasse and fit for the reach of most voyces heere are most in number of that sort."

In an etiquette book of the time, "The Compleat Gentleman" by Henry Peacham, we learn that one of the fundamental qualifications of a gentleman was to be able "to sing your part sure, at first sight, withall to play the same upon your Violl or the exercise of your lute."

The more pretentious homes had a "musicyons gallery" overlooking the great hall. Hired musicians were part of the household and gave concerts which varied the "part-singing" of madrigals. Some of the household establishments maintained a resident Master of Musicke who directed the musical activities. There were no such things as public concerts in Queen Elizabeth's time. Concerts were held in the homes. Among the most popular were "consorts of violls." The composer, John Wilbye, was a famous Master of Musicke and served in the household of a wealthy wool merchant.

A popular mode of entertainment for the reception of Queen Elizabeth, when she was visiting different sections of the country, was to hold festivals for which

(*Continued on Page 764*)

Musicians of November Birth

By W. FRANCIS GATES

NOVEMBER, nature's usher to winter, has been also prolific as an usher to the world of music. Perhaps no other one month has been so liberal a donor of rare musical talents.

Of composers she has given Vincenzo Bellini and Gaetano Donizetti, two of the greatest and purest of Italian melodists; Jean Baptiste Lully, Italian-born founder of the French school of music, and François Couperin, his able standard bearer; Carl Maria von Weber, German founder of the romantic school of music; Karl Loewe, perfecter of the ballade for solo voice; whilst to Russia she has been bountiful in giving Alexander Borodin and Sergei Ivanovitch Taneiev; and to England, Sir Henry Rowley Bishop of *Home, Sweet, Home* immortality.

Of conductors, she has distributed internationally, Sir Julius Benedict, Hermann Levi, Eugene Ormandy, George Lennart Schneevoigt, and composer-conductor, John Philip Sousa.

Of pianists, there are at least two immortals, Anton Rubinstein and Ignace Jan Paderewski, with Alfred Reisenauer, Karl Tausig, Walter Gieseking, and Bernard Stavenhagen as brilliant co-stars in the constellation; José Iturbi, pianist-conductor; and Fanny Cäcilia Hensel, among the first to say to the world that "we feminine pianists offer something worth the hearing."

Of singers the list may well begin with Hans Sachs, that almost divinity of meistersingers; and with him are to be included the immortals, Lilli Lehmann and Mattia Battistini, with the addition of Emma Albani, Emma Thursby, Amelita Galli-Curci, Clarence Whitehill, Minnie Hauk, the legendary *Carmen*, and two unforgettable contraltos, Mme. Kirkby-Lunn and Mme. Scalchi.

Then the general list may close with Friedrich von Schiller, poet inspirer of musicians; Martin Luther, perpetuator of the chorale; two rare musical scientists, Herschel and Hellmesberger; and three musical philanthropists of deathless fame, Prince Rasumovsky, Hans von Wolzogen, and Henry Lee Higginson.

To America November has given with lavish hand, though space will allow mention of but a few not yet named. Of these we have such composers as Ethelbert Nevin and George Whitfield Chadwick; of teachers and writers, Daniel Gregory Mason, Peter W. Dykema and Arthur Elson; of conductors, Frederick A. Stock and Henry Russell; to which we add Theodore Steinway, genius of piano-making, for the gift of whom we must be forever grateful to the Old World.

A Natal Chronology

1st—Emma Albani (1852), Joseph von Blumenthal (1782), Eleonora de Cisneros (1880), William Henry Grattan Flood (1859), Alfred Reisenauer (1863)

2nd—Michail Cherniavsky (1893), Karl Ditters (von Dittersdorf—1739), Prince Andrei Kyrillovitch Razumovsky (1752), Vassily Sapelnikov (1868)

3rd—Vincenzo Bellini (1801), William Wade Hinshaw (1873), Antoine-Marcel Lemoine (1763)

4th—Lucienne Bréval (Bertha Brennwald—1870), Toscha Seidel (1900), Karl Tausig (1841)

5th—Edward Dannreuther (1844), Walter Gieseking (1895), Hans Sachs (1494), Clarence Eugene Whitehill (1871)

6th—James Duff Brown (1862), Beniamino Cesi (1845), William Ganz (1833), Ignace Jan Paderewski (1860), John Philip Sousa (1854), C. F. Theodore Steinway (Steinweg—1825), Nicola Aloysius Montani (1880)

7th—Ludwig Deppe (1828), Hermann Levi (1839)

8th—Arnold E. Trevor Bax (1883), Louise Kirkby-Lunn (1873), Georg Lennart Schneevoigt (1872)

9th—Jean-Baptiste-Théodore Weckerlin (1821)

10th—François Couperin (1668), Martin Luther (1483), Waldo Selden Pratt (1857), Friedrich von Schiller (1759)

11th—Elena Gerhardt (1883), Frederick A. Stock (1872)

12th—Alexander Borodin (1834), Gustav Merkel (1827), Patty Stair (1869)

13th—George Whitfield Chadwick (1854), Louis-James-Alfred Lefébure-Wély (1817), H. Brinley Richards (1817), Hans Wolzogen (1848)

14th—Fanny Cäcilia Hensel (1805), Johann Nepomuk Hummel (1778), Albert Jungmann (1824), Johann Ernst Perabo (1845), Henry Russell (1871), Gasparo Spontini (1774)

15th—Gervase Elwes (1866), Frank H. Grey (1883), Friedrich Wilhelm Herschel (1738)

16th—Frederick Scotson Clark (1840), Henri-Louis-Charles Duvernoy (1820), Minnie Hauk (1852), Paul Hindemith (1895)

17th—August Wilhelm Ambrose (1816), Gerhard Schjelderup (1859), Emma Thursby (1857)

18th—Sir Henry Rowley Bishop (1786), Arthur Elson (1873), Amelita Galli-Curci (1889), Otto Hegner (1876), Henry Lee Higginson (1834), Riccardo Martin (1878), Eugene Ormandy (1899), Carl Maria von Weber (1786)

(*Continued on Page 764*)

A REAL PIANO IN THE PLAY ROOM

A group of educators in the west sought a piano that the little child might have as its very own, and thus remove some of the possible awe or fear that youngsters sometimes have for the big keyboard. Here is such an instrument, with forty-four keys, in the play-room in London of little Sidonie Goossens, daughter of Eugene Goossens, conductor of the Cincinnati Orchestra. The instrument was made by Wurlitzer. Sidonie's parents state that the instrument has been most successful in the child's development and will be used until she is ready for a full sized piano. For centuries small-sized violins have been used by some teachers for little children, where the diminutive hand is incapable of using a large violin.

Four Portals to Piano Playing

Speed! Dynamics! Phrasing! Pedaling!

By RAYMOND MORIN

IT WAS EMERSON who said: "The artist who is to produce a work which is to be admired, not by his friends or his townspeople or his contemporaries, but by all men, and which is to be more beautiful to the eye in proportion to its culture, must disindividualize himself and be a man of no party and no manner and no age, but one through whom the soul of all men circulates as the common air through his lungs. He must work in the spirit in which we conceive a prophet to speak or an Angel of the Lord to act; that is, he is not to speak his own words or to think his own thoughts, but he is to be an organ through which the Universal mind acts."

Herein lies the pathway to artistic interpretation; and, likewise, the violation of this theory results in the failure of a performer to impart the true significance of a work of art.

One thing only proves beyond question the artistic merit of a work, and that is time. The history of any art shows that its development has been in cycles; that is, there has been a series of periods of experimentation, each one ending in a culmination. In each of these periods, form, style and content underwent a distinct metamorphosis. It is by looking back upon this clearly marked development that it can be determined whether a composer was an experimenter and an important contributor, or whether he was a culminator. What time has proven to be a work of art does not require the application of a performer's machinations, but authentic interpretation. Nor should any accepted work of art be employed for purposes of self-display. How can the real value of the work of an experimenter be determined, thereby permitting it to serve its important mission, if it is not performed as conceived by its composer? Robert Schumann said, "Consider it a monstrosity to alter or leave out anything, or to introduce any new-fangled ornaments in pieces by a good composer. That is the greatest outrage you can do to art."

A Dual Operation

THE CLOSE AFFILIATION between the construction of a musical work and its authoritative interpretation is evidenced by the fact that as changes occurred in methods of creating, corresponding developments took place in such elements as dynamics, pedaling, *tempo rubato*, and so on. Thus, outstanding musical interpretation of a musical work is largely dependent upon:

1. A knowledge of the period during which it was created.
2. A familiarity with the personality of its composer.
3. An awareness of any traditional characteristics.
4. An adequate technical proficiency.

The first three of these factors are almost entirely acquired by means of supervised personal research; and the fourth factor, technical proficiency, involves the four vital elements in interpretation—Speed, Dynamics, Phrasing and Pedaling.

This first vital element in interpretation, for our consideration involves problems of a rhythmic nature. Chief among these are: 1. The determining of speed. 2. Ritards and accelerations. 3. Pauses. 4. *Tempo rubato.*

The indication of the composer and sometimes a metronomic mark are the two most common clues in determining speed. The former is hardly infallible, for how is one to know the exact speed a composer had in mind when he marked a composition *andante* or *moderato?* The metronomic mark bears a definiteness when it is known to be that of the composer; but, when it is that of one of numerous editors, it becomes a matter of opinion.

RAYMOND MORIN

Since the speed of a rapid composition is frequently dependent upon the technical ability of the performer, the strict observance of the following rule will result in the adoption of a speed which the competence of the individual dictates: There never should be a serious readjustment of speed in the course of a performance, to facilitate the accuracy of more difficult fragments. Hence, this theory evolves from these considerations. After the approximate speed has been determined, as indicated by the composer, and the performer has tested his ability to maintain consistently this *tempo*, a correct judgment of speed may be made for that particular performer.

The correct judgment of slow compositions is best determined by the effect of the whole, after the composer's *tempo* mark has been conscientiously judged. The correctness of the resultant speed will be further confirmed if the performance does not drag; if its melodic qualities are heard to advantage; if its silent beats do not become monotonous in being held for their full time-value; if the melodic tones are not so far separated that they lose their continuity. A performer should not rely entirely upon his own judgment in determining this. The reaction of an audience is an excellent guide, although the concert stage is hardly a workshop. The opinion of a competent teacher is obviously invaluable.

A Question of Judgment

A RITARD OR AN ACCELERATION in speed will be in proportion to the speed of the section with which it is associated. The danger lies in exaggeration. To become mathematical on this point, the expressions, *ritardando* and *accelerando*, may be said to mean a diminuation and an increase of approximately one-third to one-half of the speed in progress—the equivalent of a decrease or an increase of as many as ten points in metronomic marking. When these indications occur at the end of a composition (more rarely the acceleration) more freedom is permitted; as the continuity of the musical thought is less apt to be destroyed.

Closely related to the *ritardando* and to the *accelerando* are the signs commonly known as the *tenuto* and *fermata*. The same sign (an arch-shaped or semicircled line with a dot under it) is used in either case. Its appearance in the course of a composition gives it the term *tenuto*, and at the conclusion of the section or of the composition, *fermata*. In either case the tone is prolonged for as much as twice its value, in a slow movement, and, in a rapid movement, as much as three or even four times its value.

Rob Peter, Pay Paul

THE TERM TEMPO RUBATO is self-explanatory; for the word *rubato* means *robbed*. Hence to digress from a precise rhythm is to play in *tempo rubato*. There are three main species of this element: 1. Any ritardation or acceleration. 2. An irregularity of accent. 3. The prolonging or the abbreviation of a beat, or some beats, beyond the allotted time value, without altering the aggregate duration of each measure.

The devices or ritardation and acceleration, which have been previously treated, add to the rhythmic interest of a fragment by making more colorful the otherwise steady pulse of the whole. It will be found, by observing the score of the entire composition, that there are a fairly equal number of accelerated and ritarded portions; as if one had to be compensated for by the other.

The second species of *tempo rubato* includes all irregularities of accent, otherwise termed *syncopation*. A measure is said to be syncopated when the stress or accent is given where it is not expected. This being a deviation from a normal rhythm, it is referred to as a form of *tempo rubato*, and is easily discernible by the clarity with which it is indicated by the composer, through the medium of accent marks or special unmistakable rhythmic figures.

The third species of *tempo rubato* is by far the most subtle. It is dangerous to describe this form mathematically; because, by following out such formulas to the letter, the performer is very apt to play out of time. In other words, he may unintentionally change the rhythmic notation. Inasmuch as this form of *tempo rubato* is rarely indicated on the score, the performer is frequently forced to rely upon his earlier teaching, or the recollection of authoritative performances he has heard, before employing it. Yet he can be as subconsciously aware of the necessity of employing this element as he is aware of the necessity for increasing or decreasing the speed of different portions of a spoken sentence for the sake of emphasis.

These are various examples of the third species of *tempo rubato:* 1. One hand may be permitted to perform *ad libitum* (with unindicated ritards or accelerations) while the other hand keeps steady time. It is almost always the melodic line that performs with rhythmic freedom. This method is particularly adaptable to a *cadenza* or other embellishment which would sound stilted if played in strict time. The theory, which involves some of the basic principles in harmony, is that there are notes which are more important because of their basic nature; and that such notes should be given greater stress by being permitted longer duration and greater accentuation. 2. Both hands may deliberately ritard one portion of the measure and make up the lost time in the next portion. 3. One beat only may be delayed or anticipated in order to make the composition sound more characteristic. For example, in the *Viennese Waltz*, tradition has made it legitimate to anticipate the second beat; whereas in much folk music the ensuing sparkle results from the opposite method of delaying the second beat.

Because of the inherent æsthetic stimulus which governs the correct use of *tempo rubato*, it is useless to speculate further on this topic without the agency of specific material for the purpose of illustration. However, it should be emphasized that the element of *tempo rubato* does not justify a persistent neglect to play notes together, nor does it excuse playing out of time. Any excessive use of *tempo rubato* will result in one of these impressions.

Dynamics

DYNAMICS MAY BE EASILY exaggerated, particularly a *fortissimo*. A performer never should be obviously straining to achieve volume, for "the more you pound the less you express." Chopin had an admirable attitude in this matter. Being of slight build and not very strong, he made his *fortissimo* effective by its contrast to his exquisite *pianissimo*.

There are innumerable shades of dynamics and they should be so relatively proportioned as to be unmistakable. In order to accomplish this, the performer must carefully plan his scale of dynamics. A section indicated *piano*, if played too softly, would not permit the desired contrast to another marked *pianissimo*, for example.

Equally important is the necessity for accurately observing the exact boundary lines of dynamic changes. One never should anticipate another dynamic quality or hold over to the next; there are methods for a composer to indicate such effects, when desired. Unfortunately, musical expression marks are not always infallible symbols of the effects desired; and, for this reason, the best gauge of judgment is one of comparison.

Akin to the problems of tonal balance are those of tone production, which concern the various styles of touch—*legato, staccato,* and *portamento*—in their correct dynamics. Before the pianist can control the dynamics of his performance he must have acquired, through excellent teaching and by means of his own experiments, the ability to progress subconsciously; for example, from a rapid *pianissimo* passage on black keys (with firm outstretched fingers) to a heavy *fortissimo* (with wrist pressure), then to a soft singing tone (by the application of pressure to firm fingertips), and to many other variations and combinations of touch which the student can devise.

Most important factors to bear in mind in adopting an attractive scale of dynamics are the size and acoustical properties of the room or auditorium and the condition of the instrument.

Phrasing

LET US NOW TURN our attention to those problems which concern phrasing and melody. The importance of melody is proved by the statement that "there is no music without melody."

The first problem which confronts a performer in his study of a score is that of distinguishing between a melodic line and a harmonic background. The melody line will in general be recognized by one or more of the following characteristics: (1) It will be singable. (2) The composer will have indicated it clearly by means of dynamic contrast, accents, phrase lines, or by isolating that melodic line from the harmonic background by opposite stem direction. It is only by close observation and considerable experimentation that an obscure melody line can be recognized and properly treated, its singable quality being the chief clue to its identity.

The problem of transmitting a melody line so effectively that there will be no lack of continuity and that every note will be given its proper evaluation, is comparable to that of the dramatic actor who must put over the thought behind every sentence, by correct enunciation. To accomplish this, melody should be at all times clear. Clarity is not always achieved by forcing the melody out of the harmonic background, but more often by proper balance.

Sometimes there are two melodic lines, and then the problem of proportion arises. In such cases it must be remembered that, because of its prevalent position, the upper melody is by nature more distinct. The problem then is one of subordination and accentuation; or, in other words, one of addition and omission. Stevenson once said that if he only knew what to omit, he could make a classic of a newspaper. Likewise, one of the pathways to artistic performance is to master the ability to judge proper balance of tone.

Correct phrasing is as important to musical performance as correct punctuation is to literature. In fact, the problems of musical phrasing are closely related to the problems of word grouping. The unphrased performance of a page of music would be, therefore, as confused and lacking in continuity as a page of unpunctuated, unparagraphed writing.

The belief that at the conclusion of each phrase the hand is to be raised from the keyboard and the sound momentarily discontinued is a common fallacy. Such a practice destroys the continuity of a performance. Phrasing does mean tone-grouping; but this may be accomplished in many ways; for example:

1. By a *decrescendo* at the conclusion of a phrase, followed by the *marcato* beginning of the next.
2. By a *crescendo* at the conclusion of a phrase, followed by the comparatively quiet beginning of the next.
3. By the accentuated beginning of the first tones of each phrase.
4. By a brief silence.
5. By a similarity in dynamics at the beginning of each phrase.
6. By the use of *tempo rubato,* and by other inflections.

It is customary for the composer to indicate, in addition to the phrase-line, the style of phrasing desired. For example, the last note of the phrase may be marked *staccato;* the first note of the phrase may be marked with an accent; there may be a rest, a *crescendo,* a *decrescendo,* an accent, and so on.

It is exceedingly important to select a scrupulously edited publication, for the omission of important phrasing is characteristic of carelessly edited music.

Pedaling

FRANZ LISZT evaluated the importance of the piano pedal when he called it "the soul of the piano." This may sound a trifle poetic, but one need only listen to some badly pedaled piano playing to appreciate the reason for Liszt's fervor in this matter.

The uses of the damper pedal may be classified into two chief methods. One is the sustained method, in which the pedal is depressed during the process of playing an extended passage upon the keys; the second is the syncopated method, in which the pedal is released simultaneously with the depression of the fingers upon the new harmony to prevent a momentary silence while the fingers release one harmony in order to seek the next.

The damper pedal has many functions and each must be discussed individually. The most important are:

1. To permit the accumulation of many tones within a single chord, for the purpose of enhancing the background to an anticipated melody, although frequently the melody itself may be in progress, the sustained method of pedaling is used.
2. To combine harmonies for the purpose of obtaining the resultant effect. This is more likely to be done at a rapid *tempo,* because combining different harmonies results in discord. In much impressionistic and modern music, this is the objective. Here, also, the sustaining method is used.
3. To build up a dynamic climax; sustaining method.
4. To obtain a special effect, such as, for example, a gradual *decrescendo* by means of a half-pedaling (the rapid, partial raising and lowering of the damper pedal).
5. The silencing of all but certain tones by the release of the pedal while the fingers hold depressed the desired tones.
6. For the purpose of closely connecting a series of harmonies or measures, with complete smoothness, use syncopated pedaling.

It is not implied that the last is the only use of the syncopated method of pedaling for the fragments performed during the sustained method are almost always connected by the syncopated method. For example, during the course of the measure the sustained method may be in progress, while at the measure bar line the syncopated process will be enacted.

All that need be said concerning the soft pedal is that it should be used sparingly except where indicated (usually by the term *una corda*), or when it is desired to obtain that characteristic veiled tone which it achieves. It is far preferable to develop a technic for quiet playing than to rely upon the mechanics of the instrument: a performer so trained can use the soft pedal to an even greater advantage.

The sustaining pedal is used to sustain certain tones in the lower extremity of the keyboard while the dampers discontinue all other tones. The procedure for using it is

(*Continued on Page 772*)

RECENT RECORD RELEASES

By PETER HUGH REED

SIR THOMAS BEECHAM evidently believes, and rightly too, that the best known symphonies of Mozart and Haydn are by no means all of the best they wrote. Perhaps no conductor has recorded more unfamiliar symphonies by these two composers than he; and in so doing he has earned the gratitude of discerning music lovers. Recently Sir Thomas favored us with a recorded performance of Haydn's "Symphony in D major" (B. & H. No. 93), the second of the celebrated dozen written in the last decade of the XVIII Century for the London impresario, J. P. Salomon (see Columbia set 336.) Those who adhere to the impression that "Papa" Haydn was simply genial and sportive in his music, and lacking in emotional depth, should sample the first and second movements of this symphony.

Prokofieff on more than one occasion has shown his abilty to express fun and satire in music, so his "Lieutenant Kije" suite (Victor set M-459) does not come as a surprise. This music, arranged from the score the composer wrote for a successful Russian film, is ingenious and witty, a lot of fun for a single hearing; but whether it will appeal in subsequent rehearings is something that will have to be decided by the listener. It is brilliantly performed by the Boston Symphony Orchestra, under the direction of Dr. Koussevitzky.

Debussy's "Iberia" is an imaginative picture of the gaily romantic Spanish peninsula. Its first movement is a tonal picture of the colorful life in country lanes and village streets, a kind of *sevillana* full of scintillating light. The second movement is one of the most beautiful orchestral nocturnes ever conceived, a delicately tinted score in which even the perfumes of the summer evening are suggested. The *finale* is an evocative picture of the morning of a fiesta. Barbirolli, conducting the Philharmonic Orchestra of New York (Victor set M-460), gives a straightforward reading of this radiant score, one lacking the subtleties of the Coppola reading (Victor set M-77), but one which is made most persuasive by the brilliance of its highly realistic recording.

Transcribing Bach seems to be becoming more and more popular, but not all transcriptions are successful in conveying the spirit of the music. For example, the transcription of the composer's lovely chorale, *Jesu, Joy of Man's Desiring,* from his "Cantata, No. 147," as played by the Philadelphia Orchestra under Mr. Ormandy (Victor disc 14973), tends to inflate the music's devotional qualities, and the exquisite serenity of this music, as evidenced in Victor's recording by the Temple Church Choir of London (disc 4286), is completely lost. More in keeping is the reverse face of the record, where a transcription of the *Prelude* to the "Unaccompanied Violin Partita in E major" is heard.

In album No. 20, Musicraft gives us a richly rewarding group of Vocal Music of the Renaissance. There are twelve compositions on five 10-inch discs, sung by The Madrigalists, an organization new to records, who here acquit themselves with high honors. The selections range from a Christmas motet by Sweelinck to a madrigal by Gesualdo da Venosa. The composers included are, besides those mentioned, Josquin des Pres, Claude le Jeune, Arcadelt, Vecchi, Jannequin, Marenzio and Orlando di Lasso. The pieces are in a variety of moods and forms (motets, madrigals, chansons, and so on); and, as a collection, it is one of the finest of this kind ever devised for phonographic perpetuation.

Max Bruch wrote his "First Violin Concerto" in 1866. Since its initial performance it has been a great favorite with the concert going public. Bruch, a gifted and versatile composer, is perhaps best remembered to-day by this concerto. A modern recording of it, made by a violinist new to records, Alfredo Campoli (Columbia set 332), sets forth the melodic fullness and gusto of this music in a truly salient manner. Campoli's tone is rich and full, recalling at times the tone of Heifetz. The recording is also rich and full, and for this reason, as well as for the remarkable performance of the soloist, we highly recommend this set to our readers.

Anatole Kitain is gaining an American following for his piano playing, through his Columbia records. His latest disc (No. 69272D) should prove a particularly welcome one for its inclusion of Rachmaninoff's *Elegie* and Scriabine's *Mazurka in E minor, Op. 25, No. 3.* Egon Petri continues his fine series of piano recordings with a poetic performance of Schubert's *Andantino variée,* for four hands, in the arrangement by Tausig (Columbia disc 69249D).

Ernst Victor Wolff displays his digital deftness on the harpsichord, in his performance of Handel's "Suite, No. 5, in E major," the last movement of which is better known as a separate piece with the title (not given to it by Handel) of *The Harmonious Blacksmith.* Although this suite, written by Handel, in 1720, as one of a series of teaching pieces for the daughters of the Prince of Wales, does not outstandingly represent his genius, it nonetheless owns a popularity among pianists.

Albert Schweitzer, turning his attentions from Bach to Franck, plays the latter's *Choral, No. 1, in E major,* for organ (Columbia set X-100), with a calmness of style that is eminently wholesome. The work is not a *chorale* in the sense in which Bach used the term; it is instead a *prelude* with a *chorale* theme near the end, upon which the composer builds seven modulating periods. Its exaltation was described by d'Indy as one of the last prayers of a sincere believer. Typically Franckian in texture, the composition abounds in chromaticism and rich harmonies.

Another Franck work, representative of his genius at its fullest, comes to us in Columbia set 334. This contains the composer's "Quintet for Piano and Strings, in F Minor," regarded as the foremost French work of its kind in existence. Played by E. Robert Schmitz, the French pianist, and the Roth String Quartet, the work is done notable justice; and the recording is truly magnificent. Divided into three movements, the quintet opens with an ardent and dramatic first movement, somewhat interrogative in character; continues with a poetic *lento,* and ends with a movement of vigor and brilliance, in which, as in the composer's symphony, his assurance reaches its fullest manifestation.

In musical circles of New York and London, William Primrose, the violist, has come to be regarded as the foremost living player on his chosen instrument. In Victor set M-422, Primrose, with the aid of Gerald Moore, the English pianist, gives a rarely poised and fully expressive performance of Brahms' "Sonata in E-flat major, Opus 120, No. 2," written originally for clarinet and piano, but also arranged by the composer for the viola. Mr. Primrose, contrary to the statement made in the notes given out with the set, plays not a transcription of this work but the version actually arranged and published by Brahms. The work is an extremely lovely one and most rewarding in the performance given it by Primrose and Moore.

BAND AND ORCHESTRA DEPARTMENT

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER

CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND

Bowing Technics

THE STRING SECTIONS of our school orchestras present innumerable teaching problems, among which bowing is perhaps the most perplexing of all. Just as the student of the wind instrument is dependent upon breath control for the final mastery of his instrument, so is the student of the strings dependent upon control of the bow. Tone production upon the instruments of the string family calls for such perfect control and coördination of the right arm, wrist, and hand, that we find but comparatively few school string sections proficient in this phase of performance.

The first necessity for bow control and tone production is evenness of stroke. Unless this is accomplished, the other factors such as firmness or *legato* (wrist motion) are of no value. Many teachers overlook the importance and difficulty of drawing the bow up and down in the same plane and at an absolutely even speed. This process involves several important steps. First, there is the up and down motion, which becomes modified and more difficult as movement from string to string is required; second, there is the place in the stroke, both up and down, where the use of the upper arm becomes a factor in the motion; third, there is the gradual bending of the wrist; and finally, the keeping of the arm, as a whole, in the same plane; that is, keeping the elbow at the proper position, neither too high, nor too low.

Middle to the Point Stroke

TO DEVELOP this control and movement of the bow arm, it is necessary to begin with the most elementary form of bowing; that from the middle to the point. There are several reasons for this. This type of bowing requires only the use of the forearm, and sufficient application of this exercise will gradually strengthen the tone in the weakest portion of the bow. Then, too, use of this portion of the bow tends to eliminate the common tendency of hand, wrist, and arm rigidity, which so many of our young players seem to acquire through the practice of playing too near the nut of the bow during their early stages of study. The important point in the beginning is that the forearm shall be made to move freely, with the arm always in such a relaxed position that there is no strain on any muscles at any time.

The Full Stroke

WHEN THIS STROKE has been sufficiently practiced, the problem of using the full stroke may be presented. When employing the whole bow, we find that it is quite difficult to retain the evenness of pressure throughout the entire length of the bow. It will be found that usually the student, when playing with the full stroke, will unconsciously delay the use of the upper arm as long as possible, and then suddenly use it so that the speed of the bow has been increased appreciably. As a result, the evenness of the stroke is affected.

The upper arm is used only to extend the bow to its full length, and should be employed naturally, as the bow begins to need it. There should be no effort to push the upper arm into place, but rather it should be pulled into the movement by the pushing forward, or pulling downward, of the forearm. When the bow is on the string at the nut, it has the entire bow arm, and hand, to act as an aid in securing a full tone; whereas, when the bow is at the point, all of these forces are lacking. If we are to maintain evenness of tone throughout the stroke, then some means must be found for the natural pressure. This application of pressure comes from the entire arm, through the medium of the hand and first finger. This pressure can hardly be secured solely by trying to regulate the exact amount of "bow pressure," but will require active listening on the part of the student. If the student will listen attentively throughout the duration of the stroke, he will be more apt to secure an evenness of tone than by attempting to figure the application of the proper pressure.

In making a complete analysis of this teaching problem, we find that there are three distinct parts of the right arm brought into action. First, the wrist; second, the forearm; third, the upper arm. While each plays an important part in the development of an even stroke, the stroke can be scarcely even unless the three are coördinated as one. To acquire this action will require considerable practice, so that the movements will be automatic and thus enable the student to focus his attention on other phases of his performance.

After the evenness of tone has been achieved, there is often lacking a definite firmness. The violin string, as an example, is too frequently treated as though a bit of pressure upon it would be disastrous, yet we find our great concert violinists exerting great pressure with the bow on the strings. Some students will apply this pressure only at one certain point of the stroke. Of course a thin, uneven, anæmic tone is the result.

In many of our school orchestras, I have observed the violin students using the bow too near the fingerboard, when the effect called for a robust, round, solid tone. While a finer quality of tone can thus be secured, the best carrying quality is to be found within a half or three-quarters of an inch of the bridge, and for greater intensity of tone even closer. Of course there are many occasions when it is legitimate to play near the fingerboard, this depending naturally upon the desired effect. For ordinary playing, however, the distance mentioned is preferable.

Wrist Motion

ANOTHER IMPORTANT REQUISITE for bow control is the preparation of the wrist for the *legato* connections. The approach to this problem is through the simple foundation motion, which is merely moving the wrist back and forth with the bow in the hand, and on one string. This motion needs be but about two or three inches, with the action entirely with the wrist; the arm being absolutely quiet. As the student gradually acquires strength in the wrist, this exercise may be practiced in the middle, at the point, and at the nut of the bow. When this wrist motion has been achieved, the problem of playing with a *legato* full bow stroke may be attempted.

Without the ability to use the "wrist-stroke," no string player can play satisfactorily in a true *legato* style. The bow must change direction, and the principle of *legato* is simply that by means of the wrist the bow is changed so quickly and evenly that the stoppage of the tonal line is unnoticed. When teaching or practicing this wrist motion, it is essential to observe that the motion of the wrist is *lateral* and not *vertical*, excepting of course when connecting tones on different strings and even then the increase of motion is quite small. When using the full stroke, the bow should be carried by the arm as near to the end of the stroke as possible, and the wrist should finish the stroke just as the arm starts down. It is necessary to maintain an even pressure, otherwise the tone will be broken and the connecting value of the wrist motion lost.

It will be noted that often students are able to perform the wrist motion as a separate problem; but when attempting to apply it as a routine, as at the end of a long and slow whole stroke, they fail to play with even pressure, or a smooth wrist motion. When first attempting this stroke, attention to the movement of the right hand fingers will aid in securing relaxation and control. Frequently students will move the wrist yet hold the fingers stiff. The complete relaxation of all the fingers is necessary for a correct loose wrist motion. Training the muscles of the arm, wrist, and fingers to relax will prove a valuable asset in the securing of a round, full, even string tone.

The wrist motion, as applied to our teaching of bowing technics, is too often not sufficiently emphasized. Daily we find students in our orchestras, who know little or nothing about the function of the wrist motion, attempting to play rapid passages with a stiff, jerky arm movement, and *legato* passages with no connection between strokes. This problem of bowing should be emphasized at the early stages, and while not difficult, the student will soon learn that he can move his bowing hand without moving his bowing arm. Proper development of these bowing technics, as well as

MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Music appearing in the Music Section of this Issue

AT EVENING

By A. WALTER KRAMER

This nocturne of Mr. Kramer is perhaps best played in the style of an improvisation or slow impromptu. Resonance should characterize the opening theme in which the melody lies in the upper or soprano voice. Observe the numerous little *sostenuto* signs and give special fullness of tone to the notes bearing these signs.

In the eighth measure where the metre changes to five-four, give the same value to quarter notes as before, or, in other words do not try to play five notes in the time of three. The same direction applies to the passage in two-four, measures 18 and 19.

Note the indication which occurs in the text at measure 29, "as from afar." Here use a more shallow touch so that a thinner quality of tone will result and lend the illusion of music heard at a distance.

By following closely the *tempo* and dynamic indications marked the player should have little difficulty in achieving the effect of elasticity so obviously desired by the composer.

SUNRISE

By THURLOW LIEURANCE

As a contrast to the number immediately preceding, we have here a composition which has for its inspiration the coming of a new day in the distant valleys of the Himalayas.

The mood of this piece contrasts strongly with Mr. Kramer's *At Evening*. Play it at slow *tempo* and with simplicity—which by no means implies that expression marks are to be ignored. The word *Pastoral* in the subtitle supplies the key to acceptable interpretation.

Thurlow Lieurance has long been an asset to American music because of his genuine gift for melody, and this little gem should find a ready place in the pianist's repertoire.

DANCE OF THE WOOD NYMPHS

By FOREST M. SHUMAKER

The performance of this composition should be as graceful as the picture suggested by the title. Establish at the outset a swinging three-four rhythm and preserve it throughout.

The left hand accompaniment should be light so that the dainty but ever active figures of the right hand are not obscured. And use the pedal with care. Unless otherwise marked it is to be applied on the first beat and released on the second.

Notice that the piece opens in the key of B-flat major; the second theme is in F major, the dominant key, and the Trio in E-flat, subdominant key.

Phrase carefully as marked.

THE OLD LOG CHURCH

By MATHILDE BILBRO

It is important to catch the atmosphere of this short number and to play it in song style. Play it with expression but without gush.

Pedaling is executed exactly as marked since the correct use of the pedal is here a direct aid to phrasing.

The melody line shifts from one hand to the other, beginning in the left hand with the last beat of measure eight and returning to the right hand at the end of measure ten. Miss Bilbro uses the same treatment from measures twelve to sixteen. The second section, in the key of D minor, affords opportunity for nice contrast between *mezzoforte* and *pianissimo*.

Do not let the piece drag. *Tempo* is *Moderato* and a feeling of motion should be perceptible throughout.

IDYL OF THE FLOWERS

By CLARENCE KOHLMANN

Here we have a composition demanding nice tonal tinting and a really smooth *legato*.

Play cleanly the many little groups in sixteenths, and weave them into the piece in such manner as to form a background suggested by the title.

Andante semplice is an important indication in the text as a guide to interpretation meaning, as it does, slowly and simply. Many pianists never learn the art of combining simplicity and expressiveness, and the resulting chills and fever interpretation is not only inartistic but often ludicrous as well.

Expression marks are well indicated in this piece and need only careful observance on the part of the performer to achieve a satisfactory reading.

LOVE THEME

By P. I. TSCHAIKOWSKY

Tschaikowsky, master of melody, was undoubtedly at his best when writing for orchestra. Nevertheless he has contributed many gems to the world's collection of fine songs, operas and piano pieces.

This theme from "Romeo and Juliet" makes a very satisfactory piano solo and has been adapted by the late Preston Ware Orem, who was a master of the theory of music.

Try to give to the opening notes of the theme the resonance of a violoncello and build up the tonal effect as the chords make their appearance later.

Treatment must never fail in the quality of tenderness, even in big moments, tonally speaking.

Notice that, from measure ten on, the left hand is rather full. Avoid the danger of having the accompanying chords sound too thick and thus cloud the melodic line.

The wise pianist will pedal precisely as indicated. Give proper significance to the upper notes of the left hand in the last five measures, as these carry forward the melodic line to the close.

AQUARELLE

By HERBERT RALPH WARD

Mr. Ward's contribution this month is written in the style of a *gavotte* and should have the stately treatment which is traditional for that particular form of the dance.

Roll the broken chords crisply, emphasizing top notes in each instance.

Pauses are important in the proper interpretation of the piece, which, it will be noticed, is written mostly in *staccato*.

The occasional sustained notes should have a certain importance for contrast.

Call to mind anew that fundamental law of interpretation mentioned so often on this page, "Contrast is the first law of all Art."

DAGGER DANCE

By BERNARD WAGNESS

Open fifths in this number are designed to lend an Oriental flavor to the theme.

The first period is unusual in that it contains but fourteen measures instead of the usual sixteen.

Play the first section at a brisk *tempo, allegro*, and note that the second section calls for a change of pace and is marked *Andante con moto*.

The first theme is in the key of E minor and the second in the key of C major.

SHEPHERD GIRL'S SUNDAY

By OLE BULL

There are a decided charm and freshness about the melody of this piece which make it perennially attractive. Harmonies are spontaneous and show the craftsmanship of a master musician.

Play this piece quite slowly, remembering its pastoral character.

A glance shows that the main melody is reënforced by fuller harmonies as it progresses and that it builds at length to sizable proportions.

The entire number has had the benefit of careful editing, and the player need only follow indications faithfully for a satisfactory interpretation.

BALLADE

By JOHANNES BRAHMS

Although an early composition (Op. 10, No. 1) this *Ballade* of Brahms holds year after year its place as a highlight in the concert pianist's repertoire. Whilst an indifferent pianist himself, Brahms has contributed treasure trove to the list of piano literature in his "Intermezzi," "Ballades," "Cappricios," "Concerti," Rhapsodies," and so on.

On another page of this issue of THE ETUDE will be found a master lesson on this ballade by Mark Hambourg, eminent Russian pianist who has taught vicariously through the pages of THE ETUDE many other masterpieces to many hundred students and teachers.

Read and study this article carefully.

GIGUE

By AUGUST GOTTLIEB MUFFAT

In this, the day of complicated harmonies, often over-rich in the matter of dissonances, it is refreshing to turn back and review the works of those early composers who wrote what is known as "pure music."

The *Gigue* has been a popular dance form in many countries and the music for it is almost traditionally supplied by the fiddle. In fact it is not at all clear whether the dance got its name from the instrument or the instrument from the dance.

The Italian name for *Jig* or *Gigue* is *Giga* while the German appellation for the fiddle is *Geiga* thus indicating that one is synonymous with the other.

This particular *Gigue* was written by a composer who lived between 1690 and 1770 and it has all the flavor of a composition of that time. It requires the clean fingering which characterized harpsichord players and should be played at rapid *tempo*.

This music has been carefully arranged and edited by Preston Ware Orem and should offer a welcome change from Scarlatti, Hummel, and so on. To busy teachers, who wish to vary occasionally the regular teaching diet.

IN A GOOD HUMOR

By GLADYS V. GILBERT

This short piece offers a first grader interesting and beneficial study in *staccato* playing.

It is simple and remains within the specified compass, thus giving the young pupil ample opportunity to pay attention to proper attack while playing.

RATHER LIKE THE CUCKOO'S SONG

By GLADYS V. GILBERT

Another little number from the pen of the same composer.

As indicated in the title, two note slurs suggest the cuckoo's call. These are best played with drop-roll attack, assuring proper shading.

Contrast strongly the slurs marked *forte* and the answering groups marked *piano*. Intervening phrases should be played with finger *legato*.

MORNING SONG

By GLADYS V. GILBERT

In the third of her triumvirate of little pieces, Miss Gilbert uses overlapping figures which are interesting and almost canonic in character.

Give special stress to notes bearing the *sostenuto* sign. Also strongly contrast *piano* and *forte*. Play this music *legato* throughout, with proper breathing spaces at the end of each phrase line.

While this little piece remains in five finger position throughout, it is not nearly as easy as it looks, because of its contrapuntal weaving. In other words, although it looks like a grade one piece, it calls for about grade one and a half pianistic ability.

ROUND AND ROUND

By N. LOUISE WRIGHT

Here is a clever and tuneful exercise for the development of two note phrase playing. Hands alternate using the drop-roll attack.

The area of the keyboard covered should develop freedom of arm action as well.

RUBY WALTZ

By BERT R. ANTHONY

An easy waltz with the melody in the right hand against broken chord accompaniment in the left.

It is in the key of G major and lies comfortably under the hands at all times, coming easily within the grasp of grade one-and-a-half pupils.

LITTLE CAPRICE

By N. IRVING HYATT

A little caprice which develops *staccato* playing for both hands.

Action is about evenly divided between the hands.

Wrist *staccato* is usually best at this stage of development (grade two), and the pupil should be taught to use a light, bouncing wrist, to produce crisp, brittle *staccato*.

BUNNY HOPS ALONG

By G. A. GRANT-SCHAEFER

Mr. Grant-Schaefer's bunny does his hopping with the aid of two note slurs.

Cautiously at first (in the *Introduction*) and later with more confidence he strikes out *allegretto* with the entrance of the first theme.

Sharp release of two note groups adds to the hopping effect and at the same time places the arm and hand in position for the following phrase.

After the repetition (D. C.) jump to the *Coda* from the end of the first line, where bunny will be found to hop out of the picture on an upward diatonic progression.

The Teachers' Round Table

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Readers will please restrict their inquiries to less than one hundred and twenty-five words.

Staging a Come Back

I am a young married woman and have not had any piano instruction for the past ten years. Prior to that, I took lessons for about five years under a teacher who was not too particular about timing, pedal, or real rudiments. For instance, I memorized all the scales from a book, but was never taught the fundamentals of majors, minors, and so on.

Now I am very anxious to play well and am puzzled as to what study books I should use, how I should divide my practicing, and what rudimentary book I could study to gain knowledge in timing, pedal, and so on.

I have been a subscriber to The Etude for the past few years, and find it easy to read the grade four pieces, but I know I cannot play them properly without much real practicing and a greater knowledge of music.—M. S., New York.

Suggestions: "Rudiments of Music," Cummings; or "Primer of Facts About Music," Evans. Technic: "Czerny-Liebling Volume I or II"; "Standard Graded Course, Vol. IV"; "Studies in Musicianship, Volume III," Heller-Philipp. Interesting volumes: "Evening Moods," an album of quiet, contemplative music; "From Bach to Beethoven," eighteen well chosen compositions, some familiar, some less known, but all thoroughly delightful; "Schubert Album, 24 pieces," from simple song arrangements to impromptus, making an ideal introduction to this composer; "Prince Eugene's Ball," a charming set of unknown baroque dance music, compiled by Ernest Krenek.

If you will look up recent issues of The Etude you will find practice plans and "Budgets" which have appeared on this page.

A Prodigy

Will you please advise me what to do with a girl of seven years old, whom I have been teaching since she was five and a half. She has the brains of a fourteen year old child, can read almost anything at sight in grade three; but, as she is very small for her age, she has also very short, stubby fingers, so she has often come across pieces in which she could not use the fingering as marked. Now she has gotten into the habit of using fingers as they please her, and all my talking and promising her a prize are in vain.

I have a metronome and I use it with her scales. She is intelligent enough to play everything with a metronome, but will not listen. When I started her, I gave her John M. Williams' "Very First Book." She finished this book by just reading off the music. The next book I gave her was Williams' "First Grade." She played every piece with the metronome. When she finished this book, she begged me to give her pieces which she heard over the radio, so I gave her "Gems of Melody and Rhythm," by Blanche Steenman; I picked out the easiest ones and gradually she learned the more difficult ones. She plays them all very well in the beginning, but as I want her to review them, she plays them worse every time I hear them. I know she is very talented and I would like to teach her correctly, but she craves always for new music and will not bother with old pieces. I believe if I would give her more technical studies like Czerny "Book I," arranged by Liebling, she would not care to play at all. Perhaps you can tell me what to do with such a child. How can I give her a good foundation without making her lose interest?—E. B., New York.

I'm afraid you are expecting too much of your seven year old girl. Try to think of yourself at that age—if you can! I am sure you will be much more satisfied with her accomplishments after you have meditated on your own shortcomings at seven summers. What if she *is* careless about fingering, when she is so ambitious to learn? What do you care if she doesn't "listen" quite up to your standard when she is able to cover the ground so astonishingly quickly? Why review her studies and pieces if she wants to press on faster, painlessly developing that precious musical and pianistic facility so rare in American teachers and students. Let her soak up all the music she can—as fast as she can, with you trying to direct her in the paths of good taste. Don't give her dry etudes that are beyond her, but try out interesting music which she will enjoy practicing; and every once in a while, slip in a difficult piece—but I reiterate, only use pieces which she likes. How about some of the easier Heller studies ("Studies in Musicianship, Vol I," edited by Philipp), the Rheinhold "Miniatures," Locke's "Ten Tonal Tales," Mary Bacon Mason's "Autumn Airs and Songs of Spring," Louise Rebe's *Selection from Humperdink's "Hänsel and Gretel,"* Ada Richter's "My First Song Book," or some arrangements of the "Snow White and the Seven Dwarfs" music?

Ambitious Boy

Would you be so kind as to map out a course of study for an eleven year old boy to follow? He knows all scales, plays them in various rhythms and has studied Kuhlau "Sonatinas" and your first steps in Bach. At present he is beginning Haydn "Sonatas." I do not know what books of technic to give him. I am trying to have him learn to relax in playing. Should he be having exercises now for developing finger dexterity? He plays well *Romance,* by Saar, *The Swan,* by MacFadyen, and is working on *Humoresque in G,* by Tschaikowsky and *Alt Wien,* by Godowsky. Can you suggest other pieces for him? Octaves are still difficult for him.—M. M., Nebraska.

Suggestions: Technic: Czerny, "Opus 299"; Heller, "Opus 47," or first volume of Heller "Studies in Musicianship," edited by Philipp; "Standard Graded Course of Studies, Book III."

Pieces: "Musical Visits with the Masters," a delightful set of sixteen simplified classic arrangements compiled by Carleton; "Marching Music," by Mary Bacon Mason; "Twenty Pieces from the Friedemann Bach Book," Bach-Maier; "Waltzes, Sets I or II," Schubert-Maier; Mendelssohn, "Songs Without Words."

Everyday Problems

1. I have a pupil, a fourteen year old girl, who does splendid work, always knows her exercises almost perfectly. She reads everything I give her without making mistakes, observing staccato notes, rests, and so on. I have been teaching her two years and she is now in the "Third Year at the Piano," by John M. Williams. I also use "Czerny-Liebling Book I." What do you think of this material? 2. The problem is, she cannot reach an octave. It is impossible for her to do this as her little finger is short and the web between her thumb and second finger grows so that she cannot stretch her thumb. What can I do about this? She has a beautiful touch. 3. Can you suggest some material and pieces suitable for her small hands?—Mrs. E. S., So. Carolina.

1. The material you are using is excellent. 2. Your girl, at fourteen, must be very small for her age, or else her hands have not developed normally. To help stretch that thumb "web," try some of Philipp's "Passing Under of the Thumb" exercises; but be sure to make a wise selection from these, using them in careful moderation to avoid strain. The "Eight Chordal Attacks" by Wagness will develop her hand span, arm strength and general all 'round solidity. She should also have daily practice in diminished seventh chords, four tones to each hand. Since her fifth finger is so inadequate, why not try the fourth for octaves? I know of many cases where this has been done with much success. It has taken patience, time and care to work out, but has succeeded admirably, resulting sometimes in astonishing octave facility and endurance.

3. Third and fourth grade material for small hands; "The Bird Book," Wardale, six beautiful short pieces; "Harpsichord Miniatures," arranged by Scott—nine lovely pieces by old composers; "Airs of the Eighteenth Century," seven exquisite transcriptions by Leopold Godowsky; Bach-Maier, "Twenty Pieces from the Friedemann Bach Clavier Book"; Mozart-Maier, *Andante and Minuet;* Mennig, *Etude*—an original study in sixths for every day practice in hand stretching and speed; *Morning Canter,* Lehman; *On the Village Green,* Henriques; *Mireille,* (Waltz) King; *Bourrée and Musette,* Chenoweth; *Autumn Twilight,* Federer; *Funeral March for a Pet Rabbit,* Grant.

Any of this material may be procured through the publishers of The Etude.

Frightening and Scolding Pupils

I have had no fortune with adults, although I have made a thorough study of materials and methods of teaching adults. They start lessons, all enthused; I put all I possess into each lesson; but within a few weeks their interest has died down.

As for children, the only fault the parents find is that I do not seem to be able to get them to practice with any sort of consistency. The only fault, I say, but a sufficient one to cause me to lose many pupils. I try to make the mothers realize that I need their coöperation but they seem to consider encouraging the student an aggravation and leave it to me to be a sufficient inspiration to last for a whole week's practicing. I have studied your questionnaire in the April, 1938, issue of The Etude, and consider myself passing in all questions but Numbers 17, 32 and 66.

It seems as though the only course left to me is to frighten and scold my pupils and that I do not wish to do. I should greatly appreciate it if, in all I have told you, you can find the weak link on which I can concentrate in order to improve my status.—E. K., New York.

Good for you! I am much impressed by your excellent rating on the teacher's questionnaire; all the more so on account of my own poor rating. You have made me blush with shame! That test was what the boys call a "tough" one, wasn't it? Your experience with adults is not unusual. The best way to keep up their interest is to teach them in small classes, preferably in friendly groups of similar ages, but dissimilar sexes, with husbands and wives segregated. If you encourage ensemble playing—four, six and eight hands, on one or two pianos, from the beginning, the results will be gratifying. I know several teachers who derive a large part of their incomes from ensemble classes of women who are delighted to find such a pleasant, yet serious, way to express themselves. And, not only are they willing to pay well for such an outlet, but they develop into excellent rooters for the teacher. No one needs to be told what a gilt-edged asset it is to have the ladies spread the gospel.

You cannot do a proper job with children without having coöperation; and you must try to maneuver yourself into the position where you can insist on such help before you consent to give the first lesson. Make this a condition for accepting a pupil. If the parent cannot take the time, or is not intelligent enough to supervise the child's practice, insist on an extra private or class lesson each week; or tell the mother that her little one must spend a minimum of fifteen minutes practice each day; and that the parent is to pay him a weekly "bonus" for overtime. Give the pupil an attractive lesson assignment book in which there is space to write down the number of minutes daily practice. For every fifteen minutes over the minimum he is to receive five cents. This plan works like a charm nine out of ten times—but I warn you, it is liable to pauperize the parents! Naturally the "ante" can be raised or lowered to fit each case.

Nothing is accomplished by frightening or scolding—although I confess sometimes becoming exasperated enough to resort to one or the other. But, if you want to have a perfect score on that questionnaire, you will have to learn to be coolly and objectively severe, bearing down whenever necessary, but without a show of temper. Which is so hard to achieve!

American children are very much in need of such treatment. They must learn that any worth while achievement in life or art is only to be had by honest physical and mental sweat. Is it not tragic how few of them know what it means to concentrate, to "dig" to work? And how rare are the parents who see eye to eye with us in this important matter! So I say, "crack down on 'em (parents and pupils)" gently but firmly at appropriate intervals during the year.

Parallel Books

Two of my pupils, brother and sister, are using John M. Williams' method of teaching. I feel that the boy, who started later, will not keep the interest which he now has, if he is studying the same books his sister has had. What is your opinion in regard to this?—C. E. H., Wisconsin.

You are right. It is obviously unwise to use the same instruction book with two children of one family. Teachers who limit themselves to one or two books of each grade are losing a fine opportunity for experimentation. If only for the stimulation it gives, every teacher should use a half dozen or more different beginner's books, suiting each to the physical and mental age of the student. The alert teacher will try out everything that offers sound, sensible musical training and that makes for fresh, spontaneous approach.

As to beginners' books, I shall never stop growling that most of them are too stingy of material, too "high-browed," and too insistent on quick advancement. Several teachers I know give each pupil a different book with the understanding that after a few weeks he is to exchange his "method" with the others. Such rotation gives the student more than ample material of his own grade, develops reading facility, keeps up interest, and above all, gives him an opportunity to enjoy playing the piano.

Don't get "set" by using the same books year in and out. There are so many good methods on the market that one can scarcely choose between them. So, my advice is, "use all of them!"

The "Ballade, Op. 10, No. 1" of Brahms

A Master Lesson by the Renowned Piano Virtuoso

MARK HAMBOURG

THE OLD SCOTTISH BALLAD, "EDWARD," is blood curdling and dramatic to a degree; and the well known vocal setting of it, by Johann Loewe, is in the form of a duologue between a mother and son; the mother questioning the son about the blood she sees upon him. He at first answers that he has killed his hawk; then that he has killed his horse; and at last confesses that it is his father whom he has killed.

The mother continues to ply him with questions as to what penance he will do, and what will become of his family and lands if he flees the country, as he says he must. Finally she asks what will become of herself, if he leaves her. Here, in a great climax of horror, he turns upon her with curses, saying that it was she who persuaded him to murder the father.

A Biographical Bit

ABOUT JOHANN LOEWE, who set this gloomy story to music for the voice, the following may be of interest. He was born in Germany about 1796, created the ballad form in that country as a definite branch of vocal art, and thereby made for himself a lasting reputation as a composer. His power of dramatic expression and sense of the epic in music were remarkable; and his version of the grim story of "Edward" is so striking that it is not surprising that it fired the imagination of Brahms to write a pianoforte ballade embodying the same tragic theme. Naturally, the resulting *Ballade, Op. 10, No. 1*, being pianoforte music, can be but reminiscent of the story of "Edward"; and it is, anyhow, far less dramatic than Loewe's song. It is more despairing than passionate: a fateful atmosphere of intolerable sadness pervades it; but it is fortunate for us musicians that the ballad of "Edward" inspired Brahms with the idea of composing a piece of music which is both beautiful and romantic.

And Now We Interpret

THE WORK MUST BE PLAYED in a narrative manner throughout. The first nine measures, up to the fourth beat of measure 9, must be performed with a hollow sound, as if someone were talking in a toneless voice; in fact, almost in a whisper. This effect can be produced by using very little pedal, laying no stress on the melody, and only now and then emphasizing slightly the notes so marked. By this manner of playing, an ominous, apprehensive feeling is imparted to the music.

There is a slight rise in tone on the second beat of measure 2, and a *diminuendo* towards the end of the measure; whilst the two eighth-note chords, on the second beat in both hands, must be played *semilegato*, so as to differentiate them from the rest of the music, which is consistently *legato* throughout the first twenty-seven measures, except where these two chords appear on the second beat of any measure; thus, in D minor, as in measures 2, 5, 15, and 18, and in G minor, as in measures 6 and 19, when they must be always *semilegato*.

In Measure 3 there is a slight emphasis on the quarter-note chord on the first beat in both hands, and again on the last quarter in the measure; also on the first, second and third beats of Measure 4, with this difference that the notes E and A, on and below the line in the treble on the second and third beats of Measure 4, must sound like an echo of the notes E on the last beat of Measure 3 and A on the first beat of Measure 4.

On reaching Measure 6, the last quarter-note G in the treble of this measure must sink down to the dotted half note on C-sharp in the following measure, with a kind of groan; and the half-note B-flat in the bass, on the second beat of Measure 7, should be emphasized. Again the progression from the C-sharp octave in the right hand (bass clef), on the last beat of Measure 7, to the dotted half-note octave D on the first beat of Measure 8, must sound like an echo of the groan in the preceding measure—almost a deep sigh.

At the end of Measure 8, the G-sharp (bass clef), on the fourth beat of the right hand, proceeds in a similar manner to the dotted half-note A in the next measure, and must be played in the same sighing manner, only more slowly and more *pianissimo*, whilst an accent must be made on the second beat in Measure 8, on the bass clef, just as on the second beat in Measure 7.

The Significance Increases

FROM THE LAST BEAT of Measure 9, where it is marked *Poco piu moto*, to the third beat of measure 14, more body must be introduced into the music, and the *tempo* should be slightly quickened. The melody in the treble should be brought out; and, though marked *mezzopiano*, it must be played with a fuller tone than the music of the first nine measures.

In Measure 11, although it is imperative that every note be kept absolutely *legato*, the hands must be lifted from the keys, after the dotted quarter note on the third beat (without, however, taking off the pedal), before playing the succeeding quarter-note chord; thus making what I call a "breath" pause, which serves to give elasticity to the phrasing of the melody. Then continuing to the first beat of measure 12, a tiny pause should be made after this beat, to introduce a repetition of the theme which now recurs, but in a different tonality. This development must be played a little slower, and the *tempo* should further decrease, until a *fermata* is reached on the third beat of Measure 14, where a long pause must be made. The middle notes of the treble chords in measure 13, namely, E-flat and D, must be brought out; also the D, C-sharp, and E-natural in the same position in the chords of the next measure; as these notes constitute an inner melody. Also a small accent must be given to the B-flat on the first beat of the treble in Measure 14.

From the last beat of Measure 14, to measure 22, is a reiteration of the first nine measures of the piece, which must be played in the same manner.

On the fourth beat of Measure 22 we reach *Poco piu moto*, again, and to this section of five measures (22 to 27) must be given an intimate and reflective atmosphere, the music being very *legato* and the top notes of the melody being brought out, without, however, smothering the accompaniment. The breath pause, as described in Measure 11, should be made after the third beat of Measure 24. The volume of tone, though *piano*, must be full and round; and, from the last beat of Measure 22 onward through measures 23 and 24, the playing should be more tuneful and colorful than in the succeeding measures (25 and 26), where the tone must sink to *pianissimo*.

A Call to Combat

THE HANDS MUST BE LIFTED from the keys, between the second and third beats of Measure 25, so as to mark the change to the softer tone which follows. Upon reaching Measure 27 there is a small *crescendo* during the progression of the two chords on the first and second beats of this measure, leading to the *fermata* on the third beat; and also a little *ritardando*, the endeavor being to try to produce the effect of a question.

We come now, at the fourth beat of Measure 27, to a new development of the *Ballade*, which is marked *Allegro ma non troppo* (lively, but not too much so). Here we have a martial theme in the left hand part, which ought to produce a tone as though being played by a brass instrument; soft and insistent in the beginning, and supported by the pedal, but without any *staccato* attack. This martial subject continues, with ever increasing tone, up to the third beat of Measure 44. The accompaniment of triplet chords, dealt with by the right hand, should strive to imitate a roll of drums, muffled to start with, but gradually growing, in a *crescendo*, until it reaches its apex in Measure 38, with a great *fortissimo*. This *fortissimo* is continued throughout measures 39 to 44 inclusive; and the *tempo* should be slower in the last four of these measures. On the last beat of Measure 44 the music returns to the Second Subject of the piece, which has been already described in Measure 10, in a different tonality, at *Poco piu moto;* only now it is amplified in style, and the chords and octaves, of which it is composed, are played heavily and loudly. The triplet eighth notes in the bass, on the last beat of Measure 44, must be stressed.

Coming to Measure 46, the hands must be taken off the keys before taking the final Eighth-note chord, so as to usher in the succeeding phrase, as is done in *piano* tone in Measure 11; but in Measure 46 the tone remains consistently *forte*. An accent must be made also on the last chord in Measure 46, and also one on the first chord in Measure 47; for these accents give point to the phrasing. Again, in Measure 49, the hands are lifted before playing the C minor chords; whilst these chords and the one on the first beat of Measure 50 are accented. In measures 51, and 52, a similar progression of chords occurs, where the accents should be made on the last chord of Measure 51, and on the first chord of Measure 52, and the hands lifted before taking the last chord in Measure 51, as in measures 46, 47 and 49. This lifting of the hands at the finish of a phrase, without removing the pedal, helps to give both significance to the phrase and grace to the execution. From the fourth beat of Measure 49 to the middle of Measure 56, the single notes in the left hand, which constitute the subject, should be made prominent, and should sound through the rest of the music, in juxtaposition to the melodic theme, which is played in the treble.

In Measure 53 I take the bass C (which is written in the music for the left hand) with the right hand, as it is easier thus.

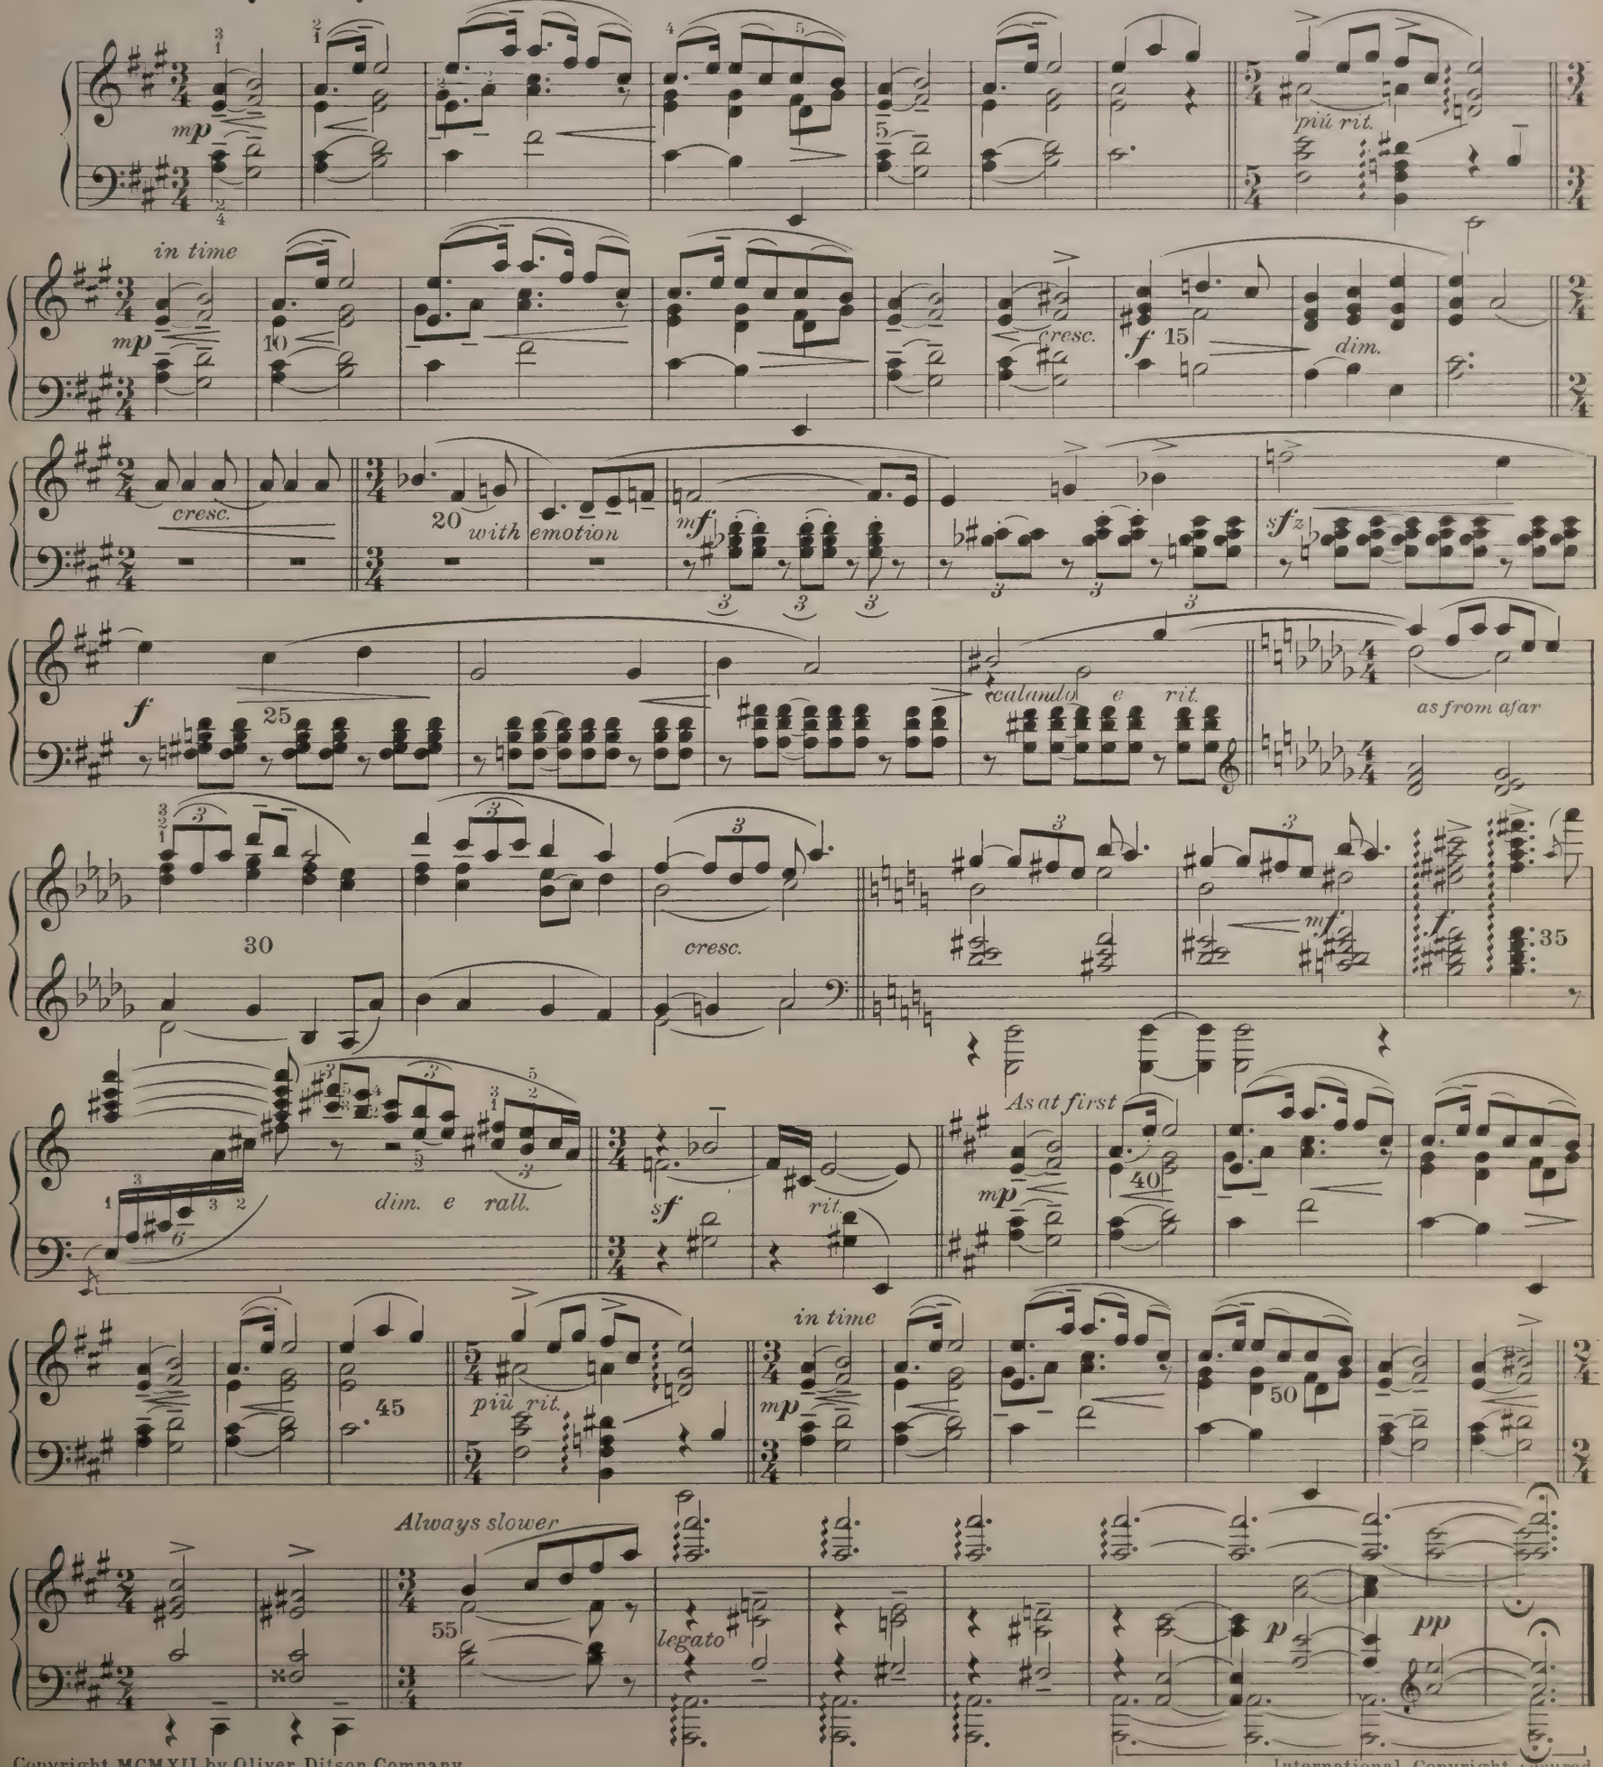
A Melancholy Denouement

THE VOLUME OF SOUND diminishes from Measure 54 onwards, until it reaches *pianissimo* on the dotted half-note chord on the third beat of Measure 58, in the bass; but, though *pianissimo*, this chord must be played with emphasis. When this insistent chord is repeated in Measure 59, on the second beat, I find it better to take it with the right hand, so as to allow the descending phrase—A and G in eighth notes in Measure 59, and F and E in Measure 60—to lie easily under the fingers of the left hand.

On the fourth beat of Measure 60 we return to the original subject of the work, but embellished by triplets in the left hand. These triplets must be played with absolute exactitude as to their rhythmic value, and *staccato*. The interpretation here must be the same as in the beginning of the *Ballade*, only more dramatically expressed, in order to stress the atmosphere of tragedy which culminates on the suspended chord on the last beat of Measure 70. The progression from the chord on the last beat of Measure 65, in the treble, proceeding to the following one on the first beat of Measure 66, must sound like a question, the answer coming from the similar chord progression from the last beat of Measure 66 to the first beat of Measure 67.

The ultimate five measures of the *Ballade* bring it to a close in a mood of deepest melancholy.

BRAHMS IN 1869
(Age, thirty-six)



***Mr. Mark Hambourg's Lessons have proved to be little pedagogical masterpieces. Other Master Lessons from him, and from other great pianists and musical educators, will appear during 1939. Next month Mr. Hambourg has a Lesson on Beethoven's* Contra Dance in C.**

AT EVENING

Where the quiet colored end of evening smiles,
Miles and miles.
Browning

There is a kind of *Grieg* character in this idyll that should be carefully preserved. The fine climax in the middle section and the smorzando effect in the last measure may be made very impressive. Grade 5.

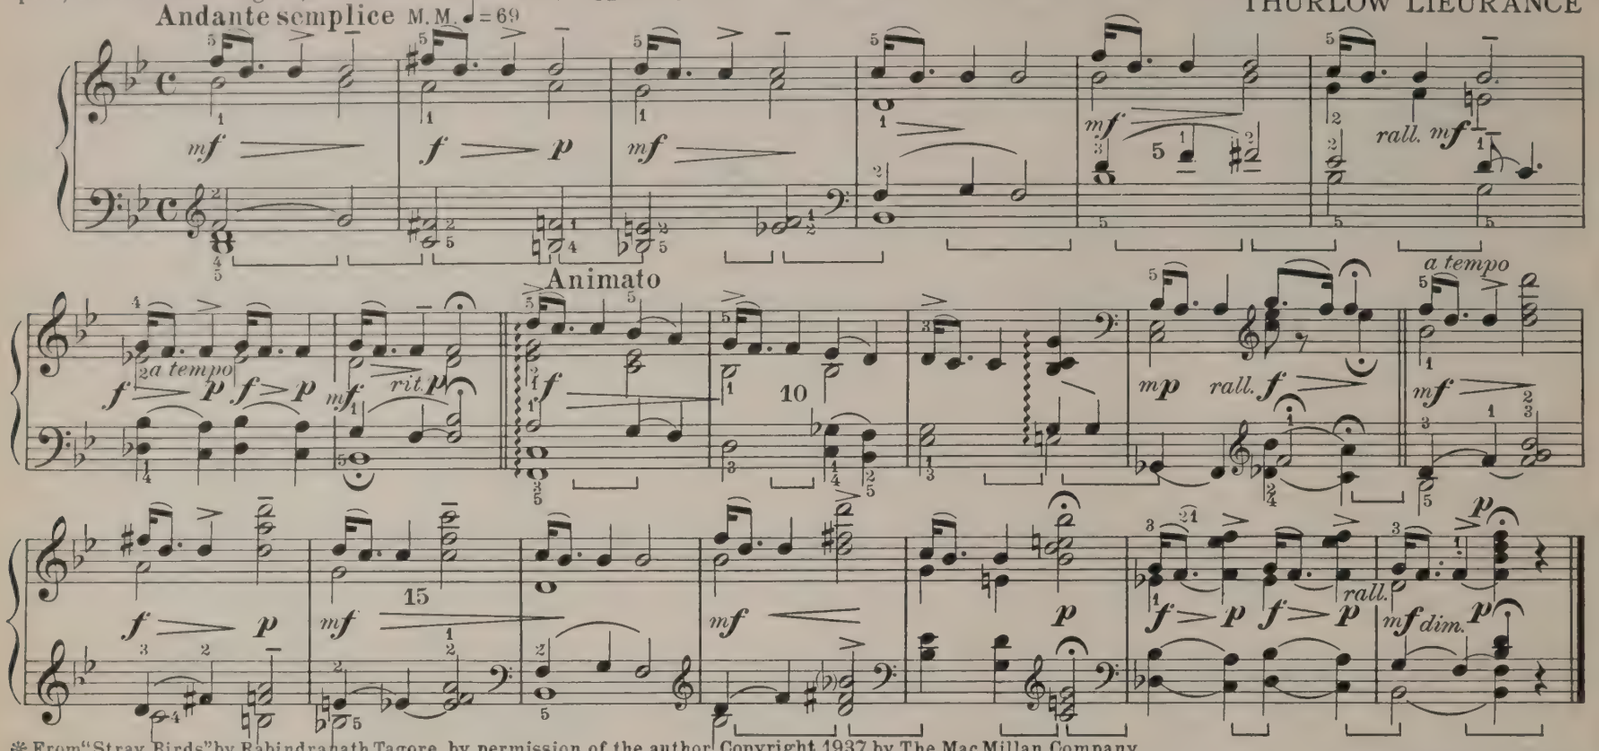
SUNRISE



PASTORAL

Some day I shall sing to thee in the sunrise of some other world,
I have seen thee before in the light of the earth, in the love of man.

Tagore ※

Always original, with harmonies that come from his inspiration rather than from books, this extremely gifted American composer invariably has something new to say. Different from his American Indian fantasies, this composition, which is a part of a suite inspired by the East Indian poet, Rabindranath Tagore, has a flavor all its own, suggesting dawn in the valleys of the Himalayas. Grade 3.

SUGGESTS

Requisites for a Career in Radio

An Interview with a Famous Radio and Concert Star

By
ANNABEL COMFORT

"HOW MAY I get work on the Radio?" This question is paramount in the minds of present day music students, all over the world. Should not the question read —"How may I prepare myself so I will be fitted for a Radio career?"

In my fan mail I have read hundreds of letters from people old and young, asking me to tell them how they may achieve "radio stardom."

There is no magic formula for radio success; but there are "requisites" for the singer before she goes before a microphone. At present I have in mind six basic essentials. The first one is VOICE PRODUCTION. I believe this should be written in capital letters. If I were a young singer, before I thought of looking for radio work, I would look for a good voice teacher. If the student feels that she has found the right vocal teacher for her particular needs, she has taken the first important step toward that involved thing called "success." That is, providing she has an unusual voice quality. Let us say a quality that is individual, a vocal texture that is inherent, one really her own.

No matter if the voice be large or small, it first must have quality. Remember this about the microphone. *It always tells the truth.* In other words you cannot cover up a "made voice" over the air. The microphone will give to the listener the exact reproduction of the quality you produce.

The average radio listener of to-day knows what kind of singing he likes. He knows the reasons why he continues to tune in week after week. It is the real quality that strikes the listener.

This teacher should put the voice in perfect technical condition. Without a technic approaching perfection, for the radio, one will not go far. Again the microphone will pick up the slightest technical defect. Perhaps this will run a whole performance or stop a career from flowering.

My second requisite should be called *musicianship.* All singers should study piano and harmony (both written and keyboard harmony). I should have been much more serious about my "musicianship" when I was a student in high school and college. Although I have played the piano since I was a little girl, and next to singing I now favor the piano as a career, I never realized how important this basis was to me until I got so busy with one hundred other things. For instance, if I just had someone to answer my telephone and do the talking, but no one can do my work for I must do it.

My present schedule insists that I must talk with my program manager, my concert manager as well as managers from all over the United States. Interviews must be given, fan mail must be answered. I have many orchestra rehearsals, besides voice coaching three times a week, working with my accompanist, three diction lessons a week, and languages, which will be discussed later.

Margaret Speaks, well known radio and concert lyric soprano

Then it must not be forgotten that there are two piano lessons a week. Yes even now I am doing that which should have been done before my career took form. I feel just like a little girl when going to the piano to practice; but I keep at it. I sometimes wonder what the neighbors must think of me, practicing piano exercises, but I know I must do it.

When one is an accomplished pianist, the composers meaning becomes clearer. The structure of a song can be worked out and the intimate intentions of the composer may be discovered through this medium. To know the structure of an accompaniment is so important to the singer. The study of harmony cannot be questioned, because of its invaluable ear training. Yes, be a good musician. It makes the way so much safer for successful radio work.

Repertoire is my third requisite. When singers think they can do radio or concert work with a few songs at their command, they are wrong. A singer should have more than "just enough" repertoire. She should not be like the runner who has just enough breath to finish the race. Of course this runner did not win the race. You should never feel pressed for more repertoire, as the runner was pressed for breath. One should keep plenty of songs in reserve.

Of course you must decide the type of song for the type of work you are in. For concert work, one's repertoire must consist of the classics. French songs both old and modern, old Italian songs, German lieder, English songs and many arias. Even though one does not intend to sing opera, he still must know arias. To sing on the radio hour with which I am now connected, I must have a large repertoire of arias. From the first of last June until the first of October I have presented a different operatic aria each week. This policy will continue in the future. I do not always do familiar arias. Recently I sang the unfamiliar *Laughing Song* from "Manon Lescaut" by Auber.

As a student learns more about voice, she should develop the school of repertoire most suited to her needs. I have tried to be adaptable in my singing. Popular songs have been in my repertoire for years. In fact I have done every type of singing you could think of. Included in this I can mention songs by Victor Herbert, Jerome Kern and George Gershwin.

I class my voice as a lyric soprano, although I have sung coloratura songs and dramatic arias on the air. One should not dissipate talent by singing just anything. The young singer should learn early to discriminate.

So many singers sing the same program over and over again. A great many of the audiences want to hear the same songs again, and the audience requests are very important to the singer. She wants to please her audience. She *should* please, for singing is just as much a business as dressmaking. The dressmaker must please her client. There is a wealth of unfamiliar material for the singer to study. One must keep looking for it and never stop studying. I love to sing rarely heard songs. It often happens that one of these becomes a favorite in an unexpected place. My advice is to keep out of a rut.

How useful it is to have the song in one's repertoire when a last minute request arrives. Of course I want to make Mrs. Jones happy by knowing and singing her favorite song.

Languages come next. Is there a successful singer to-day who does not know languages? The singer should have a speaking acquaintance with German, French, Italian and Spanish, and should be able to speak an extra language as well as perfect English. A phonetician has taught me languages for the past five years. English diction should come under this heading; and it is equally important, for the microphone will not help imperfect diction.

Next must come the study of dramatics. This study is advantageous whether one does or does not plan to become an opera or movie star. My present radio program is broadcast in Radio City, New York, in the largest radio studio in the world. The stage is immense. Here is where the seventy-five piece symphony orchestra sit. My dramatic study has assisted me greatly in getting on and off the stage, and, in fact, on the many concert platforms where I appear during the year.

On first coming to New York I saw an ad in the newspaper and answered it. A part was given to me in a piece called the "Greenwich Village Revue." I also played the piano for the chorus to rehearse, but this venture was short lived. Soon I was in the chorus of a Schubert show, and this led to a vaudeville contract. I regret that I did not pay more attention to high school and college dramatics. It is a golden opportunity; for, if one does have a career, the groundwork will be well cemented. Yes, let me say again that—dramatics, languages and piano should be given most serious study in high school and college.

Many more requisites could be mentioned, but the last, and certainly not least, for which there will be space, is *personal appearance.* At my two weekly broadcasts there is an audience of twelve hundred people; and of course I must look my best. I am also thinking and preparing for television which they say is (*Continued on Page* 738)

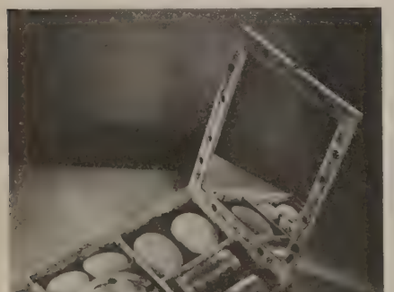
Helpful Hints on Platform and Personal Appearances



EARLY AMERICAN OLD SPICE

"Sugar 'n spice, 'n everything nice, that's what little *girls* are made of." Often in my younger days, I repeated this little rhyme, not knowing that our American ladies of the 18th Century used, as their greatly treasured perfume, just such compounds of crushed flower petals and spices, making the rhyme almost literally true!

In the 18th Century, young America was enjoying a period of gracious living. Homes were lavishly equipped with fine furnishings, china, glass, silver, treasures from the Old World and the Orient. Our American furniture and glass makers were being patronized and encouraged. Men and women dressed with great meticulousness, and so naturally, "scents" were sought after.

Boxes seemed to be just as carefully made and treasured as the perfumes were, for many a bride's chest was supplemented by small hand decorated sewing boxes, pincushions, whatnot boxes, miniature trunks and so on, which were made by artistic friends. I treasure a small spice-box to which the heady odor of spice clings after a hundred years or more of idleness, also a miniature trunk that was made to hold trinkets. It was carefully lined in newspaper and has the bride's initials hammered in its top in brass nails.

And so, being an Early American enthusiast, as well as a lover of fine toiletries, I "oohed and aahed" when I stepped

into a showroom recently, redolent of the newly rediscovered perfume of yesteryear; and saw reproductions of hand-decorated Stiegel bottles carrying perfume and toilette water, a gaily painted wooden salt box, with its burden of bath salts and a tiny wooden scoop, a sewing box with quaint mottoes, a trunk with "welcome" on it—for the guest room, large and small pin cushions, trinket boxes and, as pictured here, a vanity box crammed full of *Early American Old Spice* toiletries. The vanity box is of sturdy light wood, gaily painted, lined in star-flecked paper, with a mirror set in the cover. It has compartments usable long after the toiletries it carries are used. It can be had at $3.50 with two small boxes of bath salts, 2 cakes of soap, 4 guest size cakes of soap and a large box of dusting powder, or at $4.25 with 2 cakes of soap, 2 guest size cakes, a bottle of cologne, a box of bath salts and dusting powder. The manufacturer, *Shulton*, 630 Fifth Avenue, New York City, will be glad to furnish these sets direct, if not obtainable locally.

ARISE - - - AND SHINE!

KNOWING that you are now planning and practicing for this year's recitals, and having an earnest desire to help you to look your very best at those important times, I consulted with the Beauty Advisers of one of our leading authorities on the art of make-up, so that we could tell you this month what you should do to bring out your best points under the varying bright lights on a platform. In other words, when you arise and shine, make sure the shine is not highlighted on the tip of your nose.

RULE I — First make sure that you are to perform behind plain bright incandescent footlights, with the overhead lights normally used on a concert stage. If there is any trace of color in the lights, the make-up must be corrected to counteract this color; otherwise the effect may be simply ghastly. If these lights are very intense (spotlight, etc.) you must heighten your coloring accordingly. The demonstrations that were made for me were done before a typical make-up mirror, that is, a mirror that is completely surrounded by lights so as to throw an intense, shadowless, bright light on the mirror. But as such a mirror is not often available, you can approximate it by putting a hundred watt bulb before an ordinary bathroom medicine cabinet, or two one hundred watt bulbs if you are to appear under an intense light.

RULE II — Of necessity, the colors to be used are dependent on whether you are blonde, brunette, red haired, grey haired or white. Women with greying hair can be guided by the darker shades in their hair. White, on the other hand, is of itself a dominant color. I will go into detail about the proper shade of cosmetics for each type later.

PROCEDURE — With a small piece of absorbent cotton pat small dabs of liquid powder lotion of the correct color on your face, neck and arms. Blend this smoothly so that all areas have an even coating. A dot of cream rouge, placed in the middle of each cheek, can be blended so that the face assumes a pleasantly oval contour. (If your face is long, work the rouge well *away* from the nose, sweeping *upward* toward the outer edges of the eyes; if round, bring the rouge *nearer* the nose, not too high; and form a smoothly blended triangle, whose inverted base runs along the cheek bones. Of course this is an imaginary triangle. Be sure there are no well defined outlines.) The next move is to powder, using a downward stroke to give that velvety texture. Our make-up specialists claim that the tiny hairs on a woman's face are thus stroked in the proper direction, thereby eliminating roughness or streakiness. Brush away all surplus powder. Study your eyes before applying shadow to determine whether or not they are deeply set. (If your eyes are not deeply set, the upper lid can be lightly covered with the proper shade of eyeshadow. Be careful not to bring the shadow near the nose. If you cannot see the upper lid, blend the shadow very lightly over it and carry it up to the eyebrows.) This make-up can be effectively used by those who wear glasses, too! An eyebrow pencil should be lightly used (when necessary) to accentuate and lengthen the brows. Use only short sketchy lines, never hard firm lines. Put a light touch of dry rouge over the basic color that appears through the powder. Mascara the eyelashes lightly, never allowing the mascara to make the hairs stick together in spear-like formation. Put a light touch of tissue oil over the shadows on the eyelids to add a sheen. Rouge your lips with a lipstick that matches the cream rouge, in your usual manner. A deftly blended touch of dry rouge on the tips of the ears and chin and you are ready to face your audience even under the most telling lights.

The Beauty Advisers at *Helena Rubinstein's* salon have demonstrated for me, that the following colors are very suitable for platform use, or if toned down a bit, for ordinary evening wear.

BLONDE HAIR — Mauresque Town and Country Lotion, Red Coral cream rouge and lipstick, Peachbloom or Champagne Rose powder, Jade or Blue eyeshadow, Blue-green or Blue mascara, Black or Brown pencil, Peachbloom dry rouge.

DARK HAIR — Mauresque lotion, Red Velvet cream rouge and lipstick, Light Terra Cotta or Mauresque powder, Emerald or Orchid eyeshadow, Black mascara, Black pencil, Peachbloom dry rouge.

RED HAIR — Mauresque lotion, Terra Cotta cream rouge, lipstick and dry rouge, Jade eyeshadow, Brown or Black Mascara, Brown or Black pencil, Disque powder.

WHITE HAIR — Peachbloom lotion, Raspberry cream rouge, lipstick and dry rouge, Violet eyeshadow, Black or Orchid mascara, Black pencil, Peach Bloom powder.

Nails can be tinted with a light shade or to match the lipstick. Eyetissue oil is applied in each of the above described make-ups to add the glamour of sparkling eyes.

And there you have it! I know it sounds complicated to those of you who have been used to giving your face a desultory pat or two of your favorite powder over a casually rubbed in spot of rouge. But seein' is believin'. If you will experiment with this until you have it down to a science, I will predict that the line of male *and female* admirers outside your dressing room will be much longer than it has ever been before. Arise and shine!

Theodora Van Doorn

MANICURE IN A KIT

Kits, kits, everywhere! Big kits and little kits! Luxury kits, practical kits! I love them all for they add the ordered altogether-in-one-place touch, that every busy, modern woman strives to achieve in her dresser drawers, closet and bathroom shelves. Then when travel time comes, the kits are zipped up or buttoned as the case may be and nothing is missing that is needed, when her destination is reached.

In searching for my kit suggestions, at Christmas approaches, I visited a famous manufacturer of nail polishes and was shown manicure kits that were so complete and easy to carry, beautiful to look at and comparatively moderate in price, that I could not refrain from picking out one for you to see.

It is made of genuine leather (black pin seal or brown ostrich), or maroon whip

cord; zipper fastened, pink silk lined; and contains *two shades* of nail enamel (your choice of any two:—Light Shell—a natural light pink, Shell—a deeper pink, Bimini—an orange pink, Newport—a deeper orange pink, Windsor—a light blue red, Riviera—a medium rose color, Sudan—an orange rose, Sun Rose—a deeper orange rose, Sierra—a brown rose, Lancer—a medium blue red, Savoy—a deep blue red, Cubana—a bright orange red, Nassau—a brighter orange red, Chestnut—the brightest orange red, Pomegranate—a bright neutral red, Ascot—a bright blue red, Suez—a deep brown red, Tartar—a medium bright blue red, Garnet—a very bright neutral red or Mahogany—a very bright blue red.) There is also a bottle of oily remover, triple-cut steel file, steel pusher, orange stick and emery boards—all for $2.50! If you can not buy this set locally, send money order or check direct to *Revlon*, 125 West 45th Street, New York City, mentioning ETUDE and the shades of polish you prefer. You will enjoy the luxury of this perfectly planned moderate priced set.

Whether you order a kit or not, this manufacturer will be happy to send you a lovely booklet "Your Hands, Madame," if you will write them saying you are an ETUDE reader.

MASCARETTE

Like all other women, I adore make-up gadgets, especially ones that are good to look at, useful and above all, that work. And so I want to pass along the word about *Pinaud's* new Mascara distributor. It is a most attractive, flat "duragold" and enamel case, little larger than your lipstick, which holds a two weeks supply of *"#612" Creamy Mascara* and a tiny brush. After the *Mascarette* is filled, a turn of its small knob forces the Mascara through three small slits in the metal wall which separates it from the brush and—voila! an evenly coated brush ready for use! There will be no more stained bags or mess

New *Under-arm*
Cream Deodorant

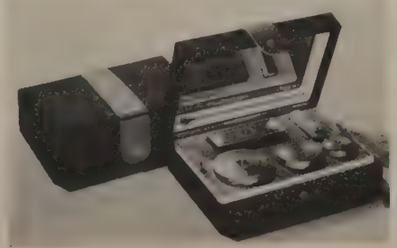
FEMININE PRODUCTS
82A Park Place, New York, N. Y.

HINTS ON PERSONAL APPEARANCES



Mascara boxes for you to hide. A beautiful ebony, ivory, green or Parisian blue enamel case will further the allusion of that precision that is called perfection in grooming. The *"#612" Mascarette* in any of the above named colors together with a regular sized tube of black, blue or brown *"#612" Creamy Mascara*, neatly boxed, is priced at $1.00. If you are in any way tied to one of those eagle-eyed males to whom Mascara is anathema, you may never have dared to try this growingly popular beauty aid. The use of Mascara is more a question of judgment and skill than most people imagine. The *Mascarette* provides the touch of skill that is needed. You will have to provide the judgment. Use Mascara rightly and your husband will like it.

PLATINUM FINISH COMPACT

Have you wished for a compact that was both elegant and simple? One that you could carry with perfect aplomb, either in your daytime bag or your most elaborate evening bag? Whether you prefer the single or double compact, cake or loose powder, this platinum finished, engine turned vanity case, with its all-over pattern of tiny ridges, recently introduced by *Yardley*, and bearing the miniature gold seal showing the famous Lavender Sellers of London, is the answer to that wish. It has slim elongated red clasps, which add a touch of daring to its dignity. The single compact for cake or loose powder is $1.50, while the double with the compacted (cake) rouge is $2.00. Call me a snob if you like, but I always feel just a little bit better if I carry some accessory with the distinction and dignity which *Yardley* so obviously possesses. Say what you please, the name *Yardley* means something to most women, that warrants that small added cost which their product sometimes entails.

MATCHING MAKEUP WITH A MIRROR

A subtle world of information seems to abound in a woman's eyes. They smile when she is gay, flash when she is stimulated, reflect innocence, ennui, mischief, sorrow and a dozen other fleeting moods, even when she is not aware of any specific feeling. They can reflect the serenity of a cloudless sky, or the deep tones of a wintry sea. Artists and poets have immortalized the beauty of the clear blue eyes of childhood, of the Madonna, the flashing dark one of a Spanish Beauty, the placidity of a Dutch Housewife's and the inscrutable depths of a Mona Lisa.

Your eyes are a key to you. How often have we heard of a woman, "she dresses to match her eyes and complexion!" And so, milady of today caters to her eyes by make-up that flatters the color in them. This admirable tendency has been recognized by *Hudnut* and capitalized in the marvelous make-up kit described herewith.

Encased in a black leather make-up box, with a smart red leather trim, are harmonizing gilt, black medallion trimmed metal cases containing eye shadow, mascara, dry rouge, lipstick and a matching gilt, single compact. These fittings are set into a removable red moire covered tray, under which is ample space for other small accessories. There is a small box of loose powder, from which you can fill the compact, in this lower compartment. A good sized mirror fitted into the cover of the case makes it handy for your dressing table, dresser drawer or when traveling. The cosmetics are assembled for blue, brown, gray or hazel eyes. This *Marvelous Eye-Matched Make-up Box* retails for $3.50. If your local dealer does not have it in stock, write *Hudnut Sales Corp.*, 113 West 18th Street, New York City, asking for the nearest dealer who does have it. Be sure to mention that you are an ETUDE reader.

"TOURISTER" CASE

Dorothy Gray, one of the top-notch cosmeticians, has just created the *"Tourister" Case*, 10" x 8" x 4½". It is one of the most complete and carefully thought out kits I have seen. Made of Black or Brown Alligator Grain Fabricoid, or Brown and White Airplane Cloth, Tweed pattern, with a Waterproof Moire Rayon lining, this zipper case contains ten different cosmetics (which will give you a complete make-up), for either dry or oily skin, and ample space for overnight accessories. As you can see from the photograph, the *"Tourister"* has been planned so that it will carry pajamas, negligee (a thin one), slippers, toothbrush and other small necessary comforts. A most luxurious case at $10.00. Just the thing to buy for that very good and swanky friend—yourself.

(*Continued on Page* 738)

Your skin will thrill to PETALSKIN!

Registered U. S. Pat. Off.

Ambitious musicians know the importance of a beautiful skin in personal and platform appearances. Those who tried PETALSKIN in ETUDE'S Charm Sampler, now know the thrill of using these quality products. You should know it, too!

If you want the *thrill* of *thrills*, send for the $2.50 deluxe kit. Use this kit yourself and you will want one for each favored friend for Xmas. See October Charm column for detailed description of kit.

If your favorite dealer cannot supply you, check each item you want, attach check or money order to this advertisement and we will supply direct; parcel post prepaid.

OLIVE OIL
is helpful for hair and skin!

The use of olive oil for the skin and hair is nearly as old as music itself! Musicians particularly appreciate the wonderful softness and flexibility it imparts to both skin and scalp. They use it because they must always look their best.

CONTI CASTILE SOAP

is genuine, 100% Pure Olive Oil Castile. Soothing and delightful, it truly cleans with a caress. The ideal complexion soap. Relieves skin dryness, roughness and chapping. 10c and 25c sizes.

CONTI CASTILE SHAMPOO

A Shampoo made from Pure Olive Oil Castile Soap has always been best for the hair. Conti Shampoo cleanses gently but thoroughly removing dirt and dandruff, replacing dullness with beauty, life and lustre. Containing no alcohol, no free alkali, no acids, it may be used as frequently as desired for every type of hair, without drying the scalp. Why risk experiments? You can absolutely trust your hair to Conti Shampoo. You will delight in the ease with which it cleanses, the richness of its lather and in its "quick-rinsing" qualities. Large size (5 oz.) 50c.

CONTI OLIVE OIL CREAM

This smooth, all-purpose cream is a boon to dry skins. Made with Conti Virgin Olive Oil, it is perfect for use as a skin softener, foundation or texture cream. Alternating the use of this cream with Conti Castile Soap provides the complete beauty treatment. 50c and $1.00.

If your dealer cannot supply you we will send direct. Or if you'd prefer to try these famous products, send us the name of your dealer and we will mail you postpaid a 10c cake of Soap, a 10c size of Shampoo and a small jar of Olive Oil Cream for 25c in stamps. Just print your name and address in the margin and mail to

Conti PRODUCTS CORP. 151 Varick Street New York, N. Y.

ARE BODY ODORS HOLDING *YOU* BACK?

This is a brutally frank question but a vital one to many a musician or music teacher who may be losing friends as well as pupils inadvertently and unnecessarily (both in winter and summer) through this insidious condition.

Music teachers and their students should watch this condition year-round because their work brings them into such intimate contact with one another. Rooms must often be kept uncomfortably warm on chilly days to meet everyone's needs. You may offend unconsciously, or *they* may.

A suggestion from you that you *both* use Park & Tilford's Perfumed Deodorant as a precaution rather than as a present need is the diplomatic way to rid either student or teacher of an undesired offense. It gives you a full day's protection and you can be sure of mental as well as physical comfort—especially under platform lights and in crowds.

Why not try it today? Body odors disappear when you use this revolutionary improved deodorant. Leaves a delightful perfume fragrance—Park & Tilford's No. 3 which many an ETUDE reader has tried recently. If your local 10-cent store cannot supply you, we will mail it direct upon receipt of 10¢ in stamps.

PARK & TILFORD 485 Fifth Avenue New York City

Simply write your name and address in the margin, clip ad and mail with 10¢.

"ON STAGE!" comes the call—and your big moment has come. Will they like you? Will you "go over"? Are you prepared technically? Is your makeup right?

Whether the part you are playing in the evening's entertainment is large or small; whether the audience is two people or two thousand, you naturally want to do all things well. You're a *musician!*

Good makeup is a most important factor, especially good character makeup. No musician should be without our "Tester" makeup kit. It's just as necessary for amateur theatricals, for operettas, masquerades and costume parties as for professional appearances. Contains cold cream, face powder, grease paints, liner, black wax, burnt cork, nose putty and Stein's 25¢ Makeup Manual—all for **$1**

AN IDEAL XMAS GIFT!

M. STEIN COSMETIC CO.
430 Broome St.
New York City

Check what you want, enclose necessary amount; print name and address plainly in margin.
- ☐ Stein's Theatrical Makeup Kit — in leatherette box. I enclose $1.00.
- ☐ Stein's Makeup Manual, FREE.
- ☐ If you ever put out a Concert Makeup Kit and Manual, let me know.

Requisites for a Career in Radio

(*Continued from Page 735*)

not far away. Make up and the matter of dress will take on an added import when this time arrives.

Speaking of make up, I prefer a good cold cream for use at night to refresh my complexion. For the street a liquid powder base is useful and a light natural powder. I find that a natural make up is far more becoming for day wear, than is a heavy one. I usually add a little rouge, lipstick and eyebrow pencil.

For my radio broadcasts and concerts my complexion must be treated in a very different way. There must be a "blend make up" for the footlights. I find a light grease paint with plenty of eye shadow and an extra portion of powder, rouge, lipstick and eyebrow pencil, when carefully applied, will give a blond complexion considerable glamour.

Just a few words about one of my favorite indulgences. I must admit that I am very fond of perfume, and on my dressing table are many different kinds. Artists should not use the same perfume on street clothes as on their evening clothes. I recently bought a perfume that was a perfect match for my tweed street clothes. At my country home, where I spend week ends, I do not use perfume but a toilet water instead. One that has a special country fragrance. Then again, for negligees I go back to perfume with an oriental odor.

The radio and concert artist must pay a great deal of attention to gowns. Every year I add several models to my already extensive wardrobe of evening clothes. When I go on a concert tour, three evening gowns of different colors are taken. At my afternoon rehearsal in the various concert auditoriums I look around and judge the lighting, atmosphere and color scheme. Then it is decided which one of my three evening gowns will look best in the environment that surrounds me. It gives me poise and confidence to know that I am correctly "turned out."

Another heavy concert schedule faces me for this coming winter as well as my regular radio hour. With it all I find time to read some non-fiction which is my favorite reading, spend a few weeks in England and on the continent, and play table tennis. At this, I would really like to excel.

One must keep a sense of awareness not only in singing but even in everything. I may sing a song in concert ten times, but I can always find a new angle in the same phrase. In the case of *Sylvia,* written by my uncle, Oley Speaks, I have sung this at least one thousand times, but I feel that I am still learning it.

Keep aware in your mind and you will see in "the old," "the new."

Hints on Personal Appearance

(*Continued from Page 737*)

MODERN MIRACLE

I witnessed a miracle of modern chemistry the other morning, while on my scouting rounds. A lovely young woman was detailed to give me a demonstration of a preparation that was created to hide disfiguring birth marks, on the face and elsewhere. I wondered how this clear skinned young lady could demonstrate the claims made for this cream, and so I voiced my doubts. She calmly seated herself before a dressing table with "wait and see." And before my eyes, she creamed her face and neck, and where creamy clear flesh had been, there appeared a fiery, purple red birth mark, which completely covered her chin and one side of her neck. She was amused at my reactions and told me that in the past she would have shrunk away completely miserable, but that now, she could face the world freely; and felt that she was doing her share in helping to make other young people free to go about their daily tasks without cruel stares and comments.

She then took up a jar of *Covermark,* in her proper shade (it comes in a choice of eight shades, at $3.00 a jar; flesh, pink medium, tan medium, dark olive, brunette, peach, suntan or dark), and covered the spots. As she worked, she explained the ease with which this can be applied. Then she rubbed in some *Complexion Cream* ($1.25 a jar) which comes in one shade only (a brickish red), and blended it carefully until the covered part matched the rest of her skin. This, she said, restored shadows. Then she patted in powder to dry the whole area. And the beautiful creamy skin that I had first seen was again apparent.

I felt much like "Alice in Wonderland" must have felt when she stepped through the mirror. I could hardly wait to get back to my desk to pass the good word along. You can send your check or money order direct to *Lydia O'Leary* at 551 Fifth Avenue, New York, mentioning ETUDE, and she will furnish this wonderful boon, together with full directions for its use, by mail. Be sure and describe the coloring of the surrounding flesh.

For the rest of us, who *will* persist in developing a blemish right at the time of our recitals, big parties and so on, there is a *"Spot Stick"* at $1.25, which comes in light, medium and dark shades only. This really should be in every musician's make-up case.

COMMENTS ON COSTUMES FOR THE CONCERT STAGE

For months, I have been wanting to amplify my earlier suggestions regarding proper dress to be worn at your various recitals. Suddenly the necessary space was available, and I hastened to get my suggestions on paper, before some other interesting kit crowded them from my mind.

Smooth, flowing, simple lines that give perfect freedom of motion, whether singing or playing, should be your first consideration.

For the evening, a simply made, long, full skirted dress, either decollete, or with small puffed sleeves is in good taste. The more daring, highly moded gowns tend to cause your audience to pay more attention to the cut of your dress than to your music. This gown can be of chiffon, velvet, satin, taffeta, mousseline, or crepe de chine, in any of the shades that are becoming to you. (If you want to spend more money you can use lame, lace or the more costly sequins.) Wear simple slippers, either to match your gown, a subtle contrast, gold, or silver. Do not overload your person with heavy, glittering jewelry. A well chosen piece or two strategically worn, will add a world of chic, whereas a full assortment only resembles the jewelry counter at the "five and ten." You can carry an evening handkerchief. If you tend toward gestures or hand movements, dispose of it quickly before you start to sing or play.

For the informal afternoon recital, choose your most flattering, walking length dress, matching or black slippers and a jaunty hat. Again watch carefully your costume jewelry, so that the ensemble will be one of smooth perfection.

If the afternoon concert is to be a bit more formal, one of those tailored, long-skirted, lace, silk or chiffon dresses, with long or short sleeves, is the proper thing. Here too, you can wear a smart, small hat.

The romantic fashions, that are being worn just now, seem to have been created for musicians, for they breathe of the atmosphere that dreams are made of.

If you do have any specific problems on dress or make-up, write me and I will answer your questions through this column, as promptly as possible. Let's all get together to make this a season of splendid success in all our "personal appearances," and remember that correct grooming will go a long way toward making it so.

When Schumann Played at Twilight

IN HER BIOGRAPHICAL WORK on "Schumann" ("The Master Musicians" series), Dr. Annie W. Patterson, long a valued contributor to THE ETUDE Music Magazine, thus describes the characteristics of the great composer at the keyboard:

"It seems that Schumann best liked to play at the twilight hour and was happiest over his performance when quite alone, as might be expected from one of his reserved and dreamy nature. At the same time he was always ready to play to his friends. Lorenz says: 'His performance was above all original, and the exact opposite of that of virtuosi, who make imposing effects by strength of percussion and sharp contrasts.' On the authority of Lorenz, we also learn that Schumann seldom played single complete pieces, but rather short, fanciful effusions in preference to anything published or written down. His style of playing, the narrator considered, resembled what one might expect from the nature of the Eusebius numbers in the *'Davidsbundlertanze.'* His almost uninterrupted, but ever discreet, use of the pedal is also referred to, Lorenz adding that nevertheless no discordant mingling of harmonies was heard.

"Alfred Dörffel, who was introduced to Schumann in 1839 and frequently played the composer's own compositions before him, speaks with grateful recollections of much useful advice from Schumann himself as to the way in which he wished his works rendered. 'It is all too stiff,' Schumann once commented, when the young performer had been interpreting some of the earlier works, such as the *Fantasiestücke* and *Novelletten.* 'This remark,' says Dörffel, 'was of great use to me, as it enabled me afterwards to attain a far freer and easier touch.' The pianist also speaks of the invariable friendliness of Schumann towards him. 'He had so much of the mildness of a father that I was not only extremely fond of him, but also always approached him with confidence, whereas I often went tremblingly to Mendelssohn and, through my nervousness before him, seldom played as well as I otherwise could have done.' Dörffel further describes what he calls Schumann's 'organ style' of piano playing, and confirms the remark of Lorenz's concerning the composer's fondness for the pedal. It seems that Schumann always kept the pedal somewhat open, so that there was ever a slight mingling of the middle harmonies, and that he was also very adroit at skips, striking one low note alone or in octave, and from thence rapidly and smoothly springing to a chord higher up on the keyboard.

"The following description of Schumann's playing 'at the twilight hour,' quoted by Jansen in *Die Davidsbündler,* on the authority of this same Alfred Dörffel, reminds one forcibly of the tales that are told of Bach's improvisations in the shadows of St. Thomas's. It appears that Schumann had a pedal keyboard attached to his grand piano. Dörffel expressed a desire to hear him play, and was told to come when the dusk was falling. The young man came accordingly, and hearing the composer playing within, knocked once or twice at the door but received no answer. 'Quietly opening the door,' says Dörffel, 'I therefore entered the room and placed myself silently near the entrance. It was already so dark that Schumann could not see me. He continued to improvise while I listened breathlessly. In the course of about ten minutes he wanted to light his cigar, and by its gleam he perceived me.' Schumann smoked very strong Havana cigars, it seems, and Dörffel mentions parenthetically that there were many remains of them upon his desk. At first the composer was somewhat surprised to see the mute listener; but, the intrusion being explained, he smiled and excused it. 'What he had been improvising,' continues Dörffel, 'made a great impression upon me, and I recognized it afterwards in one of the *Nachtstücke* (I cannot now remember which). The playing moved me strangely. It seemed as if the pedals were always half down, so that the note-groups mingled; the melody, however, stood out softly, like the twilight. He (Schumann) must have had exceptional execution (or agility) as a player.'

"Truhn, who had heard Schumann play from the *Kinderscenen, Novelletten* and *Kreisleriana,* writes: 'Schumann's playing was indescribable. He moved his fingers with almost alarming rapidity, as if ants were groping about the keys. He played his own compositions (other people's works I certainly never heard him perform) with very slight accent but considerable use of both pedals. Yet in this habit of his there was not the slightest want of taste.' Brendel expresses himself in the same way about Schumann's peculiarities as a performer and speaks of them as giving him an insight into the character of the composer's works at that period. Knorr, who must frequently have heard him play as a young man, years afterwards spoke with intense admiration of Schumann's improvisations and characterized in particular a certain 'dying away' mode of *diminuendo* he favoured, 'which fell softly upon the ear and won the heart.' Even the somewhat phlegmatic F. Whistling seems to have been strangely affected once on hearing Schumann try a grand piano. This performance he described as essentially original and so striking that, as long as he lived, he would never forget it. Hauptmann and Spohr also refer in enthusiastic terms to the rare and apparently unique charm of Schumann's playing. Spohr had visited him and heard him perform when passing through Leipzig in 1838, and he speaks in his *Autobiography* of being delighted with the composer's interpretation of several of his interesting and romantic *Fantasiestücke* (Op. 12)."

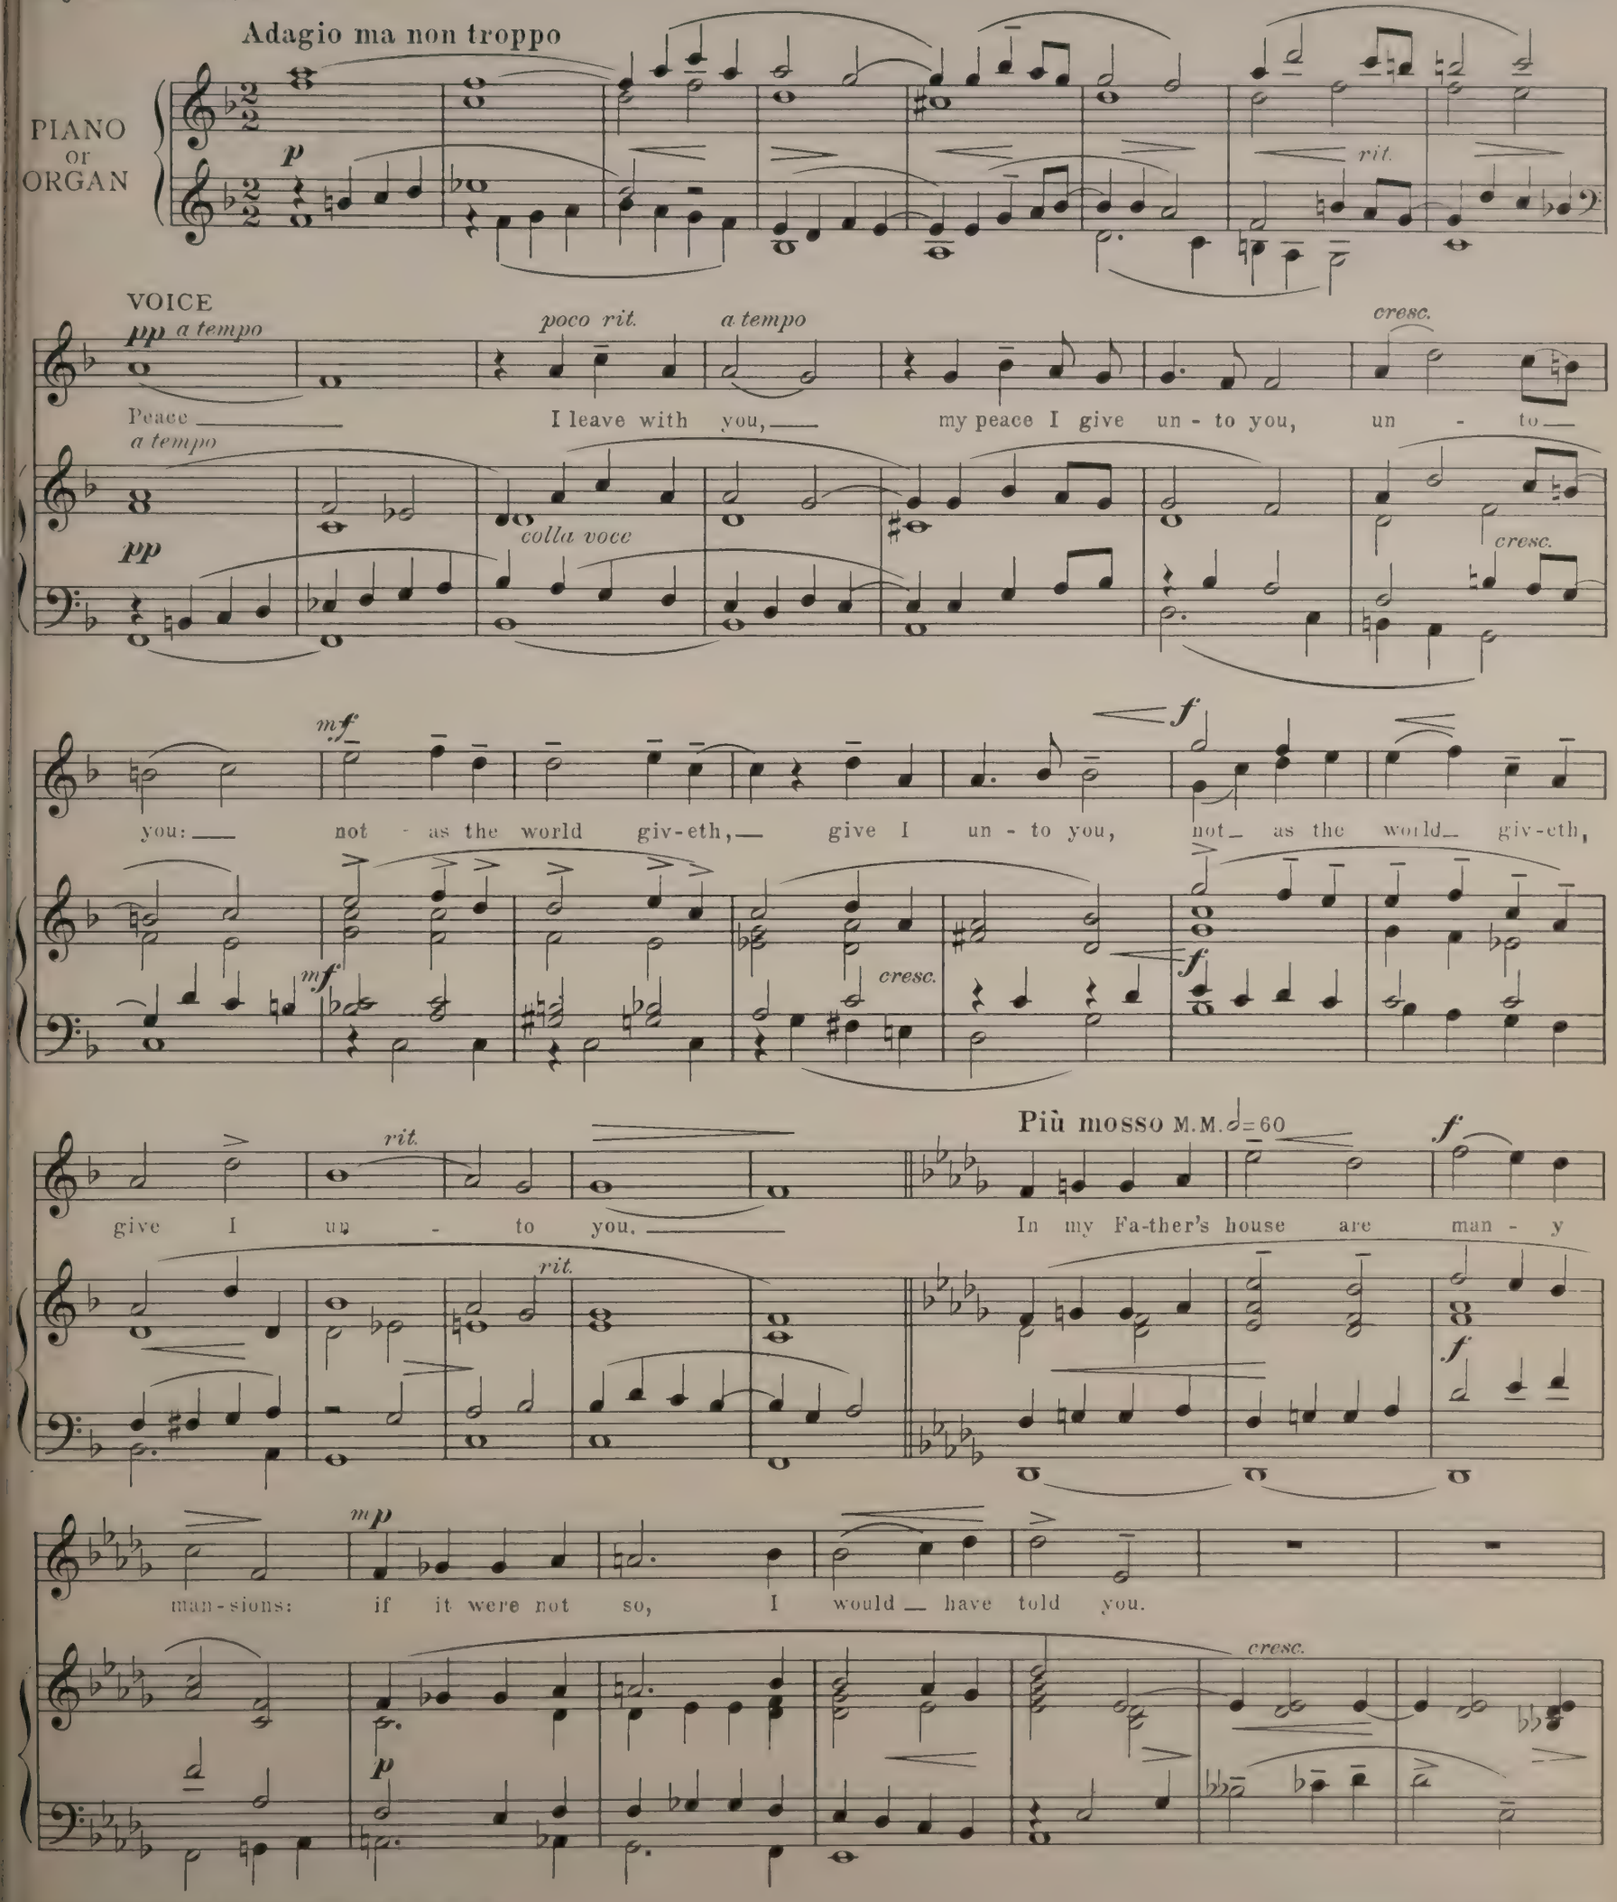
Musicians in Mercurial Moods

Billroth and Brahms were playing a sonata and the former cried out: "I say, your piano playing is so loud that I can't hear my 'cello." "You ought to be glad of that," yelled Brahms, continuing with fire and fury.

* * * * *

Mahler was known never to leave the hall while rehearsals were in progress but on one occasion he suddenly handed the baton to his assistant and said: "I shall have to be away for an hour." Returning at the end of that time he explained: "I'm sorry. I went out to get married."

Rossini and a friend occupied a rear box at the Paris Opéra première of a new work. Rossini kept on his hat but raised it after each aria, smiled, and bowed. "I am greeting old acquaintances," he explained.



* * * * *

Spontini, visiting the Paris Louvre, gazed at the mummy of King Amenophis of Egypt, and apostrophized it as follows: "Curses upon you, Pharaoh! You are the cause of my misery. Had you not chased the Israelites from your domains, they would still be there, and Meyerbeer and Mendelssohn wouldn't be conducting the operas and concerts in Berlin which rightfully fall to my baton."

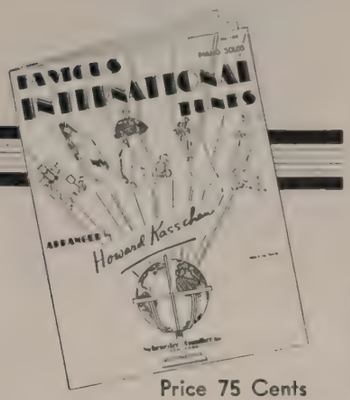
A SYMPHONY A DAY

(*Continued from Page* 706)

by inescapably bad jazz programs. We find many of these programs especially detestable. We belong, however, to a kind of blessed minority. There are millions who have not yet risen above the level of enjoying sounds of this kind, which seem to enthrall a certain type of jittery, chaotic American mind. Jazz, apparently, is a necessity for these millions; and many look upon it as the first musical step of the musically untutored masses. As long as there are novices, there must be music for novices; but, remember, uncounted thousands have started their musical life with jazz, who, only a few years later, have found themselves clamoring for Bach, Beethoven, Wagner and Debussy. For over fifty years THE ETUDE has published in each issue easily comprehensible little pieces that the advanced musicians, of course, look upon as somewhat trite; but these pieces are put there to initiate certain players who soon find themselves seeking better music. Likewise, musical commonplaces, and even jazz of the most rabid sort, on the radio, may be the first step toward finer music. Many wonderful and beautiful things have come out of the gutters of life. We know of a highly successful novelist who, as a boy, learned to read from *The Police Gazette* he found in a barber shop where he worked as a bootblack.

There has somehow been circulated the idea that this cheap jazz music, as it comes from metropolitan hot spots, is the normal music of the common people. Why should not the so-called "poor" have the music they like, as well as the so-called "rich"? This is a ridiculous fallacy. These monotonous tonal atrocities are usually the result of a cultivated musical depravity. This kind of jazz is in no sense natural music but is, on the contrary, highly artificial. Certain primitive intelligences among the "rich" go in for "hot jazz" more than the "poor." However, when the Kentucky mountaineers travel twenty to thirty miles, by wagons and by muleback, just to hear a program at a "listening radio station," they show a curious disdain for jazz. Brought up for two centuries upon a fare of fine old English ballads, they are instantly delighted by the better music and the symphonic programs, but hold their ears when the noise of the Harlem bedlamites is turned on. Their natural taste never has been perverted.

We have recently been listening to some aboriginal programs made in the Belgian Congo, under the direction of the Belgian government, by the Dennis-Roosevelt Expedition, and we must confess that some of this primitive jungle music represents sincere musical gifts, far higher than the meaningless musical jamborees we hear now and then echoed from wild "nite clubs." We are personally so sick of listening to the strident upper tones of the trumpet, which sound more like the shrieks of a rogue elephant than anything else we can recall, that, when one of these Lenox Avenue musical deluges breaks out, we rush to turn the radio dial around, hoping to find a beautiful Negro spiritual. We know a great many others who do likewise, but we know that thousands more have not yet gotten above the level of enjoying sounds of this kind, which, in turn, seem to enthrall this "hugger-mugger" type of American mind. Therefore we are glad that they have this kind of music to enjoy.



Of course there is only one reason why these sprees of jazz are admitted to the air. That is because many people, unfortunately, want this music and demand it. Naturally the broadcasting companies cannot ignore such a demand, as the very principle of broadcasting is to appeal to all and not to an academic few. The broadcasting companies are everlastingly faced by practical exigencies. They do not do what they might want to do, but what established conditions force them to do. For instance, a giraffe might have a desire to sing. It has a neck like an eight foot diapason, but it is said that it cannot make as much noise as a mosquito. When you think of the evils of jazz, always remember that George Gershwin, born and bred in jazz, created the opera, "Porgy and Bess," with its lovely idyllic lullaby, *Summertime*, one of the finest songs yet written in America.

If there is anything really worth while in a man or woman, he will inevitably rise above his surroundings. Many a beautiful flower has blossomed where once was a dung hill. Jazz has contributed a great deal of novelty and interest to modern music, through rhythmic designs, harmonies and orchestral colors, which have been discovered

THE SINGER'S ETUDE

Edited for November by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

Tone and Vowel Development

By LUZERN HUEY

COULD THERE BE ANYTHING more natural and reasonable than to suppose that the vocal base, or foundation, must be at the bottom of the voice? And what could seem more consistent than the idea, constantly advanced, that in order to open the voice we first must open the instrument producing it?

To accomplish these purposes, we are persistently advised to start with the open vowel *ah*, as in *father*. When sounding this *ah*, the throat, we are told, should be widely open, from the bottom of the neck upward. The *ah* sensation, thus produced throughout the throat, has been called the "model sensation—the one to be willed, no matter what vowel is to be emitted at the lips."

Here we have the foundation tone—the tone supposed to serve as a base when building the vocal superstructure.

Now, although this open *ah* belongs to "father," it also has been called the "mother vowel," or "the vowel which contains the possibilities of producing all the other vowels"; and it is indeed fortunate for all serious students of the use of the voice that "father" turned this vowel over to "mother": because "mother" decided that although the neck might be the proper place for forming the "father" *ah*, it is not a fit place for "mother" *ah*.

As we shall see, in changing the nature and placement of this *ah* as a foundation tone, it will tend to alter the trend of modern vocal procedure. To make a long story short, we must build our foundation tone as a part of vocal development.

The Vowels Sustained

WHAT HAPPENS to the vowels when sustained as singing tones by the natural, or undeveloped, voice? They become what are called open, forward, and covered tones, each group having a localized reënforcement only. A start is generally made on the open tones, with the open *ah* as a base. The tones are formed as "open," with a low, or mouth and chest, reënforcement, because the untrained, or improperly trained, voice can form them in no other way. Open tones, carried or forced too high, mean an injury to the voice. The lack of ability to give voice to "father" *ah*, with good quality and volume, has consigned to oblivion many a fine, if not potentially great, voice. Persistence in using the open *ah*, as a vowel building base, has injured many more.

Gladys Swarthout, prima donna mezzo-soprano, gives us an excellent example of what may happen when one attempts to build the voice from the bottom up—or by trying to open the throat from its bottom upward. Speaking of the result, after having changed entirely her method of approach, she says, "My tones became richer, easier, free from that thick, heavy, 'hooty' quality, which results from the chest upward attack."

Mme. Gertrude Wettergren, prima donna contralto of the Metropolitan Opera Company, was even less fortunate, as the succeeding statement shows: "I was allowed to push, or force, my tone from the throat; and the result was over four years of voicelessness." She adds, further, "For me the hardest sound to produce correctly was *ah*. I had to unlearn my native *ah*, which is normally made low in the throat, and to make a fresh acquaintanceship with the properly resonated *ah*." All tones based on the open, or "father," *ah* are practically without definite focus: and tones without definite focus are worthless in voice building, as it is from the point of focus that the tones begin to develop.

This open *ah* is very apt to lead one to push, or force, tone from the throat, under the mistaken impression that the fundamental tone, instead of the fundamental sound, is formed in the throat. In correct tone emission there should be no sensation of tonal vibration in the throat.

The Masters Differ

THE OPINIONS of prominent teachers of singing are, of course, entitled to serious consideration. The prevailing weakness among them, however, is a more or less narrow and superficial consideration of voice as a musical product, rather than as a living, vital force which, when properly handled, may operate to rejuvenate, or rebuild, the entire physical and mental being.

In treating of the action of tonal vibrations on the human organism, we are carried far beyond the vibratory action created by the voice in giving utterance to musical sound only. When taking up the task of developing a voice, which often means the rebuilding of both character and physique, the ear alone is generally depended upon to furnish a clue to its present and probable future possibilities. By no means is this a sure way of arriving at an accurate estimate of the potential possibilities of a voice, especially of a voice lacking in the elements considered essential to a good singing voice. Where such vocal diagnosis tends to debar from instruction one who has the urge and desire to develop the voice, it is a clear indication of pedagogic incapacity allied to inefficiency of method.

But the fact remains that the masters differ. Let us take, for example, three prominent teachers of voice—Garcia, Sbriglia, and Delle Sedie. Each had a different method of procedure in developing the singing voice. Each method was based on what the natural, or untrained, voice could do with the vowel sounds when converting them into singing tones. As before mentioned, these vowel sounds are classed as open, forward, and covered, tones.

According to Sbriglia, all tones should be kept singing (or vibrating) in the chest. Obviously this would mean that vowel production must be based on, or largely controlled by, the open tones.

Garcia, on the other hand, taught that all vowel sounds—open, forward, and covered—should focus in the masque. He claimed that "through this process the singer finds both tone and vowel impinging upon the same identical facial area, and there alone will their union be made perfect." Garcia is quite right in this; but he is absolutely wrong in his manner of approach. The idea of converting not only the covered tones, but also the open and forward ones, into singing tones with a masque focus, merely through the application of pressure, is rather crude vocal philosophy. Sbriglia's idea of keeping not only the open tones, but also the forward and covered ones, singing in the chest is just as crude. But, in its proper place in the scheme of vocal development, it assumes a vital importance. Whenever we start out to keep, or put, the voice either up or down, we are violating a basic law—the law of vocal automatism, which is immutable.

Delle Sedie, of Paris, one of the greatest singing teachers of all time, promulgated ideas which, in some respects, may be considered in advance of present day teaching. The very simplicity of his method tends to conceal its value. Certainly he does appeal to the modern vocal student, who leans strongly towards any method promising quick results—one, if possible, "warranted to transform a voice from the 'natural,' or commonplace, to the artistic plane almost instantaneously." Such an absurd procedure is sponsored only by the "green timber" tone builder. Delle Sedie was no "green timber" tone builder, but one who believed in thoroughly seasoning his material in a slow, natural way, meanwhile watching carefully the trend of the voice itself. He did not say, "Keep the voice singing in the chest," or "Focus all tones in the masque." No, but he said, "Exercise the pupil's voice in its natural center, which forms the ring conducting to the upper and nether extremities; and only allow it to leave this center by small degrees, *as the voice itself seeks to expand*." All honor to Delle Sedie! But we would modify somewhat his line of procedure, by first training the voice in sustained tone production on the plane of speech, instead of at once starting with vocalization on the plane of song, which tends to render much more difficult the mastery of speech in song.

Forward Focus

WHEN BEGINNING vocal training, a definite tone focus is all-important. The focus, with all voices, should be forward to the front mouth and lips. Next in importance is the sustained tone. All speech sounds, as they occur in forming a word, should be first separately sustained. The word should be then pronounced, by sustaining, or prolonging, the sound of each syllable. A sentence, after being so treated, should be read over very slowly, in order to train the organs of articulation in sustained vowel and word formation.

For at least six months this work should be done in monotone, on a natural, or easy, pitch of the speaking voice. Next, through automatic action, would come the rise and fall of the tone as in the *nuances* of speech, preparatory to the formation of sustained vowelized tone and speech at definite pitch. These exercises should be worked out in a sitting position. Sit well back in the chair, with the body erect and inclined slightly forward to free the chest. The feet should not be extended, but drawn back. When we evenly sustain, or prolong, the tones on the plane of speech, we are putting to practical use the fundamental principle underlying the production of the artistic singing tone.

The Vowel Blend

THE FIRST difficulty we are liable to encounter in working for a vowel blend, when starting with the open register, is the vocal break between the chest and the middle registers. But if we follow Delle Sedie's advice there will be no "open tones," and no vocal "break."

Another point worth remembering is that the open tones have no definite focus, which renders them worthless as a vowel building base. Instead of building from the bottom up, or from the top down, we begin by working from the natural center of the voice under a forward, or mouth, focus. As a rule it requires at least a year, and often longer, to establish a vowel blend under forward focus (the open *ah* should be avoided).

Of course we understand this is a temporary, not a permanent focus. Under the action of vocal automatism it will require from one to two years before this forward vowel blend, or vowel cohesion begins to work back towards the pharyngeal space leading to the nasal sinuses (or the masque) and the head spaces. The vowelized tones will gradually become perfected in the upper pharynx (above and back of the uvula) entirely independent of the forward focus employed at the start, but without in any way detracting from, but rather amplifying, the tone volume developed under forward focus.

However, one must not make the mistake of thinking that after the vowel blend develops back to the pharyngeal space it will ascend without interruption to the nasal sinuses, or the masque; or, in other words, follow Manuel Garcia's theory of a masque focus. At this point the nature of the voice automatically determines its own up and down movement. If bass or baritone, it will incline toward chest resonance; but permanent placement will not occur before all tones have developed a masque focus; which does away with all openness of tone. On the other hand, the tenor, owing to his higher range, will incline strongly towards a head, or bell, resonance; though also tending to develop solidity in the lower range, meanwhile maintaining a masque focus. This alone makes possible a close vowel blend over the entire compass.

Not at once, but in time, the vowel *ah*, if not deliberately formed open, will also develop a masque focus, or become so closely affiliated with the sound of *uh* in

mother, that it will become practically identical in both placement and quality. Not until this takes place can it be considered a foundation tone.

The Open Tone

A VOWEL having a masque focus is not an open tone. With this admission, the first question is, "Can any and all vowel sounds be developed to a masque focus?"

And the answer is emphatically, "They can be so produced."

Then comes the correlative, "Is the quality of the open and forward tones improved by this focus?"

And again we say with assurance, "Yes, decidedly."

And finally, "If tones with a masque focus are superior, in quality and ease of production, to open tones, then why are they formed as open?"

To which there is the unequivocal answer, "Because the natural, or partially developed, voice can form them in no other way."

The Romance of Beethoven's "Adelaide"

By PALMER VAN GUNDY

NO SEARCHER for romance in the history of the world's music would fail to thrill to the story of Beethoven's *Adelaide (Ah'-day-lah-ee'-day)*. This renowned composition, which has been described as "the longest, the most impassioned, the most varied, and the most inspired of Beethoven's songs," had its beginning in that wonderland of Europe, the Swiss Alps. There it was that the poet, Friedrich Matthisson, loved and wooed beautiful Annette von Glafey, the original Adelaide.

It was as members of the vacation party of Princess Louise of Dessau, one summer near the close of the Eighteenth Century, that the pair were brought together. Fraulein von Glafey was of noble birth and a member of the royal household. Matthisson held the comparatively obscure position of reader to the Princess. Although he was older than Annette by a number of years, he combined experience and learning with youthful appearance and brilliance of mind, in such a way as to form to the girl the ideal embodiment of all she had dreamed of poetry and romance.

Inevitably they loved each other. High above the world of conventional requirements and practical obligations, they knew the joys of unsullied adoration. It was a love, youthful, pure, romantic. In a few glorious, unreflecting weeks they experienced the happiness of a lifetime. It was not until the final days of summer that they realized the uncertainty which the future held for them.

She was of the nobility. He was a poor clergyman's son. What would her father say to such a marriage as they proposed?

Apprehensive and gloomy, they returned to Dessau. Informed of their wishes, her father came to a quick decision: "Marry in your own class or enter the Convent of Mosigkan! If you must bury yourself, let it be within the four walls of the church."

With tragic haste the maiden made her choice. Bidding a sad farewell to her lover and the world, she began the cloistered life that was to last more than half a century.

In the course of time Matthisson grew to be recognized as one of the great poets of Europe. Finally, by an ironical turn of events, he was granted a title. But she was forever inaccessible. Moreover, he had married another woman.

But the beauty of their love was not destined to die. By the alchemy of his genius, it was transformed into the deathless *Adelaide*.

When the poem came to Beethoven's attention, he at once conceived for it a regard that was intense and lasting. "I must set it to music," he declared; and immediately he began the search for an art form worthy of the verses. Neither the traditional ballad nor the lied offered the freedom necessary for a true expression of the mood of the poem. Beethoven knew exactly what emotions the song must convey. He could feel in his own soul the poignant loneliness of the pleading lover wandering disconsolately through the radiant air. He was familiar with the touch and sight and smell of the natural world—the quivering of nocturnal grasses, the lapping of wings over water. But, to convey that limitless wonder and anguish within the scope of the established song forms, was like trying to compress the starlit glory of a May night behind a lantern shutter.

A less restricted form was needed. Beethoven applied himself to the problem of creating an art song that would be free yet coherent, descriptive yet lyrical, profoundly moving without sentimentality. How well he succeeded may be seen from the enthusiasm with which the composition was received by the musical public of 1797, and from the lasting place which it holds in the library of the world's great songs. Among those who paid tribute to the composer was Matthisson himself. Of the many musical settings which his poem received, none seemed to him so ideally suited to the spirit of his *Adelaide* as the ethereal music of Beethoven.

The Way to Good Breathing

By DAVID SCHEETZ CRAIG

A SIMPLE yet effective exercise to develop breath control is after having inhaled naturally and deeply, without effort, to allow the breath to flow through funnel-shaped lips; that is, lips somewhat protruded, with a small round opening as if one said "boo." By this exercise we control the exhaling or the singing breath and thereby accustom the breathing muscles to relax gradually instead of contracting suddenly, as in their normal functions. It is by repeating this exercise over many times that these muscles become elastic; and this absence of rigidity means greater breath control. This exercise can be repeated, using "boo" audibly, with lips funnel shaped; but at first and for some time it should be practiced with the inaudible "boo."

A sure test of progress of this exercise is to place a lighted candle six inches before the mouth as the breath escapes, and to notice whether the light is extinguished, or the flame flickers or is bent to a steady angle.

By practicing the above exercise, a steady, even flow of tone is developed, from the beginning of one's study, and the very foundation of good tone production is begun.

—*Music and Musicians.*

Believe your ears! BELIEVE YOUR EYES

Yes it's true . . . that gloriously rich, abundant tone originates in this exquisite gem of a piano, which fits so perfectly into the most minute space. And it's just as much of a joy to behold as to hear. See the suave, modern encasements and authentic period models at your nearest Gulbransen dealer or write for Brochure illustrating latest designs. THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

Legato Playing of Difficult Manual Passages

By PARVIN TITUS

MOST good books of organ studies provide material for the mastery of the *legato* style in manual playing. The following suggestions are for those who may not have such books at their disposal, or for others who may find a restatement of the principles of *legato* technic helpful in the fingering of passages which demand some special treatment. In all cases the ear and mind must be alert, to test whether or not a true *legato* has been obtained.

1. Divide the work as equally as possible between the hands, avoiding unnecessary shifts in position.

Ex.1

In measures 1 and 2 of the *Andante con Moto* of "Sonata V," for organ, by Mendelssohn, the fingering here given may be helpful.

The same may be true of this quotation from the *Chorale Prelude, Gottes Sohn ist kommen* (Peters Edition, Vol. V, No. 25; or Novello Edition, Vol. XVIII, No. 20).

Ex.2

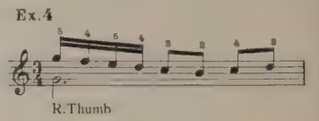
2. Use

A. A rocking motion of the right thumb on white keys of descending passages, or of the left hand thumb when ascending.

B. A *glissando* of the thumb, or any finger, in passing from a black key to a white one.

In the following combinations,

Ex.3



*Use a low wrist, with contact felt below the first joint of finger, and the thumb prepared for the next key.

°Play here by raising the wrist; and shift immediately to a position for preparation of the next key.

†Low wrist, with contact at the second joint.

3. Place a longer finger over a shorter one, or a short finger under a longer one

Ex.4

4. Substitute fingers while keys are depressed, if the above means are impossible.

Ex.5

By the study of these examples, and by the adaptation of their principles to other passages, the organist will be able to add much to the quality of his playing.

The Choirmaster and the Clergyman

As Seen by the Minister

By FREDERICK C. GRANT

DEAN OF SEABURY—WESTERN THEOLOGICAL SEMINARY

PART II

I have already tried to sketch some of the ideals which the clergyman and the choirmaster should share; I have stressed these, rather than the principle of fair-play, or the delimitation of spheres of responsibility (which I take for granted), since I believe that harmonious coöperation in their common, creative task will be more fully assured if they share the same ideals than if they merely follow a code (but the code is there, all the same!). Now what do you do when the aims and ideals of the two men diverge?

A Ruined Service

I PURPOSE TO DEAL with certain difficulties that arise, now and then, in the relations between choirmasters and clergymen, or vestries, or music committees. And I must beg you, in advance, to realize that these difficulties are exceptional; I entreat you not to think that your career is destined to be a thorny one, full of problems of this kind; the overwhelming majority of choirmasters and clergymen get on together as good teammates; it is only in rare cases that problems, of the sort I intend to discuss, arise in parishes; but now is as good a time as any to discuss them; and their best solution is in the light of the principles, or the theory, that I have already tried to present.

I know a choirmaster who spent several months in building up toward a magnificent Easter service; and in the very midst of that service, when the hearts of the congregation were lifted up to the very gates of the celestial city, the minister arose to announce a hymn. 'Now, folks,' said he, 'what shall we sing? What will it be? Let's forget the hymn on the program! How about "Brighten the corner where you are?" Who'd like to sing that? Raise your hands.' The poor, half-educated, egotistic boor probably never knew what he had done, how he wrecked the service, and destroyed by his clumsy bungling what another man, and a whole choir, had spent months in perfecting. Had he taken an axe to the organ, he probably would have gone to an asylum. But this was quite as bad—and he went on his way without reproof or restraint! I know another choirmaster who never gets away from the church after service without a tart word from the minister—never praise, always complaint. And I know another who has to face the 'grouchiest' vestryman in the parish, who chances to be head of the music committee (or is it chance?—he seems to be self-appointed!), every Sunday, and that before he has finished his part of the service, usually as he begins playing the postlude. The committeeman strides up to the organ bench and delivers himself, usually in harsh terms—What can these men do?

The first man *need* not do anything. The members of his choir have told their friends what the minister did to spoil their service; and that bungling minister will probably be on his way to a new charge, sooner or later. The second man *cannot* do anything: the clash of these two personalities is inevitable, and they meet like fire and gunpowder, and explode. One of them must go—and it will probably be the choirmaster. Let us hope the next time he will find a parson who—like the great majority, I fully believe—has a sense of fair-play, and knows enough to leave a man free to exercise the responsibilities committed to him, and has tact and sympathy and a feeling of brotherhood.

When two good men work together in a church, a good choirmaster and a good parson, there is not a happier relationship in the whole world of social contacts: for they are working together, and yet sufficiently apart, each in his own sphere, at a common task, and one that is really creative, and not mere routine and repetition. They are producing something new and fresh and vital, week by week: and theirs is the joy of fresh creation. The third man, I believe, *must* do something, or he will be a nervous wreck. If he cannot reach the vestry with his protest, and get the committee changed, let him resist the bully on the spot and demand that he be approached as a gentleman. The minister might well be the judge, and settle the case—though of course he may not choose to do so. If he will not, then there are the wardens, to whom appeal can be made. There is a great deal of unnecessary friction in human life, and sheer wastage of nervous energy, which could be stopped if bears and bullies were resisted, promptly and once for all, before they 'get the habit' of ragging and complaining—or of raging in violence.

Three Obligations

BUT WHAT TO DO when the vestry or the music committee is either domineering or critical! What to do when the Guild circulates gossip, and persons who don't know their scales pass judgment upon the work of the choir and its leader! I know this is a very difficult practical problem; and I believe the solution is just about the same as when a similar misfortune overtakes a clergyman. And so I shall outline the 'clerical' remedy I think most efficacious!—You simply must view your task as an educational one, quite as much so as the task of the clergyman. And you must, as an educator, both set up high goals to aim at and at the same time take your pupils (in this case the congregation) where you find them. And as an educator you ought, I believe, to do three things:

(1) First, get in touch with other idealists. There is a rising tide of musical appreciation in America, and along with it, as part of it, a rising tide of better church music and of higher standards in worship. The progressive men in the ministry, and the progressive lay leaders in all the churches, are becoming aware of this. Find your fellows and associates; there is added courage and fortitude in numbers. Two men, united, have the strength of three; and three men, united, can take a city—especially if they happen to be the leading organists and choirmasters of said city!

(2) Secondly, let people know that you belong to some society of church musicians. Be an expert in your line—Why not? Take journals; go to conferences and conventions; write articles; write hymns—if you have it in you to do so! Why not? It is your business to grow, to stay alive, never to get stale or dull or 'dead above the shoulders.' American communities have a solid respect for experts. Why not be one? Why not be so thorough a master of your art, as a whole, and a specialist in some one branch of it—say the seventeenth century, or Palestrina, or Plain-chant—that when you speak people will know you speak with authority, and will respect you? No danger then of being dominated and overborne by any committee or self-appointed individual! What would you think of a doctor who never goes to a clinic, never takes a medical journal, never reads a new medical book? The advice I give you is precisely the same that I give my young friends going into the ministry: *The man who is growing is not likely to be caught in a stalemate*, or driven to despair by opposition or attempted domineering. Be an expert in your line! Why not?

(3) Thirdly, and finally, paste into your hat, or at least repeat every morning at

breakfast, that line of Emerson: 'Nothing great was ever accomplished without enthusiasm.' If your inner fire goes out, and you slump into the attitude of the hireling, and you have no longer any of your youthful enthusiasm, then do not for a moment think you can make a go of your work. See a doctor at once, and get a diet, or have your tonsils out, or something; and then if, once you are physically on a sound basis, you still lack enthusiasm for your work, pray God to give you a new vision of life, and a fresh baptism of the Spirit. They say it doesn't take much of a man to be a clergyman (I disagree!), but that 'it takes all there is of him.' The same is certainly true of the choirmaster—I mean the second half of the saying, with which I agree. And I wish there were time to tell you the happy relations I have experienced in my own ministry, and have observed in that of other ministers whose choirmasters have been men of skill, intelligence, tact, idealism, devotion, earnestness, humor, and enthusiasm. If I have stressed the fact that a choirmaster should count himself fortunate in having a clergyman with such qualities, let me close by saying that happy is the clergyman who has such a choirmaster. Thrice a day, he will call himself the pampered pet of fortune; and all his friends will rise up and call him doubly blessed! *(Reprinted, by permission, from "Northwestern University Information.")*

A Duo-Artist on the Organ Bench

By WILLIAM REED

THE COMBINATION of organist and choirmaster in the same personality includes certain advantages especially in the management of a choir of moderate size. The two departments may be readily unified and assimilated, provided the organist, irrespective of his efficiency as a player, keeps before him the fact that the choir constitutes his main responsibility, exacting his constant attention both vocally and in some degree instrumentally.

Primarily, points essential to the success of a choirmaster's work may be summarized as Methodical System and Disciplinary Tact. He should know the voices and useful capacity of every member of his choir, and should seat them in such positions as will be likely to make for their personal and mutual assistance in the general effect. He must also be ready to afford individual assistance, where required in the matters of sight reading and small vocal points, all of which will be found to give good results in the long run.

A choir rehearsal should begin as punctually as possible, and it should not exceed one and three-fourths hours in duration, with an allowance of an intermission of three minutes, or so, half way through. All other time should be devoted to interesting work, done in a businesslike manner. To this end, discipline is all-important; a social atmosphere being maintained or relaxed according to circumstances. Experienced organists and choirmasters differ in their modes of management and conducting. Those who are less experienced in the combined duties will find the following suggestions of service, and it is to such that they are offered.

Voice parts should be rehearsed:

1. Individually.
2. In different combinations, such as Soprano-Contralto, Tenor-Bass, Tenor-Contralto, and wherever there are any cross difficulties; then collectively.

After this, a good test is that of accompanying the parts, both singly and collectively, with a simple harmonic basis of chords; and, if necessary, follow this with unaccompanied singing. Both of these means enable faults to show through, besides imparting confidence to the singers.

For expressional purposes, the organist may illustrate, not only vocally but also instrumentally, by means of the Swell Pedal, leads and attacks being emphasized through the use of 8′ and 4′ registers, thereby furnishing initiative and encouragement; but the singers should become familiar with the actual accompaniment when the parts have been sufficiently rehearsed. Good vocal tone is helped by the use of Diapason and Gamba quality in the accompaniment, to which may be occasionally added a 4′ Harmonic Flute. Such combinations assimilate well with the voices and may tend to become imitative in regard to more clearness of vocal tone.

Rehearsals after church services are sometimes found necessary; but such a system, regularly exercised, has little to recommend it. It has a tendency to encourage laxity in attendance at the week night rehearsals, besides lacking both the time and atmosphere for the more solid study of the latter.

The tactful choirmaster will not frequently interrupt the singing for the purpose of small corrections. He will make these at the end of the periods and sections, and then correct matters piecemeal.

Not the least important point in the successful management of a choir centers in the judgment of the choirmaster in the selection of music. Let him devote much thought to finding what is reasonably within the capacity of his singers, yet of real musical and literary worth; while at the same time he considers what is likely to be acceptable to the congregation that all serve.

How to Make the Hymn Breathe Life

By MARIE M. HINE

AN ESSENTIAL QUALIFICATION of the well equipped organist is the ability to play hymns well. Organists, do you make your congregations want to sing? This is a part of your job. However, unless you enter into the spirit of each hymn, you cannot expect the people to do so.

Is it asking too much to insist that the organist shall have memorized all of the most frequently used hymns?

If the hymn tunes are at the tips of his fingers, he can give attention to the phrasing and expression of each stanza (the expression not to be overdone, however); and who knows but that he may soon have the congregation singing artistically?

Let loose of the pedal occasionally. The pedal will enjoy the rest and so will the people. Also, forget for long stretches that your organ boasts of a 16-ft. coupler.

In giving out a hymn on the organ, play it through accurately, and use the exact tempo in which you expect it to be sung, remembering each hymn has its own tempo.

A rather free style of accompaniment on a very familiar hymn tune will prove inspiring, but should not be overworked.

JACOBS' BAND MONTHLY and JACOBS' ORCHESTRA MONTHLY, $1.00 per year, each

"HE CAN'T EXPLAIN IT—BUT HE SAYS THEY CAME OUT OF HIS SOUL."

FIFTY YEARS AGO THIS MONTH

EDGAR STILLMAN KELLY, then early in his distinguished career among our native musicians, gave to our readers these thoughts on "Pianoforte Study":

"Dr. Hans von Bülow, while commenting upon the effects of practicing monotonous five-finger exercises, maintains that the flexibility thus gained is acquired at the cost of musical intelligence. 'Involuntarily, the performer loses all thought of what he is playing. The great lack of charm and interest of the task produces absentmindedness, and, finally, utter thoughtlessness. The player becomes a mere machine, forgetting that he has to be engineer at the same time, without whose care its progress, if not stopped immediately, will be greatly impeded.'

"Schumann, in his 'Advice to Young Musicians,' expresses similar sentiments. 'Practice assiduously scales and other exercises. There are those, however, who fancy that they attain perfection by spending several hours daily in mechanical execution, even until at an advanced age. That is as if a person should exert himself to repeat his A B C faster and faster. Employ your time better.' Again he says: 'But how does one become a good musician?' Not by secluding himself for days together, and prosecuting mechanical studies, but by holding enlarged, living, musical intercourse.'"

ORGAN AND CHOIR QUESTIONS
Answered

By HENRY S. FRY, Mus. Doc.
Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Having a desire to learn to play the organ, until I am ready to do so it occurred to me that perhaps there is a book that would be helpful to a person who is a complete beginner, and who does not know how to read music or play the piano.—A. G.

A. We suggest your studying the piano, in order to learn to read music and to obtain technical ability on the keyboard. For information in reference to organ, you might consult "The Organ," by Stainer-Kraft (which contains some reading matter) and "Organ Playing; Its Technique and Expression" by Hull. Of course much will be difficult to understand by one whose knowledge of music is not more extensive.

Q. Enclosed find specificaton of a proposed residence organ. The Pedal Bourdon is to be omitted until funds permit installation. Reed organ attachment to be included to introduce additional voices in manuals and pedal. What would you consider suitable scales for the stops? Where can used pipes be secured? How much would the stops named on enclosed list cost? Should a String be added to the Great and Choir organs? What are the patent date, number and inventor of the Hammond Electric Organ?—E. H.

A. We suggest your seeking information from "Organ Stops" by Audsley, or, better still from some practical tone expert. You might find some used organ pipes by communicating with some organ builder, who could also quote you prices if pipes are available. We advise new pipes, arranged as to proper scales and so forth, by a practical organ builder. A String toned stop on the Great and Choir organs would be useful. We question the effectiveness of a Cor Anglais produced by a Clarinet and Salicional—also the "Horn" specified. The Swell organ Diapason might be of the Geigen type, and a Duiciana Nazard might be included in the Choir organ. We are not enthusiastic over the idea of including a reed organ attachment to introduce additional voices on manuals and pedal. You might secure information relative to the Hammond instrument by addressing the Hammond Organ Company, 2915 North Western Avenue, Chicago, Illinois.

Q. What, in your estimation, are the possibilities of an organ of enclosed specification? I have endeavored to preserve both the full toned qualities of the "straight" type and the special effects obtained by unification and duplexing. Would you advise any changes? Do you think it would be advisable to enclose in a third chamber a few ranks of pipes for the third or Choir organ, and to have these stops appear on the Great organ also? Or, would you leave the Choir manual with stops entirely borrowed from Great and Swell? Or, would you dispense with the third manual entirely?
—F. T.

A. We suggest for the Choir organ a Duiciana Nazard and a Duiciana Fifteenth—to draw separately. These stops can also be included in the Mixture on the Choir organ, as suggested. We advise, in the Swell organ, the including of the 8′ Salicional, and if possible, a Mixture and a Clarion 4′. In answer to your inquiry as to Choir organ, we would include, if possible a few solo stops to be placed in a third chamber. Of course, the player will have to remember the contents of the different swell chambers. The stops might bear an indication —such as I—II—III. Unless there are separate individual stops, exclusive to one manual, there is always the possibility of one stop being affected by the swell shutters while another stop on the same manual is not similarly affected. Some stops that might be included in the Choir organ are English Horn, Orchestral Oboe, French Horn, Gamba and Gamba Celeste. Whether these stops appear also on the Great organ is a matter of preference.

Q. Our choir is to sing Bach's Chorale, No. 3, *Paterson edition:* For the Beauty of the Earth (Hilf, Herr Jesu, lass gelingen) *or* Brightest and Best (Liebster Immanuel). *Our music does not contain any markings and I do not feel confident of my interpretation. Does the music call for a pause at the end of each eight measures? A pause at the end of each phrase is common in most Bach chorales. I am taking the music moderately slow and in a dignified manner, but changing the expression to meet the words. Is this correct? For instance, the first verse of the first chorale commences* mf, *with a slight swell on "beauty." The fifth line is sung reverently* mp; *and the last line gradually increases in volume to the word "praise."*—P. J. M.

A. We would not use any pauses at the end of eight measure phrases in the chorales you mention. We suggest a moderate expression according to words—not to the extent of sentimentality. We also suggest a *crescendo* on the last two lines of each verse of the first chorale, beginning at the word "God," and also the singing of verses three and four with a generally brighter tone, and perhaps, a shade faster, to indicate "joy." Lines three and four of verse three might be sung with a slightly darker tone, to indicate mystic harmony. Your ideas seem to indicate a proper sense of fitness.

Q. We have an outstanding music director in charge of our Church Quartet. She says she has tried for several years to get a girls' chorus, but she cannot get the girls to come either for practice or for the church service. Believing it would be for the good of the church, I would like to see a girls' chorus that would be a success. Usually only one member of the quartet is present at the evening service. Here is the idea I have had in mind: to have some individual have direct charge of the organization of the chorus and to supervise it afterward, relieving the music director of all matters except that of training the voices and of selecting the music for the chorus; and to have this chorus to sing at the night service and on special occasions. The director says that she will not do this without more money; but she is responsible for music at both morning and evening services. At present the music for the evening service is wanting. Our director is conducting a chorus of girls for another church in our city, which is a success. The chorus is under the supervision of the choir director of that church, and our director is paid to train these voices. These girls think she is fine and come to practice regularly. Our director says the parents of our girls are to blame for the girls' attitude. I have talked with her concerning the girls' chorus.—W. J. P.

A. It is somewhat difficult to advise you just what to do. Your director apparently is making a success of the girls' chorus in another church—which indicates her ability as a trainer able to do similar work in your church, if proper coöperation is present. Perhaps there may be a conflict of activities, unless each church has the individual members necessary for its own chorus. Perhaps you might secure the supervision of the choirmaster of the other church, since in connection with your director that work is satisfactory. The remuneration for your director is dependent on the arrangement existing. The introduction of a chorus certainly entails work additional to that of training the quartet. The girls' chorus might be "organized" with officers and so forth, to relieve your musical director of all details except the musical work, as you suggest. This might also serve to increase the interest of the members of the choir, through the increased activity of officers and so forth. The success of the organization will require coöperation, and the financial aspect is a matter of arrangement satisfactory to church and director.

Q. We have in our church a two manual organ. I have been the organist of the church for eight months, during which time I have been left to learn what I could. I have recently been told that the tremolo stop is not to be used incessantly; that it helps to wear out the organ. I have been using it most of the time, thinking that it was necessary because the music did not sound right without it. I am a radio fan, and notice that those organists most generally use it. Please advise me whether I have been doing right, and, if not, how I can remedy the matter.

A. We certainly do not advocate incessant use of the tremolo. Our objection to its use is not based on the idea that "it helps to wear out the organ," but from a sense of fitness. The tremolo should be used only when such use is effective, and generally not with "ensemble" combinations such as *mf* or full organ. The use of the tremolo by radio organists is, in many cases, probably governed by the music played, registration used, and appeal to popular taste, and may not always be justified to conservative listeners.

Q. The organ in our church is an old reed organ, two manuals and pedals. It has no blower. The instrument contains the stops named on enclosed list. There are also Grand Organ and Pedal coupler attachments. The Bass stops are very loud, and the higher pitched stops greatly overbalance the bass stops. How can this condition be remedied? Can octave couplers be installed on the keyboards? Please suggest some combinations for hymn and prelude playing. Would you advise getting a blower for this organ? What would be the cost of an electric blower?—R. T.

A. We suggest that you take up the matter of changes, installation of couplers and blower, with the builders of the organ, whose address we are sending you by mail. For hearty congregational singing, you might use "full organ," by using "Grand organ" pedal. If this proves to be too much organ, use 8′ and 4′ stops of both manuals, coupled, with pedal stop and manual to pedal couplers. The stops to be used for playing of preludes depend on the character of the music being played. We imagine your soft stops to be Duiciana and Gamba or Viola. The Vox Humana is a tremulant. Our advice would be to replace the organ with a newer, more satisfactory type of instrument.

Q. I am acting as substitute organist and would like to know what stops to use for Junior Choir, Senior Choir, Soprano soloist and Alto soloist. Organ stops on enclosed list.
—L. P. L.

A. The stops for the various uses you mention are dependent on the character of the music used, size of the choirs to be accompanied, and so forth. For *mf* combinations you might try Swell: Open Diapason, Stopped Diapason, Salicional and Violin (4′); Great: Duiciana, Melodia and Flute d'Amour; Pedal-stops to balance; Swell to Great, Swell to Pedal and Great to Pedal. For additional power, add stops in following order: Great—Open Diapason—Octave—Swell, Piccolo—Great—Twelfth and Fifteenth.—Swell Oboe (and Bassoon)—Swell Bourdon.

CENTURY MUSIC IS 15¢ A COPY
CENTURY Certified EDITION SHEET MUSIC
WHY PAY MORE YOU CAN'T BUY BETTER

For thirty-eight years Century music has enjoyed the distinction of being one of the finest editions published, yet its price is but 15c a copy.

In the following list are featured some of our very latest Issues, including the works of four of today's most popular composers.

Teachers, pupils and players will find them all of exceptional value, especially Kay Armour's "Modern Piano Method" and Walter Rolfe's "Book on Harmony." You can buy them at your dealer or direct from us.

Teachers who use and recommend Century music win the everlasting gratitude of parents who can't afford the high prices generally asked for teaching music. Century music helps you hold your old pupils and also aids in enrolling new ones.

Your money refunded without question, if not fully satisfied with your purchase.

NEW and IMPORTANT

A MODERN PIANO METHOD FOR BEGINNERS
by
KATHLEEN ARMOUR
PRICE 15c EACH PART

Here is something decidedly new and original. It is issued in five parts in sheet music form and each part sells at the regular price at 15c per copy, which enables the pupil to start the study of the piano with very little financial outlay. This modern work is based on the middle C approach and is so clear and step-wise that the pupil is playing little tunes almost at the outset. Profusely illustrated. Teachers, be sure to see this outstanding work.

3196—Part I—Learning Letters on the Keyboard
3197—Part II—Notes, Bars, Time Signatures
3198—Part III—Five Finger Exercises
3199—Part IV—The 2/4, Time Signature
3200—Part V—Introducing the 8th Note

CENTURY PIANO SOLOS, 15c ea.

THE ACCORDION DEPARTMENT

How to Form an Accordion Band

By PIETRO DEIRO
As told to ElVera Collins

THERE IS MUCH to be said in favor of accordion ensemble playing. It is not only beneficial, but almost a necessity for students who contemplate becoming professional accordion soloists or orchestra musicians. It teaches them the important lesson of playing together under a director, the keeping of correct time, the playing of parts other than the melody and how to sight read.

Directors of established accordion schools, who have not previously given thought to the establishment of a band, will find it to their advantage to do so during the fall and winter season.

Up until recently the publication of accordion band music had been seriously neglected, but there is now a wealth of fine arrangements made from favorite standard selections.

The first step in forming an accordion band is to give it sufficient publicity in order to get response from those who will be interested. Let it be known that the band is forming for the purpose of its members being presented in concert twice a year.

Application blanks should be signed by those who wish to join the band. Such blanks will be in the form of a pledge, the contents of which will be given later.

Most accordion schools have a mixed student body ranging from tiny tots to adults. Separate rehearsals should be held for the small children. The age of ten is usually a good dividing line, unless some particular student under that age is quite advanced, in which case an exception should be made. The rehearsals for small children could be held any afternoon about four o'clock. The rehearsals for the older group will probably be found most convenient on Friday evenings.

Important Details

FEW SCHOOLS HAVE AUDITORIUMS large enough to accommodate an accordion band rehearsal, so a centrally located hall should be rented. As it is the students, rather than the director, who reap the benefits from such rehearsals, they are usually willing to pay a nominal rehearsal fee. This could range from fifteen to twenty-five cents, depending upon the rental cost of the hall and the number of members to share the expense.

The application blank, previously mentioned, would specify the rehearsal fee. When the student signs this he will pledge himself to be responsible for that amount weekly, whether absent or not. An exception could be made in the case of prolonged illness.

A definite rehearsal hour should be set and the director should be most punctual in beginning at that time. Tardiness in a director encourages tardiness in band members, and before long the thought becomes general that there is no need to appear on time because rehearsals never begin on time. Some directors impose a small fine for tardiness.

Assigning the Parts

A LITTLE DIPLOMACY must be exercised in assignment of parts. Naturally the advanced players should be given the first parts, with the second, third and fourth parts being given to players according to their ability. This rule will work out all right in most instances; but some simplified arrangements should be secured so that the less advanced students may occasionally play the first and second parts. Students lose interest if they continually have to play the third and fourth parts.

The first number selected probably would be a march, while the second would be a waltz. The third and fourth may be optional, although a characteristic novelty is a good choice, as it provides divertisement in rehearsals. The fourth number could be an overture, but of course rehearsals would go more slowly on it than on the other numbers.

Another point to consider when assigning parts is the type of instrument used by various members. The late model accordions with the multiple switches provide an excellent variety of tonal color, and the director should utilize these for certain effects.

Accordionists who have never done ensemble playing are inclined to play as loud as possible, as they feel they cannot be heard unless they do so. A director should begin at the first rehearsal and work for shading of tone, approaching of climaxes, *diminuendos* and other effects. It will probably take two or three rehearsals before the band will be able to play softly. Another problem will be encountered in getting all instruments to finish at the same exact moment, without two or three dragging out after the others have stopped. All instruments should have the air release valve, so they can be quietly closed when necessary.

The Members Become Soloists

THERE SHOULD BE A ROLL CALL at each rehearsal, and a certain number of absent dates should prohibit a member from participating in the next concert. Unless such a rule is established, it will be found that members miss rehearsals when not necessary.

After an hour or so of rehearsal, an intermission can be called, during which time individual members of the band should be asked to play solos. This can be made a most important feature of the rehearsal. Students, who have always been nervous and shy about playing before others, soon lose their self-consciousness and in this way prepare themselves for future public playing.

Most directors select certain members to take part in the playing of duets, trios

THE VIOLINIST'S ETUDE

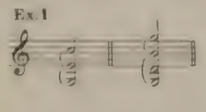
Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

A Violinistic Problem Solved—Holding the Bow

By KELVIN MASSON



THE RUSSIAN MANNER of holding the bow is fast becoming the most popular (Wieniawski, Auer and his pupils) because of its strength conserving characteristics. In this the bow is held so that the index finger presses almost laterally on the stick, at the beginning of its third joint, counting from the tip of the finger. It lightly embraces the stick with its first and second joints during the entire bow stroke, thereby acting as a guide on the stick. The middle finger touches the stick at its first crease; and the little finger touches the bow with its extreme tip when playing in the lower third or half of the bow during closely connected bowings, depending on the player's length of fingers. The ring finger touches the stick with the inside surface of its nail joint; which point of contact is determined by the set of the other fingers and the conformation of the hand. Furthermore, the index finger and the little finger are held slightly apart from their adjacent fingers, with the middle and ring fingers touching each other.

The thumb is held in a bent outward position and touches both the stick and the frog. It should rest against the frog (nut) enough to give it stability in its counter pressure against the fingers. It touches the stick opposite a point midway between the middle and ring fingers. This position may be determined by looking at the bow hand position with the hair of the bow up. Such a procedure is necessary, for the slant of the fingers on the bow makes the thumb seem to outward appearances, to lie opposite the middle finger.

The bow is drawn so that the stick is directly over the hairs, when playing in its upper two-thirds, except when playing *p* or *pp*, when the bow is tilted in the general direction of the fingerboard. The bow hairs should be rather slack.

Usually, when playing in the lower third of the bow, and always when attacking a chord, but three-fourths of the bow hair surface is used. Also in playing chords it is important that the bow be drawn lightly, beginning with an attack from the wrist. Three-note chords are usually broken in 2-2 manner, and four-note chords in 3-2 manner, thus:

Ex. 1

In order to manipulate the breaking of four-note chords in this manner, it is necessary that the bow attack all three bottom notes at once, in the vicinity of the fingerboard, with a quick wrist attack as already mentioned; then the bow quickly passes up into the vicinity of the bridge to play the sustained two upper notes. In his transcriptions Kreisler usually notates how he wishes particular chords broken.

The bow hairs should constantly retain a position parallel with the bridge; generally the bow is farther away from the bridge for *p* and *pp* playing and to attack chords; it is closer to the bridge for *f* and *ff* playing and for high notes usually played on the outer strings. The bow midway between the bridge and the fingerboard is a requisite of most bowing.

The upper side of the hand adopts a horizontal position throughout the bow stroke. At the nut the knuckle joints and the elbow are on a straight line with one another. Also, the lower arm is kept rotated slightly inward to facilitate the use of the Russian hand position. Auer ("Violin-Playing As I Teach It," p. 56) gives the following valuable hint relative to the technical side of the approach to good tone production:

> "Do not press down the bow with the arm; the *whole body of sound* should be produced by means of a light pressure of the wrist, which may be increased little by little, until it calls forth a full tone, perfectly pure and equal in power, from the nut to the point of the bow, and *vice versa*."

In playing the closely connected bowings at the nut, a follow-through stroke, with the hand and fingers, is employed, to make the connection smoothly in this section of the bow.

Names of Bow Strokes

THE FOLLOWING is a classification of the various types of bow strokes used in violin playing:

I. Strokes in which the bow adheres to the string.
  A. Notes closely connected.
    1. The spun tones (*sons files*). Change of bow inaudible.
    2. *Legato*. Notes smoothly connected on one bow stroke.
    3. *Portato*. *Legato* with pressure accents as tone sounds.
    4. *Detaché* (without or with French wrist articulation).
      a. Whole bow.
      b. Large, broad strokes.
      c. Short, small strokes
      d. *Tremolo*. Stick is turned toward face, with separate strokes.
  B. Notes separated from one another.
    1. *Martelé*. Alternating bow strokes; pressure accents before tone sounds, produced with index finger.
    2. *Staccato*. One bow stroke; *martelé* accents.
      a. Up-bow *staccato*. Bow almost over hairs.
      b. Down-bow *staccato*. Stick turned toward bridge.
      c. Stiff *staccato*. Stiffening of entire arm.

II. Bowings in which the bow leaves the string after each tone sounded.
  A. Thrown strokes. The player is active in throwing the bow against the string and lifting it off. This stroke is used for slow *tempi*, in any part of the bow. The little finger touches the stick.
    1. One note to a stroke, and *battuto* at the point.
    2. *Col. legno*. Percussion with the stick.
    3. More than one note to a stroke.
    4. Flying *staccato* (*staccato volant*).
    5. Standing *staccato*. Up-bow only.
    6. Thrown arpeggios. Bow turned toward bridge.
  B. Springing strokes (bouncing strokes, *spiccato, sautille*). The bow is active of its own accord in bouncing away from the string. This stroke, in the middle of the bow, is used for fast *tempi*. The little finger leaves the stick after the rebound qualities of the bow are set into action. The bow itself is dropped on the string from a little height, in order to produce the first note of a passage demanding this type of bowing.
    1. One note to a bow.
    2. More than one note to a bow (*ricochet, saltato, bowed-tremolo*).
    3. Fast arpeggios on three or four strings.

In violin playing the term *staccato* is used to label two or more notes played on one bow stroke, with a marked separation of the notes. The term *spiccato* is used to label those strokes in which the bounding qualities of the bow are utilized to effect a separation of the notes.

In the thrown strokes it is advisable at times to take the first note of a passage of separated notes, by playing it with a *martelé* stroke.

The down-bow *staccato* usually acts best with ascending passages; the up-bow *staccato*, with descending passages.

The bow strokes are executed in the following parts of the bow (Carl Flesch: "Art of Violin-Playing," Vol. I, p. 64):

At the extreme point: Rapid bowed-tremolo, small *martelé*.

At the greater point: All types of bowing combined with *detaché, martelé, staccato*, and quick changes of string.

At the middle: All springing or thrown types of bowing.

The greater middle: Flying *staccato*, change of string in the *detaché* with intermediate unused strings.

Upper half: Broad *detaché* and *martelé*, mixed bowings, long *staccati*, rapid tied change of string.

Lower Half: Broad chords; a slow, flying *staccato*.

Greater Nut: Slow *detaché* on the G-string; double-stops in the *detaché*, with or without intermediate pauses; the *detaché*, or the bowing types combined with it, which in view of the phrasing or the division of the bow cannot be executed in the upper third; short notes separated from each other by raising of the bow; short chords.

Extreme Nut: Rapid *detaché* on G-string; standing *staccato*.

The right hand *pizzicato* is produced by strumming three or four note chords. To pluck single and double stops the thumb rests against the corner of the fingerboard while the index finger (with sometimes the middle finger in conjunction with it) plucks the string with its fleshy cushion in a left to right direction.

The manipulation of the bow and bow arm, to obtain special effects during various passages and *cantilena* portions of a work, is a subject which requires the assistance and guidance of a competent teacher.

Interesting Points in Violin Construction

By B. E. ELLSWORTH

The writer of this article is an electrical engineer by profession. He is a member of the Lincoln Symphony Orchestra, having studied and played the violin for over twenty years.—Editor's Note

We Study Anatomy

AFTER A THOROUGH STUDY of the details of violin construction and the theory of the instrument, it has always been a question why all the violin makers from the time of Amati to the present have relied upon a cut and try method of construction. The ear training and experience of the maker have always been relied upon to determine the dimensions of the instrument and the quality of the wood used. There is no question but that wonderful instruments have been produced, but the men capable of producing them by these methods have been few and far between.

Knowing the theory of the instrument, why would it not be possible to calculate mathematically the proper proportions and dimensions of a violin and to reduce the process of violin making to a more or less exact science? The only variable quantity then would be the quality of wood used in the actual construction. Once the correct dimensions are arrived at, wood tests could be made for determining the correct quality of wood to produce the desired tone quality.

This the writer has attempted to do with more or less success. After several months' effort, juggling the slide rule and playing with complicated formulas, a set of figures was arrived at, which gives the essential measurements of a violin. It is not to be inferred that these figures are final and that the secrets of the violin can all be written in black and white; they do, however, make a good start. It was extremely surprising how closely these calculated values agreed with the dimensions used by the "Masters." The "why" of these dimensions is now very apparent. It undoubtedly has taken years of the "cut and try" methods to arrive at the dimensions which, with the aid of modern mathematics, can be calculated in a few days' time.

If the modern violin manufacturer

The DESIRED GOAL

of the Average Student in the

STUDY OF PIANO
PIANO-ACCORDION
HAWAIIAN GUITAR
SPANISH GUITAR

can be best attained in less time and with greater ease if our MODERN METHODS are used. The material we publish for these instruments has been written by writers whose years of experience in teaching has qualified them to write practical lessons that will GET RESULTS.

Necessary technique is acquired in the playing of interesting melodies making study a real pleasure.

TEACHERS will find our material PRACTICAL for CLASS WORK as well as PRIVATE lessons.

Write for descriptive catalogs. Be sure to specify the instrument you are interested in as well as whether or not you are teaching.

Marketing Musical Patients

Landlady (to lodger): "Beg pardon, sir. Did I understand as you were a doctor of music?"

Lodger: "I am, ma'am; why?"

Landlady: "Well, sir, my Billy 'ave just been and broke his concertina, and I thawt as 'owe I should be glad to put a hodd job in yer way."

Naughty Fiddle

First Indignant Roman Citizen—I hear Nero was torturing people at the palace again last night.

Second Ditto—Somebody ought to take that fiddle away from him.—*Judge*

Sirshe!

Little Doreen had just received a new doll from her aunt. "And what are you going to name her?" the aunt asked.

"Sirshe," said the child.

"Sirshe?" said auntie: "I've never heard that name before."

Little Doreen looked aghast. "Don't you remember that song you taught me—'Where are you going my pretty maid? I'm going a milking, Sir she said.'"

Why Repeat?

"Now," said the leader of the Brushville band, "we'll play 'The Stars and Stripes Forever!'"

"Gosh!" exclaimed the cornet-player. "I've just played that!"—*Lancaster Evening News*

would use theoretically correct proportions, his product would be much superior to the violins produced by a hit and miss method. Some of the proportions and dimensions used by manufacturers are atrocious. Most of these monstrosities are inside the violin, where they cannot be readily seen by the purchaser.

The country is full of cheap violins of varying ages. Many of these violins may have been made with good wood which, because of its age, is now well seasoned. Many of these instruments can be purchased for a song, because the proper dimensions of the back, belly and bass-bar were not used and the violin is doomed. Some of these, if they contain sufficient wood, can be remodeled without much labor and made into respectable instruments.

The Fallen Rise

FOR EXAMPLE, the writer recently purchased two violins at a pawn broker's (the ultimate destination of many a fiddle) for two dollars and a half each. One was a miserable thing with thick wood; in fact, it was the worst sounding instrument the writer ever attempted to play. The other was an older instrument with thin wood and with a poor tone. The responses secured from the different strings were badly unbalanced in both instruments. These two instruments were dissected and carved out with an electric planer to the theoretically correct dimensions; and where the wood was too thin, allowance was made for it in the dimensions of the bass-bar.

After several weeks' work at odd times, they were reassembled and the results were quite gratifying. The one with thick wood now responds very well and has a tone quality comparable to a fifty dollar instrument. The other instrument now gives equal response from all the strings and has a pleasing tone, comparable to about a seventy-five dollar instrument. The quality of wood was present in these instruments all the time, but incorrect proportions and construction doomed them to a shelf in a pawn shop. The same laws apply to a fine instrument as to a cheap one; however, by skill or chance, the dimensions of a good instrument are more likely to be close to the theoretical values. For obvious reasons, expensive instruments were not used in these experiments.

A scientific analysis of the wood used in the manufacture of violins similar to the tests made by many manufacturers of wood products should produce some startling relations between certain wood contents and tone quality.

Tone Tonics

By ROBERT M. GEORGE

THE NECESSARY FACTORS in tone production may be said to be a good instrument, a good bow, and a violinist with the ability to develop a good tone. Let us look into the details of these three factors.

The instrument is the making or breaking of a violinist. If Kreisler should be heard playing a very beautiful selection on a very cheap violin, no one would want to listen to him. It is reasonable to suppose that a violin made of good wood and of the right dimensions and thicknesses will have a good tone. The beginner's parents or he, himself, should see that he gets a good violin. It certainly does not pay to buy a cheap instrument. A good violin should be full and even toned on all the strings, and it should have as few "wolf" tones as possible. These "howling" notes are found even in fine Stradivarius violins, but they are few and far between.

If you do not have a good violin, you surely do not need a good bow. A light, cheap bow, probably made of white wood, is an abomination to a good violinist. The tone it produces has a tendency to be thin and scratchy rather than full and solid. Such bows do not have the elasticity so necessary for shading and the playing of double stops. *Staccato* notes and broken chords are dull and uninteresting, without the grace and brilliance that a good bow gives to them.

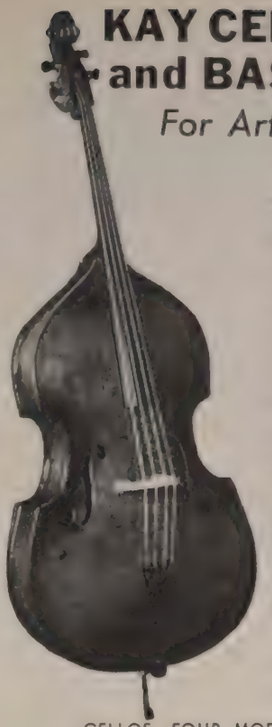
No player is at his best without a good violin and bow; but some players, by their skill, can take a cheap instrument and bow and produce a really good tone. A justly famous violinist once said, "Seven-eighths of a violinist's art can be taught him, but the other eighth must be born with him." An amateur's tone may be improved by hearing and seeing good violinists, and thus getting a mental conception of what constitutes a really good tone. If one practices much, he will naturally produce a tone more pleasing and less tiresome to his ear. Playing with a rhythmic "swing" of the bow improves the tone, but one should not let himself degenerate into a "jazz" or "swing-time" player. If an amateur really wants to produce a good tone, he will not have much trouble in finding ways to do so.

An Emergency Repair of a Damaged Bow Nut

By ANTHONY G. KOVACH

ON SEVERAL OCCASIONS the writer has seen the procedure described here "save the day" for a violinist when the thread was stripped (worn) in the frog of the bow so that it could not be tightened.

Generally, the tension nut within the frog of a bow is made of a soft alloy, such as brass, and after much tightening and loosening of the bow the thread within the nut becomes stripped so that the bow cannot be tightened. This brass nut is an item which is seldom carried in the repair kit. However, it is possible to make the old one serve for a long time to come by simply flattening the nut slightly by applying pressure across its sides at the base of the jaws of a pair of strong pliers, or even with a few careful taps of a hammer. It is best to remove entirely the screw from the bow and insert it in the nut before flattening, as this precaution will eliminate the possibility of flattening the nut too much. The object of this operation is to obtain an oval shape of the hole within the nut, so that the yet unstripped depth of the thread presses against the screw on two opposite sides.



Fine oil, sparingly applied to the screw mechanism within the frog, will lengthen considerably the life of this part of a bow.

* * * * *

"Different roads lead to Parnassus; but on first starting on their journey, they have, each and all, for some time to walk the same road, till they come to a place where many different roads branch off . . . Those great masters who have traveled the same road with success are the most likely to conduct others."—Sir Joshua Reynolds.

KAY CELLOS and BASSES

For Artists

● American-made instruments duplicating genuine old Italian models. Entirely crack and warp proof laminated construction. Beautifully polished finishes in Stradivarius models, with finest quality appointments. Moderately priced, with quality in comparison to competitive models at much higher prices.

CELLOS—FOUR MODELS	
Artist	$100.00
Concert	75.00
Orchestra	60.00
Student	50.00
BASSES—THREE MODELS	
Artist	$180.00
Concert	135.00
Orchestra	100.00

Circle-O-Keys
MUSIC CHART

An Ingenious Device That Simplifies Music Study and Teaching

● Circle-O-Keys Music Chart consists of a movable card that slides up and down in a sleeve. You slide the card to show the key you want and through the holes in the sleeve you can tell, at a glance, for that key, its number of sharps or flats, their names, and their staff locations in the signature. The relative minor key also is shown with both the relative harmonic and melodic minor scales, ascending and descending. These minor scales are shown through the slot in the lower half of the sleeve. Circle-O-Keys is a valuable aid in teaching, in stimulating interest in harmony and theory, and a handy reference for transposition. Every music pupil should have one. Actual size 3½" by 6½".

How to Form an Accordion Band

(Continued from Page 757)

and quartets. These make interesting interludes in concert programs and provide excellent training for those taking part.

In all communities, whether small towns or large cities, there will be found opportunities where an accordion band can appear as an entertainment unit for benefits, social gatherings, lodge and church affairs, as well as in theaters. Also, radio programs can be arranged, in cities which have broadcasting stations.

If a director expects enthusiasm from his members he should arrange to present them in public frequently, in addition to the semiannual concerts. If he is fortunate enough to do so, he will probably be able to interest them in costumes to make their appearance more colorful. Most accordion bands like to wear an accordion pin as an insignia of their particular band.

Pietro Deiro will be glad to answer questions about accordion playing. Letters should be addressed in care of The Etude.

What About Scales?

By NELL V. MELLICHAMP

In discussing with the head of a famous school the most common deficiency shown by entrants, the writer learned that in a great number of cases these new students showed a most superficial knowledge of scales. The instructor asked, "Why do music students not know scales?" He then told of a case where a student had come a considerable distance for a hearing and had played brilliantly but could not tell him which major scale had five sharps.

Is the piano teacher to blame? Yes and no. She may be discouraged by lack of coöperation, by distracting influences or by the carelessness of average young persons.

Try this scheme: when giving a much coveted composition to a student, let it be understood that the key must be mastered and the scale and signature learned before the piece is begun; then that scale must be played each time the piece is practiced. If the student uses this plan willingly, he will learn his scales intelligently and *with a reason* which is necessary in this day and time.

Scale contests are helpful in groups of grammar school age. Preparation that extends over several weeks, and a final test with scales written and played, are required.

Competition begets interest; and, as we are told by John Dewey, effort will come only as a result of interest.

What Does "Voicing a Piano" Mean?

An Etude reader asked this question and we put it up to Mr. Hermann Irion, of Steinway and Sons, to answer. He has kindly sent us the following:

"Voicing a piano means to regulate the tone to be either brilliant or mellow or somewhere between these two qualities. New Steinway pianos are usually voiced toward the brilliant side, although we strive to attain a happy medium. There are some musicians who require an extremely brilliant tone, and there are others, particularly when the piano is used as accompaniment for other instruments, who prefer a more mellow tone. This regulating, or voicing, should be done only by a person who is fully competent to do this kind of work. It is done by pricking the felts of the hammers with very sharp needles fastened in a small implement, to soften the felts, when new, or as they may have become hard through use. It is the combination of the felt and the expertness of the regulator that produces the fine tone of our pianos.

"Inasmuch as you say your piano is a new grand, and unless you are giving it an extraordinary amount of usage, we would say that your piano ought not to require voicing at this time. It may require this work after two or three years of constant use. What is more important for a new piano is that it should be kept in tune at all times, and a new instrument should be tuned three or four times a year, again depending upon how much it is used."

* * * * *

"Musical education, of a simple sort, would do more than the average mind can imagine to reconstruct society."—Harriet A. Seymour.

Violin Questions
Answered
By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

How Can We Judge?

B. E. H.—Your letter, my dear correspondent, contains a question, which is the most frequently asked, and one which cannot be answered without a personal audition. You tell how long you have studied, and the number of hours of your daily practice. Then you give a list of the pieces and studies, you have had in this time and ask whether you have made satisfactory progress. You do not seem to realize that it is not the number of pieces you have *been over* that counts, but *how well* you play them. If I could hear you play these pieces and exercises, I could tell at once whether you have made good use of your time; but not knowing how well you play them, it would be pure guess work to try to give an opinion. Your best course is to take half a dozen of your pieces to an experienced violin teacher, play them for him, tell him how long you have worked on them, and he will be able to tell you whether you have made the proper progress.

Getting Proper Instruction

D. S.—1. Without hearing you play I cannot tell whether you have made good progress in the time you have been studying the violin. Take some of your pieces and exercises to a first class violin teacher, and he will be able to advise you. You will find such a teacher in a large city, near your home. As you live in a small city, you will hardly be likely to get the information you seek there. 2. What you need now, after having a number of class lessons, is a first rate private teacher, who can give you thorough training. If you can visit a large city, the teacher there can tell whether you have been properly taught, if you have talent for the violin, and if you have made sufficient progress for the time you have studied.

As your object is to learn to play in a symphony orchestra, you had better move to a large city and enter a conservatory or college of music of note, preferably one which has a pupils' orchestra. In such a city you will be able to hear symphony orchestras, grand opera, and concerts of various kinds. This will do you untold good. Philadelphia and Chicago are both important music centers. Both have fine symphony orchestras and excellent private music schools and teachers. You are just at the age—fourteen years—when it is important to receive the best musical instruction. I do not know the high school you name, nor its musical director.

Contradictory Labels.

J. M. B.—1. Of the two labels in your violin, the first would indicate that the instrument was made by John Baptist Schweitzer, at Budapest, Hungary, in the workshop of Hieronymo Amati. That your violin is a copy and not a genuine Schweitzer, is proved by the second label, on which is printed "Germany." This proves that the violin is a German imitation, and not genuine. 2. Temperatures during the summer of one hundred to one hundred twenty degrees in Oklahoma where you reside, are very apt to affect the glue of a violin. It should be kept in its case, in a closet, in the coolest room in your house.

Another Imitation

J. E. A.—There are hundreds of thousands of violins scattered all over the world, bearing the label, "Rigat Rubus, St. Petersburg." These violins are made by various makers, and are not usually of much value. As a rule they are like the "wooden nutmegs" of Connecticut, made merely "to sell," or like "wooden razors," manufactured for the same purpose.

The Foot as a Metronome

M. L. B.—There always has been discussion over beating time with the foot, while playing the violin. Some violin teachers consider this the "unpardonable sin," while others do not object to it, as long as it is done quietly, and in such a manner as not to annoy the audience. If you watch the members of a symphony orchestra, or even eminent violin soloists, you will note that, at times, they beat the rhythm with the foot. I remember hearing the late Karl Halir, eminent violin soloist of Berlin, play a violin concerto before a large audience, here in America. When it came to some difficult passages, he would "stomp" out the time with his honest thick soled German shoes, but the audience seemed to forgive him, because of the excellence of his playing. So you see, about beating time with the foot, some do, and some do not. But, whatever you do, if you must use the foot, tap gently.

A Varnish Formula.

L. P.—Here is the formula for a good oil varnish, extensively used for violins. "Clear and pale African copal, one pound; pale drying oil, one quart; rectified oil of turpentine, three pints."

Boil the copal, and drying oil, till stringy, then thin with the turpentine and strain immediately into a store jar. This varnish is hard and durable, and dries hard in from twelve to twenty-four hours.

You will find many other formulas for making oil and spirit varnishes, in the little book, "The Violin and How to Make It, by a Master of the Instrument." This book can be purchased through the publishers of The Etude.

Judging Progress

B. H.—See answers to B. E. H. and D. S. I cannot tell if you have made proper progress in the time you name, without hearing you play the pieces you state that you have studied. However, if you play the pieces you name really well, you have made good progress. Take your pieces to a good, experienced violin teacher, play them for him and he can judge.

Do Not Bite the Nails

J. M.—Your teacher is right in telling you that biting the nails of the left hand, (or the right) is a very bad habit; and you should do everything possible to discontinue it. The nails of the left hand should be carefully and closely trimmed, so that the end of the nail does not cut into and scuff the strings, as the tip of the finger presses them down. Any physician or druggist can give you a preparation to put on the finger tips and nails, which I think will solve your problem. This medicine has a disagreeable taste which will stop your tendency to bite the nails when you are tempted to indulge in it.

"The Violin Maker's Bulletin"

J. M. C.—I have not yet received the copies of the "Violin Maker's Club," which you speak of sending me. I have no doubt, also, that the readers of The Etude would be interested in "The Violin Maker's Bulletin," which you state is being published by the Club in Chicago.

When the Sound Post Falls

A. D. F.—If the sound post in your violin falls down, be sure to loosen the strings without delay, and get the instrument to the repairer to be reset as soon as possible. When the sound post falls, the pressure of the strings on the bridge, which amounts to many pounds, is transferred to the top, which, being made of very thin wood, sags under the pressure, creating much damage. I have known inexperienced pupils to play on violins without sound posts, for a year or two, all the while wondering why their instruments gave forth such horrible sounds. When any mishap occurs, the violin should be taken to the repairer at once.

To Hold the Violoncello

Y. O. I.—You can avoid damage to floors and rugs from the sharp end of the peg which supports the violoncello, by procuring from your music dealer a rubber device which fastens to the end of the pin, and thus avoids all scratching. A well known music firm describes this device as follows: "A very clever attachment which will interest every violoncello player. The swivel ball and socket joint permit a free and easy angle of the instrument. Three substantial screws clamp the end of the point of the end pin securely in the holder. All metal parts are nickel plated. The base is of hard rubber, and covered with sponge rubber to prevent slipping, and scratching of the floor."

An Efficient Bow Grip.

B. H.—When using a violin bow which has nothing to serve as a grip, the fingers are apt to slide to and fro on the stick. Several devices can be obtained to prevent this. One that is very widely used is a piece of rubber tubing which is slipped on the bow stick at the portion of the bow where the fingers grasp it. Another is to have the bow stick wrapped with silver-plated wire, near the frog, where the fingers are laid. The latter device is largely used in Europe.

To Acquire Good Vibrato

H. M. N.—The best, quickest, and surest way to learn the vibrato is to go to an experienced violin teacher and have him show you how it is most effectively produced, and the best method of teaching it to your pupils. It is quite difficult to learn from books, or by mail. I note that you have the books by Gruenberg and Eberhardt. These books deal extensively with the vibrato, and are both excellent. The book "Violin Teaching and Violin Study," by Eugene Gruenberg has detailed directions on the subject, and quotes extensively from famous violinists, giving their views on acquiring it. For exercises at the start in learning the vibrato, any pieces or studies with long, sustained notes will be satisfactory. Scales and slow melodies are best adapted for the work. As for the technic of the vibrato, you will find it described as well as it can be done in print, in Gruenberg's book. You can get many ideas on the vibrato by watching good violinists perform it, either as soloists, or performers in an orchestra. It is simply a to and fro motion of the hand, from the wrist, without use of the forearm, although some violinists perform it that way. The neck of the violin is held lightly between the first finger and thumb; it must not be tightly gripped. The best way to acquire it as I said above, is to take a few lessons from a good violinist, even if you can take only two or three.

It is a beautiful embellishment, and entirely changes the character of violin playing.

Beware of Frauds

November is the month in which magazine solicitors are intensively active and unfortunately too, many unscrupulous men and women take advantage of enthusiastic magazine buyers. We caution our musical friends against magazine subscription frauds. Beware of the canvasser who offers bargains in magazines at any time, but particularly now. Look out for the man who offers you THE ETUDE for a year at a cut price, or for THE ETUDE combined with other periodicals at a price which does not pay for cost of manufacture. Representatives of THE ETUDE carry the official receipt of the Theodore Presser Co., publishers of THE ETUDE. Accept no plain "stationery store receipt." Ask for the agent's credentials. Help us to protect you from loss. We cannot be responsible for the work of swindlers.

Bands and Orchestras

(*Continued from Page* 719)

the various types of bowings and an analysis of their uses, will do much to aid in the building of a full round tone, as well as a flexible, firm and even stroke.

Classification of Bowings

ALL BOWING may be classified into three basic types which are distinguished by the following characteristics: 1. Decisive, 2. Sustained. 3. Resilient. Each of these types may be applied to the playing of a separate tone or note with each stroke (separate strokes), or to a group of two or more tones with a single stroke (group strokes).

The three types of bowings, and their principal subdivisions, are as follows:

Group I. The Decisive Stroke. Sharply articulated or detached types.
  Separate Strokes
    (a) Whole bow. The long decisive
      Grand *martelé*
      Grand *detaché*
    (b) Divisions of the bow. The short decisive
      Martelé
      Dotted rhythms—as the dotted eighth and sixteenth
  Group Strokes
    (a) *Staccato*
    (b) Rhythmic variances of the *staccato*
Group II. The Sustained Stroke
  Separate Strokes
    (a) Whole bow. The long sustained
    (b) Divisions of the bow. The short sustained
  Group Strokes
    (a) Slurred *legato*
    (b) Interrupted *legato*
Group III. The Resilient Type
  Separate Strokes
  The *spiccato*
  Group Strokes

    (d) Tremolo

I. The Decisive Strokes

MORE AND MORE we find that string teachers are employing the detached decisive strokes as the best means of developing right arm control. There are but slight differences in the general characteristics of the grand *martelé* and the grand *detaché*. Both are forceful, decisive types of right arm action, carried out with the entire length of bow, with more stress laid upon the incisiveness of the attack, the freedom of arm movement, and the manner of concluding the stroke, either on or off the string, than upon the quality of tone. Observance of the correct playing level in spite of the rapidity of the stroke, and a uniform grip of bow throughout the stroke are important problems that should be carefully kept in mind while teaching this type of bowing.

In the grand *detaché*, the bow should not be permitted to leave the string at the end of the stroke, but should be stopped on the string. It will take considerable practice to acquire sufficient relaxation in order to break the jar of the sudden stop. It is at the conclusion of the down stroke that the rigidity of the hand position becomes so pronounced that relaxation is very difficult. As a means to attain this relaxation, we suggest the following: Immediately at the conclusion of the stroke, with the thumb remaining in position, lift the fingers from the bow one at a time, permitting them at once to fall back into position without effort. The raising of the first finger will naturally cause it momentarily to lose its usual control of the bow. To regain this control, merely return the first finger to its usual position. This type of bowing, properly employed, will do much toward developing freedom of the upper arm as well as firmness of the entire stroke.

II. The Sustained Stroke

IT IS THROUGH this type of bowing that the *cantabile* or singing character of tone may be realized. The various features of the sustained type of bowings are:

1. Evenness of stroke.
2. Unbroken contact between bow and string.
3. Balance between bow speed and bow pressure.
4. Accuracy in timing with regard to change of stroke.

The mastery of this stroke depends largely upon the close adhesion of the bow to the string, the even sustaining of string vibrations, and the accurate timing of the change of stroke. Much has been said of the wrist motion and its relationship to various types of bowings, and it again is of extreme importance in the correct performance of the sustained stroke. The wrist must be so skillfully coördinated with the main action of the forearm and upper arm, that the listener cannot tell when the stroke is changed from up to down or *vice versa*. Wrist motion, properly applied, is very helpful in securing continuity of tone and is depended upon so to join the strokes that the sustained character of the tone is not disturbed. Unevenness in the *legato* may be due to unevenness of stroke, or to lack of sufficient control of the *wrist movement*.

III. The Resilient Bowings

THIS TYPE OF BOWINGS employs the natural resiliency of the stick. To do this it is necessary that the hand stroke be placed on a level slightly elevated above the string to permit a rebound of the stick. A well balanced muscular control is required as well as sufficient onward movement of the bow in contact with the string.

The resilient bowings can be divided into two general types. First, those which are carried out by the hand—as the *spiccato* or, second, by a combination of arm and hand as in the thrown strokes, such as the *ricochet*. It is a common tendency to overdo the action by which the resiliency is released or the rebound is accentuated. Exaggerated effort to secure the rebound will check the movement of the bow. The bow must be *permitted* to bounce, not *forced* to do so. Not until the student has become thoroughly schooled in the first two types of bowings should he attempt any of the bowings belonging to the resilient groups.

Just as the teaching of finger technic in the playing of a wind instrument is usually deferred until the student has acquired reasonable control of his breath, so should the teaching of the various types of bowings be delayed until the student has mastered the elementary problems of tonal quality and intonation. Bowing is the means to the end, but at no time should the student become impatient, and attempt to cross his bridges before he comes to them.

* * * * *

"Public taste in this country is much higher than in Europe. We have at least eleven major orchestras, the worst of which is at least two hundred per cent better than any European orchestra."—Eugene Ormandy.

EASY to Own—
EASY to Play

It's new, it's thrilling, it's spectacular—a genuine 2½ octave DEAGAN marimba, embodying DEAGAN standards of quality and beauty, at the lowest price in history.

The DEAGAN STU-DETTE is your opportunity, at negligible cost, to *stimulate* the musical interest of your children, *develop* their musical talent. No instrument gives greater expression to musical abilities. None wins greater applause—or is easier to master.

There's fun for all the family in the DEAGAN STU-DETTE. Shall we send you particulars? . . . J. C. Deagan, Inc., Dept. E11, 1770 Berteau Ave., Chicago.

THE MARK OF CULTURE

There is no mark of culture finer than that which is associated with beautiful music. Advertisers who desire to appeal to those who have come to love beautiful things and have the means to purchase them, know this, and think too highly of Etude advertising space to offer you anything but that which they are sure will please you.

It pays to read ETUDE advertising.

FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

Miguel Llobet

1878-1938

THE RECENTLY REPORTED death in Barcelona of Miguel Llobet will come as a great loss to the guitar fraternity.

The younger generation of guitarists will be interested to know that in his native land Miguel Llobet was considered the greatest guitar virtuoso and a worthy successor to his teacher Francisco Tarrega. Born in Barcelona, October 18, 1878, son of a celebrated wood carver, young Miguel quite early in life displayed exceptional talent for the fine arts. When ten years of age he entered the Municipal Conservatory, where he received a thorough training in all branches of music. One day his uncle, owner of a hostelry in Barcelona, came into possession of a guitar left with him in settlement of a debt, and he presented this instrument to his nephew. At once the youngster was attracted to the guitar and within a short time mastered its technic sufficiently to entertain his friends. Realizing the boy's exceptional musical talent, his father placed him in the hands of the incomparable Francisco Tarrega, and now his studies were carried on in earnest. His concert activities began when he was about twenty years of age and were at first confined to the cities of his native land, where he scored great successes whenever he appeared. After the death of Terrega, Llobet made his home in Paris, where he was received with the greatest admiration by the cultured musicians; and his recitals in the Schola Cantorum, as well as those with the Trompette Societe Nationale were veritable triumphs. In 1910 there followed a trip to the Argentine, where he gave over one hundred concerts and became quite the *"Enfant Cherie"* of the public. In 1912 and 1913 he toured France, Belgium, Germany, Austria and Spain creating a furore wherever he appeared and impressing the critics with his astonishing technic and musicianship. After the world war Llobet undertook several more concert tours to South America, Mexico, and Central Europe, after which he returned to his native city, where he spent his leisure hours amongst his vast collection of books and paintings gathered during his travels.

Miguel Llobet was the greatest exponent of the school of Tarrega, who regarded him as his favorite pupil; and it was Llobet who made the name of Francisco Terrega immortal amongst guitarists throughout the world.

An extract from "Le Courier" of Paris (1910) makes interesting reading. "At his recent recital in Madrid, Miguel Llobet received a welcome never to be forgotten; and the entire royal family united in this felicitations to this exceptional virtuoso. He is the fortunate possessor of an admirable instrument made by the great master Torres. Upon this instrument he has done wonders in music—on this instrument, the guitar, which once we thought, and so wrongly, was capable only of rendering a serenade under a starry sky. The works of the great composer Ferdinand Sor give to this true magician an opportunity to make us feel and thrill in moments of artistic emotion. We must say in passing that many pages of Sor are true masterpieces; and has not this Ferdinand Sor been called the Beethoven of the Guitar? Mr. Llobet executes these works with a style and a rare charm such as he only can do. From Bach, Beethoven, Chopin to Albeniz, his talent has reached an extremely rare artistic perfection. We may compare him with Paderewski and Kubelik. In other words he is not a guitar player, he is a great artist."

A Changing Attitude

IT IS AN INDISPUTABLE FACT that the Llobet recitals greatly influenced the guitaristic movement throughout Europe and South America and gave it an impetus that reached its culmination with the Segovia recitals in late years. Before Llobet came upon the scene the guitar was heard frequently in concert halls, but failed to attract the general musical public, neither did the music critics think it worth while to attend a guitar recital.

The remarkable technic and rare musicianship displayed by Llobet brought about a change in their attitude towards the guitar and it was his rendition of the classics that convinced everyone within his hearing that this instrument was capable of producing musical effects that equalled, and in some instances surpassed, those one is accustomed to associate with violin, piano or violoncello.

The writer was fortunate enough to attend the only recital given by Llobet in Philadelphia, on October 29, 1912. Stopping in New York for a few days on his way from South America to Paris, Llobet happened to meet the late Paul Eno, prominent guitar and banjo teacher, who persuaded him to come to Philadelphia for an afternoon concert. Having only a few hours we went to work with the telephone and managed to get together an audience of about two hundred fifty, in the Orpheus Club rooms.

To the best of the writer's knowledge this was the first complete guitar recital ever given in Philadelphia, and it goes without saying that it proved a great artistic success. The late Camille Zeckwer, pianist and composer, who happened to be my guest of the afternoon, turned to me after Llobet played the Chopin *Nocturne, Op. 9, No. 2,* and remarked: "This was the most artistic rendition of that beautiful Chopin classic I've been privileged to listen to." His program consisted of:—

1. *Menuet,* Sor; 2. *Etude de Concert,* Coste; 3. *Nocturne, Op. 9, No. 2,* Chopin; 4. *Variations, on a theme by Mozart,* Sor; 5. *Baurrée,* Bach; 6. *Andante* ("Sonata, No. 10"), Beethoven; 7. *Reve,* Tarrega; 8. *Caprice Arabe,* Tarrega; 9. *Fantaisie Espagnole,* M. Llobet.

As an artist Miguel Llobet has set a standard every ambitious guitarist should strive to reach.

* * * * *

Verdi Snubs Publicity

In a letter written just a few weeks before his death, Verdi thus relieves his feelings towards newspaper notoriety:

"For an artist who courts the public approbation, to have the press against him is, to my mind, a great asset. At all events he thus remains independent. He does not need to spend his life thanking this one, listening to the advice of this other. He can write freely, without trammels, as his heart and mind dictate; and if there be anything worth while in him, it will come out."

QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Fingering and Pedaling.

Q. 1. In Handel's Fuga in F minor *("Suite No. 8"), how is the right hand fingered in measure 112?*

2. How are both hands fingered in measure 130?

3. How are measures 145-146 figured?

4. What is the tempo *of this* fuga?

5. How is measure 5 of the Allemande *fingered? Also, how do you play the trill?*

6. What exercises should I use in connection with this "Suite"?

7. In Rustle of Spring, *by Sinding, how do I interpret the "con pedal"?*

8. How do you finger and pedal measure 40?

9. How do you pedal measures 44, 45, 46, and 47?

10. What is the tempo *of this piece?*

11. What exercises should I use in connection with this piece.—A. M., Ecuador.

A. 1. I suppose you are bothered as to how you can hold the half-note D with the thumb. Catch it with the pedal on the third eighth note. This makes it easy to finger the rest of the measure.

2. You are not supposed to hold all the notes down with the fingers. Sustain them with the pedal. The pedal is held through the first three beats.

3. Here again the pedal helps you out. Free your hands by catching the fourth beat with the pedal; however, it seems to me the thumb F of the final chord is superfluous and could just as well be omitted.

4. *Tempo* of the *Fuga* is about ♩=120; of the *Allemande*, ♩=100.

5. As follows:

6. Bach's "Three-part Inventions."

7. *Con pedal* simply means that the pedal is used at your discretion.

8. Measure 40 is fingered exactly like the C minor scale. The pedal can be held throughout the measure provided you start softly with the run and make a *crescendo;* otherwise, release pedal in middle of the measure.

9. Measures 44, 45, and 47 are pedaled through the measure. Measure 46 does not need any pedal.

10. *Tempo,* about ♩=108.

11. I know of nothing better than scales and arpeggios. (It would greatly benefit you to buy a copy of Mendelssohn's "Songs Without Words," edited by Theodore Wiehmayer. Play through all of them, with careful attention to his pedal markings.)

Liszt's Fourth Rhapsody

Q. Will you please answer the following question in regard to the Fourth Rhapsody *of Liszt?*

1. What is the meaning of altieramente?

2. Is the maestoso *faster than the* adagio?

3. Is the same tempo *kept while the left hand has the melody accompanied by rapid runs in the right hand?*

4. The first theme of the Andantino is sixteen measures in length. Should the contrasting theme which ends in a cadenza *be in the same* tempo *as the first theme?*

5. An accelerando *begins toward the bottom of the second page of the* Allegretto. *Would there be slight retards where the theme changes from one hand to the other, or must it move on steadily faster and faster to the end?*

6. What are the tempi *of the various sections?*—Mrs. F. R. R.

A. 1. *Altieramente* means *"with grandeur."*

2. Just slightly in this case.

3. Keep it the same if possible.

4. Yes.

5. Where the hands interlock, the *tempo* should be kept strict.

6. The *tempo* of this *Rhapsody* is pretty much the same up to the octave section, which is taken according to one's octave playing ability. Start at 60 quarter notes to the minute. You can take the *Andantino* a shade faster if you like. The *Allegretto* had better not be begun at a too rapid *tempo,* unless your octave technic is good; probably about 104, if you can manage this, then gradually increase the speed to the end.

Improving One's Reading

Q. 1. I read your column each month with interest. I have been troubled with a few things in my study of music and would like you to advise me as to what I should do to correct them. I have trouble with rhythm. Whenever I take time to count the rhythm, I get it; but I feel I should not have to do that in my music. I want to be able to sense the rhythm on the first sight of the composition. How can I develop this?

2. Could you give me some information as to where I might study interpretation of piano compositions alone?—T. G. S.

A. 1. I think it will greatly benefit you to sight read some easy sonatinas. Be sure to play slowly enough so as to take in the note values as you proceed. Begin with the sonatinas of Clementi or Kuhlau, after which take up the easier sonatas of Mozart and Haydn. Try to read ahead of where you are playing. Take in a whole measure or even an entire phrase at a glance instead of reading note by note. Some of the time just look at the music and try to *hear* it without playing at all.

2. This magazine often has master lessons on various piano compositions. In addition, the publishers of THE ETUDE will be glad to tell you what they have in stock. Also, you might be interested in a book, "Interpretation of Piano Music," by Mary Venable, which may be obtained through the Publishers of THE ETUDE.

Rachmaninoff's Prelude, Op. 3, No. 2

Q. 1. In Rachmaninoff's Prelude, Op. 3, No. 2, *measures 7 to 12, it seems difficult to keep the right hand above the left hand while playing these chords. Can one change the hand position when it seems easier to do so?*

2. At Tempo I *why is there a double staff connected with a perpendicular line? They are alike with a little different harmony. Which of the two is played, or can one choose?*

—Mrs. L. S.

A. 1. It is better to change hand positions. Throughout this passage, when the left hand octave is on black keys and the right hand octave on white keys, keep the left hand over the right; in all other places the right is placed over the left.

2. This is not a case of "take your choice." The two staffs are played together. Rachmaninoff wrote the passage as he did for the sake of clearness in reading, but it has had the opposite effect on many.

Trills in Purcell

Q. Will you kindly tell me how the trills are played in Two Bourées *by Henry Purcell? Measures 7, 15, 31, 39 of No. 1; and measures 7, 15, 23 in No. 2. I have looked through a number of books and they all say to start trills from the note above the principal note in compositions of this period. Only I do not know whether Mr. Moffat, the editor, wants them played this way.*—L. L. S.

A. I am not acquainted with these Bourées. If you will copy the measures that trouble you and send them to me I will gladly answer your question; however, I may be able to help you by a general statement. It is true that trills of this period are *usually* played from the note above the principal note, but not always. So do not let this worry you. If you think they sound better the other way, play them that way. Most artists do not pay much attention to such rules.

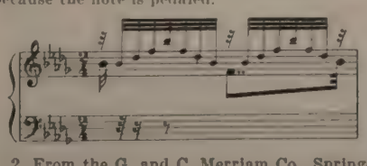
How to Select Material

Q. 1. I am a young piano teacher seeking advice. In our small town we have no music store and cannot select our material. When we order we have no way of knowing what to send for. I have a student playing Heller and John M. Williams' "Third Year." What shall I teach next?

2. What exercise book is best to use in developing the fingers and technic for grades two and a half, three and three and a half?

—Mrs. P. L. S.

A. 1. I think a young teacher in a small town gets the best results by using graded course books. If I were you I would order the first five books of "Mathews' Graded Course" (In 10 grades) and get acquainted with the material. These may be procured through the publishers of THE ETUDE. You will find the material very interesting and beneficial.



2. The Hanon "Studies" are also good for finger training; however, nothing can quite take the place of good practice in scales and arpeggios. (Most publishers are quite willing to send material "On Selection" and I am sure that the publishers of THE ETUDE will gladly send you a package of music which you may look over at your leisure, returning to them the publications that you do not want.)

Wrong Notation.

Q. 1. In measure one of Sinding's Frühlingsrauschen, *I cannot figure the value of the notes played by the left hand. All I can make out is one thirty-second note, one double dotted eighth note, and one thirty-second note. There should be three more thirty-second notes. Will you please explain this measure for me?*

2. Where can I purchase the Webster New International Dictionary?—Mrs. E. J. V. B.

A. 1. Composers and publishers sometimes are careless in their notations, and this is a good example. For every note not played in the left hand there should be a rest of equal value marked in the bass clef; also, for the right hand in the treble clef. The example below will enlighten you, I think. Of course, in sound, the first thirty-second note (B-flat) played by the left hand is a full quarter note because the note is pedaled.

2. From the G. and C. Merriam Co., Springfield, Massachusetts.

Madrigals of the Days of Good Queen Bess

(*Continued from Page* 716)

many madrigals were composed and performed. Masques also provided the musicians with great opportunities, and many excellent compositions were written for them. Henry VIII favored this type of musical presentation.

Wedding festivities in wealthy homes were very elaborate. It is generally thought that Shakespeare's "A Midsummer Night's Dream" was first produced at some notable wedding festivity.

The customary May-Day Revels included much singing and dancing, and many madrigals were written for them. The entire populace would go out at an early hour and gather flowers and hawthorn blossoms. The final ceremony of bringing home the May Pole was a climax to the choice of the fairest maid of the village as May Queen. Every house was decked out with May blossoms and the evening ceremonies centered around the May Pole which was a permanent fixture in almost every village. References to these festivities are found as early as Chaucer. In his "Court of Love" he states, that "Forth goeth all the Court, both most and least, to fetch the flowers fresh." In his "Shepherd's Calendar" Spenser gives a good account of the entertainment of the times.

There was an unlimited fund of first-rate poetry to set to music, since the poets contributing texts to madrigals were contemporaries of Shakespeare. While the Elizabethan madrigalists varied considerably in their choice of texts, most of them chose the works of poets of the first order. Among the most popular were Edmund Spenser, Philip Sidney, Ben Jonson, Robert Greene, Christopher Marlowe, Walter Raleigh, and Samuel Daniel. There is no known example of any of Shakespeare's words being set as a madrigal.

The death of Queen Elizabeth dealt a serious blow to music in England. Political upheavals throughout the middle of the seventeenth century seriously affected all the arts as well as the domestic life of the country. Music suffered more than all its fellows. Music books, instruments and organs, were ruthlessly destroyed during the Puritan regime. Church music was forbidden by authority, and fanatics in certain quarters taught the people that all forms of music and dancing were unforgivably sinful.

With the Restoration there came a great revival of the arts; and, for a short period towards the close of the seventeenth century, England seemed to resume again the supremacy in music that she had held in Elizabethan days. Henry Purcell stands out in this period. Revivals of madrigals were undertaken, but they were not successful. The rhythms were misunderstood and false accentuation was the result. Another art form, the opera, was the "modern music of its day"; and it had become so thoroughly established as to exert a powerful influence on all future musical composition.

Musicians of November Birth

(*Continued from Page* 716)

19th—François-Alexandre-Nicolas-Chéri Delsarte (1811)

20th—John Wall Callcott (1766), Daniel Gregory Mason (1873), Henry Purcell (Nov. 20[?], 1658 or 1659)

21st—Louis Campbell-Tipton (1877), Walter Battison Haynes (1859), Siegfried Karg-Elert (1879)

22nd—Wilhelm Friedemann Bach (1710), Howard A. Brockway (1870), St. Cecilia (year unknown), Muriel Foster (1877), José Iturbi (1895), Conradin Kreutzer (1780), Joseph-Jean-Pierre-Émile Meifred (1791), Maud Morgan (1864)

23rd—Thomas Attwood (1765), Manuel de Falla (1877), Joseph Hellmesberger, Sr. (1828), Fanny Moody (1866)

24th—Karl August Heymann-Rheineck (1852), Lilli Lehmann (1848), René Maison (1895), Daniel Protheroe (1866), Bernhard Stavenhagen (1862)

25th—Franz Benda (1709), P. Paul Bliss (1872), Peter W. Dykema (1873), Paul Hillemacher (1852), Ethelbert Woodbridge Nevin (1862), Sergei Ivanovitch Taneiev (1856)

26th—Henry Coward (1849), Earl R. Drake (1865)

27th—Mattia Battistini (1857), Sir Julius Benedict (1804), Mabel Wheeler Daniels (1878), Margaret Ruthven Lang (1867), Harrison Millard (1830)

28th—Franz Drdla (1868), Gottfried Emil Fischer (1791), Orlando Augustine Mansfield (1863), Louis Plaidy (1810), Anton Gregorovitch Rubinstein (1829), Adolf Weidig (1867)

29th—Gaetano Donizetti (1797), Charles Hubert Farnsworth (1859), Jean-Baptiste de Lully (1632), Eduardo Marzo (1852), Anna von Mildenburg (1872), Sofia Scalchi (1850)

30th—Charles-Henri-Valentin Alkan (1813), Frederick J. Crowest (1850), Andreas Dippel (1866), Cecil Forsyth (1870), Karl Loewe (1796), Joseph Mosenthal (1834), Ernest Newman (1869), Peter Raabe (1872), Eleanor Spencer (1890), Ludwig Thuille (1861)

Window Advertising

By ANNETTE M. LINGELBACH

It is an excellent idea for the beginning teacher to study musical advertising through pamphlets, catalogs, and magazine advertisements. Possibly a local music dealer would consent to her arranging his display window one day of the week. If not, she should try to secure space in some prominent store-window, where her musical message will reach a large audience. If the expense for using the window is great, she might suggest to a group of musical friends that she and they go together to create a worth while window display.

For this display, she might use miniature furniture and dolls to trace the development of music, to show the benefits of music study to-day, and to impress on her audience the essential accuracy and modern quality of her own teaching methods. Window contests, with small prizes, can be featured at certain intervals, for identifying the figures, describing the musical event or incident pictured, or answering the questions on musical history and personal advertising, posted in the window. This field of window advertising is practically unlimited, and it may be made to be of immeasurable value to the wide awake teacher.

Famous Writers and Music

By ARTHUR O'HALLORAN

Among the great novelists, playwrights, poets or historians, it is seldom that we find the literary artist skillful in the science and art of music. There are, however, some notable cases where great literary craftsmenship go hand in hand with a passion for music and academic attainments.

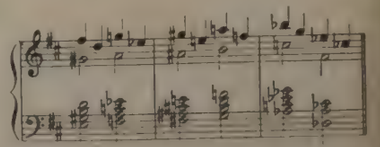
George Eliot, the great Victorian novelist, was a proficient pianist and took pleasure in playing duets with her (adopted) son whilst he lived under the George Lewes "Menage."

Samuel Butler, writer of the famous novel, "Way of All Flesh," and of the great satire "Erewhon," was a competent composer and a pianist. During the voyage out to New Zealand, where he resided for several years, he conducted a choir formed from among the passengers. To his out back sheep run, high up among the mountains, he somehow got a piano. He played his beloved Handel after a day of mustering sheep. Later, in London, he essayed his hand at composing.

George Bernard Shaw, in the nineties, was one of the best music critics in London and probably knew more about Wagner than any newspaper man then or since.

Schumann was a clever writer for the music journals of his day.

Edward MacDowell wrote excellent poetry; and, had he chosen the profession of the Muses, he would be numbered perhaps among the minor poets of America.



The Threshold of Music

(*Continued from Page* 708)

preoccupied with the fascinating tone color of the dominant ninth chord. One, César Franck, did so, and this is the passage in his "Symphony in D minor" which resulted.

Ex. 6

(This quotation, from the "Symphony in D minor" of César Franck, is reproduced with the permission of the owner of its copyright, J. Hamelle.)

Here, also, every chord is a dominant ninth!

VOICE QUESTIONS
Answered
By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

What Is Harmful to the Voice?

Q. Is it harmful to the voice to sing moderately early in the morning, late at night and after meals?

2. Is it harmful to clear the throat?

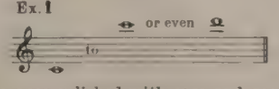
3. Can the vocal apparatus, after having been given rough use and perhaps somewhat injured, be brought to a perfect, normal condition again?

4. Are there any books written by competent vocal teachers or singers which teach voice training from a physiological standpoint? If so, kindly suggest one or more.—J. A. F.

A. It is not harmful to sing moderately early in the morning. One should remember, however, that the heart action slows down during sleep; and the highest tones are seldom quite as free and clear at that time as they are later. Opera and concert singers must sing late at night, and most of them are then at their best. After a heavy meal, it is always wise to rest for half an hour or so before singing. The blood flows to the digestive organs at that time, and therefore the singing voice is seldom of as good quality or as easily produced immediately after eating.

2. When there is tenacious mucous in the throat or larynx it is difficult to produce a clear tone. To dislodge it by a moderate expulsion of air from the lungs through the trachea is not harmful. Forceful hawking, scraping and spitting may strain the throat and the vocal cords and lead to serious trouble.

3. If the vocal bands have been injured by rough usage, it takes a considerable period of time and skilful teaching to bring them back to normal. Consult a good throat doctor.



4. Oscar Gutman—"Gymnastics of the Voice," Behnke & Pearce—"Voice, Song and Speech" are books that treat voice training from a physiological point of view. Please remember that a man is more than a collection of muscles, bones, cartilages and nerves. He is a living, breathing organism, and the spiritual, intellectual side of him should never be ignored.

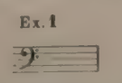
The Young Girl's Voice

Q. In the department Voice Questions, I notice seventeen year old girls saying that their singing range is only to high C and they go on to say that the tones B and C are sweet. I cannot see why they should not be. I am only fourteen years of age and can reach G above high C without effort, and I do not flat. You probably do not believe me and I do not blame you, for I have never shown any one how high I can sing, because of my bashfulness. Would you please tell me why people think it is a miracle if one can reach B or C when they are in their teens?—R. S.

A. It is not at all unusual for a very young girl to be able to sing extraordinarily high notes, especially if she is healthy and naturally well developed. A range from

Ex. 1

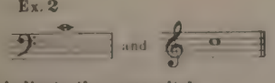
may be accomplished with ease and good tone quality. The tones above that are quite unusual. Remember that the strain put upon the vocal bands by the muscular contraction necessary to produce the intense vibrations above the "high C" is very great. Often, as a girl grows older, the voice deepens, so that at nineteen or twenty a tone is lost at the top and added at the bottom. If you can sing comfortably and with a good quality of tone throughout the extended range that you specify in your letter, you should certainly study singing seriously. You need a good singing teacher, preferably a woman who will train your voice without forcing it, and who will be willing (as you also must be) to bring you along slowly and gradually, without trying to turn you into another Deanna Durbin, and probably hurt your voice in the process. You should study the piano so that you will be able to play for yourself, and languages also, commencing with Italian and French and later adding German.



A Question of Clefs

Q. Do the tenor, baritone and bass naturally have voices an octave lower than the woman's voices? Should exercises for the tenor voice be played in the bass clef?

2. In an arrangement of a mixed quartet sung by a male quartet, which voice should sing the alto.—G. M. K.



A. The fact that the part for the tenor is written in either one or the other of two clefs leads to confusion. When it is written in the F, or bass, clef

Ex. 1

the note must be sounded as it is actually written. When it is written in the G, or treble, clef, it must be sung an octave lower. Thus the notes

Ex. 2

really indicate the same pitch.

2. It is never satisfactory to sing a piece written for a mixed quartet by having the soprano and alto parts sung by the tenors and the tenor and bass parts sung by the two basses. The piece must be especially arranged for a male quartet, and many of these arrangements are published and easy to come by. It is the fashion of the moment, in many of these arrangements to give the melody to the baritone, in which case the other three voices must be careful not to sing too loudly. They may even hum. In some arrangements the melody wanders from one voice to the other, in which case the voice that carries the tune should be the most prominent, the others subduing themselves. "The *Revelers*" do this sort of thing very well. Listen to them over the air.

The Young Voice Once More

Q. I am a girl of thirteen with musical ambitions, chiefly singing. My range is

Ex. 1

Is this very exceptional? My notes are clear and true up to high C and reasonably so from there on. I would like to take some voice lessons, but my parents think I am too young. I can play Grade 4-4½ piano pieces and am taking lessons from a very capable teacher. Could I continue piano and take up singing in addition to my school work?—S. R.

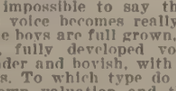
A. A range of three octaves is quite remarkable, if all the notes are equally easy, clear and of good quality. You should consult an experienced singing teacher, one whose word you can depend upon, before starting your singing lessons. Thirteen is, as your parents suggest, very young for serious vocal study. The decision as to whether you must wait a year or start now must rest with them.

2. If you are strong enough and if your health is good enough to stand the rather strenuous program of continuing school work, vocal lessons and piano practice all at the same time, I see no reason why you cannot do it. Your physician and your parents, who know you intimately, plus your own common sense, will help you to make this very important decision. Good luck to a very ambitious girl.

Should the Singer Play a Brass Instrument?

Q. Will you please tell me whether a young lady starting voice lessons should continue playing cornet in the school band? She has had no training on how to play the instrument correctly and they play a great deal. I am inclined to think it would not be good for her to continue playing.

2. What exercises do you consider best to open the nasal passages of a young man who sings very nasal. I have used all the exercises I know, but on I *and* Ah *he shuts the passages tight.*—Mrs. H. T.



A. Playing the cornet or any other brass instrument is excellent for the lungs, the chest, the diaphragm and the intercostal muscles. It strengthens and develops them all. It may help the girl's musicianship, too. Unfortunately, it may stiffen the lips and because the actions are so forceful, may tend to tighten the throat muscles. If the cornet playing is doing any or all of these things she must stop. If not she may continue as the exercise will certainly benefit her health.

2. Perhaps your nasal young man has been trying to place his tones in his nose in the hope of developing the so called nasal resonance. His jaw is probably stiff in consequence and his uvula tightly wedged into the back of his throat, leaving but little opening into the mouth. Teach him to breathe deeply. Make him understand that the breath is the motor that runs the voice. Make him relax his tight jaw and throat muscles and sing more deeply, and see that his speaking voice is free from nasality; and he will improve. Have a physician examine him to see if there is any deformity of the nasal passages.

Is Eighteen too Early for a Man to Study Singing?

Q.—I am a boy eighteen years of age, my voice is a baritone, and I would like to know if a boy's voice is fully settled at eighteen. My range is from low F to high F in the bass clef and is developing rapidly. My teacher likes my voice and does not think it will hurt me to continue my studies, while a former opera singer expressed the opinion that I should wait until I am twenty-one. Shall I stop singing lessons and concentrate upon piano and theory until that time?—C. H. G.

A.—It is impossible to say the exact age that a boy's voice becomes really settled. At eighteen some boys are full grown, strong men, with strong, fully developed voices. Others are still slender and boyish, with weak, undeveloped tones. To which type do you belong? Upon your own valuation and that of your teacher must rest the decision. A range from

is a long one. Be very careful not to growl the low tones nor to scream the high ones, but produce them all firmly, without throatiness or breathiness. Pay great attention to your breathing, and to the quality and clarity of your speaking voice. Some study of piano sight reading, languages and harmony, will do you a great deal of good and can do you no harm. If you are a normal boy and will be willing to develop your voice slowly and naturally, singing lessons need not be put off too long.

DEVELOP YOUR TALENT AT SHERWOOD

At Sherwood Music School native musical ability is carefully brought to maturity. Whatever your field of musical interest, you here have every facility to develop your talent to the fullest. There is a balanced program of technical training and culture—an atmosphere of friendliness, mutual interest and common objective.

Courses lead to degrees, diplomas and certificates in Piano, Violin, Cello, Voice, Organ, Theory, Composition, Public School Music, Conducting, and Dramatic Art. Instruction fully accredited.

Scholarship assistance for deserving students. Dormitory. Write for catalog. 410 S. Michigan Ave., Chicago, Ill.

Institutional Member of the National Association of Schools of Music

SHERWOOD MUSIC SCHOOL

The Cleveland Institute of Music

Confers Bachelor of Music Degree, Master of Music Degree, Artist Diploma

Faculty of Nationally Known Musicians

BERYL RUBINSTEIN, Director, 2605 Euclid Avenue, Cleveland, Ohio

SCHOOL OF MUSIC
OF THE UNIVERSITY OF MICHIGAN

Complete curricula leading to degrees in all branches of Music. Faculty of distinguished artist teachers. Concerts and May Festival by world's greatest artists and organizations in Hill Auditorium seating 5,000. Chorus of 350; student symphony orchestras, glee clubs, bands, etc. Recitals each week on $75,000 organ.

Second Semester Begins February 13.

Instrumental Ensemble Music

EASY QUARTETS FOR YOUNG VIOLINISTS

Each Part, 40 cents
Piano Acc., 75 cents

This collection also is delighting quartets of B-flat clarinet players.

This album may be used by a group of young violinists, just for the fun of ensemble playing, or for participation in programs. The piano is not essential to the rendition of these 15 attractive and interesting numbers. The 4 violin parts are quite easy, the 1st violin being the only part to go out of the 1st position and then only for an occasional use of the 3rd position.

THE BRASS CHOIR

A COLLECTION FOR BRASS INSTRUMENTS

A dandy collection of well-arranged selections of an attractive character. These are ideal for amateurs, as no parts are difficult. Various combinations can be made. Four different practical quartet combinations are suggested. The B-flat and E-flat books may be used by saxophones if desired.

PARTS PUBLISHED FOR

First B-Flat Trumpet
Second B-Flat Trumpet
First Trombone (*Bass Clef*)
Second Trombone and Tuba (*Bass Clef*)
E-Flat Horn
Baritone or Trombone (*Treble Clef*)

Each Part, 35 cents
Piano Acc., 60 cents

GONDOLIERI (GONDOLIERS)

By Ethelbert Nevin—Arranged for WOODWIND ENSEMBLE (Flute, Oboe, Clarinet, Horn, and Bassoon)
By Hugh Gordon
—Complete, $1.25.
—Score, 40c. Separate Parts, 20c Each.

This is one of the favorite tone poems from Nevin's world famous suite, *A Day in Venice* (*Un Giorno in Venezia*). It lends itself particularly well to the woodwind combination, and Hugh Gordon has made a very excellent scoring for this group of instruments.

DANCE OF THE ROSEBUDS

By Frederick Keats—Arranged for FOUR CLARINETS—By Hugh Gordon
—Score, 25c. Separate Parts, 15c Each.

A bright, tuneful composition that has the rhythmic appeal of a sprightly ballet. It is here arr. for a quartet of B-flat clarinets.

MELODY OF LOVE

By Hans Engelmann—Arranged for STRING QUARTET—By Ladislas Kun
—Complete, 50c. Separate Parts, 15c Each.

Everyone loves this melodious selection. Its theme has been borrowed for ballads, gospel songs, etc., but still it holds its standard worth and it is especially appealing in this string quartet form.

MENUETTO (From Quartet No. 52)

By F. J. Haydn—STRING QUARTET
Edited by Rob Roy Peery
—Complete with Score, 75c.
—Score, 25c. Separate Parts, 15c Each.

The Committee on Instr. Affairs of the M. S. N. C. recommend this easy number for small instrumental ensembles.

MENUETTO (From Quartet No. 41)

By F. J. Haydn—STRING QUARTET
Edited by Rob Roy Peery
—Complete with Score, 75c.
—Score, 25c. Separate Parts, 15c Each.

The more advanced string quartet will enjoy this charming movement from Op. 76, No. 2.

GARDEN OF ROSES

By Irene M. Ritter—Arranged for VIOLIN, CELLO, AND PIANO—By W. M. Felton—Complete, 75c.

With pleasing themes this number delights. This arr. is of moderate difficulty.

PRESSER'S FIRST STRING QUARTET BOOK

For First Violin, Second Violin, Viola and Cello. $2.25, Complete.

15 worthy compositions each skilfully arranged for effective string quartet playing. Each player is given an interesting, but not difficult, part. The aim at variety, in making up this collection of entirely new material for student players, was carried further by having several gifted arrangers, instead of only one, edit the book.

THE TRIO CLUB

Collection for Violin, Cello and Piano.
$2.00, Complete.

A splendid album containing 19 excellent numbers for violin, cello and piano ensembles. This is a collection of pieces of such varied assortment as to make a strong appeal to the professional as well as the amateur musician. The pieces are melodious and attractive without being trivial, and none of them has ever before appeared in any similar collection. This album is especially recommended for its adaptability to school ensembles, since the arrangements, while being very excellent and entirely adequate, make no unusual technical demands on the performer. Truly a most unique publication.

TRIO REPERTOIRE

For Violin, Cello and Piano.
$2.00, Complete.

The well equipped amateur group, or the professional ensemble requiring a large repertoire of attractive, musicianly selections, can do no better than add this superb collection to their library. The arrangements are intelligently made and the composers represented mark this collection as one of genuine artistic worth.

A DAY IN VENICE

(UN GIORNO IN VENEZIA)
Suite by ETHELBERT NEVIN.
Arranged for Violin, Cello and Piano.
$2.00, Complete.

These 4 beautiful and world-renowned tone poems, *Dawn, Gondoliers, Venetian Love Song* and *Good Night*, are enhanced in these masterly arrangements for an instrumental trio.

A SYMPHONY A DAY

(*Continued from Page* 751)

empirically, as some untutored players have chanced upon them and liked them. Men, with fine musical training, have taken this new material and "streamlined" it for well trained orchestras and bands, and the result often has been a kind of glorified jazz, very delightful and exciting in its interest. If you "can't stand jazz," do not worry about it. A great pattern in music is to-day being evolved in America, and jazz is only an incident.

Let there be no mistake in the reader's understanding of our attitude toward a kind of music so widely accepted by the great public that certain groups of leaders make millions from it yearly. We do make a wide distinction between the modern glorified jazz, such as we hear from the orchestras of Andre Kostelanetz, Paul Whiteman, Rudy Vallee, Frank Black, Phil Spitalny, Guy Lombardo, and Fred Waring, as well as Vincent Lopez, Eddie Duchin, and other better groups, which thrill us with the ingenuity and virtuosity of the players, and, the boiler factory, pandemonium jazz, in which two or three players ignorantly and impudently feel that they are heaven-sent and may, therefore, improvise any old kind of tune upon any orchestral background, with the thought that the louder, higher and harsher the rumpus, the more satisfactory the results. Because the public runs after these "Pied Pipers of Harlem," the players imagine that they are producing something artistically marvelous. The public, dear friends, will run after anything. Once, in a western town, we attended a shivaree (charivari) given to a young bridal couple. The "callithumpian" band was composed of all kinds of resonant domestic utensils, selected with none too delicate humor. The players pounded mercilessly upon these for hours, and the crowd seemed just as much overwhelmed by this orgy of sound as are the neurotic jitterbugs of to-day, and quite as abnormal for the moment. Certainly neither music nor religion is at its best when followed by those who indulge in sprees of such emotional frenzy.

In many of the jazz bands, we have heard white players and black players of incredible virtuosity, some of the most astonishing being Negroes; but we have listened with sorrow to what can be looked upon only as a perversion of their skill. Incidentally, superior Negro musical art, such as that of Roland Hayes, Marian Anderson, R. Nathaniel Dett, William Grant Still, Florence B. Price, Clarence Cameron White, Harry Burleigh, and others, has had no more enthusiastic champion than THE ETUDE MUSIC MAGAZINE.

The remarkable thing about radio is the splendid amount of time which the broadcasting companies in America give to the finer programs and to education. These cost the companies millions of dollars a year, and much of the revenue that makes this possible is derived from sources financially fertilized by jazz. Our readers should note, for instance, that, of the 1937 programs of the National Broadcasting Company, only thirty per cent were "sponsored" or "advertising programs." Many of these sponsored programs presented music of the highest class. A few were inebriated with vile jazz. Seventy per cent of the programs, including the great musical programs, are thus subsidized from the profits of broadcasting. The Columbia Broadcasting System reports a ratio of 39.7% sponsored programs, to 60.3% unsponsored. Jazz, and what you may possibly call trash, thus brings to us a far greater amount of fine music than is broadcast in all Europe. If you cannot stand the maniacal shrieks of "hot" trumpets, the blare of despondent trombones, the wail of saxophones in the last stages of *mal de mer*, and the apoplectic gargles of clarinets, just turn the dial to something better. It is almost always there.

A symphony a day does not keep jazz away; but jazz pays the bill for many a symphony.

* * * * *

Verdi Balks at Portrait Idea

In 1878 Verdi was made a member of "Arcadia," or, as it was also called, the Academia Properziana. Acknowledging receipt of the diploma of membership, under date of Busseto, December 1, 1878, he wrote:

"I am much obliged for this evidence of the regard of so ancient a society. But, since in the accompanying circular, I perceive that your Academy has decided to get up a gallery of portraits of all its members, I feel constrained to tell you that, if such a portrait be made a condition of membership, I should regretfully have to decline the honour of accepting this diploma."

Tropical Brazil Speaks!

● Our mail constantly brings us messages of the most cordial and appreciative kind from enthusiastic Etude friends all over the world. Many teachers are frank in declaring that it would be exceedingly difficult for them to continue their work without the monthly visits of The Etude. Here is a photograph of a bright class of Etude devotees, each with an Etude in hand, in a small Brazilian city. The class is conducted by Senora Nair Soares Lins. She writes "The Etude is an invaluable source of help in my work." In numerous countries as well as in America, some teachers insist upon having their classes 100% Etude subscribers.

To our friends in foreign countries we desire to say that the same purchasing facilities and service enjoyed by American patrons of The Etude, are always extended to them. Of course transit problems and customs make a difference, but our foreign customers find the convenience and economy of patronizing the Theodore Presser Co. a most satisfactory experience.

The Cover for this Month

The antiquity of the violin is suggested in the cover decoration for this month as the eye beholds the violin superimposed upon a manuscript from an ancient source. Those who have endeavored to trace the origin and development of the violin admit that the mysterious veils of time shroud the origin of the stringed instruments which formed the ancestry of the violin which we know to-day.

One thing that is discovered in the study of violins is the great care necessary in order not to be fooled by spurious labels. It was not always the intent of the manufacturer to fool people as to the age of the instruments made by them, labels sometimes being intended only to indicate that the instruments were modeled after an instrument made by some maker whose instruments, made many years before, continued to be held in high repute.

It is doubtful if there is a day passes without the mails containing letters going to leading musical magazines, instrument manufacturers, famous violinists, or other musical authorities, carrying the news that the writer believes himself to be in the possession of a valuable old violin, which he discovered in the attic of the old homestead, or which some old person gave to him or left behind when he died.

Unfortunately, it is a very rare thing when these people are to have any other experience than to have their hopes dashed in learning that it takes more than a label with some name such as Stradivarius, Guarnerius, Amati, Storioni, or Stainer, to make an instrument an authentic product of a famous maker of several centuries or more ago.

It is generally accepted that the type of instrument called the violin came into being somewhere in the very beginning of the sixteenth century. Most of the higher priced old violins in existence to-day are instruments that were manufactured around the close of the seventeenth century and in the beginning of the eighteenth century, the most notable of these being the famous creations of Antonio Stradivarius (164(?)-1737). The instruments of this maker as well as those of Joseph Guarnerius (1687-1742) have brought fabulous prices, not because they are the very oldest instruments in existence but because they represent the greatest achievements in violin making.

The real student of any subject gets great joy in doing his own research and perhaps these few remarks and the cover of this issue will inspire many to turn to such works as *Grove's Dictionary of Music and Musicians* for the excellent articles it gives on violin making and violin playing. One of the more exhaustive works on the subject of the old violin is the 488 page volume entitled *An Encyclopedia of the Violin* (Bachmann).

Christmas Music

When the warm summer days were with us letters began arriving from choir masters, some asking for a selection of Christmas Music, others naming certain Christmas anthems that were wanted for examination. Fortunate indeed are the individuals who have their lives so ordered that they may take up things which they plan to do well in advance of the time when they are to be needed. Many must crowd so much activity into each day, however, that there comes a time when some things must be set aside to take up other things which no longer can be deferred.

It is to such busy people that these paragraphs are AN URGENT REMINDER TO SELECT CHRISTMAS MUSIC NOW. Do not risk further delay—reach for writing materials now and address a note to us here at the Theodore Presser Co., 1712 Chestnut Street, telling of the type of Christmas Music you would like to examine.

All you need do is tell us what you may want in the way of cantatas, or anthems. That is, whether you want them for mixed voices, men's voices, or treble voices, and if you want any Christmas solos, and if so, for what voices. By mentioning some numbers which you have used in the past our selection clerks will know what types and grades of material to send for examination with return privileges. Single copies only are sent on special inspection with return privileges.

You also have the privilege of naming any numbers you would like to examine, and if you prefer this method of ordering material "on approval" you will find it helpful to have on hand the folders we issue listing Christmas Music. Just send a postal asking for a Christmas Music folder (P-2)—this covers anthems, organ solos, cantatas, etc. If you want a list of music for Christmastime entertainment and for pupils' recitals at Christmastime, ask for folder P-10.

If you are particularly interested in recently published numbers for Christmas perhaps you will want to ask for the privilege of examining some of the following:—

ANTHEMS

Cat. No.		Price
21359	Christmas Lullaby (a cappella) *McCollin*	.12
35368	The First Noel (a cappella) *Banks*	.12
35367	Homage to the Christ Child (a cappella) *Bampton*	.12
21361	Sing Ye! Sing! The Saviour's Birth *Curry*	.08
21360	On This Christmas Day (2-Part) *Richter*	.08

CAROLS

21362	Traditional Christmas Carols (Unison) *Baines*	.15

CANTATA

	The Manger Prince *Stairs*	.60

Play and Sing

Favorite Songs in Easy Arrangements for Piano

By Ada Richter

What child does not like to play a song he knows? And what parent does not like to hear his child play and sing the old favorite melodies? The music teacher is constantly being asked, "Why can't Mary play *Sweet and Low* or *Home on the Range?*"

Such songs as these, as originally composed, however, are usually too difficult for the child to cope with, and a special simplified arrangement is necessary. It is to meet just this need that Mrs. Richter has prepared this new book, similar to her very successful *My First Song Book*. The pupil who has studied a year or more will be able to play the arrangements in this book with ease, since at no time does it surpass grade two in difficulty.

The author has divided the songs into six interesting groups: School Songs, Songs of Other Lands, Songs of My Country, Songs from Operas, and Songs My Grandparents Sang Long Ago. There are some forty songs in all and a glimpse of the contents reveals favorites like *Love's Old Sweet Song, The Mocking Bird, Toreador Song, Merry Widow Waltz, Comin' Through the Rye, Aloha Oe, Levee Song,* and gems from Stephen Foster. One verse of the text is given in each case, for singing purposes.

A single copy now may be ordered at the special advance of publication cash price, 25 cents, postpaid. Sold only in the U. S. A.

Victory Divine

An Easter Cantata by J. Christopher Marks

Arranged for Women's Voices

By James C. Warhurst

Choirmasters generally are familiar with this favorite Easter cantata from the pen of one of America's outstanding composers of church music, Dr. J. Christopher Marks of Brooklyn, N. Y. In its original form for mixed voices, it long has been in the "best seller" class.

Because of the growing demand for extended choral works for women's voices, we are pleased to offer a new arrangement of this cantata for three-part chorus. In the new adaptation, there are solos for Soprano, Mezzo-Soprano, and Alto, and a duet for Soprano and Alto. Of particular interest is the appealing chorus, *God So Loved the World*. Several of the solos occur with accompaniment of the chorus, such as *It Is the Hour of Morning* for Mezzo-Soprano and *Fear Not* for Soprano. The arrangement is strictly three-part (S.S.A.) throughout, with but occasional division of the voices for added emphasis or to provide an optional note where the range is wide.

This work is being announced early for the benefit of those choirmasters who make their plans far in advance. A single reference copy may be ordered now with the assurance that delivery will be made in plenty of time for rehearsals preceding the Easter season. The special advance of publication cash price is 35 cents a copy, postpaid.

An Etude Subscription Is a Lasting Holiday Gift

When renewing your own subscription to The Etude, as many subscribers do at this time, why not send a year's subscription to a musical friend? Add only $1.00 to the price of your renewal subscription, $3.00 in all, and we will enter both subscriptions for one year.

Such additional subscription must be a gift, however, in order to secure the low rate. If requested, a fine Christmas gift card will be sent at holiday time, bearing your name and good wishes to your friend. Isn't this a splendid way in which to do your Christmas shopping? No fuss or bother. This is a special holiday offer good until December 31st.

The Organist's Resource

A New Collection of Organ Music Selected from the Compositions and Arrangements of

I. V. Flagler

Organ music, at one time associated mostly with church worship, is now used also in many other forms of public assemblage. As the organ is to-day, it is undeniably the "King of Instruments". Much wonderful music has been written for it by such masters as Dubois, Bizet, Lemaigre, Widor, Beethoven, Guilmant, Massenet, Rubinstein, Meyer-Helmund, and others.

An important contributor to organ literature was Isaac V. Flagler, for many years organist and composer of Albany, N. Y. He wrote much for the instrument, and was prolific in fine transcriptions and arrangements of the works of other writers. *Flagler's Collection of Organ Music*, in five volumes, is everywhere recognized as a standard work.

The Organist's Resource is a careful selection of the very best compositions and arrangements from this larger work. It will be published in the handy oblong size, 12 x 9", and will be universally appreciated by the organist in need of the very best music for his instrument.

In earlier announcements, this collection was called *The Organist's Treasury*. Due to a similarity with an existing book, and the probable confusion which would result, this new collection will be issued under the title *The Organist's Resource*.

Single copies of this fine book may be ordered now at the special advance of publication cash price of 60 cents, delivery to be made upon publication. Sale is restricted to the U. S. A. and Its Possessions.

Penitence, Pardon and Peace

A Lenten Cantata by J. H. Maunder

Arranged for Women's Voices

***By* James C. Warhurst**

Most choirmasters are acquainted with Maunder's celebrated Lenten cantata, and, from the response to our initial announcement of the forthcoming publication of this new arrangement, many are delighted to learn that it soon will be obtainable for choirs of treble voice singers.

The new edition calls for three-part singing of most of the choruses interspersed with solos for soprano and alto—all supported by the excellent organ accompaniment. It may be given in its entirety, requiring about 35 minutes, or each of the three parts may be given separately as part of the church service.

Single copies of Mr. Warhurst's arrangement of *Penitence, Pardon and Peace* may be ordered now at the special advance of publication cash price, 30 cents postpaid. This work will be sold only in the U. S. A.

The Youthful Tenor

An Album of Songs for Studio and Recital

In the present day music culture of all kinds is increasing by leaps and bounds. An important feature is voice culture. True voice culture means much more than extending the range of the vocal compass. It is much more creditable to have a limited range of pure, even tones than an extended compass of greater length where the extreme notes sound thin, nasal, rasping, or otherwise unpleasant. The best modern teachers aim to train the voice so that all the tones used are in perfect balance.

Many singers who have had most of their public appearances confined to choirs, choruses, glee clubs, and the like, have ambitions to appear in solo work. Among these are many men whose voices have the true tenor quality and range. They naturally need songs best suited to their voices and ability. *The Youthful Tenor*, mentioned above, contains valuable material for their needs. Every song gives opportunity for vocal display, good enunciation, and artistic interpretation. The texts and melodies seem to be written for each other and add to the pleasure of both singer and listener. The dozen songs in this collection contain a variety of subject and style that will enable the singer to find something suitable for almost any occasion.

Customers may now order single copies of this work at the special advance of publication price of 35 cents, postpaid, cash to accompany order, and copies will be delivered when ready.

The Youthful Baritone

An Album of Songs for Studio and Recital

In this age more emphasis is placed on correct voice culture than was the case some fifty years ago. This is apparent in all stages of voice growth. In the early grades the culture starts with teaching the child worth while melodies with worth while texts, thus laying the foundation for proper musical appreciation. As the pupil grows older, opportunities are afforded for participation in group singing (class, choir, chorus, glee club, operettas, cantatas, etc.), and for solo work. Experienced teachers abound to train the voice properly, as is evidenced by the wealth of good vocal talent all over the country.

Many men are by nature gifted with voices which, by their quality and range, are classified as baritones. Baritones, having a medium range of voice, are more numerous than tenors, and have greater ease in finding suitable songs.

Because it requires something more than mere range to make a good baritone, we have gone to special pains to prepare a collection of songs in every way suited to bring out the abundance of richness in a well-trained baritone voice. The *Youthful Baritone* contains about twelve selections of interesting variety, giving a chance to choose something suitable for almost any occasion. The texts are especially suitable for men to sing, and well fitted for artistic enunciation.

By ordering promptly, customers will be able to secure single copies of this book at the special advance of publication cash price of 35 cents a copy postpaid, copies to be sent as soon as printed.

Manual of Fugue

***By* Preston Ware Orem, Mus. Doc.**

Listening to a few programs of present day choirs and choruses should convince any ambitious young composer, or student of music composition, of the absolute necessity for a thorough knowledge of the art of Fugue writing. Note the prominence of the compositions from Bach, Handel, and their successors who cultivated this form of musical expression.

Many have successfully taught the higher branches of musical theory — counterpoint, canon and fugue—but few have been able to express their pedagogic skill by means of the written word. Fewer have been able to produce compact, yet thorough, text books on musical theoretical subjects.

Those who have progressed through Dr. Orem's *Harmony Book for Beginners* (1.25) *Theory and Composition of Music* (1.25) and *The Art of Interweaving Melodies* (A First Study in Counterpoint) (1.25), teachers and pupils, know what to expect in this forthcoming work. The number of advance of publication orders being received for copies proves that many are anxious to begin work on Dr. Orem's fourth and final book in the series.

Our Mechanical Department promises to have this book ready for delivery as soon as possible, but during the current month orders still may be placed for copies at the special advance of publication cash price, 40 cents postpaid.

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

***By* Ella Ketterer**

Frequently, teachers have in their classes boys and girls who began the study of the piano early, often at the pre-school ages. Because of natural aptitude and studious application, many of these students have arrived at the ability to take up the work of the third grade before their hands have grown sufficiently to play the average third grade study or piece. They still are little children, too, and their imaginations are readily fired by attractive titles and by descriptive and characteristic compositions.

Covering the various phases of third grade study that should be accentuated to supplement the work of the instruction book, this volume will present study-pieces, or etudes, each one page in length. Note some of the titles and the purpose for which the pieces are intended: *The Whirlpool* (triplets), *Oriental Song* (syncopation), *Sunday Morning* (suspensions), *Up the Stairs* (broken thirds), *Prattle* (the trill), *Bouncing Ball* (repeated notes), and *Harp Song* (arpeggios).

Knowing that many teachers will be glad to add this book to their curriculum and wishing to give them the opportunity of doing so at the least possible expense, we repeat this month our special advance of publication price offer, 30 cents postpaid.

Ten Studies in Black and White

For the Piano

***By* Mana-Zucca**

At an early age Mana-Zucca won acclaim for her artistry and technic as she appeared here and abroad in individual piano recitals and as the featured soloist with some of the leading symphony orchestras. Between the urge to give free expression to her gifts for composition, and her marriage to her student-days sweetheart, Mana-Zucca for a number of years has refrained from major concert appearances, so to-day she is best known as a composer.

Mana-Zucca's pianist background, her composing talents, and her love of helping music students, are sufficient reasons for any alert teacher to want to become acquainted with this set of ten original studies she has just written. Each one of the ten is a titled composition, but in the development of each composition some special phase of piano technic figures.

Thus, in these ten pieces the fourth and fifth grade student may be given material for expanding the reach of the fingers, handling melody and accompaniment in legato style, playing in crisp staccato, effectively using the wrist attack, performing a left hand arpeggio study with melody in the right hand, executing a contrasting rhythm, cleanly and accurately rendering double notes, utilizing velocity to produce sparkling music, etc.

As may be expected the flow of melody in these compositions has been handled in a musicianly manner, worthy of Mana-Zucca's pen. This work is to be a new addition to the Theodore Presser Co. *Music Mastery Series*. By ordering now, at the advance of publication cash price of 20 cents, a single copy will reach you postpaid as soon as the work appears on the market.

Fragments from Famous Symphonies

Compiled and Arranged for the Piano

***By* William Baines**

Successful men in all walks of life have repeatedly declared that their accomplishments, in large measure, could be attributed to the fact that they "got a lot of fun out of their work". Successful teachers of music, years since, discovered that "mixing the agreeable with the necessary", in choosing study material for pupils, made for more rapid and satisfactory progress.

Remember the "song transcriptions" and the "operatic medleys" of the past generation of music publications? The hundreds of "arrangements" under the names of Krug, Dorn, Richards, etc., and in the earlier grades by Spaulding and Greenwald? To be able to play easy arrangements of the celebrated operas, or songs that were household favorites was considered an accomplishment by the youngsters and always was a source of pleasure to their parents.

Today, with the rapid strides music instruction has made in our schools, and the opportunities afforded for hearing the best music via the radio, appreciation for the best in music has increased. Both parents and children hear the great symphonies played by the foremost symphony orchestras, and they learn to love these masterworks of musical composition.

From the better known symphonies, Mr. Baines has selected favorite themes, or "fragments", and arranged them for piano players and pupils able to play grade two music. These will form the contents of this book and a finer collection of good music to assign young students seldom has been assembled. "Fragments" have been chosen from the symphonies of Beethoven, Mozart, Haydn, Schumann, Schubert, Brahms, Tschaikowsky and Dvořák.

Copies of this book may be ordered now, delivery to be made when the book is published, at the special advance of publication cash price, 30 cents, postpaid. Sale of the book will be restricted to the U. S. A. and Its Possessions.

Librettos of the Grand Operas

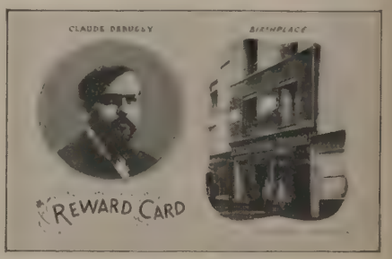
Add to your enjoyment of the Opera broadcasts over the radio this season by reading in advance the story of the opera, and then follow the rendition with the complete English text before you. Many new opera devotees thus prepare for the rich musical treats provided for them by the opera managements and the broadcasting companies.

Complete librettos of the standard operas which give all of this information may be had for as little as 30 cents. The librettos of some of the more recent grand operas, upon which performing rights are restricted, are priced a bit higher, say 50 cents. Surely, opera in America is being brought to the masses, when the cost is so reasonable, and increased interest in and appreciation for this majestic form of musical composition are bound to be noticed in our musical lives.

One String Solos For Violin Beginners

***By* Kate LaRue Harper**

In both private and class teaching it is vitally essential that the interest of the student be aroused from the very beginning and that it be continued throughout the early stages of instruction.



To enable pupils to take up these pieces almost at the first lesson, the author has confined the technical demands to playing on one string, and then using only the first, second and third fingers, as frequently in younger children the fourth finger is too weak to use in playing until developing exercises have been practiced for some time.

With the aid of a well-harmonized piano part it is surprising how melodious these little compositions become. And then, as an added attraction, each piece is accompanied by a fascinating story and attractive illustrations.

One String Solos will be issued in two separate volumes, oblong in shape, one for young violinists, the other for the teacher or accompanying pianist. Copies may be ordered in advance of publication at 15 cents for the violin part and 20 cents for the piano, postpaid.

Reward Cards for Music Pupils

(Second Series)

Bizet	Gluck	Rimsky-Korsakow
Chaminade	Grieg	Rossini
Debussy	MacDowell	Rubinstein
Dvořák	Massenet	Saint-Saëns
Elgar	Moszkowski	Sibelius
	Moussorgsky	

For many readers of THE ETUDE a description of this novelty series, so frequently used in music teaching, is unnecessary. But for those who may not know our *Reward Cards* (First Series), and for the benefit of new teachers just entering the profession, we insert here this brief note.

The *Reward Cards* (both series) are about the size of a U. S. Post Card; in fact, the first series is, and the second series will be, issued also as *Music Post Cards*, priced at 40 cents for the set of 16. These *Music Post Cards* appear as illustrated above, without the words "Reward Card", and on the reverse there is space for name and address of the recipient, as on regular U. S. Post Cards.

The *Reward Cards* appear as above, one side having a picture of the composer and his birthplace, or some other scene of interest, lithographed in the style of a water color painting, and on the reverse a condensed biography of the composer, a facsimile of his manuscript and a reproduction of his signature. Their educational value readily can be recognized and, given as rewards for well studied lessons, they act as an inspiration and encouragement to pupils.

Some teachers present these *Reward Cards*

(Continued on Page 769)

Reward Cards for Music Pupils

(*Continued from Page 768*)

for each piece learned and when the pupil has earned all 16 of the set, a *Prize Card* is given. This *Prize Card*, which always has been included in the first series at no extra charge, and will be given with the second series, too, is reproduced from steel engravings and contains the portraits of 8 great composers linked together by an artistic design and background. Separately, these *Prize Cards* sell at 10 cents each.

The *Reward Cards* (First Series) sell for 50 cents for the set of 16, including the *Prize Card*. Advance of publication orders for *Reward Cards* (Second Series) may be placed now at 35 cents for the set of 16, *Prize Card* to be included, of course. It will be several months, probably, before the new cards will be ready for delivery.

16 Modern Etudes

For the Advanced Trumpet Player

***By* John Huber**

As an aid to attaining that virtuosity that marks the performances of players of this instrument with the orchestras of today, these studies should prove most satisfactory. The author, instructor in a prominent Philadelphia school of music, has prepared this book as a result of his experience with ambitious students who come to him for help in preparing for professional work.

Properly used, under the direction of a good teacher, these studies will develop interpretative ability, proper breathing, correct tone production and flexibility in triple tonguing. While in the course of preparation orders may be placed for copies of this work at the special advance of publication cash price, 40 cents postpaid.

The First Oyster

Often in jest someone makes a remark to the effect that it was a brave man who ate the first oyster. This remark tells a whole story in itself, as it points to the fact that millions of oysters are consumed a day because thousands know that somebody else proved they are edible.

Music courses of study, concert and radio programs, church calendars, etc., give evidence of music folk's natural inclination to use music publications that have proved their worth many times over. A music publishing organization is firmly established only when its catalog contains a goodly number of publications which active music workers have no fear about using.

It is such works that come up for printing, or ones which users of music find acceptable to their needs, and so here each month we present some of the outstanding items from the Publisher's Printing Orders of the previous thirty days.

Examination privileges will be extended cheerfully on single copies of any of these numbers.

SHEET MUSIC—PIANO SOLOS

Cat. No.	Title	Grade	Price
26168	Betty's First Waltz—*Light*	1	$0.35

Crosspatch Fairies—*Dale*	.60

The Etude Historical Musical Portrait Series

In just a few months this important feature of THE ETUDE will have been running for seven years and, as one can see from the alphabetical listing of musical notables whose family names begin with the letter S, the series still has some time to run. Before completing the series it is the intention of the compilers to return to the listings under letters that previously have appeared and there supply portraits and biographies obtained since the original list was published. In the first few letters of the alphabet there is especial need for this review, as insufficient time was available when these appeared for gathering data to make the list of eligibles more complete.

Have you started saving your ETUDES, or at least this page, so that you may add to your reference library this valuable fund of knowledge concerning musical people? Many issues of THE ETUDE, in which the series has appeared, are now out of print and copies no longer are obtainable. But copies of this page can be secured, because with the printing of each issue, an additional quantity of this page is printed separately. If you haven't started, and you wish to possess an invaluable musical reference library, begin now by ordering a complete set of *The Etude Historical Musical Portrait Series* pages that have appeared to date. If several copies are missing from your set you can obtain them at 5 cents each by writing to Theodore Presser Co.

The Etude Offers Fine Premiums For Subscriptions

Thousands of our musical friends have been enabled to fill out their entire holiday gift list without any cash outlay for presents. In exchange for subscriptions to THE ETUDE merchandise of high quality, and of which you need never be ashamed, is offered. Why not follow the same plan with your Christmas list? It is easy. In your wide circle of musical friends and acquaintances, some may not be familiar with THE ETUDE. Show your copy to these friends, and with your knowledge of its value to every music lover, it should not be difficult for you to convince them that the subscription price, only $2.00 per year, makes the magazine a worth while investment. One yearly subscription represents one point credit on any gift you may select. Here are a selected few of the many fine rewards offered:

DESK SET—Here is a splendid Desk Set—6 pieces covered with genuine leather, your choice of red, green, brown. Pad size 12" x 19". Your reward for securing four subscriptions.

SILVERCRAFT COMPOTE—This attractive compote is 7" in diameter, has a scalloped edge, stands 5½" high and has a bright chromium finish. Awarded for securing one subscription, not your own.

SANDWICH TRAY—This unusual Tray has a swinging handle and a fine lace doily center encased in glass. The center of the doily is done in gay colors, adding to the attractiveness of the Tray. Both Tray and handle have a neatly embossed trim and are chromium-plated. Diameter 10½", height overall 7". Your reward for securing five subscriptions.

ELECTRIC ALARM CLOCK—Now you can have a dependable Electric Alarm Clock to waken you at whatever hour you wish. This is a genuine Westclox. Its ivory color harmonizes with any other color and will always be clean and new looking. Your reward for securing six subscriptions.

FOUR-SLICE BREAD TOASTER—Will toast four slices of bread at one time. Lowering of doors automatically turns the toast. Nichrome Heating Unit wound on Mica for long life. Base, top and sides in black baked enamel. Doors highly chrome plated. Your reward for securing two subscriptions.

SYRUP PITCHER AND TRAY—This gracefully designed Pitcher has a heavy cast handle and is 5½" high with a diameter of 3⅝". The Tray is 5½" in diameter. Completely chromium-plated. Your reward for securing five subscriptions.

Send post card for Premium Catalog showing complete list.

Changes of Address

We again emphasize the importance of sending to us both old and new addresses when changing. We should have this information at least four weeks in advance of a change to insure delivery of the current issue to the new address.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC. REQUIRED BY THE ACTS OF CONGRESS OF AUGUST 24, 1912, AND MARCH 3, 1933

Of THE ETUDE, published *Monthly* at *Philadelphia, Pennsylvania*, for October 1, 1938.

State of *Pennsylvania* } SS.
County of *Philadelphia* }

Before me, a *Notary Public* in and for the State and county aforesaid, personally appeared *David W. Banks*, who, having been duly sworn according to law, deposes and says that he is the *President* of the *Theodore Presser Company*, publishers of THE ETUDE and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, as amended by the Act of March 3, 1933, embodied in section 537, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher *Theodore Presser Company, Philadelphia, Pennsylvania.*
Editor *James Francis Cooke, Philadelphia, Pennsylvania.*
Managing Editor *None*
Business Manager *None*

2. That the owners are:

Theodore Presser Company, Philadelphia, Pennsylvania.
The Presser Foundation, Philadelphia, Pennsylvania.
Estate of Theodore Presser, Philadelphia, Pennsylvania.
James Francis Cooke, Philadelphia, Pennsylvania.
Edwin B. Garrigues, Germantown, Philadelphia, Pennsylvania.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: *None.*

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

(Signed) DAVID W. BANKS, President
For Publisher

Sworn to and subscribed before me this 15th day of September, 1938.

SEAL. JOHN E. THOMAS,
Notary Public

(My commission expires March 7, 1941)

World of Music

(*Continued from Page 704*)

THE INTERNATIONAL MUSIC FESTIVAL of Lucerne was the fruits of a community which quietly went to work while tongues were wagging as to whether the waif "Salzburg Festival" was to find refuge at Versailles. The festival, not at all emulating Salzburg, modestly courtesied to the world in eight concerts of varied character, from a program by soloists to a Beethoven orchestral concert under Fritz Busch.

HENRY W. WORLEY, for two score years an organ builder, and for two decades a political leader in his home city, Columbus, Ohio, died suddenly on August fifth. Mr. Worley was perhaps the only organ builder ever to become mayor of a large American municipality. He was for four years, 1932-1936, the chief executive of the "Buckeye" capital.

THE ACCADEMIA MUSICALE CHIGIANA of Sienna, Italy, sponsored a "Summer Course for the Perfection of Music," lasting from July 15 to September 15, with a faculty including such notables as Casella, Bonucci, Germani, Frazzi, Serato, and Mmes. Maria Labia and Ada Ruata Sassoli.

TWO LITTLE-KNOWN AMERICAN COMPOSERS were brought to a hearing on the "Everybody's Music" broadcast of July 24th of the Columbia Broadcasting System, with Howard Barlow conducting. Paul Creston, a Guggenheim Fellowship student of New York was represented by a *Partita;* and Julia Smith, of Denton, Texas, temporarily in New York as a Juilliard Fellowship student, heard her "Episodic Suite" in performance.

* * * * *

COMPETITIONS

TWO PADEREWSKI PRIZES of one thousand dollars each are available to American composers. One is for an orchestral composition of fifteen to twenty minutes length, another for a concerto for solo instrument with orchestra and not less than fifteen minutes in length. Manuscripts must be received not later than March 1, 1939; and complete information may be had from Mrs. Elizabeth C. Allen, Secretary of Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

THE CALIFORNIA COMPOSERS AND WRITERS SOCIETY will be especially recognized on August 22nd to 25th, 1939, as the sponsors of leading activities of the Golden Gate International Exposition of San Francisco. California born musicians are asked to communicate with Galen M. Harvey, Secretary, 616 Aileen Street, Oakland, California.

A TWO HUNDRED DOLLAR PRIZE is offered by the American Guild of Organists, to composers resident in the United States or Canada, for an organ composition in extended form. The prize is furnished by the *Diapason;* and manuscripts, signed with *nom de plume,* with the composer's true name in a sealed envelope bearing also this *nom de plume,* must be received by the Guild of Organists, 1270 Sixth Avenue, New York City, not later than January 1, 1939. The winning work will be played at the 1939 San Francisco Convention.

AMERICAN COMPOSERS are asked to submit works to Howard Barlow, Columbia Broadcasting Company, 485 Madison Avenue, New York City, to be considered for performance on the Everybody's Music orchestral series over CBS. Having begun with July 24th, each program now includes one American composition—a fine recognition and opportunity for our creative musicians.

THE H. W. GRAY COMPANY PRIZE of one hundred dollars is offered under the auspices of the American Guild of Organists, for an anthem of any difficulty or length (with about eight printed pages given the preference). Submissions close January 1, 1939; and further information may be had from The American Guild of Organists, 1270 Sixth Avenue, New York City.

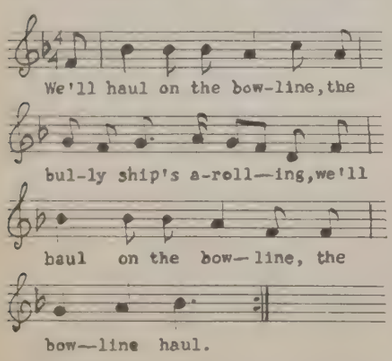
ELIZABETH A. GEST



Sea Chanties

By E. A. G.

WHO KNOWS what a Sea Chanty is? or Shanty as it is sometimes spelled?

Of course music in most cases is something to be listened to; but in some cases the music really has work to do itself—the music has a job, you might say—and a Sea Chantie is a piece of music that has work to do.

On the old sailing vessels (very few of which are in existence now), all the sails had to be raised by hand with long heavy ropes, often with the wind blowing hard and the ship rolling roughly. When the sailors tugged on the ropes, they found

they got better results when they sang and pulled in rhythm with the song; and such a song was called a "chanty.

A very old one, called *Haul on the Bow-line*, is shown here.

Tapping

By Frances Taylor Rather
(With Apologies to Edgar Allan Poe)

Once, when day was softly closing, I was
list'ning, half-way dozing,
To the rare tones of a player—tones revealing skill and ease.
As I listened, nearly napping, suddenly there came a tapping,
As of some one gently rapping, rapping on the piano keys.
"'Tis my fancy," then I muttered, "else the dead leaves in the breeze,
Brown and crisp, beneath the trees."

Then I sat and listened longer, as the tones grew clearer, stronger,
Tones that would have filled their mission to uplift and to appease,
But for that crude, aimless tapping—that discordant, steady rapping,
As of some one idly tapping on my cherished piano keys.
Long I waited—listened—pondered—musing thus, and ill at ease,
"Is that tapping on the keys?"

I advanced a few steps nearer—all at once the mist was clearer:
When I saw those able fingers, edged with long nails on the keys,
Well I knew what made that tapping, for I was no longer napping,
That insistent, thoughtless rapping—'twas the long nails on the keys.
"Oh!" I cried, "you mar the music—you will desecrate with these,
Tapping, tapping on the keys."

The Adventures of a Piano

By HELEN JARVIS LAMBOURNE

NOW I AM OLD; my varnish is cracked and my ivories chipped; but my tone, thank the stars, is still good. I cannot remember back to the time of the forest, when the wood that is in me grew hard and black and my ivories flourished as elephant tusks; I cannot remember when my singing wires lay deep underground in the mines; but I do know I am happiest when playing wind-through-the-tree tunes—so perhaps a part of me remembers.

When I was proudly new, I stood among other pianos in a music store. My first home was large and handsome, my mistress very beautiful. She played soft lullabies on me, and little running pieces. Too, I liked standing in a corner between the lamp and a fern.

Naturally I thought this was to be my home forever. I did not know that the husband of my mistress was in the diplomatic service and would be called to a foreign land, so that I would be sold at auction.

On the day of the sale the auctioneer played a chord or two to advertise my tone. Then a sweet old lady's face brightened, and she offered a hundred dollars for me. No one bid higher (although the auctioneer said I was worth more), so she got me. I heard her talking later to a friend. She said: "Land alive. Here I am with a piano, when I don't play a note and all my children gone. Guess I'll lend it to the church."

So I was moved to the church by a creaking van. I liked the church hymns that were played on me, and the children's voices singing; but when I was moved to the amusement hall to be used for church socials, my life became harder, and when I needed tuning no one cared.

One day the lady who had lent me to the church said, to herself, "I think I'll send the piano to my daughter in California—if the shipping charges are not too high."

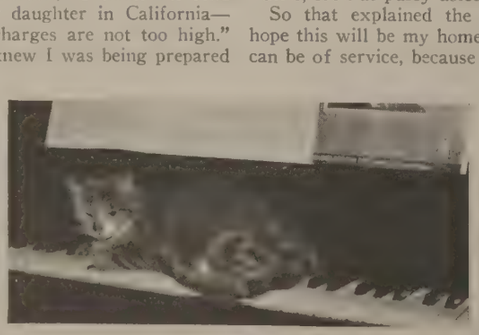
Next thing I knew I was being prepared for shipping. "How fine!" I thought, "I am really going adventuring—destination unknown."

Another trip by van to the docks, where I was lifted by a huge crane into the ship's hold. Soon we were off, and I learned it was to be an ocean voyage from New York to California by way of the Panama Canal. Was I not to be a seasoned traveler?

It wasn't a hard trip. Just fourteen days of easy travel and then we docked at San Pedro, and I was trucked to Los Angeles.

When I was first unboxed and saw two children and their mother watching me with excitement, I thought, "I shall like it here."

"And I shall teach you to play on it," the mother told the children.



The very next week the piano tuning man came and we started lessons. Sally and Ann wanted to play big pieces before they had learned little ones, but their mother said, "No. We must start at the beginning"; and she was very patient with them. I did my best to help them, too.

Now the smaller little girl is practicing on *Three Little Kittens;* and Sally, the older sister, plays *To a Wild Rose;* so you see they are learning. The mother plays almost anything she pleases, almost at sight.

Last night the strangest thing happened to me. Someone had forgotten to shut me; and, when all was still and dark, I felt something soft pressing up and down on my keyboard. No one had ever played on me like that before. It sounded as it might if someone were playing in thick mittens; neither a scale nor a tune, but just any notes at all. Soon the soft weight settled on the middle of my keyboard and stayed there until dawn.

In the morning I heard a voice say: "Girls, look at pussy asleep on the piano!"

So that explained the mystery; and I hope this will be my home for as long as I can be of service, because I like it here.

Spelling Matches

By GERTRUDE GREENHALGH WALKER

SPELLING MATCHES are ever popular, so at the next club party try a music terminology spelling bee. This will prove most interesting and instructive if varied in several ways.

Sides may be chosen or not at the discretion of the leader.

The person giving out the terms may say, "Spell and define *Da Capo, Dal Segno,* and so on."

Then the contestant may be asked to spell fast in Italian; slower in Italian; a conductor's stick in French; the word denoting a stress or emphasis upon a certain note, and so on.

Again composers' names may be used, the leader asking that the name of the composer born in Bonn, Germany be spelled; and other similar questions.

Using the compositions of the masters is another variant. Such as to spell the name of the composer of "The Magic Flute"; the composer of "Lohengrin," and so on.

Dance forms may be used, the speller being required not only to spell correctly but also to describe the dance.

Miss Belle's Idea

By Gladys M. Stein

"BEFORE YOU START your lesson to-day, John," remarked Miss Belle, "I wish you would read that small typewritten notice over there on the bulletin board."

ITALIAN	ENGLISH
forte	loud
dolce	sweetly
lento	slowly
sempre	continually
poco a poco	little by little

"What does it mean?" John asked as he returned to the piano. "It means," the teacher went on to explain, "that every week I am going to type out five Italian music terms and their equivalents in English, and pin them on the bulletin board. Then during the lessons the pupils are to try to use these Italian words in their conversation just as many times as possible. Of course," she added, "the terms must be employed so that they will make sense. You can use them at club meetings, too."

"That's a fine idea!" John declared.

"And now, how did you practice your new piece this week?"

"Oh, I practised it *poco a poco,*" he answered, "and very, very *lento.*"

"Good for you!" exclaimed Miss Belle. "I hope that the others will be as quick to learn those terms as you are. And," she continued, "I may award a prize each week to the child using the listed terms the most times during his lesson period."

? ? ? ? ? ? ? ?

Musical Arithmetic

1. Mozart was born fourteen years before Beethoven and Beethoven died thirty-five years after Mozart. How much older was Beethoven than Mozart?
2. How many thirty-second notes can there be in one measure of four-four time, if the first note is a dotted eighth?
3. If a complete measure contains a dotted quarter rest, one eighth-note, four thirty-second notes and an eighth rest, what is the time signature of the measure?
4. How many more half steps are there in an augmented fifth than in a minor third?
5. How much time value do two dots add to a quarter rest?
6. How many whole steps are there from middle C to E, fourth space of treble clef?
7. How may the following be expressed in one rest: a quarter rest, two sixteenth rests, one eighth rest?
8. How many minor thirds are there in a diminished seventh chord?
9. What rests are required to fill a measure in four-four time, containing two eighth-notes, a dotted eighth and a sixteenth, and three sixteenth notes?
10. How many half steps are there in an octave?

(*Answers on next page*)

The Symphonic Etiquette

By GERTRUDE GREENHALGH WALKER

THE LITTLE ETUDERS CLUB was holding its regular bi-monthly meeting. The secretary, Ruth, had given her various reports when she asked President Clarinda permission to read an announcement that had been mailed to her. It was telling all about the children's concert prepared by the symphony orchestra of their city especially to acquaint the young people with the various masters' works. Haydn's "Surprise Symphony" was listed as a feature number.

"Oh!" said Barbemay, when Ruth had finished reading all about the concert, "I think that is a wonderful opportunity for our club members and we should all go and learn from it. I move we buy a block of tickets and attend in a body."

"Good," said President Clarinda, "will some one second the motion"? "I do," exclaimed Bruce.

So the motion was passed that the Etuders Club buy tickets and attend the symphony concert.

Then Miss Brown, the Counselor, spoke up, saying, "I think you young folks have made a wise decision, but I would like at this time to stress the fact that there is symphony or concert etiquette. In addition to customary good manners it is necessary to note a few more rules of etiquette that always are observed by all true music lovers.

1. "Always arrive a few minutes early, so as to be seated before the curtain rises.

2. "If you are unavoidably late and the program has started, stand very quietly at the rear of the hall until the number is finished.

3. "Do read all program notes before the concert begins, so as to have a better appreciation of the different pieces.

4. "Do keep quiet (no whispering) while the orchestra or soloist is playing.

5. "Do not change seats while the orchestra is playing.

6. "Do not wave to friends in the hall; it distracts others.

7. "Do not applaud between the parts of a symphony. Wait until it is finished.

8. "Wait until conductor lowers his baton to avoid breaking into his climax with applause.

9. "Wait until the program is finished before putting on your wraps preparatory to going home.

"These are the main rules; and I do not think it necessary to remind you that hats are to be removed; your neighbor likes to see as well as hear. No candy or gum chewing; and programs are to be read instead of being rustled."

"Oh, thank you so much, Counselor," said President Clarinda. "I'm sure we will all remember what you have told us and that you will be very proud of our deportment at the symphony concert. I hope we set a fine example for all other young musicians to follow.

"Now, if there is no further business, the meeting is adjourned."

Junior Etude Contest

The Junior Etude will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "What Music Means to Me." Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by November 18th. Names of prize winners and their contributions will appear in the February issue. The thirty next best contributors will receive honorable mention.

RULES

Put your name, age and class in which you enter, on upper left corner of the paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only. Do not use typewriters and do not have anyone copy your work for you.

When clubs or schools' compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

Letter Box

DEAR JUNIOR ETUDE:

I am writing on behalf of the Happy Musicians Club. We meet once a month, with seventeen members, when we sometimes take turns giving concert programs, or play riddles and games. Our colors are blue and gold. Our meetings are followed by refreshments and we enjoy our club very much.

From your friend,
JACQUELINE MUNNS (Age 11),
16 Birdwood Street, Wandel,
Rockhampton,
Queensland, Australia.

JUNIORS OF SPRINGFIELD, MASS.

Jane Blossom, Elva Foerster, Yvette Lesperance, Edith Zundell, Dorothy Jefferson.

DEAR JUNIOR ETUDE:

I find the Junior Etude pages very interesting. I play the flute and the piano and my sister, who plays the violin is going to help me more with violin, too. I think I have done pretty well in piano. I play in our grade school band, and I was one of the few picked to play in the high school band, too; and I also play in the Community Band; so I am kept quite busy.

From your friend,
GENEVA SNEED (Age 12), Kansas.

Music Out of Doors

(Prize Winner)

Nature, the great out-of-doors, has given us much to help in the proper interpretation of music. Chopin urged his pupils to liken music to a tree whose branches are swayed by the wind. The trunk was to represent the even, unchanging time, while the moving branches and leaves would represent the various inflections of the theme. This imitation, carefully mastered, was his goal. Chopin wrote some of his loveliest melodies after hearing a slight rustle of wind, a jubilant bird singing, or after seeing some piece of work from God's easel, Nature. We too hear the birds sing and might well take a lesson from them. In a chorus of birds not a single discord is heard.

In out of door musical programs a sacred feeling seems to arise, even when the music is not sacred music. Music and out of doors go together as bread and butter.

NINA LOIS RINGWALT (Age 13),
Class A, Kansas.

Music Out of Doors

(Prize Winner)

Music out of doors is enjoyed by many people. In Hollywood, for instance, many concerts are given in what is called the Bowl, and named this because the natural sculpturing of the hillside where the programs are given is bowl shaped. The large audience is seated on rows of benches. In Golden Gate Park in San Francisco a band gives a concert every Sunday and holiday afternoon.

When listening to music out of doors, above you is the sky. Around you are the trees and plants. The works of nature are beautiful; and music is beauty. I think these two make a perfect combination, don't you?

MARY MORROW (Age 12), Class B,
California.

Music Out of Doors

(Prize Winner)

One sunny day I fell asleep in the grass near the window; and I dreamed that a fairy came and took me by the hand. "Come," she said; "listen to my orchestra playing in the meadow."

A cuckoo was standing on a stump flapping his wings and saying, "Cuckoo, cuckoo, time to start." The frogs began in low bass tones; then came the insects with their violins, singing. A meadow lark trilled her best. Woodpeckers were tapping the time with their beaks. Many birds added their flutelike tones, making the melody go on and on. A meadow brook sang like a golden harp. All together, it was beautiful. The ducks came by and quacked so loud as they applauded that I woke up.

I sat up and listened, and heard the music again.

So can you, if you listen.

MARY ERASMI (Age 9), Class C,
Massachusetts.

Daddy's Model

By Elvira Jones

When Daddy plays the radio,
It's fun to hear him say,
"Why, that is Chopin's brilliant waltz,
That Mary Jane can play!"

And then he sits back in his chair,
Attentive as can be,
To hear if every note is played
As well as though by me.

You see he hears me practicing,
And I'm his standard quite;
I always practice with great care,
So he can judge aright.

Answers to June Puzzle:

1. *My Country 'tis of Thee.*
2. *Largo* from "Xerxes," Handel.
3. *Swanee River,* Foster.
4. *Minuet* from "Don Juan," Mozart.
5. *Waltz in A-flat,* Brahms.
6. *Minuet in G,* Beethoven.
7. *Silent Night,* Gruber.
8. *Song of the Volga Boatmen.*

Honorable Mention for June Puzzles:

Ernestine Buck; Betty Jane Cooper; Rita Enliane Scogna; Flora Martini; Sara Anders; Betty Madigan; Sydney James; Louis A. Bonelli; Angela Moore; Audrey Vincent; Patricia Thomson; Teddy Wolfe; Katherine Wade; Jane Cowles; Mary Brooks; Laura Rivers; Sue French; Adele Wolff; John Carson; Benson Pearce; Margaret Dean.

Honorable Mention for June Essays:

Rosabelle Hicks; Donna Pinnell; Janice Laney; Carolyn Rose Cowper; Nancy Lea Handett; Ruth D. Beane; Jenia Davis; Viola Clarke; Frances Jones; Doris Walker; Doris Perkins; Lois June Mumaw; Irene Kershner; Ruth Eeklof; Fifi Walker; Sandra Munstrom; Sue Bemmerman; Eileen Cranford; Nina Vollmar; Tansie Murdoreck; Ona Meirs; Tom Yonkers; Theodore Mesmer; Florence Vindeck; Francis Morceau.

Initial Puzzle

By Mrs. H. C. Higgins

THE INITIALS of the following five-letter words, when properly arranged, will give the name of a composer. Answers must give words, as well as composer's name.

1. A musical instrument. 2, Musical instrument. 3, To take pleasure in. 4, Symbols of musical sound. 5, An animal. 6, Title. 7, A musical study. 8, The organ of singing. 9, A large bird.

1. * * * * *
2. * * * * *
3. * * * * *
4. * * * * *
5. * * * * *
6. * * * * *
7. * * * * *
8. * * * * *
9. * * * * *

JUNIOR MUSIC CLUB, BAKERSFIELD, CALIFORNIA

Prize Winners for June Puzzles:

Class A, Andrew Butler (Age 14), Texas.

Class B, Gloria Bauer (Age 11), Illinois.

Class C, Leonie Dangroise (Age 10), Maryland.

Answers to Musical Arithmetic

1, Twenty-one years. 2, Twenty-six. 3, Six-eight, or 4, Five. 5, An eighth and a sixteenth. 6, Eight. 7, One half-rest. 8, Three. 9, A quarter rest and a sixteenth rest. 10, Twelve.

Letters from the Etude Friends

Tiny Tots

To The Etude:

Thanks to my Etude's *In Advance of Publication* columns I became acquainted with Ada Richter's "Kindergarten Class Book" just in time to start these two darlings (who are brother and sister, aged four and five) out in it.

"Sissy" and "Bud"

The girl finished the book on her fifth birthday. The boy no doubt will also toe the mark. Both love their lessons and fairly beg for them. The girl was asked to play at a concert here and did splendidly—was even asked for an encore!

How would we get along without The Etude?

—Irene Bade

Worth While Music in the Movies

(*Continued from Page* 710)

However, most of these men are interested enough to add reservations and to see enormous screen possibilities for opera in the event that it is adapted to fit the screen and, in the words of Boris Morros, "is developed into a synthetic form, combining lights, music, drama and cinema" or in the event that some new musical genius arises, as did Wagner, to create a new, vital music drama especially for the screen. Nathaniel Finston declares that "Nothing is wrong with presenting opera in films. The fault is with those who insist on presenting it in a traditional way." Then both Boris Morros and Morris Stoloff (Columbia Films) look toward American composers for this new development and for original film opera scores. Stoloff even feels that some way must be found of avoiding long arias. He considers Gershwin's "Porgy and Bess" closest to the new screen medium, because it has story value and because the action progresses in each song.

On the other hand, Lou Forbes (Selznick-International) and Nathaniel Finston (M.G.M.) see screen possibilities in the operas already written. The former merely says that the screen can present operas as the stage never could. The latter elaborates on this statement: "Imagine," says he, "the enchanted *Garden Scene* in 'Hansel und Gretel' in films. It will be marvelous! Then the screen will be able to lend to Wagner's legendary, mythical dramas the illusion and dreamlike quality that the stage never could have. Think of the glorious sound of operatic music when it is played by the enlarged orchestra that Hollywood's financial resources would allow. Think of our modern scoring, sound effects, mechanical resources! One could not succeed to-day with the old, decrepit effects; for the success of a film depends on making the audience believe it. The audience must know it is seeing something real, alive, royal, magnificent. Certainly there will be a way to adapt and modernize opera for films. 'La Tosca,' 'Cavalleria Rusticana' and 'Rigoletto' are great dramas and great music in any land or language. Hollywood will find a way."

Apprentice Years of a Master

(*Continued from Page* 707)

culties should be played with great concentration, and then left alone for a while, until the hands are no longer tired from them. It is not advisable to dwell too long on *one* difficulty.) There seemed some wisdom, though, in the choice of piece our new acquaintance advised; so I decided upon *Feux Follets*, which Joseffy had praised when I played it for him. It was then eleven in the morning, and I was to play for Liszt that same afternoon. Still I went back to my rooms, looked through the *Feux Follets*, which I had not played in some time, and surmounted its considerable difficulties before the audition.

Several of Liszt's pupils were present when I played. As I completed the piece, the master rose, walked straight over to my stocky friend of the day before, and said, *"Ja, lieber K. . . . das können wir nicht!"* "Well, sir, we couldn't give a performance like that!" (Which, of course, was a joke so far as Liszt was concerned.)

Alas for his poor swollen thumbs!

In Which Liszt Gives a Lesson

Liszt's method of instruction was again different from anything I had known heretofore. Liszt received his pupils twice a week, all together. He never assigned music. Each pupil would select what he wished to study, and then he would perfect it, quite alone, as though he were preparing for a concert. At lesson time each student would lay his notes on the piano; then Liszt would look them through and select the music as it pleased him best. He would hold up the notes, and the student who had brought them would announce himself and be invited to play. When he had finished Liszt would comment on his performance, praising, suggesting, or advising.

At this time Liszt's chief interest lay in composition rather than in performance, and his comments were more musical than pianistic. If someone played a sonata by Beethoven, Liszt would comment on the playing with a cordial "Sehr schön," and then would turn to an illuminating analysis of harmonic discoveries. But the influence of Liszt himself was the greatest advantage of studying with him.

Each of my teachers gave me something definitely helpful. My first master gave me a good grounding in the elements of music, and allowed me to turn to music as a means of approach to the composer. Mikuli opened my perceptions to technic and beauty of tone. Joseffy continued in the same way. And Liszt taught me to keep high my musical enthusiasm in spite of terrific technical studies.

Looking back to-day over my years of study—and I still count myself as an earnest student of music—I believe that the course of my work was directed into the best possible channels. The student must first be made aware of music as a reality and a pleasure in its own right. Next, when the student is of an age to appreciate the technical difficulties of his instrument, he should apply himself to piano playing. And later still, when he thinks for himself and approaches the ideal of a goal towards which he can strive all his life, let him combine the two foundations of musical study and pianistic study into the single balanced blending which alone opens the way to art.

Next Month

THE ETUDE'S CHRISTMAS TREE

Everyone naturally saves up surprises to put around the Christmas tree; and we have held back many for the Christmas ETUDE, particularly because we know that thousands begin their gift subscriptions with the December number.

WILLIAM ALLEN WHITE

WILLIAM ALLEN WHITE

Easily one of the most distinguished and influential citizens of the New World, the famous and genial editor of the **Emporia (Kansas) Gazette**, who has been a music lover since his boyhood, will tell in his inimitable style, in the December ETUDE, "What Music Has Done for Me." This rare and inspiring article is certain to be widely quoted and copied.

GABRILOWITSCH AS A TEACHER

The late Ossip Gabrilowitsch, pianist and conductor, gave a small part of his time to teaching, but thousands who heard him yearned to have the secret of his velvety touch. Mme. Cecile de Horvath, whom many say was his only pupil, has prepared a special series of articles, beginning in December, upon "Lessons with Gabrilowitsch."

WHAT IS THE TEACHER'S GREATEST PRESENT NEED?

Thirty of the foremost teachers of America have joined in a symposium upon this vital subject, timed to parallel the Annual Convention of the Music Teachers' National Association which takes place in Washington, D. C., December 28th to 30th.

LET'S GO CAROLING THIS CHRISTMAS

Florence Smith gives practical ideas for the annual revival of the "grand" old custom of hailing Christmas Eve with this traditional music.

BEETHOVEN'S FAMOUS "CONTRA DANCE"

Mark Hambourg, Anglo-Russian piano virtuoso, contributes one of his unique Master Lessons upon this delightful Beethoven work. Hundreds of readers of THE ETUDE look forward to these lessons as they would to a trip to a great master teacher in a world renowned conservatory.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of delightful new music to play and sing.

Musical Books Reviewed

Plain Words on Singing

By William Shakespeare

The reprint, in revised edition, of this so valuable little book, by one of the leading singing teachers of the last century, comes as a most welcome relief to many of our readers whom we were obliged to disappoint while it was out of print. In short, it is one of the most practical writings on the vocal art of which we have knowledge. Such themes as "Breath Control," "Starting the Note," "Registers," "Tone and Pronunciation," and "How to Study," are among the many valuable discussions offered in the most succinct and understandable of forms. A valuable counsellor for every vocalist and student of singing.

Pages: 119.
Price: $2.00.
Publishers: G. P. Putnam's Sons.

Band Drills

Twenty and Seven Band Drill Maneuvers

By Willis P. Oldfield

Of course, everyone knows that there must be a great deal of work behind the pretty formations that the bands present at high school and college football games. Now comes a book which tells how to do it; or rather two books, because there is a manual for the teacher and one for the students. Willis P. Oldfield is the author of this thoroughly practical work, giving over one hundred designs including formations for all of the letters of the alphabet.

Pages: 47 (teacher's manual) and (student's guide).
Price: Sold only in sets of 32 books, at $9.60 per set.
Publisher: Swain's Music House.

Four Portals to Piano Playing

(*Continued from Page* 718)

mere'y to play those tones which it is desired to prolong, and then to depress the sustaining pedal; while the damper pedal continues to be used as indicated. The sustaining pedal is to be released when those special tones are to be discontinued.

There are erroneous beliefs concerning the pedals, that should be cleared. One is that the damper pedal should not be used if there are *staccato* notes to be played. A special effect results when the *staccato* notes are combined with this pedal; and many times that is the intention of the composer. There are others who do not realize that the damper and the soft pedal may be used simultaneously. Also they call the damper pedal the "loud pedal," although it is but occasionally used for the express purpose of accumulating volume.

To a large degree, the specific problems of interpretation may be solved in terms of rules. However, the observance of rules is insufficient for artistic performance. It is necessary that the artist transmit through the medium of another's composition, his own personality and individuality, without distorting the fine points of the score. To do this, he first must master the content of the score minus his own inventiveness; then he may take certain liberties, if they are for the purpose of doing greater justice to the music by making it more adaptable to his particular technical equipment.

A problem that often confronts the student is whether the fine points of interpretation are to be added before or after the technical difficulties are mastered. The outstanding interpretative devices should be observed as much as possible along with the mastering of the technic; not to do this is as ridiculous as adding the sharps and the flats after the notes have been learned.

* * * * *

Music is a thing of the soul; a rose-lipped shell that murmurs of the eternal sea; a strange bird singing the songs of another shore.—J. G. Holland.

Suggesting Practical Gifts for Music Folk

Albums for the Church Pianist

PIANO VOLUNTARIES

Music for Religious Services

(Price, $1.00)

HOLIDAY CASH PRICE, 60c, *Postpaid*

Pianists seeking selections for church services or Sunday school will find their needs met in this most useful album of 26 pieces. Many have copies of this book in the home for those occasions when music of a quiet character is preferred.

SUNDAY PIANO MUSIC

An Album for Church or Home

(Price, $1.00) **HOLIDAY CASH PRICE, 60c, *Postpaid***

A richness of sacred dignity and spiritual feeling pervades the 25 piano solo compositions in this volume. There is nothing the average pianist cannot master, most of the pieces being in the third and fourth grade.

SACRED MUSIC FOR PIANO SOLO

(Price, $1.00) **HOLIDAY CASH PRICE, 60c, *Postpaid***

The 26 medium grade piano solos in this volume have made for it a host of friends, not only among church pianists, but among those who enjoy music of a quiet type in the home.

(See Also EVENING MOODS on Opposite Page)

Piano Duet Albums—Easy

VERY FIRST DUET BOOK

For Piano, Four Hands

(Price, 75c) **HOLIDAY CASH PRICE, 50c, *Postpaid***

These 27 first and second grade duets, with enjoyable melodies and interesting rhythms, are for first piano duet efforts, each part being easy to play. Not only a gift book that will be appreciated but at this price, a wise investment by the teacher for future teaching needs.

PLAYING TOGETHER

For Piano, Four Hands

(Price, 75c) **HOLIDAY CASH PRICE, 50c, *Postpaid***

20 first and second grade four-hand pieces which are delightful and helpful to young pianists. Both parts are for playing by pupils.

JUST WE TWO

For Piano, Four Hands By George L. Spaulding

(Price, 75c) **HOLIDAY CASH PRICE, 50c, *Postpaid***

23 easy first grade duets which have charmed many young piano players. Verses are given with each piece and these are printed between the staves of both the *Primo* and *Secondo*.

Piano Duet Albums for Players of Average Ability

RECREATIONAL ALBUM

For Piano Duet Players

(Price, $1.00)

HOLIDAY CASH PRICE, 60c, *Postpaid*

Numbers of a lighter type for recital use, or keyboard diversion, by players of moderate ability. *Swaying Daffodils* (Overlade), *Dark Eyes, Sweet Jasmine* (Vedova), and *Hawaiian Nights* (Grey) give some idea of the interesting contents.

CONCERT DUETS

A Favorite Album of Music for Four Hands

(Price, $1.25) **HOLIDAY CASH PRICE, 75c, *Postpaid***

It is doubtful if any collection of substantial piano duets anywhere near approaches this compilation in popularity. There is quite a variety. Players in grades three and four may handle most of them, although several are a little more difficult.

SOUSA ALBUM FOR FOUR HANDS

By John Philip Sousa

(Price, $1.50) **HOLIDAY CASH PRICE, 95c, *Postpaid***

The most popular marches of the "March King" make splendid piano duets, particularly since they retain much of the ornamentation used in the original band compositions.

Fascinating Books on Musical Subjects

STANDARD HISTORY OF MUSIC

Latest, Revised Edition

By James Francis Cooke

(Cloth Bound—Price, $1.50)

HOLIDAY CASH PRICE, $1.20, *Postpaid*

This, the "best seller" in musical literature for more than a quarter of a century, leaps to new heights in its latest, revised edition. Added matter, to bring the original text up-to-date, has enlarged it to 321 pages. Here is a thoroughly enjoyable story of the romance and lore of music. Over 200 illustrations. Nearly 900 names and well over 100 subjects are indexed.

YOUNG FOLKS' PICTURE HISTORY OF MUSIC

By James Francis Cooke

(Price, $1.00) **HOLIDAY CASH PRICE, 70c, *Postpaid***

Gives the child student an acquaintance with important things concerning the earliest known music, and the development of music through the eras of all the great masters. Over 100 cut-out pictures are supplied to be pasted in the book.

CHILD'S OWN BOOK OF GREAT MUSICIANS

By Thomas Tapper *(16 Subjects in 16 Booklets)*

(Price, 20c Each) **HOLIDAY CASH PRICE, 12c Each, *Postpaid***

With the 3 subjects added this year there now are 16 booklets in this series of fascinating biographies and "cut-out" pictures: Bach, Beethoven, Brahms, Chopin, Grieg, Handel, Haydn, Liszt, MacDowell, Mendelssohn, Mozart, Schubert, Schumann, Tschaikowsky, Verdi and Wagner.

BETTY AND THE SYMPHONY ORCHESTRA

By Elizabeth Gest

(Price, 10c) **HOLIDAY CASH PRICE, 7c, *Postpaid***

Thousands of children have enjoyed this educational story of Betty's dream after her first symphony concert, where each instrument comes to life and tells all about its function in the ensemble and its relationship with other instruments.

PIANO PLAYING WITH PIANO QUESTIONS ANSWERED

By Josef Hofmann

(Cloth Bnd.—Pr., $2.00) **HOLIDAY CASH PRICE, $1.45, *Postpaid***

One of the most highly esteemed and most extensively used sources of information upon vital points in piano playing. Besides being a guide to modern pianoforte playing it gives authoritative answers to two hundred specific questions on the subject.

MUSICAL TRAVELOGUES

By James Francis Cooke

(Cloth Bnd.—Pr., $3.00) **HOLIDAY CASH PRICE, $2.20, *Postpaid***

If you have been abroad, this book will enhance memories and supplement your own observations; if you have not, it gives you delightful and instructive "armchair" traveling. Everyone will enjoy reading about these visits to European shrines and with famous musical personages.

Dictionaries of Music

STUDENT'S PRONOUNCING MUSICAL DICTIONARY (Pocket Size)

(Price, 30c) By H. A. Clarke, Mus. Doc.

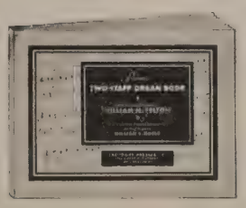
HOLIDAY CASH PRICE, 20c, *Postpaid*

All the musical terms in common use are found in this compact little storehouse of musical information. Includes birth and death dates of over 350 famous musicians of all times.

MUSICAL DICTIONARY AND PRONOUNCING GUIDE—By H. N. Redman

(Flex. Cloth—Pr., 60c) **HOLIDAY CASH PR., 45c, *Postpaid***

This is a mighty fine and quite comprehensive dictionary of music terms. Convenient size, 4½″ x 6″.



PRONOUNCING DICTIONARY OF MUSICAL TERMS—By H. A. Clarke, Mus. Doc.

(Cloth Bnd.—Pr., $1.25) **HOLIDAY CASH PR., 95c, *Postpaid***

A dictionary which has enjoyed standard acceptance for quite some time. It very definitely explains all musical terms.

Collections of Music for the Organist

Presser's TWO-STAFF ORGAN BOOK

Compiled and Arranged

By William M. Felton

Registration for Small Organ

By William S. Nagle

(Price, $1.00)

HOLIDAY CASH PRICE, 60c, *Postpaid*

A veritable treasure chest for pianists taking up the study of the instrument. The pedal part is printed on the staff with the left hand.

ECCLESIAE ORGANUM

Compiled and Edited by Dr. Wm. C. Carl

(Cloth Bnd.—Pr., $2.50) **HOLIDAY CASH PRICE, $1.80, *Postpaid***

A well assorted collection of music chosen specifically for church use. The contents are classified, giving 10 preludes, 10 offertories and 10 postludes.

THE CHAPEL ORGANIST

Compiled by Rob Roy Peery

(Cloth Bnd.—Pr., $1.50) **HOLIDAY CASH PRICE, $1.00, *Postpaid***

This is a good supply of easy preludes and postludes and acceptable melodious offertories. None of the 28 pieces in this book makes registration demands beyond the equipment of the average 2-manual organ with pedals.

THE ORGAN PLAYER

Compiled by

Preston Ware Orem

(Cloth Bound—Price, $2.00)

HOLIDAY CASH PRICE, $1.30, *Postpaid*

This immensely successful album answers practically every need of the average organist. The selections are adaptable to either two or three-manual organs.

ORGAN MISCELLANY

(Price, 75c)

HOLIDAY CASH PRICE, 50c, *Postpaid*

Enough to make one wonder how the publishers can afford to give such a wealth of organ music as here presented. All of its 50 numbers are attractive and useful.

For the Violinist

VIOLIN VISTAS

For First Position Players

(Price, 75c)

HOLIDAY CASH PRICE, 50c, *Postpaid*

15 attractive and easy-to-play pieces. First position.

ALBUM OF FAVORITE FIRST POSITION PIECES

For Violin and Piano

(Price, $1.00)

HOLIDAY CASH PRICE, 60c, *Postpaid*

22 solos for first and second year students.

SUNDAY MUSIC

For Violin and Piano

(Price, $1.00)

HOLIDAY CASH PRICE, 60c, *Postpaid*

16 violin pieces with dignified characteristics.

ALBUM OF TRANSCRIPTIONS

By Arthur Hartmann

(Price, $1.00)

HOLIDAY CASH PRICE, 60c, *Postpaid*

Popular with recital violinists and students.

For the Singer

SABBATH DAY SOLOS

For High Voice

For Low Voice

(Price, 75c)

HOLIDAY CASH PRICE, 50c, *Postpaid*

These dozen excellent sacred solos are grateful to the singer and pleasing to a congregation. None of them will be found in similar collections.

CELEBRATED RECITAL SONGS

Compiled and Edited

By David Bispham

(Price, $2.00)

HOLIDAY CASH PRICE, $1.20, *Postpaid*

44 ancient and modern vocal solos selected from the repertoire of this great American singer. Actual lessons are given on several of these fine songs.

THE INTERNATIONAL CYCLOPEDIA OF MUSIC AND MUSICIANS surpasses all other single-volume works in the field in *completeness of information* and in variety and detail of subject matter. It includes *composers, conductors, singers, artists, instrument makers, operatic premieres, radio and jazz music, chamber music, the symphony, oratorio, ballet, opera, musical instruments, musical terms,* and articles of varying length *on many theoretical subjects.* The purpose of the book is to present a new, comprehensive encyclopedia of the musical knowledge of the world in a concise and authoritative manner, in one compact volume, conveniently arranged for daily reference. *Complete plots of approximately 300 operas are included.* A special feature, found in no other encyclopedia, is a series of extended articles on each of the great figures in music, written by the world's most brilliant and authoritative critics, as listed above.

Bound in blue buckram, genuine gold stamped, boxed, 2100 pages, price $12.50.

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

HEIKKI KLEMETTI

THE FINLANDIA CHORUS, from Helzinski, Finland. will make a short spring tour of America, when it comes to assist in the opening of the Finnish Exhibition at the New York World's Fair. The chorus, sponsored by Jean Sibelius, is composed of seventy professional and business men, led by Heikki Klemetti, outstanding in Finland and other parts of Europe as a choir director, organist and conductor.

THE NEW YORK PHILHARMONIC-SYMPHONY SOCIETY inaugurated its ninety-seventh season by a concert on October 20th, in Carnegie Hall, with John Barbirolli, brilliant young English conductor, beginning his third consecutive season as its leader.

MOZART'S "LA FINTA GIARDINIERA" was presented as a feature of the Baroque Exposition held early in the summer in Prague. The opera was written when Mozart was but eighteen.

THE BIRTHPLACE of Sir Edward Elgar, at Broadheath (Worcester), is to be transformed into an Elgarian Museum.

JOSEF HOFMANN announced on September 26th his resignation as Director of the Curtis Institute of Music of Philadelphia, in order that he may have more time for "other of my musical interests." He may remain as head of the piano department.

OPERA IN ENGLISH, in a three weeks season at Covent Garden, London, was presented with Eugene Goossens and Stanford Robinson leading. "The Serf," by George Lloyd, twenty-four year old composer with another opera ("Iernin") and two symphonies to his credit, had its première; and from the standard repertoire there were performances of "Faust," "Tristan and Isolde," "Cavalleria Rusticana," "I Pagliacci," "Rigoletto" and "Die Fledermaus."

THE SECOND EUROPEAN CHAMBER MUSIC FESTIVAL has been a distinctive success at Trencianske-Teplice, a famous Slovakian watering place, when the New Hungarian String Quartet and the Rome Quartet (representing Italy) carried off the honors of the occasion.

DAVID VAN VACTOR

DAVID VAN VACTOR, young American composer of Evanston, Illinois, has been awarded the One Thousand Dollar Prize of the New York Philharmonic-Symphony Society, for his "Symphony in D," which will be heard on a Philharmonic-Symphony program of this season. Mark Wessel, also of Evanston, received honorable mention for his symphonic poem, "The King of Babylon."

"GETTYSBURG," an American opera by Arthur Robinson and Morris Hutchins Ruger, had its world première when presented at the Hollywood Bowl on the evening of September 23rd.

THE SYMPHONIC ORCHESTRA OF MEXICO, under Carlos Chavez, gave an ambitious summer season of concerts, beginning late in June and ending the first week of September. Among the novelties was the Mexican première of the Poulenc "Concerto for Two Pianos and Orchestra," which was heard first in public when given by the Philadelphia Orchestra with Jeanne Behrend and Alexander Kelberine at the pianos.

ANTOINETTE SZUMOWSKA ADAMOWSKA, eminent pianist and teacher, said to have been the only woman pupil of Paderewski, died on August 18th, at Rumson, New Jersey, at the age of seventy. She was born on February 22, 1868, and made her professional début in Warsaw, at the age of eighteen.

THE CHICAGO CITY OPERA COMPANY opened its season on October 29th, with a non-subscription performance of Verdi's "Otello."

FOLK MUSIC, in all its phases, will be a special feature of the Swiss National Exposition to be held in Zurich from May 6th to October 29th. There will be a Federal Yodeling Festival on June 3rd to 5th, and Swiss operas throughout the month, with other characteristic events during the summer and autumn.

BRUNO WALTER, eminent German conductor, became a French citizen on September 18th. Born at Berlin, September 15, 1876, he has been a victim of the Nazi regime, in both Germany and the absorbed Austria.

OPERA BY NATIVE SINGERS is being tried by Rio de Janeiro, under the tutelage of Mme. Gabriella Besanzoni, internationally famous Italian contralto. During the past season there have been successful performances of "La Traviata," "Cavalleria Rusticana," "La Forza del Destino," "La Tosca" and "Madame Butterfly."

PIETRO A. YON, organist of St. Patrick's Cathedral of New York, and his brother Constantino, have been knighted by Pope Pius XI, for their services in advancing the cause of liturgical music and for their contributions to church choirs throughout the world.

A BANDSMAN STILL at eighty-two, sixty-five years of which have been devoted to brass band work, is the rather unique record of Mr. Jonathan Pearson, of England, who was recently "the recipient of a presentation" in recognition of thirty-six years as trustee, secretary, and instrumentalist in the Cleator Moor St. John's Silver Prize Band.

"AMERICAN MUSIC YEAR" is a new movement sponsored by the National Federation of Music Clubs, under the presidency of Mrs. Vincent Hilles Ober of Norfolk, Virginia, as a leading activity of this great organization during the coming months.

RICHARD STRAUSS was elected president of the International Confederation of the Societies of Authors and Composers, at its recent convention at Stockholm.

THE "PROM" CONCERTS under the direction of Sir Henry Wood, at Queen's Hall, London, have been featuring one-composer nights. On a recent Beethoven Program Walter Rummel won an ovation for his interpretation of the master's "Third Concerto for Piano and Orchestra." There have been also Bach, Wagner, and Sibelius nights.

THE AMERICAN GUILD of Banjoists, Mandolinists, and Guitarists, with headquarters at 121 East Fourth Street, Cincinnati, Ohio, is doing a significant work in the propagation of interest in these fretted instruments with their large possibilities. The Guild will hold its Annual Convention at the midsummer of 1939, in Providence, Rhode Island.

ONE HUNDRED AND TWENTY COMPOSERS, of whom thirty-three were American, were represented on the programs of the summer concerts of the Goldman Band, as led by Edwin Franko Goldman, on the Mall of Central Park, New York and at Prospect Park, Brooklyn. Bach led in the number of compositions played; and Wagner was second with forty-eight performances.

ALMA GLUCK, famous operatic and concert soprano, and the wife of Efrem Zimbalist, eminent violinist, died October 27th, in New York. She was discovered and recommended to the Metropolitan Opera Company by Arturo Toscanini and was at one time perhaps the most popular maker of song records, her *Carry Me Back to Ol' Virginny* having been reported to have sold over a million records.

A JOHN PHILIP SOUSA MEMORIAL, probably in form of a monument, is planned by a committee in New York, headed by B. A. Rolfe, conductor; and including Gene Buck, president of the American Society of Composers, Authors and Publishers; George H. Gartlan, supervisor of music in the New York Public Schools; Joseph N. Weber, head of the American Federation of Musicians; Arthur Pryor, bandmaster, and others.

ERROR: BY A QUIRK OF FATE we announced in these columns for November that the Convention for 1939 of the American Guild of Organists would be held in San Francisco, when we should have said "in Philadelphia."

MELCHIORRE MAURO-COTTONI

DR. MELCHIORRE MAURO-COTTONE, eminent Italian organist of New York City, died there on September twenty-ninth. He was official organist of the New York Philharmonic-Symphony Society and had appeared as soloist with the Philadelphia Orchestra. At twelve he became organist of the Church of San Carlo Borromeo of his native Palermo, Sicily, and at eighteen was director of the Schola Cantorum under the patronage of Pope Pius X.

A SERIES OF HARPSICHORD RECITALS was given during the second week of October, in the Governor's Palace of Williamsburg, Virginia, with Ralph Kirkpatrick as the artist. Mr. Kirkpatrick has appeared with many of our leading orchestras; and these recitals were sponsored by the Restoration Movement.

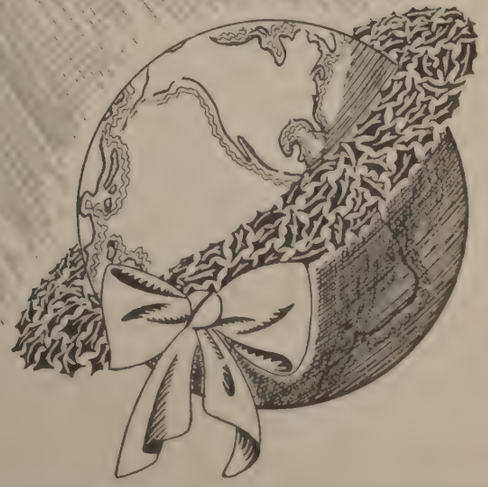
THE ONE THOUSANDTH PERFORMANCE of Massenet's "Werther," which was first heard in Vienna, in 1892, was recently celebrated at the Opéra Comique of Paris.

ADOLPH LEWISOHN, musical philanthropist and sponsor of the Stadium Concerts of New York City, passed away on August 17, at the age of eighty-nine. Mr. Lewisohn was born at Hamburg, Germany, on May 27, 1849, and landed in America on August 1, 1867, to become one of our most useful citizens.

WILLIAM GRANT STILL, widely known Negro composer, has composed music for the Theme Center of the New York World's Fair of 1939. His work is described as a symphonic poem with a choral *finale*. It will create both the background and emotional climax for the "World of Tomorrow" exhibit which Henry Dreyfuss is preparing for the interior of the two hundred foot peristyle.

MASSENET'S "MANON" was recently heard at the Royal Opera of Stockholm, for its first time in Sweden. It was presented in a free translation to the Swedish language.

ILSE MAREN



ILSE MAREN, widely known German pianist, has won American laurels by her appearances before the Lake View Musical Society, the Chicago Woman's Club and at the State Convention of Music Clubs at Decatur, Illinois, on all of which occasions she made a distinct success through her "strong musical feeling based on a finished technic." In Europe she has appeared as soloist with the leading symphony orchestras of Berlin, Hamburg, Aachen, Cologne, and Milan.

CHRISTMAS LOVE

LAST year there came a little card
With Christmas love bedight,
It was the same old deathless song
About that wondrous night
When little Jesus came to earth
To try to make us see
That good will, peace and happiness
Await both you and me.

BUT on the card there was no name,
No token to disclose
Who sent these golden greetings out.
And then a thought arose:
Why not transport our Christmas love
To ALL, both far and near?
So, friends around the world, we shout,
"Glad Christmas and New Year!"

Her Christmas Piano

WHO is "her"?

There are a million "hers" in America, at this moment, longing for a splendid "Christmas Piano" with its promise of years of profitable keyboard fun and inspiration. The "hers" and the "hims" are the children of the new age—a far more precocious and sophisticated age, than those of their parents and their grandparents. At home, in the school, on the street, through the newspapers, and over the air, they have had their wits sharpened to be on the lookout for the new epoch of opportunity and responsibility. Many are now far more eager to study music than were the children of other times. Parents, with genuine parental love in their hearts, must heed at once the sharp call of the boys and girls of this new and mightily different high speed era.

HER CHRISTMAS PIANO

Think of it, Mr. Father and Mrs. Mother! Every child born during the last twenty years has been unavoidably affected by the atmosphere of the world convulsion following the Great War, the tremblors of communism, fascism, nazism and international strife, by the grind of giant industrialism, the "new freedom" (which more frequently means "new license"), all making a stupendous social mill such as the world never before has seen. Our alert children sense the seriousness of these staggering conditions; and they are looking very sharply to Dad and Mother, to see what means they will employ to protect and adjust the family to these days of mighty changes.

Last Christmas we saw a "her" with a new piano, and we shall never forget the delight and pride with which she sounded the first notes, which opened the door to a fairy world of limitless interest and promise.

What has the piano to do with the coming generation? Well the child, as it develops, falls naturally into one of three general classes:

First, the wholesome youngster who will advance along normal physical, mental, cultural and spiritual lines, into the type of citizen which Americans like to think collectively makes up the backbone of our national reputation for integrity, industry, courage and fair play.

Second, the neurotic "fresh kid", whose chief ambition is to become a "jitter bug" wasting the precious hours of youth in preparation for a life of consummate worthlessness.

Third, the "tough guy" who, having started in life innocently enough, has descended to a criminal plane. His number has increased until our prisons are exploding with the abandoned youth of the country. The one, who never has walked through a few penal institutions, has not the slightest conception of the significance of this tragedy.

The to-morrow of our America depends largely for its progress and security upon how we labor and fight to build up the first of the foregoing classes, and upon how we may salvage those boys and girls in the other classes and turn them into potential good citizens.

The writer has given years of active investigation to this vital subject, has traveled thousands and thousands of miles, and has talked with unlimited numbers of people in all classes, in the pursuit of a sound and practical solution of this problem.

He finds that music study is now, almost without exception, accorded the position of being one of the most valuable factors in *developing personal discipline, cultivating self-control, elevating ideals and particularly in stimulating an interest in the home.* The restoration of the real joys of the American home, illumined by self-sacrifice and family love, welded by common interest, profitable study and entertainment, must be a vital part of this American program. Home singing and home playing keep young people close to the heart of the home; and "the heart of the home" is the piano. Save the home and we save America.

Children in these turbulent days cannot be fooled. Their eyes and their ears are ever open. We know of the case of two little girls who fairly begged their father for a piano. He was a prosperous man, a graduate of an eastern university, who had just built a suburban mansion. In the basement he installed a costly, modernesque bar, plenished with rare wines and liquors. It was a Christmas present to his wife. What could his daughters have thought when he met their plea for a piano with, "Hold up, kids, I'm not through paying for that bar yet!" What could they have thought when a year or so later their elder brother was arrested for manslaughter. While driving an automobile during a state of intoxication, he had struck and killed a child pedestrian. The catastrophe all but ruined the family. If the money the father spent on that bar and the wine cellar had been invested in musical education, there would be an entirely different picture in that home to-day. More

What Music Has Done for Me

From a Conference with the Famous American Journalist and Publicist
WILLIAM ALLEN WHITE

Secured Expressly for The Etude
By JAMES FRANCIS COOKE

WILLIAM ALLEN WHITE

CERTAINLY NO JOURNALISTIC FIGURE in American history, since the day of Horace Greeley, has received the respect and admiration of the people of the country as has William Allen White of Emporia, Kansas. Born in Emporia, February 10, 1868, the son of Dr. Allen and Mary Hatton White, he received his education at the University of Kansas and has the degree of Ph. D. from Washburn, Oberlin and Beloit colleges, and from Baker, Brown, Columbia and Harvard Universities. In 1893 he married Sallie Lindsay of Kansas City, Kansas. He has been, since 1895, the proprietor of the *Emporia Daily and Weekly Gazette*. He has served upon many important national commissions, both here and abroad, and has been a trustee and member of numerous prominent organizations, including the famous College of Emporia. He is the author of: "The Real Issue and Other Stories," 1896; "The Court of Boyville," 1899; "Stratagems and Spoils," 1901; "In Our Town," 1906; "A Certain Rich Man," 1909; "The Old Order Changeth," 1910; "God's Puppets," 1916; "In the Heart of a Fool," 1918; "The Marital Adventures of Henry and Me," 1918; "Life of Woodrow Wilson," 1924; "Life of Calvin Coolidge," 1925; and "Masks in a Pageant," 1928. His wholesome common sense, absence of all pretense, courage in statement, and his remarkable literary style, have given his writings an authority and reputation which few journalists of the past generation have enjoyed. He has drawn world attention to Emporia, Kansas, a city of fifteen thousand inhabitants and the home of two notable educational institutions, the College of Emporia (of which Mr. White is a trustee) and the Kansas State Teachers College. Both of these colleges conduct musical departments with excellent faculties, finely equipped modern music buildings, and preserve high cultural standards.—*Editor's Note.*

"SOMEWHERE ALONG ABOUT THE TURN of the century, say nineteen hundred and one or nineteen hundred and two, I was visiting the late George Horace Lorimer, Editor of the *Saturday Evening Post*, of Philadelphia. Lorimer was just then coming into his momentous prime. I found that he was very much interested in music and in phonograph records, and had many very carefully chosen recordings of such works as were then available. There were practically no records of great orchestras then, but the leading bands, such as those of Sousa, Pryor, Vessella, Conway and Creatore were well represented on records through performances of works, some of which fell in the class of masterpieces. Of course the recordings were terribly crude, compared with those of to-day. They were recorded and then reproduced through the huge old-fashioned, metal funnel horns, sometimes gaily painted to resemble a morning-glory. There was a metallic blare to these records; but the invention, as a whole, was all so marvelous that we were grateful for what we got. No longer was music to be confined to the big city. It could now be turned on in the farmhouse, and seventy-five cents was the one and final admission price to a performance of an interesting excerpt from Rossini's "William Tell" or Sousa's *Stars and Stripes Forever*. Mr. Lorimer's enthusiasm was contagious. I immediately became immensely excited about it, and I have been captivated ever since. More than this, records have contributed greatly to my musical joy and enlightenment. My investment in them and in phonographic equipment has possibly exceeded two thousand dollars. There are an amazing number of men who are record collectors, and are particularly proud of their possessions. Frank Lloyd Wright, the widely discussed American architect, is one of them, and when we visit we have a thrilling time in listening to the records in our collections.

"At first no one ever thought that a full symphony could be recorded. Now practically all of the great symphonies are available. It is only a matter of time before we shall have an entire symphony on one record, so that it will not be necessary to change records. Even now the attainments in recordings are so fine that they are uncanny. Students can hear records over and over again, studying instrumentation as it was never possible to do hitherto. The Carnegie Corporation has provided certain colleges in America with libraries of records, so that music students, who years ago might have heard a Brahms' Symphony only once or twice a year, may now hear it as many times as necessary. This is bound to have an unusual influence upon orchestral composition, and American students have not been slow in recognizing its value.

A Musical Youth

"I HAVE ALWAYS HAD A LOVE for music. My father and my mother both had very accurate musical ears; and I had the musical talent which is natural with almost every normal child. My first musical instrument was a small portable cabinet organ. It was operated by pedals. I never owned a self-playing organ. But the Mason and Hamlin organ, I played as a boy, was the cause of much astonishment to all who heard its reedy tone in hymns, jigs, reels and popular pieces. 'When would inventions ever cease!' Somehow I got acquainted with the reed organ keyboard, with its becoming black and white teeth. This was a thing of most absorbing interest to me. I gradually became able to play a little upon almost anything that was around, and reached a state of interest so that I simply could not live without music. The first extra dollars I earned after buying the *Emporia Gazette*, I put into a piano, and have played on that piano and its successors almost every day since then. The late Cyrus H. K. Curtis, founder of the Curtis Publishing Company, once said that the thing he bought with the first money he ever saved was a piano, and I am sure that many American business men have made a similar investment and have found it a most profitable and important one. As for myself, I am certain that if I had not had my piano as a source of personal refuge, at times in my life when everything seemed to be tied up into inextricable knots, I would have blown up. It has been a means of escape from trials, tribulations and sorrows that might have driven me into an insane asylum. I am sure that the ability to play, with the resulting abstraction from the worries of the hour, has been a life saver to many a man and a woman.

"The first money I ever earned came from playing for dances with a blind fiddler, and a cornetist. Former Vice-President, General Charles E. Dawes, claims that he paid his way through college playing the flute. Music was, likewise, invaluable to me in getting a start. Crude as it may seem to some in these days, the cabinet organ was used for dancing. Part of my work was to call off the dances. I was blessed with a powerful voice and you could hear me, on a clear moonlight night, in three counties. Most of our playing was by ear and we were expected to play every tune we had ever heard. We had no notes. Why should a real musician bother with notes? The fiddler got two and a half dollars a night, and I got three dollars. The extra fifty cents was for 'callin' off' dances; and I earned it! The 'callin' off' was for dances such as the lancers, the quadrilles, and the popular Virginia Reel. The other dances included the polka, the schottische, the racket and the yorke, with of course, the waltz. When a dance was announced in the farm districts, preparations for the social event were always exciting. The houses were small, and one of the first things done was to take down the beds and move out the stove. There was a spirit of good humor and friendliness which never invades the ballrooms of great cities. Everybody was out for wholesome fun, and they never failed to have it. Here are some of the 'calls' as I remember them:

"Cheat or Swing" (in which the lady went around all four corners of the quadrille either swinging the gentlemen or "cheating" them).

"Lady in centre and four hands around."

"Bird flies out and crow flies in" (of course, the crow was the dark suited 'he-male' and the bird was the sweet young thing in ruffles).

We Revert to Days of Yore

"THE 'BIG APPLE' OF TO-DAY is an effort to revive some of the jollity and hilarity of the joy of life which those folks in the seventies and eighties found indispensable. Perhaps it can be done, but it seems like transplanting buttercups to a convention hall. They just don't seem natural. Among the favorite pieces of the day were the *Cornflower Waltz;* the *Kiss Waltz; Mai*

guerite; Flower from my Angel Mother's Grave; Old Fashioned Photograph; Sweet Violets; Only a Pansy Blossom; When the Leaves Begin to Turn; My Queen; and *Genevieve.* The songs lasted longer in those days, and there was more time to make an impression. The musical fragrance of *Sweet Violets* must have haunted the hand organs for ten years. In consequence of this, I can play from memory scores of the old tunes and I take a great delight in doing so. Of course it is a far call from *When the leaves begin to turn* to a Tschaikowsky symphony, as played by the Philadelphia Orchestra and graven in sound tracks on a modern record; but one gets something from actually playing that never comes from merely hearing music.

"Somehow I acquired a knowledge of many valuable principles in harmony, from reading and playing. Funny, how habit influences us in all things! You see, I learned how to play on a cabinet organ, giving each note its proper value and maintaining a *legato.* The organ, of course, was pumped with the feet; and to this day I play the piano with my feet crossed, because if I put them on the pedals I begin to pump. My friends laugh at this, but I have never gotten out of the habit.

A Blind Man Leadeth

"In my younger days in Kansas, the best known instruction book was that of Septimus Winner, of Philadelphia, who was the composer of *The Mocking Bird.* Then I got a collection, which was published by Oliver Ditson Co., called "The Organ at Home." This was my pride and joy for years. No one will ever know what real fun and life-long musical delight I got out of that book. Gradually, but very gradually, my musical taste advanced. I went to Kansas City, where I made the acquaintance of a music critic who took me to concerts. At that time a blind pianist, Edward Baxter Perry, who, I learn, was for many years a regular contributor to The Etude, was touring the country. Perry had been a pupil of Franz Liszt and Clara Schumann, and had acquired a repertory which was really amazing in its comprehensiveness. He gave over three thousand concerts in America; and, despite his affliction, he toured from coast to coast for years without an attendant. His playing was a revelation to me, and his platform comments most informative. I have to thank this sightless man for introducing me to many of the classics.

"Many of the simpler things I heard him play, I still play—after a fashion and by ear! He had a proper admiration for melody and I have found that the music which gratifies my own musical taste must be melodic. Such a melody as *Oh, Thou Sublime Sweet Evening Star* from Wagner's "Tannhäuser," or *Ase's Tod* from Grieg's "Peer Gynt," leave a complete definite musical picture in my mind, just like the face of a friend; and I like to play them over and over again, just as I enjoy seeing my old friends repeatedly.

"Speaking of blind players, I remember well Blind Boone (not Blind Tom). He was a negro idiot with that uncanny and inexplicable facility for repeating at the keyboard some surprisingly complicated pieces after hearing them once. His memory was phenomenal. I met him first when I was in my 'teens, and had a little talk with him. I did not meet him again until at least twenty years thereafter. It was in a different city. I spoke to him without announcing my name. He immediately said, 'How do you do? You are the boy I met in Eldorado, Kansas, twenty years ago.'

Some Powerful Personalities

"It is singular how the works of the great masters seem to influence me differently. For instance, Beethoven seems inimitable. He forces me to his mood, with the innate grandeur of his mental and spiritual power. There is something so epic about his message that it is all-compelling. On the other hand, one has to be in the mood to enjoy Tschaikowsky. With Beethoven, there is no choice. He overwhelms you. Chopin, although at most times lyric, is like Beethoven in that his gorgeous melodies are all captivating. Some people are inclined to belittle Chopin because he confined himself to the piano, but why spoil a lyric composer to make an epic composer. One does not belittle Heine because he did not do an 'Inferno'.

"I find that more and more men of affairs are taking a practical playing interest in music. One time when I was coming back from Europe aboard the President Harding, I was playing the piano to amuse myself in the salon of the ship, when I encountered William Cardinal O'Connell, the greatly revered prelate of Boston. I found that he, too, was immensely interested in music, and was an exceptionally accomplished performer. Among other things he played for me were parts of the *Overture to "Tannhäuser,"* which he admired greatly. Then we had sort of a musicfest, playing over old themes that were rooted in our memories and which were a reflection of youth. I played *Sweet Genevieve,* which he had not heard for years; and I played Kjerulf's *Last Night the Nightingale Woke Me,* and he sang it in a way which told me that as a youth he had not always concentrated his mind upon non-mundane things. That afternoon was one of the pleasantest I have ever spent, and it was music that brought us together. It is a fine commentary upon the wholesome dissemination of musical culture in America, to realize that there are thousands of men who, like Cardinal O'Connell, employ music as a means of reaching greater human joys and attaining daily, higher spiritual and æsthetic heights.

Turn to Inspirational Living

"It seems to be one of the most common human frailties to make a collection of all sorts of mental impressions of fears and troubles and worries, real and imagined. Some men never seem to be happy unless they get out the family skeleton from the closet and make it dance. Then they wonder why they are miserable. The stupidity of this seems never to occur to them. When I find myself beginning to worry about anything I make a bee-line for the keyboard, because it has been my experience over and over again, that there is nothing like playing an instrument to wash out an ugly state of mind which nine times out of ten is only imagined anyhow. If for no other reason, the investment in music study for children is much worth while.

Cultural Investments Pay

"But music in this day is just as much a part of general culture as literature. The young person who is musically ignorant has a very great handicap. While I advise the practical study of an instrument, I also advise young people to start a permanent record library as early in life as possible, and to keep on adding to that library just as they would to a library of books, making proper provision for the shelving, care and protection of the records. I have done this for years, and I look upon my collection of records as one of my dearest possessions. What does such a collection mean? It means that one has at hand the wealth of musical enjoyment that kings and emperors of a hundred years ago had only for limited measure. Think of being able to summon the great orchestras of the world, to be able to hear just the masterpieces you love best, whenever you are in the mood. It is so wonderful that it is uncanny. One of the things that any young person may learn with profit is that there are other ways of making profitable investments than by putting their money into the bank or in stocks and bonds or real estate. Sometimes cultural investments pay the biggest interest. Wasn't that the secret of the immortal Greeks?"

Musicians of December Birth

By W. FRANCIS GATES

DECEMBER SEEMS ALWAYS just a bit the most musical of the calendar months, because it gave to us perhaps our most typical and complete music master—the inimitable Beethoven. Then, basking in his radiance, are such other international composers as Erich Wolff, Johann Christoph Bach, Pietro Mascagni, Ernst Toch, Jean Sibelius, Emil Waldteufel, César Franck, Hector Berlioz, Kurt Atterberg, Domenico Cimarosa, Giacomo Puccini, and Giovanni Pierluigi Palestrina.

Of conductors she gave Sir Hamilton Harty, Luigi Vannuccini, Artur Bodanzky, Ernst Pauer, and Patrick S. Gilmore.

Pianists include Gertrude Peppercorn, Joseph Lhévinne, Richard Burmeister, Moriz Rosenthal, and Teresa Careño.

To these must be added the picturesque, powerful, and persistent propagandist of the Wagner cult, the invincible Cosima Liszt Wagner.

Then to America December has contributed a roll unequalled in number and brilliance by any other month: Carolina White, Charles N. Boyd, Henry T. Burleigh, William J. Henderson, Arnold J. Gantvoort, Rudolf Friml, Sibyl Sanderson, Emma Abbott, Sidney Homer, Gustav Hinrichs, Rollo F. Maitland, Louis Victor Saar, Leo Ornstein, Eugene Thayer, Henry Gordon Thunder, Frederick Grant Gleason, Winton James Baltzell, Edward A. MacDowell, George Frederick Bristow, Henry K. Hadley, Carl Faelten, Deems Taylor, Charles Wakefield Cadman, Mana-Zucca, Homer N. Bartlett, Benjamin Johnson Lang, and John James Hattstaedt.

A Natal Chronology

1st—Alfred Cellier (1844), Joseph Gungl (1810), Gertrude Peppercorn (1878), Louis-Étienne Reyer (1823)

2nd—Paul Althouse (1889), Carolina White (1886), Charles N. Boyd (1875), Henry Thacker Burleigh (1866)

3rd—Niccolò Amati (1596), Joseph Lhévinne (1874), Erich Wolff (1874)

4th—Johann Heinrich Bonawitz (1839), Johann Sigismund Gruber (1759), Sir Hamilton Harty (1879), William James Henderson (1855), Benjamin Robert Papperitz (1826), Luigi Vannuccini (1828)

5th—Sir John Frederick Bridge (1844), Anton Strelezki (1859)

6th—Johann Christoph Bach (1642), Arnold Johann Gantvoort (1857), Jean Gérardy (1878), Luigi Lablache (1794), Wilhelmine Schröder-Devrient (1804)

7th—Richard Burmeister (1860), Rudolf Friml (1881), Pietro Mascagni (1863), Sibyl Sanderson (1865), Ernst Toch (1887)

8th—Franz Dussek (1736), Bernard Pasquini (1637), Jean Sibelius (1865)

9th—Emma Abbott (1850), Sidney Homer (1864), Nikolai Dimitrievitch Kashkin (1839), Peter Joseph von Lindpaintner (1791), David Popper (1843), Emil Waldteufel (1837)

10th—César Franck (1822), Gustav Hinrichs (1850), Theodor Kirchner (1823), Louis-Sébastien Lebrun (1764), Rollo F. Maitland (1884), Louis Victor Saar (1868)

11th—Hector Berlioz (1803), David Ffrangcon Davies (1860), Julian Edwards (1855), Leo Ornstein (1895), Gerrit Smith (1859), Whitney Eugene Thayer (1838), Karl Friedrich Zelter (1758)

12th—Kurt Atterberg (1887), Siegmund Lebert (1822), Clara Damrosch Mannes (1869), Hermine Rudersdorff (1822)

13th—Mario Sammarco (1873), Pauline Anna Milder-Hauptmann (1785)

14th—Marshall Rutgers Kernochan (1880), Michael Penha (1888), Henry Trotère (Trotter-1855)

15th—Henry Fothergill Chorley (1808), Charles Albert Edwin Harriss (1862), Henry Gordon Thunder (1865)

16th—Ludwig van Beethoven (1770), William Leonard Blumenschein (1849), Artur Bodanzky (1877), François-Adrien Boieldieu (1775), Augusta (Mary Anne) Holmès (Hermann Zenta-1847), Heinrich Wohlfahrt (1797)

17th—Domenico Cimarosa (1749), Frederick Grant Gleason (1848), Louis Mollenhauer (1863)

18th—Winton James Baltzell (1864), Edward Alexander MacDowell (1861)

19th—George Frederick Bristow (1825), Charles Dancla (1818), Bronislaw Hubermann (1882), Giulio Ricordi (1840), Moriz Rosenthal (1862)

20th—Henry K. Hadley (1871)

21st—Richard Buhlig (1880), Carl Faelten (1846), Zdenko Fibich (1850), Ernst Pauer (1826)

22nd—Franz Abt (1819), Teresa Carreño (1853), Deems Taylor (1885)

23rd—Hugh Percy Allen (1869), Édouard de Reszké (1855), Putnam Griswold (1875), Don Lorenzo Perosi (1872), Giacomo Puccini (1858), Isidor Wilhelm Seiss (1840), Friedrich Julius Urban (1838), Mathilde Wesendonk (1828)

24th—Lucrezia Bori (1888), Giovanni Bottesini (1821), Charles Wakefield Cadman (1881), Peter Cornelius (1824), Karl Ludwig Drobisch (1803), Simon E. Jacobsohn (1839)

25th—Enrique Fernández Arbos (1863), Lina Cavalieri (1874), Charles Whitney Coombs (1859), Patrick Sarsfield Gilmore (1829), Johann Adam Hiller (1728), Cosima Wagner (1837), Mana-Zucca (1891)

26th—William Berwald (1864), Giuseppe de Luca (1876), Arnold Mendelssohn (1855), Léon Rothier (1874), Julius Weismann (1879)

27th—Sir John Goss (1800), William Henry Hadow (1859), Giovanni Pierluigi Palestrina (1525), Johann August Philipp Spitta (1841)

28th—Homer Newton Bartlett (1845), Alexander von Fielitz (1860), Benjamin Johnson Lang (1837), Calixa Lavallée (1842)

29th—Sasha Culbertson (1893), John James Hattstaedt (1851)

30th—Karl Anschütz (1870), Pablo Casals (1876), André Messager (1853)

31st—Caroline-Marie-Félix Carvalho-Miolan (1837), Charles Dalmorès (1871), Theodor Oesten (1813)

Lessons with Ossip Gabrilowitsch, Piano Virtuoso and Conductor

An Apostle of Beauty in Piano Playing

By his Noted Pupil

MME. CECILE DE HORVATH

NEVER SHALL I FORGET the first time I heard Ossip Gabrilowitsch play. It marked an epoch in my life, as there was something about the tones he produced that became an absolute obsession with me. For hours I would work at the piano, trying to produce tones of the same quality, but I soon realized that there was nothing in the method I was studying that would enable me to achieve those effects. Those tones haunted me to such a degree that I felt that I would never be happy in my piano work unless I found out from Mr. Gabrilowitsch himself just how those magical sounds were produced; and so my father, always sympathetic, took me to Europe on rather a wild goose chase, as we had never heard of Gabrilowitsch's doing any teaching, and we were not even sure as to where he lived.

We went to Berlin, as most artists were living there at the time, and had letters of introduction to a pension which was run by some charming people by the name of McElwee, from Indianapolis. Strangely enough, Miss Frances McElwee had been a fellow student of Gabrilowitsch with Leschetizky, and was a good friend of his. She told me that many other people were imbued with the same idea that I had, and that she had persuaded Gabrilowitsch to teach a limited number of pupils that winter. She said that he had never done any teaching, inasmuch as he was financially independent; but as a favor to her, he had promised to come twice a month up to Berlin, from his home in Munich, to teach in her pension.

Musical Life In Berlin

WORDS CANNOT ADEQUATELY DESCRIBE the cosmopolitan brilliance of Berlin in those days. It was easily the musical center of the world. Nearly all the artists were located there, and the critical approval of Berlin was sought and craved by them all. Richard Strauss was conducting regular symphony concerts at the opera house; and Nikisch held sway with the Berlin Philharmonic Orchestra.

All the visiting French artists were sure to be met at the salon of Mme. Kirsinger, a picturesque South American of French blood. Here was supposed to be the only really old time French salon in the world. She would wear her gray hair dressed a la Marie Antoinette, and, although seventy, she was a lovely picture. She had an enormous salon consisting of many drawing rooms, and almost every one there was a famous painter, sculptor, literary light or musician. There were always a great many French people, among them Widor and Philipp; and one day we met Max Reger and Xaver Scharwenka, who brought out a sonata of his own that afternoon. All the lights were turned low, according to old French customs, and altogether it was a brilliant and unforgettable scene. While there we could easily imagine Liszt, Chopin, and George Sand fitting right into the picture, and we would not have been at all surprised if they had suddenly appeared, so perfectly had Mme. Kirsinger created the old romantic atmosphere.

The pension in which we lived happened to be one of the musical centers of the city, and Miss Frances McElwee and her mother had succeeded in establishing a veritable salon, through their own personal charm and interesting connections. There were four large drawing rooms which opened into each other, and every Sunday afternoon there were teas which were attended by celebrities in almost every walk of life. We girls were always dressed in light pastel colors and helped receive and entertain the guests. Many an artist had his start in those drawing rooms.

Busoni lived right across the street from us, and we could always hear him practice when he had his windows open.

Mme. Amelie Nikisch, wife of the great conductor, and one of the greatest vocal teachers in Europe, taught in this pension, and how well I remember her beautiful face and high bred manner. She was a most attractive Belgian; and of course her professional pride was her most prominent pupil, Elena Gerhardt, who was considered at that time the greatest lieder singer in Europe.

It was in this atmosphere that we had our memorable lessons with Gabrilowitsch.

Meeting With Gabrilowitsch

I REMEMBER SO WELL the day I met him. There were a large number of us, from which he was to select seven. I might say, incidentally, that the only pupils he ever accepted were the few he taught in Berlin. I was a very timid child and greatly in awe when I first met him. He was most interesting looking at that time; but as the years passed by he became more and more distinguished in appearance. With his commanding, aristocratic carriage, great fascination and spiritual expression of countenance, he became one of the most picturesque personalities on the stage; and there was much of the Paderewski glamour about him. A Chicago pianist remarked to me in his last year: "Have you noticed how beautiful his face has become with the years?"

But to go back to the lessons, Gabrilowitsch conducted his classes as Leschetizky did. He sat at one piano while the pupil played at another; and the rest of the class were jotting down notes for future use. He was a most illuminating teacher and illustrated every point by playing over passages for us. It was a matter of deep regret with him that more teachers are not able to play, as he believed in the force of example. No one could possibly explain more clearly than he could; but, after all, we learned more from hearing his own inspired illustrations than from anything else. His tones and effects would ring in our ears after we left the class room, and we could hardly wait until we could attain the same results. He was not interested in pupils with merely mechanical ability but selected his pupils from those with natural musical gifts.

Before long I found that I was able to accomplish more with him in one month than in all the years with my former teachers. We had studied with great masters, but we all agreed that his training was so utterly different and his procedure of practice was so entirely removed from anything we had ever had before that we were actually beginning to study the piano for the first time.

He was very severe and would not tolerate anything short of perfection; so that it was a great ordeal to play for him Some of us adopted the plan of swallowing raw eggs before taking our lessons, as we had heard that they were good for the nerves. But we were exceedingly grateful for this severity as, to put it in his own words:

"The more I criticize you, the more favorable comments you will receive from the press."

MME. CECILE DE HORVATH

How to Practice Exercises

THE FIRST STEP HE INSISTED UPON was the development of the utmost strength in each individual finger and in the hands, wrists, arms, shoulders, and especially back of the shoulders, and he told us exactly how to practice in order to accomplish this purpose. He not only strengthened our muscles but also taught us the utmost control of them, as he maintained that all this strength and control was necessary in order to produce the tones he wanted, even the *pianissimo* tones.

First we had to begin our practice each day with a dropping exercise, and I would like to show you how this is done. Begin with the second finger, quickly pressing the tip of the curved finger into the key; then bring the arm up so suddenly that the finger tip produces a *staccato* sound. Keep the wrist lowered while you bring up your arm. Hold the arm in that position until it feels very relaxed and heavy, and then let it fall so that the wrist is below the level of the keyboard and the tip of the second finger strikes the same note with the other fingers curved and raised, so that the one finger tip supports the entire weight of the arm from the shoulders. Of course none of the joints should collapse. Do this with each finger in turn, ending up with the tip of the thumb. To illustrate, imagine a ballet dancer balancing her relaxed body on the firm tips of her toes. If you have ever seen Pavlova you would know what I mean. This exercise accomplishes several things. It strengthens each finger and the muscles back of the shoulders and the arm at the same time.

Then come the scales which are to be practiced in three *tempi:* First slowly, with each hand separately and with a very low wrist, your fingers curved and raised very high and with very quick thumb preparation. Then again separately, in moderate *tempo,* with a free wrist, and with the hands very quiet and the fingers close to the bottom of the keys. Then separately, in *tempo,* in the same way. Then in moderate *tempo,* with the hands together two octaves apart, so you can hear the fingers distinctly; and, finally, in *tempo* in the same way.

Gabrilowitsch advised us to practice Czerny's *Kunst der Fingerfertigkeit,* (Art of Finger Dexterity) and Chopin's "Etudes," and the above scheme of practice was followed in everything we did, including etudes and pieces where passage work obtained. His idea of practicing slowly, with high raised fingers, was to strengthen them; but in order to do that one's wrists and arms have to be relaxed, and it is very important to use only the maximum strength of which each finger is capable. If the arms help, the finger will not grow stronger, just as a baby will not learn to walk alone if you

help him too much. That is why the wrist is held so low. If one feels the muscles pulling on top of the wrist, that is a sign that the wrong muscles are being used. But, if they pull underneath the wrist, that is a good sign, as there is no danger of stiffening, and the muscles are developing in the right place. During the slow practice do not leave a single note until you have heard the complete vibration, and in playing in *tempo* your finger tips must never lose contact with the bottom of the keys. There should be no finger action in *tempo*, as otherwise it is impossible to develop speed and ease in playing. In other words avoid all excess motions. In playing a scale use less weight on the thumb than on the other fingers, so as to produce smoothness. For coloring a scale, lower your wrists for *diminuendo* and gradually raise them for a *crescendo*. It is possible to play long etudes without tiring, by using fresh arm weight at the beginning of certain passages. This is like putting on the gas and then letting the car run on its own momentum. It is best to sit on a low chair for the slow practice, to facilitate the lowering of the wrist. For playing and practicing in moderate *tempo* a higher chair gives greater command of the technical passages.

This system of practice, that I have outlined, is an answer to those many students who complain that they have no set system. It would be impossible for anyone to practice in the above way and not show immediate technical gains. Six hours a day of the wrong kind of practice does no good and only makes the playing worse. This accounts for the fact that many very advanced students, who have worked hard all their lives, have undeveloped hands. In the right kind of practice every minute should count. After a short period of this kind of practice we were thrilled to find that we were unable to wear the same size gloves. Our hands developed at such a pace that for sheer economy's sake we had to buy our gloves several sizes too large, and even these would eventually burst. Thumb preparation in arpeggios, however, was not advocated, as a smoother arpeggio is obtained by keeping the fingers close to the keys, holding on to the notes in the broken chords, with the wrist held high, and moving the wrist lightly and rapidly from one broken chord to another. Of course in the slow practice the fingers are raised high and the wrist held low, but even then no thumb preparation is used. The wrist moves like lightning from one chord to another; in fast playing no gap is heard, and the effect is smoother, more accurate, and less labored than the thumby arpeggio. Naturally there must be no jumping of the wrist. Although it is held high, it must work in a straight line.

Above all things, Gabrilowitsch urged us to avoid aimless practice. He said that before he went to Leschetizky he shared the idea of many people that if any one practiced six hours a day for a certain number of years he must perforce become a pianist. From Leschetizky he learned that quality and not quantity is the measure of accomplishment, that hours count for nothing, and that concentration means everything.

How to Study Compositions

When we came to our pieces he advocated our first studying carefully the form and harmonic structure of the composition, just as an intelligent traveler familiarizes himself with the general topographical scheme of the strange city which he is about to explore.

Then he had us study the technical difficulties of the work, and we had to make sure that we had the best possible fingering by playing difficult passages through in *tempo*. We had to have a clear mental picture of the work. Then came the slow separate practice that I have mentioned above. Finally began the most important stage; namely, the study of interpretation and the choice of colors most adequate for that interpretation. He would say:

"Do not practice faster than the mind can follow, as otherwise your work will degenerate into mere automatic effort, behind which there is no 'flash of the will.'"

We were allowed to practice only one hour at a time. As he said:

"Too much practice dulls not alone the ear, but also the fine sensitiveness of the nerves which run out to the tips of the fingers and which are to the pianist what the palette colors are to the worker on canvas."

For that reason, he said, it is not advisable to practice too much on the day of a public appearance.

He maintained that concentration is the most vital point in piano playing. During our practice he recommended frequent intervals of mental practice, and this he exemplified in his own work. During his own practice he would play a few measures and then pace the floor in deep thought. Then when he touched the keys he produced the desired effect.

"Above all," he would say, "listen to your playing." It is extraordinary, by the way, how few pupils really do listen to their playing. They all think they do. Sometimes a pupil will argue and insist that he hears what he is doing. Of course he hears something. He is not deaf; but when he begins really to listen to his playing, he will finally realize that his ears have heretofore been dulled by unintelligent drumming, and he will be astonished to hear how his playing really sounds.

(*Continued in* The Etude *for January*)

Four Octave Practice Helps

By HAROLD MYNNING

A gradual improvement in one's technic in playing octaves depends to a large extent on *how* they are practiced. It is well to keep in mind several important points when practicing octaves.

1. When the hand takes the octave span it is important to keep the little finger relaxed. No one can expect to play brilliant octaves with a stiff fifth finger. Pianists who have long practiced octaves incorrectly may feel that they cannot eradicate this stiffness from their fifth finger, but persistence along these lines will accomplish wonders.

2. A good preliminary exercise for octaves is to play a chromatic scale with the thumb alone, curving the thumb for white keys and straightening it for black keys.

3. Octaves should be practiced first, for brilliancy, second, for tone. Scales played in octaves provide a good exercise for brilliance; simple melodies played in octaves, slowly and softly, will improve tone.

4. A good way to secure the arm balance necessary for good octaves is to play them not only by raising the forearm but also by raising the entire arm. And of course wrist octaves should not be neglected.

* * * * *

"No book-learning, no acquired culture, no technical knowledge is needed to understand the message so faithfully delivered by Carl Maria von Weber."—Francesco Berger.

Recent Record Releases

By PETER HUGH REED

Dr. Felix Weingartner's leadership is shown in his recording of the "Fourth Symphony" of Brahms (Columbia set 335), for which the London Symphony Orchestra plays in better style than ever before on records. This is by far the most vital reading of this work on discs, and a great tribute to the genius of Weingartner.

Equally remarkable is the new recording of "First Symphony," of Brahms, played by the Vienna Philharmonic Orchestra under the direction of Bruno Walter (Victor set M-470). One could not ask a nobler or more elevated reading of this great work. From the upward surge of the brooding introduction, with its urgent beating wings in the bass, to the hymnlike peroration of the closing section of the finale, the poise and flow of this music are clearly and sensitively achieved.

Stokowski and the Philadelphia Orchestra give fresh aspects to the *Polovetzki Dances* from "Prince Igor" (Victor set M-499). The conductor has made a new and more complete arrangement of the music, and here again we are struck by the clarity of instrumentation, as well as by the brilliant coloring and the superb playing of the orchestra.

The new orchestral transcription of Moussorgsky's *Pictures at an Exhibition*, made by Lucien Cailliet (Victor set M442), is unquestionably brilliant and effective, but it does not approach in subtlety, wit or color the famous transcription of this music that the late Maurice Ravel made. Ravel's work is regarded by musicians throughout the world as a great classic of its kind. The new version of this work is played by the Philadelphia Orchestra, under the direction of Eugene Ormandy.

Arthur Fiedler, conducting the Boston "Pops" Orchestra, does all that could be asked for the *Bacchanale* music from Saint-Saëns' "Samson and Dalilah" (Victor disc 12318); and Walter Goehr manages to make some excerpts from Chopin, chosen from the score used in the ballet "Les Sylphides," sound attractive (Columbia disc 69281D), but the arrangement is too fragmentary for its own good.

Complete operas are strains on the purse strings, but when a performance like the one of Mozart's "Don Giovanni" is issued (Victor sets M-423-424-425) the reward is worth the expense. Made at the famous Glyndebourne Festival in England this past year, this performance, for perfect ensemble and spirit, would be hard to beat in the foremost opera houses in the world. Opera stars are not featured at Glyndebourne; it is the ensemble that counts, and each member of the cast is chosen because he or she fits the chosen rôle. John Brownlee, the Australian baritone, who sang the part of the *Don* last winter at the Metropolitan, is in the title rôle. Audrey Mildmay, who sang *Susanna* in the complete recording of the "Marriage of Figaro," is *Zerlina;* and Ina Souez, the noted British soprano, is the impressive *Donna Anna*. Fritz Busch is the conductor. The balance of the cast and the chorus are excellent.

In the complete recording of Donizetti's "Lucia di Lammermoor" (Columbia Operatic set 20), one encounters a performance typical to Italian opera houses. We have heard such performances in Italy, and although the singers could not be called the greatest singers, enthusiasm nevertheless ran high. The soprano here is Mercedes Capsir, competent but not great, the tenor is De Muro Lomanto, a good but uneven singer, and the baritone is Enrico Molinari, a splendid artist. The chorus and orchestra of the La Scala Theatre in Milan, under the direction of Lorenzo Molajoli acquit themselves with honors, and the balance of the cast is capable. The recording, dating back a few years, proves entirely satisfactory. A performance of "Lucia" for those who love the music rather than for those who admire great singing.

Szigeti's recording of Tartini's "Concerto in D minor" (Columbia set X-103) displays his fine art. Szigeti has rearranged this work admirably for string orchestra and harpsichord. The purity of the music, which stems from the XVIII Century, and its gentle melancholy are tellingly set forth.

Bach's "Sonata No. 1 in G major," for viola da gamba and harpsichord, once was issued in a recording for violoncello and piano played by John Barbirolli and Ethel Bartlett. A new recording of this work (Columbia set X-104) is played on the gamba and harpsichord by Janos Scholtz and Ernst Victor Wolff. The work is one of Bach's most persuasive chamber compositions, and the two artists do justice to it.

From Bach to Ernest Bloch, the great Hebraic composer, is a long stride, one that marks the growth of music in an interesting and compelling manner. Bloch's "Sonata for Violin and Piano" (Victor set M-498), is a work that must be heard to be appreciated. It is music of barbaric intensity and rhapsodic fervor, the emotional fervor of which cannot be conveyed in words. The rugged strength of the Israelites, the rhapsodic *Song of Solomon*, the passion and fire of a great Oriental race all are embodied in this music. The score makes terrific demands upon its players, but in the Victor recording the magnificent artistry of Josef Gingold and Beryl Rubinstein does not suggest this.

Late in life Haydn turned his attentions to writing for wind instruments, and more especially for the flute. Among compositions that he wrote using the flute are a group of "Divertimenti," the original manuscripts of which have long been in the possession of the British Museum. Four of these works have been recorded by Musicraft (set No. 17), in performances by Rene Le Roy (flute) and Jean and Etienne Pasquier (violin and viloncello) that are models of tonal sonority and expression. Its unity and tonal perfection are rare. That is why the performance of Beethoven's "Serenade Trio, Opus 8," which the trio play (Columbia set 341), is a particularly treasurable one. A gracious, youthful work by the great Titan, of which he is said to have been particularly fond.

Sheer splendor of voice is exhibited by Kirsten Flagstad in her singing of the big soprano aria from Beethoven's "Fidelio" (Victor disc 14972). She does not seek to interpret the music, but sings it with sincerity and simple conviction. John Charles Thomas records two of his favorite concert songs, Holmès' *Au pays* and Pessard's *Requiem di coeur* (Victor disc 15184). The first is a marching song and the second a macabre drinking song, to which the richness and suavity of the baritone's voice is excellently suited.

At long last, Bruno Castagna records. On Victor disc 1936, the great contralto is heard in superb performances of the *Seguidilla* and the sinister *Card Scene* from "Carmen." Castagna belongs to the long line of notable Carmens; her richly sensuous voice ideally fits the music.

A treasure of recorded music, made in Europe, was recently issued by RCA Victor. As we were instrumental in bringing about this release and in providing notes on it, we invite our readers to request a copy of Victor's booklet "A Connoisseur's List of Victor Red Seal Records." If your dealer cannot supply you with this list, we will be glad to see that one is mailed to you.

Christmas in Many Lands

A Television Christmas Recital

By LILLIAN V. MATTERN

Place—The stage of a broadcasting station. There is a piano at the left, a microphone near the center, and another microphone at the right of the stage. An announcer is standing by the microphone at the center. This may be a young man or one of the older boy pupils. If desired, a young lady with a good speaking voice may take the part of the Announcer. Toward the back of the stage right, is a table containing a number of wrapped packages.

Characters—American Announcer
English Announcer
Swedish Announcer
French Announcer
Italian Announcer
Swedish Father
Swedish Mother
Pupils

If found feasible, characters may be dressed in the costume of the country they represent.

As the curtain rises, the American Announcer comes to the front of the stage and speaks to the audience.

AMERICAN ANNOUNCER: "We are glad to welcome you to one of our first television programs. Soon you will have television in your own homes, but in the meantime, we thought you would enjoy one of our experimental programs. To-day it is Christmas over all the world, and we are going to bring before you a short Christmas program from people of many climes. The events will be illustrated by music, and we hope you will catch their story. We will first call our English neighbor. (*Stepping to the microphone, he continues.)* "Calling England! United States calling England! Take it away, England!"

ENGLISH ANNOUNCER (coming to the microphone at the right): "It is Christmas Eve in the village church, and the folks from the country 'round are gathering for their Christmas Eve Festival of music and jollity."

(As he speaks the English group enters, gayly smiling and laughing quietly.)

ENGLISH ANNOUNCER: "A 'Carrier Pigeon' has just brought us a message from our distant friend and benefactor, Sir John Manville, who is obliged to be away at this time. Mary, can you tell us about the pigeon? (Mary steps to the piano and plays the *Carrier Pigeon* by Spaulding.) You shall have the message after we have had our *Evening Prayer* by (pupil's name — — — —)."

(Pupil plays Evening Prayer *by Weil.)*

ENGLISH ANNOUNCER: "Now for the message. Sir John tells us that the carol, *King Wenceslaus*, which we have always thought of as distinctly English, refers to King Wenceslaus, or Wenzel, an emperor of Germany and King of Bohemia, born in 1361. There is a statue of him in the center of a square of the same name in Praha, Czechoslovakia, and he is called the Patron Saint of Bohemia. Isn't that interesting? Sir John will soon be home and what a *Joyous Home Coming* that will be. I am sure we can say that in music. Our gay little Anne will tell us just how happy we shall be.

(Children play Joyous Home Coming *by Beer.)*

ENGLISH ANNOUNCER: "England signing off!"

(Announcer and English group retire.)

UNITED STATES ANNOUNCER: "United States calling Sweden. Sweden! Take it away, Sweden!"

SWEDISH ANNOUNCER (*coming to the microphone*): "Snow is falling heavily. Can you picture the scene? A small home in the country. Outside, a great stretch of snow covered hills, and, nestling at the foot of the noblest of these, the cozy little home of Jan Christiansen. A Christmas party is in progress, and the guests are singing our old Swedish Christmas carol, *The Star in the East.* Listen!"

(Swedish group enters, singing The Star in the East, *carol from the book, "Noels," by Oberndorfer. There are many packages on the table near by.)*

SWEDISH MOTHER *(selecting one of the largest parcels):* "Oh! I know what this one is — *Boots and Saddles* for Daddy. Ruth, I wonder if you could represent anything like this in music."

RUTH: "I believe I could. May I try?" *(She plays* Boots and Saddles *by Engelmann.)*

MOTHER: "Fine! Now let us see what else we can find."

RUTH *(coming back to the table):* "Oh, Mother, see! A lovely *French Clock* for you. Hilda, I heard you practicing a piece the other day that sounded like the ticking of a clock. Will you play it again for our party?"

(Hilda plays The French Clock *by Bornschein.)*

FATHER: "Little Jan, what would you like most?"

LITTLE JAN: "Oh! Daddy, you know. A *Rocking Horse.*"

FATHER: "Well, here it is, and it is yours if you can represent it in music."

LITTLE JAN: "I'll try."

(Goes to the piano and plays The Rocking Horse *by Baumbach.)*

MOTHER: "See what I found! A darling little 'Princess Doll' for Hannah. How about it, Hannah, can you tell us about the doll in music?"

HANNAH: "My teacher gave me a piece the other day that I think is as beautiful as a princess. See what you think."

(She goes to the piano and plays Doll Princess *by Jessel.)*

(The Swedish party quietly retires.)

SWEDISH ANNOUNCER: "Sweden signing off."

UNITED STATES ANNOUNCER: "Calling France! United States calling France! Take it away, France."

ANNOUNCER FOR FRANCE *(stepping to the microphone):* "The students at the Palace at Fontainebleau are celebrating Christmas. In the hall below they are doing a beautiful minuet of the olden days. Can you not imagine you see the lovely ladies and gentlemen in their colorful court dresses as they move in the graceful figures of this dance of the time of Napoleon? We can just catch from here the strains of the music. Listen!"

(A pupil steps quietly to the piano and plays Ye Olden Days Minuet *by Rolfe.)*

FRENCH ANNOUNCER: "Looking out of the windows we see the 'Fountains of Fontainebleau' appearing like a *Cascade of Rubies* in the afternoon sun. The students are now gathered at the windows to catch a glimpse of this unusual picture before the sun drops behind the trees. We cannot help you to see this picture, but we can tell you about it in music."

(A student plays The Fountains at Versailles *by Cooke, followed by another playing* Cascade of Rubies *by Smith. French group retires.)*

UNITED STATES ANNOUNCER: "United States calling Italy! Calling Italy! Take it away, Italy!"

ITALIAN ANNOUNCER (coming forward): "From the Church across the way we hear the *Chimes at Christmas* pealing out. Listen to their music."

(Pupil plays Chimes at Christmas *by Greenwald.)*

ITALIAN ANNOUNCER: "Farther down the street we see the priests going quietly into the cathedral for the Christmas Mass. Distantly we hear the tramp of their feet growing fainter as they enter the church."

(Children play Priests March *from "The Magic Flute" by Mozart-Sartorio (6 hands);* or The Priests' March *by Mendelssohn.)*

ITALIAN ANNOUNCER: "The street is gay with revellers and much confetti is in evidence. So much, in fact, that we almost can hear it. We catch the contagion of their merriment as we hear merry strains of *Confetti* by Media."

(Student plays Confetti *by Media.)*

ITALIAN ANNOUNCER: "Italy signing off."

UNITED STATES ANNOUNCER *(to audience):* "We have time for two or three numbers from our own group in the few minutes that are left to us, and I am going as ask ——— to play *Star Gleams* as we think of the wondrous Star of long ago."

(Student plays the number Star Gleams *by Lieurance.)*

ANNOUNCER (*to audience*): "We will close our broadcast with the number *Evening Prayer and Dance of the Angels, from Hansel and Gretel* by Humperdinck, after which we will all rise and sing *Adeste Fidelis.*"

MUSIC FOR PROGRAM

			Grade
7394	*Carrier Pigeons*	Spaulding	2
1887	*Evening Prayer*	Weil	2½
24741	*Joyous Home Coming* (Duet)	Beer	3½
7863	*Boots and Saddles*	Engelmann	3
23566	*The French Clock*	Bornschein	3
	The Rocking Horse	Baumbach	2
24180	*The Doll Princess*	Jessel	3
22986	*Ye Olden Days Minuet*	Rolfe	3
26038	*Fountains at Versailles*	Cooke	4
	Cascade of Rubies	Smith	5

THE AMAZING MUSIC WORLD OF TO-DAY

One of the most original and penetrating musical artists of the day is Walter Gieseking, born of German parents, in Lyons, France, and brought up on the French Riviera, until he went to Hanover, Germany, to study with Karl Leimer. He has become the best known exponent of modern music, particularly that of the French School.

In this forceful interview, to appear in THE ETUDE for January, he makes many statements which are sure to be controversial, but which will command wide attention thereby. You may not agree with him, but you cannot afford not to read what he has to say.

A LADY OF THE COURT OF HENRY XV

This little known musical portrait is one of the finest of the Dutch trained French artist, Jean Marc Nattier (1685-1766). The picture is in the Palace of Versailles, and the subject was named "Henriette de France."

The Threshold of Music

Natural Laws That Guide The Flow Of Chords

By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

This article is the tenth in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter.*

IN THE LANGUAGE OF MUSIC, chords are the words—the vocabulary. The notes of the melody are the threads of thought which carry us along from one chord to another. When several chords are placed one after the other in orderly succession, they form phrases and sentences.

So far we have discussed only chords (musical words). Now we come to the grammar of music: the progression from one chord to another (musical sentences).

Certain combinations of chords are natural and instantly satisfying to the ear. Others are less usual, yet of a strangeness which is pleasant and intriguing. Still others are awkward, unnatural and ugly.

Some musical phrases are as trite and overworked as certain word combinations which are all too familiar to most of us—"broad daylight" . . . "frightened out of his wits" . . . "pure and simple" . . . "out of the frying pan into the fire" . . . "all in the day's work." Others have the sauciness of O. Henry's "Children, pinochle and fountains were playing in the park," or the poetry of Shakespeare's "Frailty, thy name is woman." Still others are unintelligible and bewildering, like a meaningless jumble of words: "Influence for hardly attention crowded its meant"—which, for all we can tell, may be a private code language, or may simply be gibberish. Modern music, unfortunately, sometimes falls into this third class.

The Lares and Penates of Music

THERE ARE CERTAIN FUNDAMENTAL LAWS in music which guide the progression of each chord to the next, and of each note in a melody to the next. This does not mean that there are any hard and fast rules which require a note or a chord to move to a certain next note or chord, and to no other. But there are strong natural tendencies which, when followed, lead the music into understandable and satisfying channels, and which, when flouted, must be done so with rare tact and skill, and then only to produce a striking and unexpected effect.

The most important of these laws are:

1. The Melody Law.
2. The Law of Motion and Rest.
3. The Bass Law.

Scales—Fountainheads of Melody

BEFORE EXPLAINING THE MELODY LAW, a word or two about scales. Certain present day composers, sincere in their belief that the major and minor scales have outworn their usefulness, are composing music in terms of special scales of their own invention. Among the most widely talked of is the "twelve-tone scale," in which each of the twelve semitones that lie between every note and its octave is rated equally important and a member in good standing of the scale. A truly communistic conception!

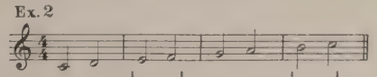
Most music, however, belongs to either major or minor tonalities and must be explained in terms of major or minor scales. In these scales each note has its individual rank and position. The Tonic is Chief; the Dominant is Second in Command; and so on. Only seven of the twelve are members of the scale at all; the other five notes are outsiders, and are introduced only occasionally as "accidentals" or "chromatic alterations."

The point of all this is that every piece of music (with the exception of certain ultramodern compositions) must be thought of in terms of tonalities. In every progression of chords or snatch of melody there is an implied tonic. Not that a composition necessarily spends all its time in one key; it may change its tonal point of view every little while—several times, if it wishes, during a single measure. César Franck's "Symphony in D minor" leaves hardly a key untouched, in the course of its wanderings. Even a simple piece like Rubinstein's *Melody in F* is not restricted to F Major, but takes excursions into the neighboring keys of G minor, C major and F minor. But at any given moment a composition must be in some key. And melody is meaningless unless it exists in relation to a key and a scale, or a changing succession of keys and scales.

One of the most famous melodies of all times is the theme of the *Andante* of Beethoven's "Fifth Symphony"—a theme that lay fermenting in Beethoven's mind and in his sketchbooks for some eight years before it became the rare, mellow wine of its finished form. This melody quickly wanders away from its original key of A-flat, but at no time does it escape the strict surveillance of some tonality. Here it is.

Ex. 1

The chart shows the theme's progress from A-flat major through the keys of B-flat minor, F minor, F major and B-flat minor and back to the original key.



The simplest melody, of course, stays in a single tonality and belongs to only one key and scale. There is no need to illustrate afresh that type of melody, since the pages of this series have been already liberally sprinkled with quotations which will serve. You might, for instance, turn back to Article VI of this series and notice that the hymn *Old Hundredth* does not once use a note which is foreign to the scale of G major.

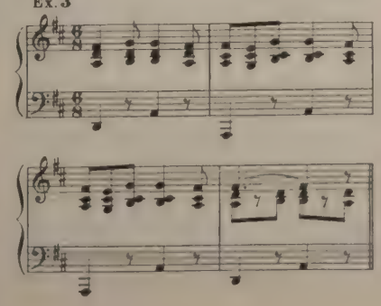
The Melody Law—the Magnetic Attraction of Tones

ONCE WE HAVE LEARNED TO THINK of melody in terms of the notes of a scale, we are ready to digest the first of the fundamental principles of music: the Melody Law. This principle may be expressed as the inherent desire of every tone to move to its nearest neighbor in the scale.

In every scale, major or minor, some notes are closer together than others. A glance at the piano keyboard will make this evident. Take the scale of C major, for instance. (This is an easy example because all the member-notes of the scale are white keys and all the outsiders black keys.) Most of the white notes will be seen to be separated from each other by black notes. Such pairs of notes are a whole tone apart. But between B and C there is no black note. These two members of the scale are as close together as they can be—only a half tone apart. The same thing is true of another pair, E and F. In both instances the Law of the Magnetic Attraction of Tones comes into play: the attraction between these close together notes is twice as intense as it is between the other and less close together pairs of notes.

Ex. 2

If a C major melody, during its course, lands on F, it is prompted by a strong desire to move down to E—much stronger than any desire to move up to G. Why? Because E is only a half tone away, while G is a full tone away. Likewise a melody pausing on E will rather move a half step up to F than a full step down to D. A melody pausing on B will much prefer C to A. And a melody on C will choose B in preference to D.

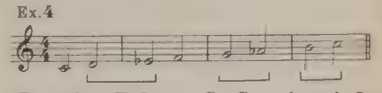


The other notes of the C major scale, however, are not swayed by such violent preferences. G sits calmly and smugly on the fence, not giving a hoot whether it rises to A or falls to F; both notes are equally distant from it, and so the attraction is fifty-fifty. Another relatively stable note is A, which does not care whether it goes to G or B. Still another is D, which regards both C and E with the same lukewarm interest.

You must bear in mind that these notes do not have any such inclinations or preferences by themselves, but only as members of the scale of C major and when heard along with C major harmonies. It is not the pitch of a tone but its position, or relation to the other notes of the scale, that determines its desire to move.

The same thing holds true in any scale. No matter whether the music is in three flats or four sharps, similar affinities exist between the third and fourth notes of the scale (Mi and Fa), and also between the seventh and eighth (Ti and Do).

The *Barcarolle* from Offenbach's opera, "Tales of Hoffmann," is a melody which derives its instant appeal from the satisfying effect of being tossed back and forth between two closely neighboring notes—Mi and Fa, as will here be seen.

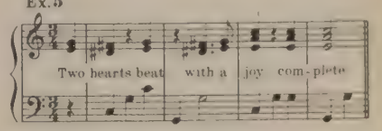


Ex. 3

The melody starts on F-sharp and straightway "obeys that impulse," going to G. Having arrived at G, it promptly follows its natural inclinations once more and returns to F-sharp. That, in a nutshell, is the basic idea behind this well known composition—which, incidentally, may help to account for its popularity. The same explanation fits such tunes as *Sometimes I'm Happy* and *The Lullaby of Broadway*.

In minor keys the notes of the scale are spaced somewhat differently from the major, and the strong attractions take place on correspondingly different notes of the scale. In C minor, for instance, we have this scale in its Melodic form:

Ex. 4



D prefers E-flat to C; G prefers A-flat to F; and B greatly prefers C to A-flat. The reason for the more than usual repugnance between A-flat and B-natural is the extra large interval which separates them: an augmented second. The leap between these two notes is avoided by nearly all musicians except when composing music of oriental flavor (see Article IV).

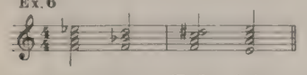
When a melody strays from the scale, the Melody Law is still on the job, attracting it back again by way of the nearest member note. If you make the effort to turn back to Chapter I, you will find an example of this phase of the Melody Law—the horn theme from "Till Eulenspiegel." The melody lands on G-sharp; but since G-sharp does not belong to the scale of F, the tune is attracted upward another half tone and finds momentary rest at A.

Here is another example of the same thing, from the recent Viennese waltz tune, *Two Hearts in Three-Four Time*. Notice how eagerly the F-sharp strains upward to G:

Ex. 5

This quotation is reproduced with the special permission of the Music Publishers Holding Corporation, owners of its copyright.

This illustration brings up an interesting little peculiarity about sharps and flats. Perhaps you already have started to wonder about it. Why does F-sharp necessarily move to G? Why not to F-natural? Is not one note just as near to it as the other?



A really exhaustive answer to these questions would involve us in the subjects of acoustics, equal temperament tuning, and other scientific branches of musical learning; and the result would probably be more confusing than interesting. Perhaps the simplest explanation is this: Though in practice F-sharp and G-flat are the selfsame note, equidistant between F and G, in theory they are two slightly different tones, F-sharp being a little higher—a little closer to G than to F, and G-flat being slightly

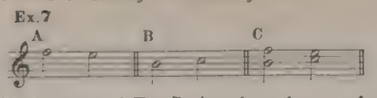
lower—a little closer to F than to G. The Melody Law follows theory rather than practice, pulling every sharpened note to the note immediately above it, and every flattened note to the note immediately below it.

Perhaps the easiest way of remembering these two tendencies is to think of a *sharp* as a note that has been raised a half tone, and, having been raised, has acquired a certain amount of momentum which tends to carry it still further upward; and of a *flat* as a lowered note which has acquired a downward momentum that tends to urge it still further downward.

Here is an example of how the Melody Law affects the tendencies of E-flat and D-sharp (which, as you know, are two different spellings of the same sound):

Ex. 6

In the first measure, E-flat, being nearer to D, inclines toward it; while in the second measure D-sharp feels more strongly the magnetism of E. Turn back to Chapter V and you will find a quotation from Schubert's "Unfinished Symphony" which verifies this point, using these very chords.



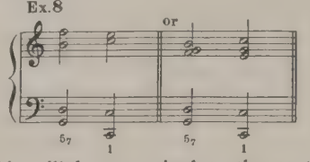
This same phase of the Melody Law applies, of course, to *naturals* which are foreign to the scale to which the tune belongs. For instance, if a tune is in the key of E-flat (three flats), and if the melody lands on B-natural, it is the same as if that note were a sharp. The B-natural rises to C. Then, if a tune is in the key of D (two sharps), and the leading tone (Ti) is lowered from C-sharp to C-natural, it joins the category of flats and resolves downward to B.

These changes, by the way, are known as *Chromatic alterations*. Do not let that phrase bother you too much, though; the word "chromatic" merely means "colorful", the implication being that the introduction of foreign tones always makes a piece of music more "colorful" in its sound.

Mob Spirit Adds its Impetus to the Melody Law

NOW WE ARE READY for the next step concerning the Melody Law. If we take a note which normally has a preference for its nearest neighbor and couple it with another note which exerts a pull toward *its* nearest neighbor, we find that the two notes together will strain harder than ever in their efforts to satisfy the Melody Law.

Ex. 7



If the urge of Ex. 7, A, takes place at the same time as the urge of Ex. 7, B, the result becomes doubly emphatic as in Ex. 7, C.

This is probably the simplest, most fundamental and most satisfying progression in music. It is the progression which you get on a mouth organ, by sucking in and then blowing out.

Play it on your piano, and then try making F and B move to other tones; none of the other possible notes are as satisfying as the E and C. The reason is that the other tones, being farther away, are exerting less of a magnetic pull.

When F and B become parts of a four note chord (the dominant seventh chord, which contains the notes G-B-D-F), they pull still harder toward E and C. Here is what happens:

Ex. 8

This will be recognized as the next to the last and last chords of practically every piece of music that is heard. This progression of notes (dominant-tonic) has become almost universal as the closing phrase of musical compositions, because it is completely satisfying to the ear.

The story is told that a friend of Beethoven, wishing to get the renowned composer out of bed in the morning, sat down at the piano, started playing a piece of music, kept on until he had reached the next to the last chord—the dominant seventh—and then stopped. The music was left hanging in mid-air. To any musician the atmosphere at that moment was highly charged with unfulfilled desire. It was too much for Beethoven's mind to endure; so he leaped out of bed, rushed to the piano and struck the final chord.

It is no mere accident that the dominant seventh pulls so hard towards the tonic; for behind this progression lies the force not only of the Melody Law but also of two other laws which we are about to investigate: the Law of Motion and Rest, and the Bass Law.

Worth While Music in the Movies

By VERNA ARVEY

IF ANY ONE of Hollywood's musical directors were asked to name the man he considers the best composer developed by films (one whose reputation was not made before coming to Hollywood), he would perhaps unhesitatingly reply, "Max Steiner." Some directors will qualify that statement. Nat Finston, for instance, says that Steiner is a wonderful craftsman. James O'Keefe declares that Steiner is good because he understands writing music for the screen; because filmdom's best musical work is done by men writing from the theater up rather than from the concert hall down.

The latest film for which Max Steiner has composed background music is the Warner Brothers' "Angels With Dirty Faces," starring James Cagney (long known to be a music lover off the screen), Pat O'Brien, Ann Sheridan and the Dead End Kids. Since there is a wide variety of moods and scenes, from night clubs to churches, there is ample opportunity for effective descriptive music.

Hope Hampton, former opera star now appearing in Universal's "The Road to Reno," sings *Musetta's* song from "La Bohème" in the film, in addition to three popular songs. It is interesting to note that John Payne, young actor who sang in the Warner Brothers' film, "Garden of the Moon," was at one time the holder of a Juilliard School of Music scholarship for voice. Two others in this actor's family are or were musical: his mother is the former Ida Schaeffer, Metropolitan Opera Company singer; a more distant relative is the John Howard Payne who wrote *Home, Sweet Home*. "Garden of the Moon" gave John Payne his first Hollywood opportunity, when Dick Powell refused the leading rôle. Instead, Powell acted and sang several popular songs by Harry Warren and Johnny Mercer, in the film "Going Places," which also features Maxine Sullivan (who also appears in Paramount's "St. Louis Blues" with Mattie Malneck and his band) and Louis Armstrong.

At least one-third of the Hal Roach film, "There Goes My Heart," starring Frederic March and Virginia Bruce, has background music, and this, with the exception of one composition by Edward Powell, was written by Marvin Hatley, one of Hollywood's energetic music directors who is truly earnest in his desire to study and to work to make his compositions

(*Continued on page* 823)

Radio Flashes

By PAUL GIRARD

IN KEEPING WITH ITS POLICY of bringing to the radio public the best in musical art, the National Broadcasting Company made arrangements this year to broadcast sixteen Sunday afternoon chamber music concerts of the New Friends of Music. These concerts, which began on October 23rd, are heard from 6:00 to 7:00 P.M., EST. The New Friends of Music was organized in 1936 by Ira A. Hirschmann, one of New York's prominent music patrons. He conceived the idea of making available to the music public of New York a series of programs at prices within range of modest pocketbooks. The success of these concerts was assured from the beginning and each was given to a sold-out house. In making these concerts available to the general public by way of radio throughout the country, NBC is making a worthy contribution to the promotion of interest in chamber music. Already listeners have been treated to a series of fine concerts, but for those who have missed some of these Sunday evening treats, we hasten to call attention to forthcoming ones. On December 4 and 11, the Kolisch String Quartet will be heard in quartets of Beethoven; on December 18 and on January 8, the Budapest String Quartet will be heard in chamber music of Bach and Haydn; and on February 12 and 19, the Pro Arte Quartet will be heard.

A very significant event on September 25, was the first radio recital of the eminent pianist, Ingace Jan Paderewski. This concert was broadcast from Lausanne, Switzerland. The clarity of both concerts was amazing, proving that space and miles mean nothing to radio.

The Curtis Institute of Music, whose weekly broadcasts have been a feature of Columbia's music schedule since 1929, have returned to the airways. These programs are heard on Mondays from 3:00 to 3:45 P.M., EST. As in the past, these programs, whether choral, chamber, solo or orchestral music, are performed entirely by the students or alumni of the school.

Early in October the Cincinnati Conservatory of Music also returned to the airways. This is the fifth season that this well known music school has been broadcasting, and as in the past the participants will be students and members of the faculty.

Chamber music enthusiasts should reserve, if possible, Saturdays at noon, for during the half hour from 12:00 to 12:30 P.M., EST., the Columbia Broadcasting System presents a program of chamber music that is always worth hearing.

Similarly those who like lieder should reserve Thursdays from 8:30 to 9:00 P.M., EST., for Columbia broadcasts then its excellent "Story of the Song." This program features a different singer each week, and presents a program chosen from the world's finest song literature.

Admirers of Howard Barlow, the American conductor, will undoubtedly be glad to know that he recently signed a three-year renewal contract with CBS. Barlow's "Everybody's Music" programs, which have been broadcast all summer, have long been one of the most popular weekly features of CBS. In the early days of radio it was said that the broadcasting industry was not yet ready to play a full symphony. Barlow answered a challenge by presenting with great success a four-movement work in its entirety: Haydn's "Military Symphony." As in its infant days the orchestra is still an informal, friendly organization. There is a real fraternal feeling among the men and towards Barlow. During the past season of the CBS Symphony, Barlow wrote and announced his own program notes. His versatility as well as his musical accomplishments have won him much praise from his associates as well as from the radio public.

Fifty Years Ago This Month

ALEXANDER CAMPBELL MACKENZIE, Mus. Doc., at the threshold of his so long and significant career as Principal of the Royal Academy of Music of London, and as one of the most vital figures in modern British music, had this to say on "The Difference Between Studying and Cramming":

"There are two very different methods of acquiring knowledge of any kind. One is a healthful mode, and productive of lastingly beautiful results; the other is of little or no use. Good work is rarely done by sudden impulses or in a fitful manner. It is the well-ordered division of the working day, and the obstinate perseverance in systematic study which commands ultimate success. Youth is the season when work is lightest, and when impressions are most easily received and retained. Few, if indeed any, prominent musicians began to study late in life. Even a man of genius like Schubert felt keenly, during the last few years of his life, that his early training had not been sufficiently thorough. And at the very time of his death he had intended to subject himself to a severe course of counterpoint in order to satisfy himself. He attached great importance to a thorough knowledge of the elements of music.

"An intimate acquaintance with the general laws of part-writing, modulation, and related studies, not only heightens one's enjoyment when he listens to music, but enables him to understand the intentions of the composers much more easily, while it is of the greatest assistance in helping him to read music at first sight. Therefore, teachers and students should give as much attention to the study of harmony as possible. The amateur as well as the professional musician is apt to become confused among the different systems and methods of harmony, and the question is often asked: 'Which book do you recommend? Which method shall I pursue?' Now in former times, not so very long ago, the idea was prevalent that the study of harmony ought to be wrapped up in as much mystery as was conveniently possible. Many of the books on harmony and counterpoint tend more to confuse the student than to aid him. The tendency of the present moment is, however, to make the science as concise and clear as possible. The simplest method is assuredly the best . . .

"After a considerably varied and extended professional life, I am happy to say that my own personal taste is not confined to any particular school of composition. While I admire Wagner, and revel in a complicated score of Berlioz or Wagner, I can enjoy quite as much the simplest sonata of Mozart.

"No confidence should be placed in those who preach that musical art has already gone too far—that it is incapable of further healthy development. Neither should we pin our faith upon the eccentric ideas of those who ignore everything but that music which is strictly of modern growth. We may, if we seek, find good in the music of yesterday and also of to-day."

What Now for Music Teachers?

A Nation Wide Symposium

Eminent Members of the Music Teachers' National Association, to be in Convention in Washington during the present month, Discuss an Important Subject in Advance

THE ETUDE MUSIC MAGAZINE rejoices in the increasing significance and importance of the annual convention of the M. T. N. A. This will be held this year in Washington, D. C., at the Hotel Mayflower, on December 28, 29 and 30th, under the able presidency of Edwin Hughes. The convention opens with a reception at the White House and a concert of the National Symphony Orchestra under Hans Kindler.

Among the high lights of the convention will be Chamber music concerts by the Budapest and the Coolidge quartets, a string and chamber music forum, a piano forum by Rudolph Ganz, as well as a discussion of the relationship of High School and College music, led by George Dickinson of Vassar College. In our experience, and through conversation with scores of members of this great organization attending these annual events, the meetings are so remunerative that those who come return to their work fortified and refreshed for the ensuing year. The annual dues are only four dollars, and any music teacher in good standing may become a member upon application to the Secretary, Dr. D. M. Swarthout, University of Kansas, Lawrence, Kansas.

During the past year twenty-one State Music Teachers Associations have joined the Music Teachers' National Association, thus affiliating over eight thousand music teachers. THE ETUDE has made this an occasion to invite many of the leaders in this movement to participate in what we feel is a very timely symposium, as it represents the thoughts of outstanding teachers in all parts of the country upon this important question:

"What is the most important step the private music teacher may take at this time to insure larger professional and business results during the coming year?"

EDWIN HUGHES

President, Music Teachers' National Association

EDWIN HUGHES

THE PRIVATE TEACHER of music can best further his own individual interests through closer coöperation with his colleagues. In no other profession is there such apparent resistance to coöperation as in that of music teaching. Lawyers, doctors, dentists, and others, all have their local, state and national associations, through which the standards of ethics and practice in these various professions are upheld, and problems of the individual and the group brought out into the open forum for discussion. Music teachers form the largest body of unorganized professional workers in existence. There are thousands throughout the country who have no affiliation with any organization that has the welfare of their profession at heart. If there is a music teachers' association in your city, join it. You will learn much from closer contact with other members of your profession; more, you will be able to give as well as to receive. If there is a State Music Teachers Association in your state, join it. The contacts you make with teachers from other cities will be valuable to you in more ways than one. If you want to know how music teachers throughout the land are meeting their problems, membership in the Music Teachers' National Association will give you the picture as a whole. Especially at the present time is a spirit of coöperation essential. National legislation is being urged, which, if put through, may well jeopardize the very existence of the private school of music and the private teacher. Through associations, such as those mentioned above, you can become informed as to the nature of this proposed legislation, you can be prepared to take a stand that will safeguard the future of your profession.

DR. EARL V. MOORE

Past President, M.T.N.A., Director, School of Music, University of Michigan

EARL V. MOORE

DESPITE THE APPARENT DRIFT of interest on the part of a considerable portion of the public of to-day, from the self-inspiring pleasure of "making" music to the less demanding, passive pastime of "listening" to music, the responsibility of the private teacher to his art and to his community is greater than ever before, because of the very conditions in which he finds himself. He must exert himself to traduce to the youth of this age the highest ideals of music for its creation (composition) and for its re-creation (performance). For the perpetuation of music as a *living art*, under present conditions, he must recognize as an asset the important advances made by music in our school systems; he must consider as a valuable tool, and not as a destructive economic and cultural force, the facility with which music may be heard and enjoyed in this mechanized age.

The successful private teacher, in the years immediately ahead, is the one who continues to adapt and utilize the conditions and forces available from whatever source, to the end that he may contribute more effectively and efficiently his unique share in the cultural training of the youth of this decade.

DR. PETER W. DYKEMA

Professor of Music Education, Teachers College, Columbia University

Chairman, Committee on Community Music, Music Teachers' National Association

THREE SUGGESTIONS which should help the private music teacher:

1st: Continually take steps to retain and to increase his own musicianship. Patrons are always impressed by the teacher who can perform as well as teach.

2nd: Keep in touch, through reading and study, with recent ideas, principles, and methods of teaching individuals and groups; psychology and pedagogy have made in the past decade significant contributions to music teaching.

3rd: Consider the tremendous effect of community music upon music in the home at the present time: radio, movie, and federal music projects, all have influenced what people know and like; and private teaching must make adjustments.

DR. D. M. SWARTHOUT

Secretary, Music Teachers' National Association

DONALD M. SWARTHOUT

THE PRIVATE MUSIC TEACHER, when once fairly established in a community, so often settles back with a seeming lack of concern for future growth.

A progressive teacher rises immeasurably in the esteem of his or her pupils, when they see that the teacher makes yearly contact with the stimulating, broadening programs of such organizations as those offered by the Music Teachers' National Association and with the programs of the state music teachers' association where such exists.

The expense entailed in membership in such groups and in attendance at their meetings, is small compared to the values received, both educational and commercial.

DR. KARL W. GEHRKENS

Editor of the M.T.N.A. Proceedings, since 1917

© Bachrach

KARL W. GEHRKENS

LET HIM get in touch with the Supervisor of Music in the public schools and offer to coöperate with him in any plans that he may be projecting for making the community more musical. Specifically, let him suggest two things: (1) that free piano classes be offered in the grade schools in order that advanced pupils may be provided for the private teacher in later years; (2) that the high school give credit for Applied Music taken under the direction of outside teachers but sponsored by the school.

DR. OSBOURNE McCONATHY

Chairman, Committee on School Music, M.T.N.A.

OSBOURNE MCCONATHY

THE MUSIC TEACHER OF TO-DAY must align himself with the leaders in his field, both by following the most approved modern teaching procedures and by affiliating himself with the best professional organizations of his fellow workers, such as the Music Teachers' National Association, the Music Educators National Conference, and State and City Associations.

Music is now a part of everyday life. The music teacher must be identified with local community activities and interests. Without lowering any standards, the teacher must help his pupils to find immediate joy and satisfaction in their music, while at the same time he lays a foundation for further progress.

Professional and business results come best from developing eager, enthusiastic, successful pupils.

DR. GLEN HAYDON

President, North Carolina Music Teachers' Association

THE PRIVATE MUSIC TEACHER should seek constantly to broaden his musical outlook by systematic reading of standard works on music and the current publications in the field.

He should maintain his contacts with the Music Teachers' National Association, attend the annual meetings, and study the Yearbooks. Further he should take advantage of the plan for applied music credit sponsored by the State Music Teachers' Association through the State Department of Public Instruction.

PALMER CHRISTIAN

Professor of Organ and University Organist, University of Michigan

Chairman, Organ-Choral Committee, M.T.N.A.

THE PRIVATE TEACHER can do one of two things. First, he can "go Hollywood", indulge in a lot of circus publicity, as did the voice teacher (?) in a recent issue of LIFE, be "queer", and probably get some quick business results.

Second, he can do what he will do if he has any artistic conscience and inherent ability: tighten up the loose threads of his teaching; continue his own growth by study; weed out carelessness; become more sure in clarifying the mechanics, and more lofty in showing the true spirit of music.

Next year's growth is more important than this year's, since it can be based very definitely on this year's mistakes. Slow and steady professional and business improvements are of more value to all concerned than quickly stimulated "results".

In any case, do not neglect publicity!

MRS. CROSBY ADAMS

Member of Executive Committee, M.T.N.A.

MRS. CROSBY ADAMS

THE ULTIMATE OF MUSIC TEACHING should be musicianship.

I. Stress ear training. Keen aural perception.

II. Constant development of the tactile sense, which promotes freedom at the keyboard.

III. Familiarity with the great hymns of the church, played in a musicianly manner.

IV. Ultimate ability to read music "prima vista," and in this sight-reading to interpret worthily the composer's message.

EVERETT JAY HILTY

President, Colorado State Music Teachers' Association

THE DENVER BRANCH of the Colorado State Music Teachers' Association is planning a series of Sunday Newspaper advertisements on the theme, "Why Study Music?" This will carry a listing of all coöperating teachers. They also suggest that teachers give recitals with printed programs carrying studio advertising on their last page, with extra copies printed for promotional use.

All have agreed that, in the final analysis, the best method of obtaining new pupils is through satisfied customers. The teacher's personality is most important. This is the sentiment of a group of teachers rather than of an individual.

DR. J. LAWRENCE ERB

Past President (Four Terms) M.T.N.A.
Chairman, Colleges and Universities Committee

J. Lawrence Erb.

More than ever, the music teacher must approach his profession in a businesslike way. This means an adequate and attractive studio and equipment; persuasive salesmanship; and "delivering the goods."

He must be awake, not only to the *needs*, but also to the *desires* of his clients. "The customer is always right."

ROWENA BISHOP

President, Music Teachers' Association of California

Rowena Bishop

Two important steps, the private teacher of music may take, are:

1. Persuade the college and university authorities to allow the same credits as are obtained in the high schools for outside applied music study with a certified teacher, to be accepted on college entrance requirements.

2. Coöperate with the publishers in finding more attractive and stimulating fourth and fifth grade teaching material. Too long the teacher has been blamed for the mortality of music students in these grades. The fault lies not so much with the teacher as with the uninteresting material with which he has had to work.

FERN WORK-SWARTOUT

President, Michigan Music Teachers' Association

Some points which might help the private music teacher:

1. Studio programs and a social hour.
2. Ensemble classes. Put on one large festival during the year.
3. Pre-school classes. The children in the classes will eventually become private pupils.
4. A gift for your teaching.
5. Personality, education and attractiveness.
6. Sincerity and an expert knowledge of your branch of music.

BERTHA FOSTER

President, Florida State Music Teachers' Association
Dean, School of Music, University of Miami

Bertha Foster

Two important steps always should be considered at the opening of the school year.

First, preparation of ourselves—getting our ideas clear and definite—our enthusiasm sincere and contagious. Then, to have something to sell, to use publicity and *more publicity* so as to let the world know we have something to give in which we believe.

LUTHER O. LEAVENGOOD

President, Kansas State Music Teachers' Association

One of the fundamental principles of advertising is to "Create a Desire."

The best medium that the private music teacher possesses to create this desire is through recitals—student recitals to promote self-expression and confidence, and the interest of the parent; recitals by the private teacher himself, increase the appreciation of music on the part of his listening public.

DR. JAMES T. QUARLES

Chairman, The Music Literature Committee, M.T.N.A.
Professor of Music, University of Missouri

James T. Quarles

A powerful, but frequently overlooked resource to the private teacher, for securing more satisfactory results, business and professional, would be that he sell enthusiasm for music as a source of joy to the *performer* as well as his *friends*. Enthusiasm is contagious. Every student infected with it becomes a potential salesman for his teacher. It is so dynamic that it will energize all other subjects in the curriculum.

WARREN D. ALLEN

Member of Executive Committee, M.T.N.A.
Chairman, Division of Music, Stanford University

Warren D. Allen

There is no one step that all private teachers could take at one time to insure greater success. Thank heaven, teaching never can be "standardized"!

The thing on which every private teacher may pride himself is his individual difference (not disagreement) from others. Each might ask himself or herself, "What do I *really know*, what do I myself have, what can I best do? What is *my* peculiar private contribution to the public good?"

CHESTER CAMPBELL

President, Minnesota Music Teachers' Association

Chester Campbell

To insure larger professional and business results, the music teacher might follow something in the order of this scheme:

1. Plan to *give* more, not only in technical instruction, but also in personal encouragement based on analysis of the pupil's needs.
2. Take an inventory of teaching methods, personal interest, concentration during lessons, teaching material, inspirational reading, and previous results.
3. Join the local Music Teachers' Association, and work through it to promote the welfare of the profession.

LEVIN HOUSTON, III

President, Virginia Music Teachers' Association

The private teacher of music will promote his professional and financial status in the community, if he:

1. Will continue his own study.
2. Will give frequent public performances.
3. Will avoid a routine, both in the choice of material and in the manner of presenting it.

A good motto is: "I will constantly strive to make of myself the kind of teacher with whom I would enjoy studying."

By continuing with one's own study, by frequent public performances, and by avoiding the routine, both in choice of material and in the manner of presenting it, the private teacher will, at this time, or any other, greatly increase his professional and financial status in the community. A good motto is: I will constantly strive to make of myself the teacher I would enjoy studying with.

ARTHUR OLAF ANDERSEN

President, Arizona Music Teachers Association
Dean, College of Fine Arts, University of Arizona

Arthur Olaf Andersen

The most valuable and contributing factor to success, for the private music teacher, is advertising. By this I do not mean blatant, indiscriminating propaganda, but dignified, authoritative, disseminated information.

The teacher should make a careful survey of his field as to the available students, and he should reach the parents of all prospective material through a follow-up system of good sound reasoning as to his own status as a teacher and the proved excellence of what he has to offer. He should develop a series of frequent studio recitals, and invite parents of possible future pupils to attend.

LEON C. SORLIEN

Music Chairman, North Dakota Educational Association

Leon C. Sorlien

In order to insure larger professional and business results during the coming year, the private music teacher should:

1. Determine to take a more personal interest in his pupils.
2. Contact public school music teachers for more and worth while talent.
3. Offer some sort of scholarship, either for those who sign up early or for outstanding progress.
4. Render community service wherever possible, so as to become known by more people.

PRICE DOYLE

President, Kentucky Music Teachers' Association

Price Doyle

Granting that the preparation of teachers has been sufficient, perhaps the thing which will most advance their general interests in their communities is to "Tap the supply at its source." In other words, they not only should coöperate with but also boost the work of the Public School music teacher, who is engaged in mass instruction. There can be no conflict between the two programs.

PEARL McDONALD

President, Washington State Music Teachers' Association

Lasting success in the music profession will not be accomplished by a stroke of supersalesmanship. If we must have a keynote, it should be:

"Develop the Amateur Spirit."

Success in 1939 will be measured by the extent to which we have learned to develop musicians rather than "star performers;" and to make music an activity, a recreation in the lives of the ninety-five per cent who for one reason or another can not be virtuosi.

Not this course or that, this method or that, but ministering to the individual needs and capabilities of every student, these are the answers that will spell increasing success.

DR. ARTHUR E. WESTBROOK

Member Executive Committee, M.T.N.A.
School of Music, Illinois Wesleyan University

Arthur E. Westbrook

A thorough studio renovation, with some modernization in appointments, the latter at small expenditure, would create an atmosphere attractive to children and adults alike. In many instances this renovation could well extend to the personality of the teacher, making that person not one set apart (there are some refreshing exceptions) but a "regular" citizen of the community in which he lives and teaches. Such an innovation would unquestionably attract more business to the private studio.

MRS. ELLA CONNELL JESSE

President, Oregon Music Teachers' Association

Ella Connell Jesse

In Oregon the most important of three serious problems confronting the private music teacher, is the project of giving free music lessons.

When confined to the original purpose, this has its value.

If the privilege of investigation could be open to Music Teachers' Associations, the project would be helped and our teaching profession, present and future, would be insured and protected.

VIRGIA POYNOR

President, Arkansas State Music Teachers' Association

Virgia Poynor

There are numerous ways that private teachers may increase their classes; but to my mind the most important one is *Coöperation*.

As president of our State Association I receive letters from teachers containing such statements as this: "The high school is organizing a band, an orchestra, or a glee club. Can students get credits for participating in these when they do not do the same study as my private pupils? If they can, I know that my class will suffer a great loss in number."

If these teachers only could get a broader view of the whole situation! These organizations create a larger interest in the whole music field; latent talent is awakened, which will demand private lessons on various instruments, the piano coming in for its share.

Observation has taught that these students are not going to select a teacher for private lessons, who has "knocked," as they express it, on their organizations. This prejudice holds over for years. Just this summer I suggested a private teacher to a high school boy; but he dismissed the suggestion with a shrug and saying, "I haven't forgotten how she knocked on our orchestra."

Coöperate with all the music forces about you, and you will soon find the public coöperating with you.

EDITH LUCILLE ROBBINS

Chairman, Council of State Presidents, M.T.N.A.
Editor, M.T.N.A. Bulletin

As a voice teacher, I began several years ago the plan of limited enrollment in small

Overcoming a Musical Crisis

By the Famous Prima Donna
MME. LOTTE LEHMANN

From "Midway in My Song"

EDITOR'S NOTE:

The Etude Music Magazine is pleased to be privileged to publish the following chapter from Mme. Lotte Lehmann's autobiography, "Midway in My Song," by permission of the Bobbs-Merrill Company (copyright 1938). Mme. Lehmann was born at Perleberg, Germany. She studied singing in Berlin as indicated in the accompanying article. Her début was made in Hamburg. For a time she became a highly valued member of the Vienna State Opera Company, making a specialty of the rôles of Richard Wagner. Since then she has appeared with great success in many of the foremost opera houses of the world, including the Metropolitan Opera Company of New York. Her story of her experience in being "turned down flat" by two very eminent teachers is certainly unusual and should be of interest to all singers. Her life is the perfect example of triumph through hard work and persistence in hard work.

—Atelier Ellinger

AS SOPHIE IN STRAUSS'S "DER ROSENKAVALIER"

THEN BEGAN ANOTHER PERIOD of serious, concentrated study. The whole style of this school of singing was entirely different from that of the Royal Academy. Here there were swarms of foreigners wanting to learn singing in exchange for vast numbers of dollars, elegant extravagant creatures whom I gazed at open-mouthed. There was one simply lovely girl I always used to watch with shy delight: Betty Kalisch, who afterward married Felix Weingartner. She was one of Frau Gerster's favorites. Nobody paid any attention to me, of course. I stood at the doors, feeling very much of a stranger, quite overwhelmed with all the elegance, beauty and self-possession round about me.

IN "DER ROSENKAVALIER"

Fräulein Reinhold took the business of singing very seriously. We had to sing with a little stick jammed between our teeth to accustom us always to keep our mouths equally wide open (a method of which I do not approve because, among other things, it makes the tone rigid and robs it of the loveliest quality one can strive for—the quality of flexibility).

At first it was most difficult to keep the stick in place; every few minutes it would slip out of one's teeth, a constant source of suppressed joy to the other pupils attending the lesson. Fräulein Reinhold had not much sense of humor for that sort of thing. One day she asked a charming young American who took particular pleasure in roaring with laughter at the refractory stick: "Do you actually sing to learn something, or for your pleasure and mine?"

"Oh," answered the pretty little miss, "it's Mother who wants me to learn singing. I shall never sing for my own pleasure, I shall sing for Mother's pleasure." Which certainly was disarming. . . .

There was great excitement one day when the aged Maestra, Marchesi, came to Berlin. A tea was given in her honor, and for the first time in my life I, together with all the other pupils, received an invitation to a grand reception. I squeezed myself shyly into a corner where with beating heart I watch all those delighted-looking ladies shaking hands as cordially as if it had been an unexpected pleasure to see one another there. A feeling of sadness overcame me. Would I ever learn to conduct myself in this easy, self-possessed manner, to feel that I belonged and not so out of it and sure to be in everyone's way if I didn't squeeze myself into the most out-of-the-way corner? . . .

Then they started singing. Julia Culp's wonderful voice floated in silver streams through the room and everyone else who sang rivaled her in beauty of tone and expression. At least so it seemed to me and I thought: "Oh, I'll never learn to sing like that!" . . . And the afternoon that gave pleasure to so many made me deeply dejected.

During this time I returned to Perleberg only once. The president of the Perleberg Women's Institute was Frau von Saldern, the wife of the Ritterschaft director who had been Papa's chief in our Perleberg days. So now I appeared on the concert platform before an audience of my townsfolk. I stayed with Frau von Saldern; that is, in the principal Ritterschaft building next door to our dear old house which looked like a lost paradise to me. Everything had changed so much; the Saldern's house I had once regarded as a wealthy mansion filled with costly and unaccessible objects—and now I passed through its rooms with a slightly disillusioned feeling: so this was what the world was really like? A suite of quite pretty rooms awaited me, stripped of all enchantment—for now I had seen grander and lovelier rooms. I was almost sorry to have my memories spoiled. But our garden and our dear old house, they still looked like home. Yet not for a single moment did I long to be back in the little town where I had grown up.

I Sing for Herr Bake

SHORTLY AFTER, FRAU VON SALDERN WROTE and told me I was to have an audition in the near future with Baron zu Putlitz, the general director of the Stuttgart Court Theater. I was very grateful and excited—for now the possibility of an engagement was actually approaching and this to me meant not only the gate to the achievement of all my hopes, but also a possibility of at last earning money and easing the burden that my parents and my brother had borne for my sake.

Fräulein Reinhold was not very pleased with this idea, as she rightly considered that I was not really ready to take engagements yet, but she finally recommended me

Let's Go Caroling This Christmas

By FLORENCE SMITH, M. M.

PLACE AND TIME: A typical mid-west Main Street; Christmas Eve; and perhaps not quite a typical town, for here a citizenry with vision has had colored lights strung in archways across the street—someone has an artistic sense.

Perhaps not a typical town, for here is a mixed population. There are Poles and Syrians; there are Swedes and Germans; there is a sprinkling of Scottish, and there is a lighter sprinkle of good old Yankee. A melting pot, this city; but on December 24th its people are all of one mind—hurrying. The stores are brilliant; the coverlet of snow upon the pavement reflects the colors of the strung lights; the scrunch of shoes on battened snow is scarcely hid by the muted hum of throttled automobiles weaving their way through the press of hastening humanity, its combined arms weighted with parcels.

And then a sudden pause in the crowds. I came to the doorway of one of the brilliantly lighted dime stores. Bells are ringing; from a gray church spire on the opposite side of the street there are chimes ringing a familiar Christmas carol. A stranger stops with hand upon my arm. "What is it? Why chimes ringing at this time of night, and the church is dark?"

And I explained. "This is a town of vision. Someone has thought of Carol singing." There on the steps of the church a crowd of warmly wrapped people were gathering. I pointed them out to the stranger—"Those are members of a community choral group. They have with them singers from Parent-Teacher groups. Presently you will see Girl Scouts arriving, each hooded against the weather, each holding a lighted red lantern; and you will hear the carols sung on the steps of the church. You will see the police halt traffic—slow it down, those cars which cannot stop—so that the noise of the cars will not drown the music. You will see a truck come and back across the footway. There will be a piano on it; and there will be a pianist to accompany the singers. There will be a director mount a chair from which to lead. You will see the words of the carols distributed by boys to the public waiting and watching; and after the first song or two you will hear the public join in the singing."

An Eve of Carols

THAT WAS WHAT I TOLD the stranger; and that is what the stranger saw. We listened with keen appreciation. There was *When Shepherds Watched Their Flocks.* The clear voices swept across the crystal air as the sound of the chimes died away. *Joy to the World* pealed out as the youthful singers took up the notes and swung their red lanterns high. *O Little Town of Bethlehem*—and the crowd had begun to join in. Nearby a grizzled veteran doffed his hat against the near zero night, and sang, in a cracked and husky tenor, *Silent Night,* but he sang in German.

And then the singers mobbed away. The truck took up its burden of piano again; the traffic officer waved the cars ahead; and the stranger said, "Is that all? If it is all, I tell you I feel the Christmas spirit more than ever. Those carols did something to me. I was lonely—I . . ."

"Come with me," I urged her. "Come and see the ending of this." I took her to a nearby restaurant, and there we found the singers, crimson cheeked, cold of finger, but glowing with a fervor left over from their task. They were having hot chocolate; hot coffee; sandwiches; doughnuts.

The First of Carols

AND THAT IN A NOT SO TYPICAL mid-west city of these United States.

The stranger and I—we spoke of carols—those carols than which there is nothing that adds such joyous security to the heralding out of the holiday spirit. There's music in the air; for the carols are carolled everywhere—in homes, in churches, in schools, on the streets, over the air by radio.

Joy, exultation, the heart stirrings of a million million persons, strung around the world by notes of song like colored lights strung across a roadway.

Christmas Eve—and I verily believe that the first carol ever sung was that by the heavenly angel chorus on that first Christmas Eve, two thousand years ago, in the city of Bethlehem, when "Christ, our Saviour was born." I always think of that carol when I hear the strains of Christmas music. They sang "Glory be to God on High, and on earth peace, goodwill to men." . . . "Glory be to God—peace on earth . . goodwill to men." Could they mean it?

The Modern Carol is Born

A FRANCISCAN named Jacopane da Todi was the first writer of carols. He was an Italian, as his name attests. He lived in the thirteenth century. It is said that the friars gathered around St. Francis of Assisi and attempted to tell the story of the gospel in a more human way; and in so doing they needed music to complete the setting. So the Franciscan da Todi composed songs about the Birth of Christ. These they used in a tableau that showed the surroundings of the manger where the Christ child was born.

This idea, as ideas always do, spread, and in its spreading went to Spain, to England, to France and to Germany.

Carols were not always devotional in character, in fact many were decidedly secular and ofttimes depicted drinking scenes and real hilarity. The parading of the boar's head and the singing of wassail songs were truly uproarious in character; and in ancient days these were distinct features of a glad and festive Christmastide.

In the fifteenth century came the "French Noel" and the English Christmas carols. Here again the English carols ranged from dainty and beautiful lullaby melodies to the really obstreperous drinking songs.

But there came a day. Luther and the Reformation began to spread, and in the wake there came to be a really beautiful devotional song of the Christmastide. The ushering in of the famous eighteenth century brought to us the devotional and dignified carol hymns, such as *The First Noel; Hark the Herald Angels Sing; While Shepherds Watched Their Flocks by Night;* and *O Come All Ye Faithful.* The last, the most loved of them all. It is used for choir processionals, as a hymn, and also as a carol. It bids men to "Come and adore Him, Christ the Lord."

An Immortal Pair

THE SONGS *O Little Town of Bethlehem,* and *Silent Night,* both are quite modern. In fact both are nineteenth century contributions. An American named Phillips Brooks made a visit to Bethlehem in 1868. He was there on Christmas Eve. He was inspired by what his eyes beheld and his ears heard in that ancient city. On his return he wrote *O Little Town of Bethlehem.*

Equally interesting is the story of *Silent Night, Holy Night.* The story goes that the thought of this was born in the little village of Arnsdorf, Austria, in the beginning of the nineteenth century. The poem was written by a minister named Joseph Mohr. The music was written by Franz Xavier Gruber, who was a church organist and a school teacher in this little Austrian settlement. The song was first performed on Christmas Eve of 1818, in the parish church of St. Nicholas, Oberndorf, near Salzburg. Mr. Mohr, the author of the beautiful words, was the rector of the church.

The song was cordially received. It did not appear in print until 1840, twenty-two years after it was first sung. It was considered for some years as a folk song, and is commonly known as "Folksong from Zillertal," because an organ builder from Zillertal was repairing the organ at St. Nicholas church the evening on which it was sung, and the repairer was captivated by the unpretentious melody, so much so that he carried it back in his memory to Zillertal. There he knew a quartet of sisters named Strasser. He played and sang the theme for them. They recognized its beauty and decided they would use it on their concert tours. It became popular and was heard through Austria and presently in the larger cities of Europe. The charming melody now has traveled round the world.

Franz Gruber's youngest son, also an organist, vouches for the truth of the story. It was not possible to mark the church where the first performance was given, because that church was washed away in the Salzburg flood of 1899. However, today, in the small town of Arnsdorf there may be found an old residence, the place that was built on the site of the former church. Above the door hangs an old motto which reads: "Silent Night, Holy Night, who brought you into being song?"

Silent Night, Holy Night is really not a folk song, nor is it a carol. It is a sublimely beautiful but simple bit of music that depicts gloriously the night of the Saviour's birth.

A Monument of the Ages

NO STORY OF CAROLS would be complete without mention of Handel's oratorio, "Messiah." This is a carol of airs, recitatives, trios, choruses, and so on. It is founded upon scriptural narrative; and it is performed without scenery or action.

The words for the "Messiah" are taken from the Holy Scriptures. Handel was born in Halle, Germany, close to the close of the seventeenth century. His father was a doctor of medicine and an excellent surgeon; but he had little appreciation of music. He did not want his son to be a musician; he wanted him to become a lawyer.

George Frederick Handel was bound to be a musician. His father gave in; he secured for the boy the best teacher he could find, and presently he became proud of his young son.

Handel traveled the none too rosy path of music. When fifty-five years old, illness overtook him. He was paralyzed. His funds were low. His mind turned to the deeper things of life. He was a genius and a beautiful character. He said, "I am not going to do any more composing in the field of opera. My endeavors shall be spent in the field of oratorio; for sacred music is best suited to a man descending into the vale of years."

In this field Handel gave to the world the finest of its kind. He brought himself enduring fame.

He commenced this immortal oratorio, "Messiah," August 22, 1741, and the first part was completed on August 28; the second part, September 6; and the third part, September 12. The instrumentation was finished by September 15th; so that, in all, it took just twenty-four days to complete it.

It was performed for the first time, on April 13, 1742, in the Music Hall, Fishamble Street, Dublin, Ireland. This was for the benefit of the society for relieving prisoners, the Charitable, Infirmary and Mercer's hospital. Handel at that time was visiting in Ireland. From there it was taken to England, and the following March of 1743 it was given for the first time there at Covent Garden Theater. Since 1750 it has been performed annually in England in the Chapel of the Foundling hospital, for the benefit of Charity. I heard the "Messiah" given in its entirety in the Royal Albert Hall of London, in 1927. A chorus of five hundred voices, known as the Royal Choral Society, an orchestra of one hundred pieces, and one of the world's largest organs, with H. L. Balfour conducting—believe me, it was certainly thrilling to hear such a production. After all, who could ever forget the stirring *Glory to God;* or *For Unto Us A Child Is Born,* especially where its words and music thunder out "And his name shall be called Wonderful, Counsellor, The Mighty God, the Everlasting Father, the Prince of Peace."

A Ruler Moved by Music

IT WAS THE INSPIRED and inspiring *Hallelujah Chorus* which, away back in 1743, so moved the British king that he rose to his feet and the audience immediately followed. They remained standing until the chorus had ended. That is why to-day, whenever this great chorus is presented, people stand. A worthy and a noble act.

Then the very last part of the "Messiah" is "magnificence personified"; it is the final *Amen.*

To-night, as in years past, from our proud cathedrals, from our little hamlets, and from over the air, will float the strains of this great oratorio. Its message is the word of God; and its music was inspired by God and brought to us through Handel.

We may well be glad that Handel's father did not make a lawyer out of his son; for he was born to become a blessing to the world through the avenue of music. The characteristic qualities of his music are simplicity and grandeur; and his music is truly inspired and noble.

So to-night, as in years gone by, the hauntingly beautiful carols are coming to us from all the corners of the earth. They have their messages, and they somehow bring a quieting sense which is appropriate to the celebrating of Christmas.

It was our own great poet Longfellow who wrote:

"I heard the bells on Christmas Day,
Their old familiar Carols play,
And wild and sweet, the words repeat,
Of Peace on earth, good will to men."

Some Vital Problems Of The Clarinet

The Problem of Tone

By WILLIAM H. STUBBINS

THE CLARINET, long recognized as the backbone of the band and as an indispensable member of the symphony orchestra, as well as a beautiful solo instrument, has claimed the serious consideration of many composers and artists. Its dynamic possibilities, both in large organizations and in small ensembles, has established its claim to the title, "King of the Woodwinds". The fact that the clarinet is the most recent of reed wind instruments, being only some two hundred years old, and that its system of fingering has been perfected only during the last seventy-five odd years, is of peculiar significance when its popularity and importance are considered. As a contrast, the ancient flute, the venerable viol family, the double reeds, the brasses, and the primitive percussion groups have provided man with the means of music for most of his life. The clarinet, by virtue of its youth, may be named as the true instrument of modernity. Due to its tender age, the clarinet does not possess the traditionalism nor, indeed, the respectable conservatism of its more conventional brethren in the instrumental family. In fact its first cousin, the saxophone, is known as the scapegoat of the family, and is only now and then admitted to their sedate gatherings without more than a raising of the elite eyebrow.

In the light of this historical background, the fact that the clarinet has become perhaps the most widely studied and played of all wind instruments gives rise to several very interesting speculations. The importance of the school band and the various other educational fields of music are of course the medium in which such discussion and speculation will take place. The writer believes, with other serious minded educators, that the whole of the artistic, cultural and creative future of the art of music, lies within the realm of educational music. It is only natural, therefore, that any discussion of the various problems of playing an instrument should be treated with respect to that realm.

Because of its youth and because of its lack of tradition, the clarinet presents many problems to the band leader and to the aspiring performer. Only discussions such as this will serve to clarify, if not to solve them. Progress in any way does not consist of resignation in the face of difficulty. It must be fought out, torn apart, added to, subtracted from, analyzed, correlated, and in general subjected to any method of solution available. One of the most painless methods is the pith of suggestions elicited from the experience of others. It is at once the most vicarious and the most efficient, if not final way. We have our separate individualities, and all possess our idiosyncrasies of learning and of practice. But no man ever was born who could not profit by coöperation, and it is by just that method that the future success of any project will be assured.

The clarinet, like any individual, possesses its idiosyncrasies. They are most subtle, and only by the long process of metamorphosis from neophyte to devotee will the individual performer be able even to recognize them. But there are problems which the clarinet has in common with other instruments, and which are shaded by its own peculiarities. These are at least subject to discussion and there are three problems which we feel to be pertinent and fundamental: First, The Problem of Tone; Second, The Problem of Technic; and Third, The Problem of the Tongue or the *Staccato*. These problems—the three "T's" of clarinet playing—are the basis of a sound musicianship as far as performance is concerned.

The Basic Problem—Tone

THE FIRST OF THESE PROBLEMS, The Problem of Tone, is the most basic of the three, and the one which we will discuss at this time. Each of these problems constitutes a dualism. Fortunately for us this natural device of dividing in order to rule is a prearranged and a time honored one. That is to say, we find on the one hand the physical approach to the problem and on the other hand the mental or intellectual concepts concerning it. As far as the tone is affected by the physical approach, it is dependent on the various physical activities of the individual in his relationship with a suitable instrument in order to control the sound produced in such a manner as to create what is called, specifically, a musical tone.

The physical activities of the mouth, jaws, lips, teeth, throat and oral cavity in producing a tone are grouped together and called by the name of embouchure. This activity comprises a delicate and subtle adjustment of the various factors in order to attain the best results. The first step in attaining an embouchure is a physical one, that is to say, a "feeling" of the various organs or muscles to be used in tone production. The student should try to feel his jaw muscles as they move, his throat as it opens or closes, his lip muscles as they expand and contract. These simple physical acts which we are so accustomed to performing that we forget them and they become reflexes, are very much like truisms in thought. It is only by really concentrating on them that we at last come to a true realization of their relationship.

After attaining a certain degree of relaxation and concentration of the muscular actions involved, certain positions for the correct embouchure may be assumed and the connection between the muscular and skeletal activities noted. By first going through the routine above it will be found that upon explanation and understanding of the correct positions of the embrouchure, the physical activities will be more easily controlled and developed.

Important Details

THE CORRECT EMBOUCHURE consists of the following positions. The upper teeth should be placed on the mouthpiece about one-half to five-eighths of an inch from the tip. The lower teeth should be covered by one-half of the red part of the lower lip. The lower jaw should be pulled down as when one speaks the syllable "aw" and the cheek muscles should be contracted in a sort of sardonic grin. The corners of the mouth should be pulled back and held tense, not tight. It must be kept in mind that all pressure on the reed must come from the sides of the mouth and the cheek muscles rather than from a pushing up of the lower jaw. An axiom to remember is, "do not bite." The muscles of the throat should be relaxed and the throat open. Let the student remember that in playing the clarinet, essentially the same situation prevails as when a vocalist produces a tone. The only difference is that in clarinet playing, the reed, which constitutes the vocal chords of the instrument, is outside the throat instead of inside of it. There must be no constriction or impediment to the free passage of breath from the diaphragm to the instrument. All muscles must merely control the flow of breath, not force or impede it. A good tone is dependent upon a relaxed muscular action with control.

Having mentioned the diaphragm, another point of physical activity arises which is every bit as important as the embouchure in the correct production of tone. Here again clarinet playing and essentially all wind instrument playing are concerned with the same problem as vocal production. The diaphragm, which is a large muscle dividing the stomach from the lungs, is the master of the situation. It must be developed by exercise in the same manner by which all muscular activity is developed. The action of the diaphragm may be observed by lying in a horizontal position, fully relaxed. Breathing naturally and easily it will be seen that the diaphragm slowly rises upon inhalation and slowly falls upon exhalation. This is the essential cue to the whole matter of correct breathing. A control of the flow of breath by means of a development of the diaphragm muscle will assure an even, unwavering, steady, solid and full tone. When more tone is needed, it is necessary only to increase the pressure of the diaphragm. For less tone it is simply necessary to use less pressure. Bear in mind constantly that a soft tone is not different

WILLIAM H. STUBBINS

Instructor of clarinet, University of Michigan; formerly assistant to Clarence G. Warmelin of Chicago and solo clarinetist of the Warmelin Ensemble and University of Chicago Band, member of Bachman's Band and of other well known organizations. He is a graduate of Chicago University and has been a frequent judge at band competitions.

A Monthly Etude Feature of practical value, by an eminent Specialist

MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Music appearing in the Music Section of this Issue

MIREILLE
By STANFORD KING

Here is a waltz that is different in many ways from the conventional offering in that form. It is somewhat modern in melodic and harmonic treatment and flows along with a graceful rhythm throughout.

If proper observance is given to phrasing and tonal nuance it will sound much more advanced in difficulty than it really is —a point that always finds favor with the amateur pianist.

Use care with the pedal, although there is small excuse for going astray in this regard as it is so plainly indicated.

Observe the *sostenuto* marks over the accompanying chords of the left hand in the first theme and be sure the melody line is well defined at all times.

A somewhat brighter treatment may be given the second section. The tonal values too are a bit more vigorous in this section.

Articulate the short passages in eighths clearly and distinctly and strive to perform the whole with the utmost grace and elasticity.

SILENT NIGHT
By FRANZ GRUBER

Here is a chime arrangement for those who like chime effects, of the ever popular *Silent Night*. Its appearance in the December issue of THE ETUDE is most apropos and it is always a welcome studio assignment at this time of year. To produce a bell effect strike the keys sharply and with somewhat rigid fingers. This adds to the percussive effect and, together with the pedal adds considerably to the illusion of "bell tones". The tune itself is so well known, it needs no further comment in these columns. The arrangement is an easy one and can be handled by any second grade pupil. It will also afford entertainment for the adult amateur or "parlor pianist".

THROUGH AN OLD GATEWAY
By GEORGE J. HECKMAN

Aside from its musical value, this composition offers a splendid etude in finger *legato*.

The first theme throws most of the burden on the right hand while the second section calls the left hand into play.

Several other important phases of pianism are also developed, such as cross-hand playing, phrasing and clean use of the pedal.

Note the many swell and *diminuendo* signs and strive to color the various passages accordingly.

Apply arm pressure to the opening chords of the second theme to produce the best possible singing quality.

Keep the title in mind and try to create the atmosphere thus suggested.

IN AN OLD MANSE
By R. MARIAL

Here is an interesting number written in the style of an old minuet. Let the right hand melody progress sedately against an ever moving left hand accompaniment. Note the many examples of *portamento*—indicated by the curved line and the dots. The Trio section opens with *staccato* eighths (wrist *staccato*) followed, a few measures later, by slurred groups of sixteenths. Roll off the slurred groups in three's as indicated and use well articulated finger *legato* on the descending diatonic passage in measure 27.

Give proper attention to the syncopation beginning measure 33. Remember always to give a slight emphasis to the syncopated beat. The first theme is in the key of F major and the Trio section lies in B-flat major, subdominant key.

After a reëntrance of the first theme (D.C.) the piece comes to a close at *Fine*.

WHEEL-WHIRL
By L. E. ORTH

Wheel-Whirl offers an excellent example for the development of independence, evenness and general agility of the fingers.

Both right and left hand must be under perfect control and only by clarity and precision can anything like a descriptive rendition be accomplished.

Properly played the effect is one of perpetual motion, as is intended by the title.

It should be studied first at slow *tempo* with well raised and clearly articulated finger action. Later, as speed develops, allow the fingers to remain closer to the keys (this in itself promotes speed).

Let the left hand accompaniment be played lightly and sharply detached. Use the pedal sparingly.

The middle section marked *fortissimo e marcatissimo* will in most cases be the better for some separate hand practice. Play the right hand chords in measures 21 and 22 with arm attack. This also applies to the left hand chords in measures 26 and 27.

Note and preserve the melody line, the notes of which are all played by the right hand thumb, in the section beginning measure 41 and ending with measure 56. Use arm pressure on these melody tones while the hand rolls off the other notes of the figure.

Practice the *Coda* until you can end the piece in brilliant fashion.

SUNDOWN
By RALPH FEDERER

This piece is in lyric form and the melody is easily located at a glance. It lies on the thumb side of the right hand and of course must be played with pressure touch to insure resonance.

Note the text, *Molto espressivo*, and play it as expressively as possible. The changes of pace are all clearly marked as is the pedal. Let the imagination loose and try to draw a musical picture of sundown and all that it implies.

THE SNOW STORM
By MATHILDE BILBRO

The very name of Bilbro always amounts to the stamp of approval on a piano piece. Miss Bilbro has contributed countless fine things to the piano educational literature and her grateful admirers among piano teachers are legion. Not only has she a real gift for writing but one can always be sure that she is in sympathy with the problems of the piano teacher and this is reflected in her writings.

This piece for instance, has decided value along pianistic lines aside from its interest as a composition. It develops wrist and forearm *staccato* and calls for many degrees of shading.

The middle section contains some passages to be played in a manner to sound almost like *glissandi*.

This can be accomplished by keeping the fingers as close as possible to the keys and by employing a rolling motion of the hand rather than finger action. Give proper significance to the principal notes (really melody tones) found at the end of the passages in small notes.

Observe the *sostenuto* marks and play the notes so marked with pressure touch.

This will make a fine descriptive number for the Christmas recital program.

FOUNTAINS AT PLAY
By FRANK GREY

Anyone studying The ETUDE numbers this month is bound to benefit in a technical way to a large extent. The technical diet is quite varied and balanced to a remarkable degree.

In this instance all forms of *staccato*—finger, wrist and forearm, are brought into play, and this in most pleasing fashion.

Follow the text closely; read the analytical notes at the top of the page and prepare yourself for a very palatable feast of *staccato* playing.

CONTRA DANCE
By L. VAN BEETHOVEN

Beethoven was a great lover of peasant dances and made use of them freely in his compositions. Whole symphonies have been built upon rhythmical fragments of various country dances and the results have been most gratifying indeed.

The one here presented always has been popular among pianists and is the subject of a Master Lesson by Mark Hambourg, whose work in this field is already well known to readers of THE ETUDE. Be sure to read it carefully. The lesson will be a direct help to both teacher and pupil alike.

SANTA CLAUS
By R. SCHUMANN

What could be more fitting for a Christmas assignment than Schumann's *Knight Rupert*. This Knight was a sort of Santa Claus well known through German Christmas legends. It will make a fine introduction to Schumann for the young pupil. Later as the pianist progresses to more advanced works the memory of *Knight Rupert* may serve to dispel the awesome approach displayed by so many when Schumann is assigned. He will have learned in the meantime that Schumann can be very "human" indeed.

Note the heavy, wedge shaped accents used. Give to these special emphasis. Be sure also to execute the many two-note slurs as marked. To all of you who chance upon this, "Merry Christmas and a Happy New Year"!

THE DONKEY
By ADA RICHTER

A descriptive piece which should find immediate favor with most youngsters.

In the short two-measure Introduction, the bray of the donkey is cleverly imitated and it is heard at intervals throughout the piece. Play the first section at rather deliberate pace in keeping with the text which reads, "The donkey is sad; he does not want to work." Later (measure 27) the *tempo* picks up, *piu mosso*. We are advised in the text that he is now happy and jogging along in consequence. Later he slows up then stops altogether. After the pause, measure 43, he starts up again, and so on.

The many "hee-haws" will provide practice in performing the two-note slur. Use the drop, roll touch to secure this effect.

MARCH OF THE CRICKETS
By OLIVE ENDRES

A study in grace-notes and cross hand playing, this march is also quite descriptive in character.

Snap the grace-notes into the following principal notes with one motion of the arm and fingers. Play all *staccati* in brittle manner and give plenty of emphasis to the accents.

FAIRIES' AWAKENING
By RENEE MILES

Here is a piece which can easily be handled by the First Grader. It develops melody playing in the right hand against a simple broken triad accompaniment in the left hand.

It should be played gaily and without pedal. Be sure the pupil is conscious of the phrasing. Each phrase is four measures long till the last line is reached where we find two phrases of two measures each followed by one phrase of four measures.

BIRDLING'S CHANT
By MICHAEL AARON

This little piece makes a fine study for trills.

To avoid heaviness which might result because of the trills being played by the thumb and second finger, dramatize the title as much as possible.

Pedal may be used as indicated.

INDIAN MEDICINE MAN
By ELIZABETH L. HOPSON

The Indian theme is always popular with youngsters.

Point out that the broken fifths in the left hand are meant to depict tom-toms, without which an Indian dance would be incomplete. Make sharp contrasts between *legato* and *staccato* and for the rest, let the imagination suggest the interpretation.

It may not be surprising to discover that the child is often more fertile than the teacher in this regard.

* * * * *

The writer of these columns again extends his heartiest wishes for a Merry Christmas to all and may the coming year be a happy and successful one to his faithful followers in THE ETUDE.

A Surprise That Made the Teacher Pinch Herself

(A True Story)

***By* A. CONTE**

ROBERT AND JO IDA always came together to take their music lessons.

One day Jo Ida was sick with a cold.

The music teacher was waiting for the children to come into her studio.

As the door opened she looked up in surprise to see only Robert coming in.

But what was her bigger surprise to hear Robert say, as he looked up with his enthusiastic smile, "Oh! Miss Jones, Jo Ida is sick to-day; but here are two dollars for two music periods. I want to take a double lesson, because I like it so much."

THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Glissando Again

Please explain single note *glissando*, both ascending and descending.—S. G., Ohio.

For a clear explanation and application of the *glissando* see the little piece called, *Bread and Butter* (composer unknown), a recent Presser publication. This simple, waltz-like number is the answer to the music teacher's prayer for an easy, attractive first grade *glissando* piece. For many years European publishers have erroneously attributed *Bread and Butter* to Mozart; but anyone with half a wit can see that he never could have written the piece. Even so, its fanciful (though improbable) story will appeal to children. Here it is: "One day when the boy Mozart was having tea at the palace in Vienna, with the little princess Marie Antoinette, he improvised *Bread and Butter* on the harpsichord for her—the ascending *glissandos* representing the buttering of bread (now helped along by jam) sliding galumptiously down into the tum-tums of the children. However far fetched or false the story, it is an excellent description of the way soft *glissandos* should sound. I predict that the lilting measures of *Bread and Butter* will soon make it one of the most popular first grade pieces.

Scales With One Hand Only

You gave me a most helpful reply recently in regard to working with a rhythmless pupil. Now I am coming to you with a question which has arisen in my mind only since the regular reading of your column in THE ETUDE.

I wonder why you advise giving scales to young pupils with one hand only and what objection you feel to having them use both hands as soon as they are able. I have always prided myself on giving thorough scale work to even my youngest pupils, and now, with even the seven year olds playing at least five sharp and four flat scales, I am debating whether to start the season in the old way or to try your way—M. M. W., Maine.

If your way of teaching scales, "hands together" is so successful, by all means continue it. And more power to you! My only arguments are that pupils not only enjoy scales more, but learn to play them rapidly and smoother very much sooner if they are taught the single handed "squashes" or finger group patterns recently described on this page.

When they are ready for "hands together" I usually start with C, E and E-flat majors in contrary motion—on account of the identical finger groups in both hands. After so much emphasis on scale patterns (as versus single notes) parallel motion is much easier.

Do you teach scales three and four octaves almost immediately? I hope so. Most teachers stop at two octaves, which seems to me inadequate and unwise.

Pedal and Memorizing

1. When shall I teach my pupils to play with the pedal? 2. When or how soon shall I start them in to memorizing?—L. S., Illinois.

1. The use of the damper pedal should be taught in the very first lessons, but only in the playing of unrelated single tones or chords. Try this: First, place third finger, left hand, on middle C; third finger, right hand, on middle E. Second, depress damper pedal. Third, decide how much tone (soft or loud) you want. Fourth, with the fingers still touching the keys play the tones by gently swinging the elbow tip upward and outward. Fifth, continue the upward arm movement, but leave the keys the moment the tones begin to sound. Sixth, let arm rebound lightly to the lap. Seventh, relax completely in the lap, but still hold the pedal and listen to the sound you have produced. Repeat this process in various octaves of the piano with different tonal gradations, always slowly and thoughtfully, with careful keytop preparation. Change pedal only with a different chord.

2. Also memorizing should begin at once; but do not try any fancy formulas on children or young people, for they will not work. Right through adolescence, memory is pretty much a matter of repetition and instinct, or what our grandmothers aptly called "learning by heart" (that is, no brains required). Some "does it easily," and with others it "comes hard." There is nothing else to do except to repeat until you have it automatically.

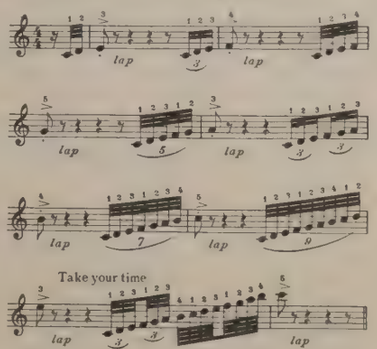
But remember always that, whether you are young or old, a good examination for your memory is to play an entire piece through—excessively slowly, softly and accurately with eyes shut, or without once looking at your hands or the music. It is one of the best tests I know. Excellent as a memory developer, it also makes listening and thinking imperative, compels accuracy, fosters "remote control," and encourages relaxation. Surely a formidable array of the feathery tribe awaiting a one stone execution! Why not try a few shots?

Tired Muscles

I am twenty-nine years of age and starting my fifth year in the study of piano. I am anxious to learn and would like to practice three or four hours per day; but if I practice that long one day the muscles in my wrists and fingers are tired and do not coördinate like they should. Would it be better for me to cut my practice to two hours a day and to practice six days per week, or to practice three or four hours one day and rest the next?

I often read of musicians practicing several hours daily, but if I do it I have to force myself against tired and unresponsive muscles.

I was twenty-four years of age when I started studying music. Would this have any bearing on the case? I would also like to know if an artificial finger exerciser and developer would correct this condition. —C. H. C., Missouri.



Once upon a time I studied with a teacher who was dissatisfied with my work. He tried to show me how badly I practiced, and how to improve, but in my zeal to please him I only managed to put in longer hours. One day when I came to my lesson I boasted proudly that I had practiced eight hours the day before; whereupon he flew into a towering rage and shouting (no, yelling!), "Get out of here! Don't you dare to come back again telling me that you have practiced more than two hours!" Then, slightly less choleric, he added, "You cannot concentrate more than a few minutes at a time. Your mind cannot give all it has for more than a very short, intensive period of practice. If you would work carefully for five minutes, and rest five more, and then at the end of half an hour change your occupation completely, you *might* achieve something. The trouble with you and all students who practice long hours is that after the first, short constructive period of work you not only undo all the good you have accomplished but also seriously deepen those dangerous brain grooves of bad practice habits with every additional minute of sitting at the piano." Then, with suddenly redoubled vehemence, "Now, clear out!" and I was figuratively but none the less humiliatingly kicked down the stairs.

That is what is the matter with you; for you have obviously not yet learned the simplest rules of practice. First, I beg you, get a good teacher who will show you how to work—but in a less violent way than mine did. After all, that is a teacher's job—to teach you to practice thoroughly and intelligently, is it not? If he cannot do that, he is incompetent.

You must learn to acquire a better coördinated, more relaxed approach to the keyboard. Throw overboard all long, tedious studies, all lengthy sequential technical exercises, also all exercises in which one or more tones are held down while the fingers struggle vainly to articulate others freely. Try constantly to apply the instantaneous "release" principle in chord practice, by letting your arm bound into your lap as soon as you hear the tones sound. Please remember that an arm "bound" or "bounce" is not a dead drop, nor is it a "snatch;" rather, the elbow springs upward and outward, letting the arm fall naturally, afterward, into the lap.

Also start each day's work with a slow, songful piece played softly with eyes shut, and without pressing or pushing a single tone.

Develop the rapid, single impulse practice used by intelligent pianists. The following are examples of such impulses.

Each group is to be played very rapidly, lightly and smoothly, with *no* accent on the first tone, but rather a slight stress on the last. Say aloud, "one" when you play this last tone; at the same instant your arm bounds in the air and falls to your lap where it rests (completely relaxed) as you continue to count, "two, three." At "four" your hand is placed back on the keys ready to start the next exercise. These should be played one after the other, with uninterrupted counting of "one, two, three, four." The exercises are good, simple examples of how rapid, one-impulse phrases can gradually be built up. Count slowly. Always think through to the last tone.

You will deduce from this (Dr. Watson!) that I advocate much less extended and less lengthy practice, with more rest and "thinking" periods. And by all means put yourself on a seven day week schedule. Do not omit Sunday, unless you cannot overcome religious scruples. All the artists I know find it necessary to practice on the Lord's Day, just the same as any other.

Your age and late start should be no deterrent, if you learn to practice well. Avoid artificial finger stretchers, for all of them are dangerous. Constant practice in five-note diminished seventh and dominant seventh chords and arpeggios is all your hand needs to develop span, solidity and strength.

Scale Fingerings

On the matter of scale fingerings, I would like to have your advice. From time to time, I have taught five different fingerings of the scales. Four of these are synchronized. In view of the fingerings that are printed in music (old fingering) is it wise to teach the synchronized fingerings exclusively?—L. D. N., California.

Heavens! I do not even know what you are talking about; and when I asked my summer class of one hundred teachers for enlightenment, not one of them could help me out!

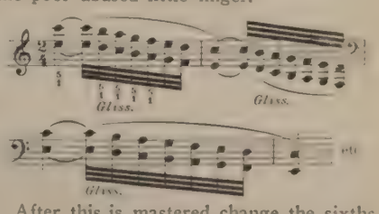
This much, however, I can say—that it is hard enough for students to learn the usual ordinary scale fingerings, so why worry about anything else? To practice a fingering which uses thumbs or fifth fingers on black keys unnecessarily complicates the problem. The few places in music which require such fingering can be practiced when they occur.

Sometimes, to give the fifth finger additional work and to smooth out a student's hand, I use the following fingering, but only for C and G major, two octaves.

Ex. 1

Also I often use the major scale form with a passing tone between the sixth and seventh steps, since such patterns frequently occur in piano music—and are usually stumbling blocks. Here it is

Ex. 2



(Use the same pattern for all keys.)

But, please forget your five varieties and your synchronizations, and from now on teach only the common, garden variety of scale fingering.

Octave Glissandos

Could you suggest a systematic Study for the octave glissandos in the last movement of Beethoven's piano "Sonata in C major, Op. 53?" My hand is large and I believe capable of mastering these glissandos.—J. M., Utah.

For a large right hand, descending octave glissandos are easy. Practice the following exercise with wrist held as high as possible, thumb very curved (in order to play on the nail) and with a little pad of cotton fastened to the fifth finger by a rubber band—in order to avoid skinning the poor abused little finger.

After this is mastered change the sixths to octaves: gradually extend the scale to two and three octaves without pause.

"The great musicians have had great minds. For instance, Liszt conversed in five languages, including Latin."—Pacific Coast Musician.

BEETHOVEN AND INSPIRATION

Beethoven's "Contra Dance in C"*

A Master Lesson by the Renowned Piano Virtuoso

MARK HAMBOURG

THE NAME *CONTRA DANSE* is of English origin, being really only a corruption of the words *country dance*. The fashionable dance, in vogue in the eighteenth century France, was known as the *Branle*, but it was later superseded in favor by the *Contradanse Anglaise*, or *English Country Dance*. Already in 1699 a book of "Suite de Dances de Roi," compiled by one, Ballard, was in existence in France, and it contained seventeen *Contradanses Anglaises*. The *Contradanse* is to be found also in French stage music of the time, having been introduced into the ballet of an opera by Dauvergne called "Les Trocquers."

The *Contradanse* is always in either two-four or six-eight time; and it consists of similar phrases of eight measures each, which generally are repeated. The music is of a lively kind, and it was a popular form with eighteenth century composers. Mozart left a large number of specimens, and Beethoven, himself, produced twelve *Contradanses* for orchestra, of one of which the piano work we have here under consideration is a transcription.

The Music Begins

THIS CONTRADANSE IN C MAJOR, marked *Allegro molto moderato*, starts with an accompaniment in the bass, which must be given ponderously, as becomes a peasant dance. The grace notes in each measure, on the last eighth note, should be played incisively and sharply; and all the eighth notes of the bass must be very detached; but at the same time the rhythm should sound leisurely and somewhat bucolic. Up to the last beat of Measure 3, the bass should be *mezzopiano*.

The sixteenth notes, with which the theme in the right hand is ushered in, on the last half of Measure 3, must be played sharply, but with care to give the exact rhythmical value to each note. The music should be given weightily, but at the same time with humor; and the top notes of the right hand must be brought out, as they constitute the melody. The sixteenth notes on the last half-beat of Measure 3, where the right hand makes its entry, must be played very deliberately, without any hurry. These sixteenth notes at the opening of the phrases occur several times throughout the first part of the piece; and whenever they appear they must be played in the same deliberate way.

In Measure 4 there is a *crescendo* which culminates on the accented chord of C major in the treble, on the second beat of Measure 5, and then *decrescendos* in Measure 6. The accents should be very much marked on the chord C—E—G in the right hand on the second half of the first beat in Measure 7, so that it acts as a complement to the accented note, C, in a similar position in Measure 5. From Measure 7 to 10 there is a continuous *crescendo*, finishing with a *mezzoforte* in Measure 11. The top notes, in the treble in Measure 10, must be brought out with marked and detached rhythm, and with a little slowing down of *tempo* to signalize the definite end of the phrase, which comes on the first beat of Measure 11, where there is an accent. A good pause must be made after the accented first beat of Measure 11, and a little hesitancy be shown on the two sixteenth notes which make their entry in the right hand at the end of Measure 11, so as to emphasize the return of the original theme which occurs here. The *tempo* then resumes its normal course. Measures 12 to 18, inclusive, are a repetition of the opening measures, and must be played in the same way.

The Rustic Beau Now Bows

THE PHRASE IN THE BASS, beginning with two sixteenth notes, F and E, on the last half of the second beat in Measure 10, must be introduced heavily, as though a somewhat clumsy countryman were dancing; and, although the tone should be *forte* at the commencement of this phrase in the left hand, still a progressive *crescendo* ought to be made up to the last half of Measure 23. In Measure 23, on the last two sixteenth notes, we find a new figure introduced, which really only constitutes a slightly more elaborate end of phrase. The running figure must be played brightly *forte*, and in a bustling manner, with a slight *decrescendo* at the end of Measure 25. This *decrescendo* leads to two little accents on the first and second beats of Measure 26, in the right hand, and there is another accent on the first beat of Measure 27.

The chord at the beginning of Measure 27 must be *mezzopiano* in tone, although weighty in touch. At the end of this Measure 27 the same figure starts in the bass as in the end of Measure 19, but this time, instead of a progressive *crescendo* being made, I make a progressive *decrescendo* with the short phrases very markedly rhythmical. When the *decrescendo* reaches Measure 31, the tone has become *piano*, and I start the figure in the right hand on the last half of the second beat in this measure, softly, but quickly make a *crescendo* and end the phrase *forte* in Measure 34, with much gaiety in expression and giving the accents as marked.

Some Attractive Arpeggios

HAVING ARRIVED at Measure 35, we have a new development consisting of an upward arpeggio-like progression of notes. This progression should be played pompously, in stately fashion, and *fortissimo*. On the last beat of Measure 37, I commence a *diminuendo;* but the incisive notes of the left hand, in Measure 38, and the sixteenth note figures in the treble of this measure must still sound highly rhythmical; and to effect this they must be played without the pedal. The pedal should be retaken in the beginning of Measure 39, and the trumpetlike chords in both hands, on the second half of the first beat, and on the first half of the second beat, ought to be played *pianissimo*, but very distinctly, the pedal being held from the first note of Measure 39, as far as the last two sixteenth notes in that measure. The arpeggio-like development is repeated in Measures 40 and 41; and the two succeeding measures are the same as Measures 38 and 39, and must be played in a similar manner.

Coming to Measure 42, I take the first top note in the left hand, which is G, with the thumb of the right hand instead of with the left hand—this to facilitate the execution. I do the same with the F-sharp on the next beat of this measure, in the left hand part, taking it with the right hand thumb.

On arriving at Measure 43, the grace notes in measures 44, 45, 46, and both of those in Measure 47, all must be very sharply played; and the accents, as marked, must be crisp. Also, all the *staccato* eighth notes in each of these measures must be emphasized. In Measure 48 there is an accent on the first note in both hands, and then a progressive *crescendo* up to Measure 50, where a sudden *pianissimo* ought to be made, which must last until the first half of the second beat in Measure 51, on the eighth note top C. I take, again, the left hand notes on the first and second beats of Measure 50, with the right hand as in Measure 42. Measures 52, 53, 54 and 55 all should sound ponderous, with the grace notes of each measure accented, and with all the marked accents deeply interlined.

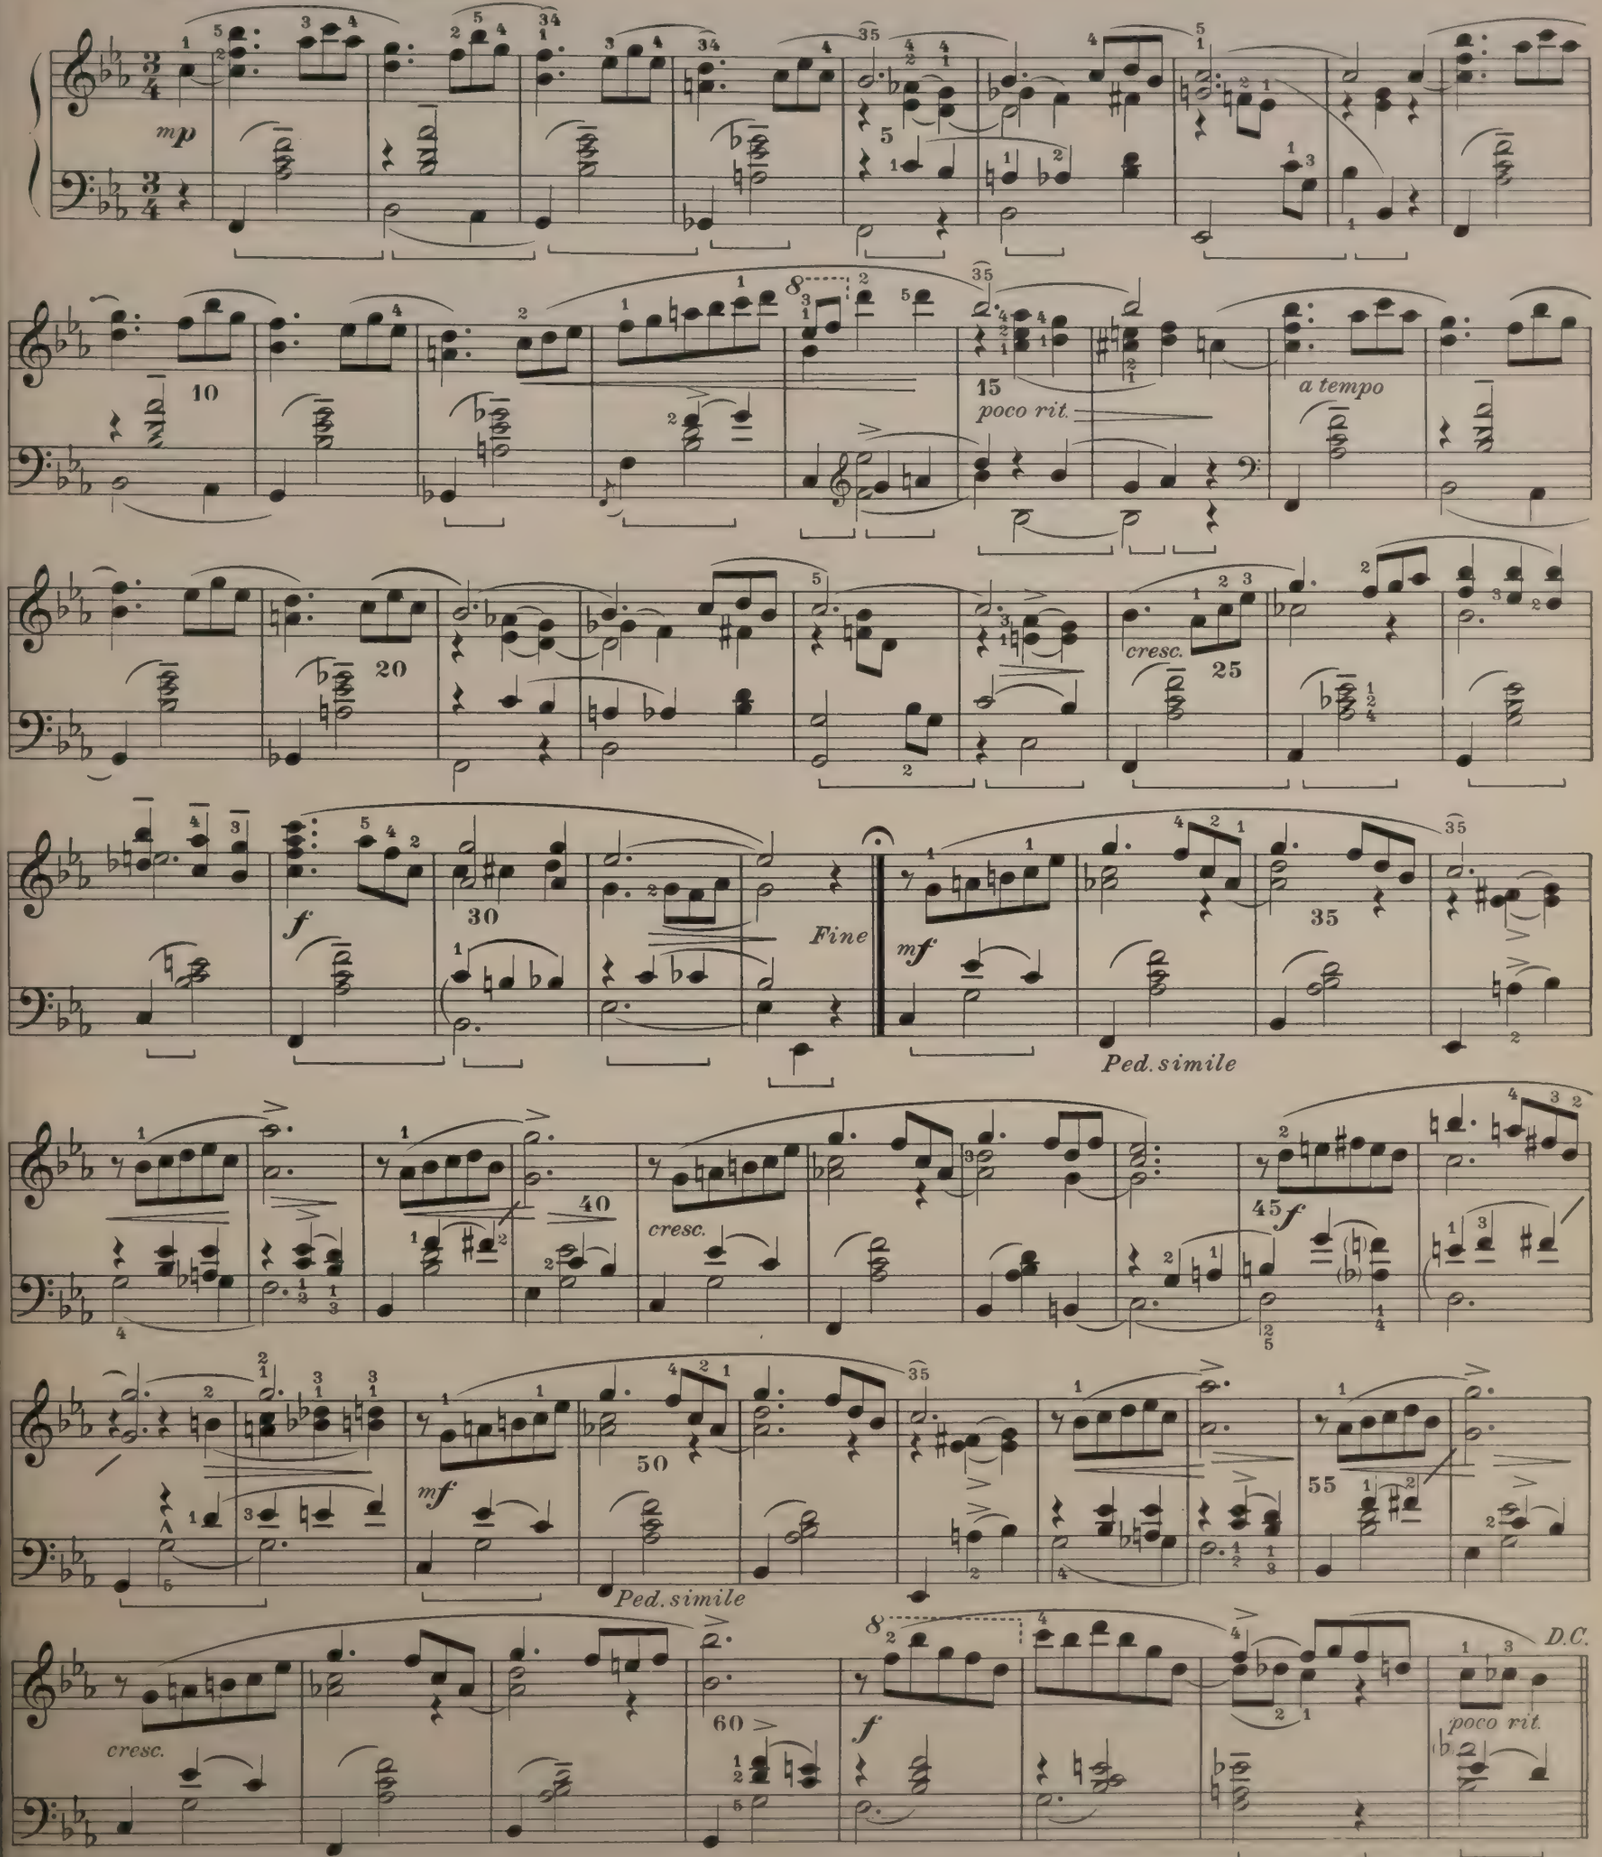
The scale, commencing in the right hand in Measure 56, is accented on the first note, C; and then a *diminuendo* occurs, gradually up to the end of Measure 57, when the tone becomes *mezzoforte* again and *crescendos* to double *forte* in Measure 59. The rhythmical figures starting on the last two sixteenth notes of Measure 59, in the bass, and lasting up to Measure 64, each hand echoing the other, and mounting in octaves, are played by me as follows: I take the two sixteenth notes, each time they appear in the left hand, on the last half of the second beat, and in the right hand, on the second half of the first beat in the succeeding measure, with the second finger of the right hand; whilst the accented single dotted notes in the left hand, on the first beat of each of these measures, and the *staccato* eighth notes on the second beat written in the right hand, I take with the thumb of the left hand. The whole of this episode should be brilliantly brought out with a rising *crescendo* up to the note D in the treble in Measure 63, on the second beat, where a *fermata* is marked. Here I make a considerable pause.

In Tenderer Mood

AT THE END OF MEASURE 63 we arrive at a new section of the *Contradanse*, which takes the form of a charming, graceful melody. It should be performed rather slower, and with a more mellow expression, to distinguish it from the heavier atmosphere of the first part. Although most of this section is *semistaccato*, it must not be played with such markedly detached action as the first section of the *Contradanse*.

In Measure 68 the first eighth note on the second half of the first beat in the bass must have a little accent, and also the first

(*Continued on Page* 823)



Note: Beethoven wrote twelve compositions which usually are catalogued under the title of "*Twelve Contretänze*," using the German orthography. These have appeared in French editions, with the translated title as *Contra Danse;* or *Contradanse* and in England often as *Contradanse* or *Country Dance*. In our edition we have used the simple English spelling, *Contra Dance*.

MIREILLE

STANFORD KING

Mireille is a charming recital valse in the modern style which affords an excellent opportunity for phrasing and the study of nuances. Grade 3½.

FOUNTAINS AT PLAY

Light Staccato Study

Like the delicate patter of rain, the fingers should play this piece with strict evenness and very sharp articulation. Many teachers will advocate playing this with exaggerated slowness at first and then, as the speed is advanced via the metronome, the notes will be played lighter and move deftly until the desired illusion is secured. Grade 3.

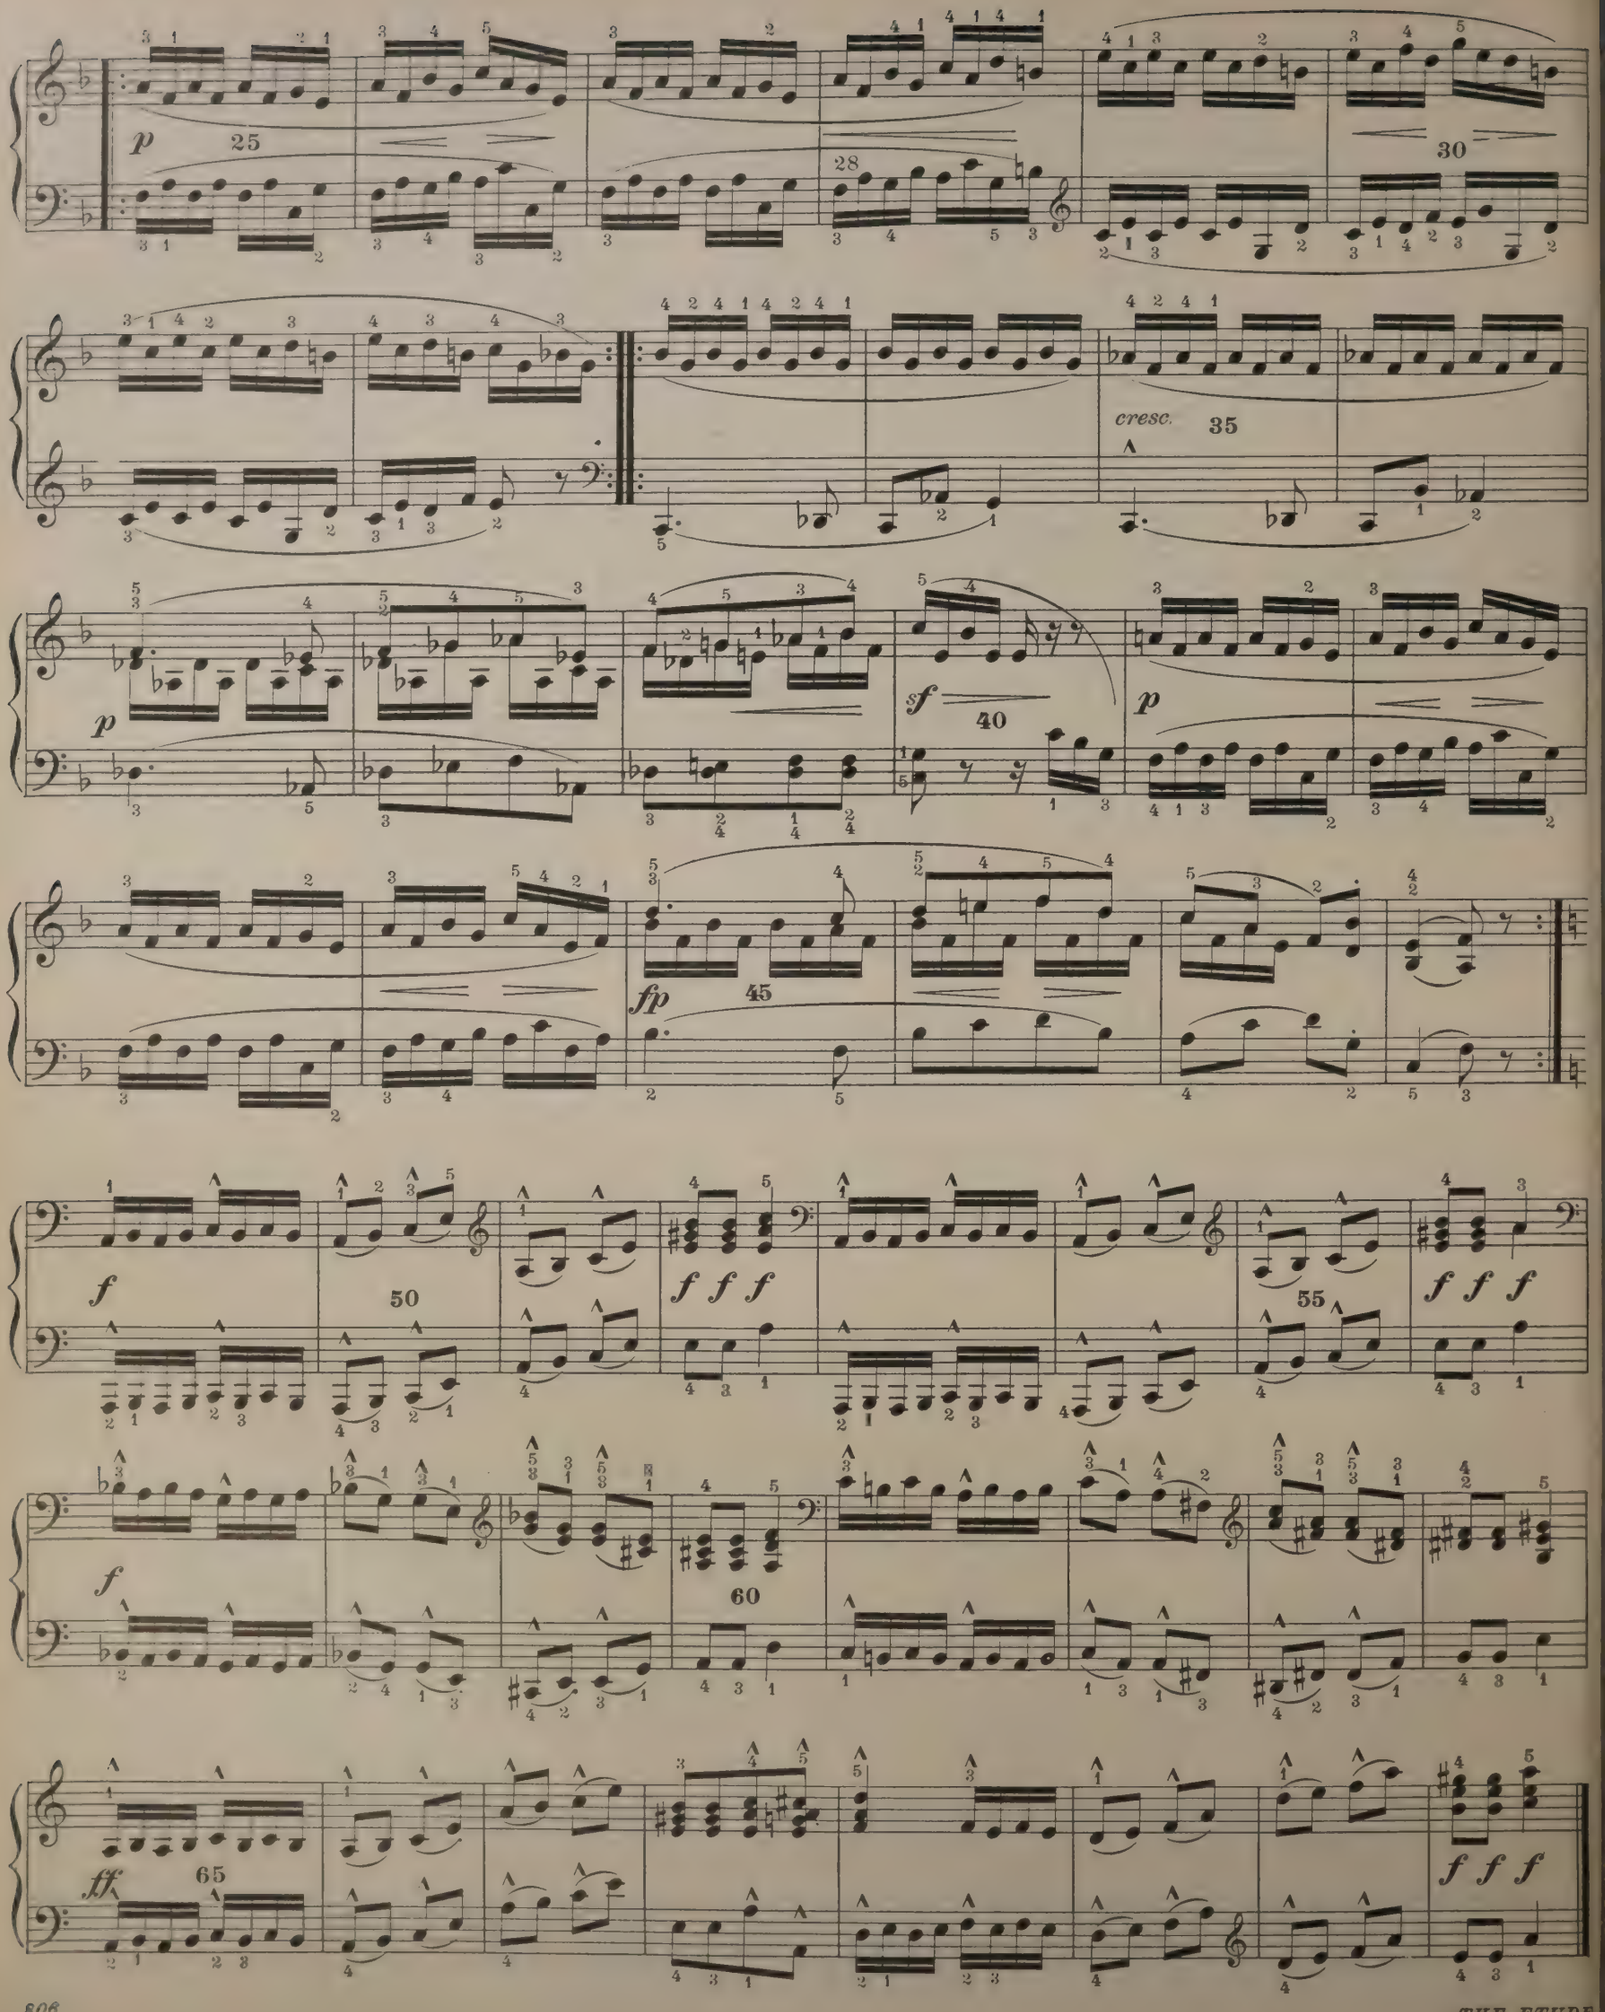
SANTA CLAUS



KNECHT RUPRECHT

The amount of musical drama that Schumann crowded into his *Knecht Ruprecht* is remarkable. *Knecht Ruprecht,* or in English, *Knight Rupert,* is the hero of a German Christmas legend, a little fellow who, like Santa Claus, brought presents for good children. Schumann, who loved children and had a large family of his own, wrote his *Album for the Young* and his *Childhood Scenes* to amuse his own domestic group. Note the tone of mystery and awe that he injects into this little piece. Watch accents carefully.

Shopping  for Charm

Theodora Van Doorn's Christmas Gift Ideas

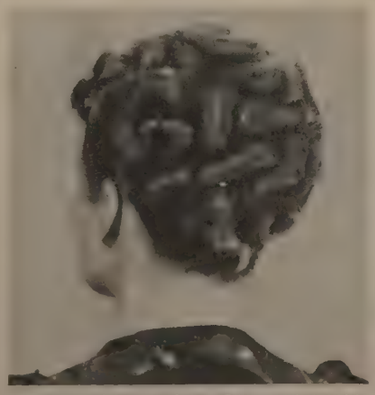
KITS FOR MEN!

Every man at some time in his life, has felt the urge to "go down to the sea in ships," sailing ships particularly. Few ever get there. But a real thrill for such "front porch sailors" is in store. The lucky man, on unpacking your gift, will find a "wooden" box, on whose top and sides appear pictures of famous old sailing ships. A clean spicy odor will drag him away from the outside to investigate the contents. Three white china containers are decorated with the same ships in a clear old blue. The metal topped flasks, which are squatty, sturdy and very masculine in character, contain after-shave lotion and talcum powder. A replica of the old-time barber's mug contains a six months' supply of soap. This well-designed package is priced at $2.75. I will gladly tell you where you can purchase it, if you will write and ask me.

Men love kits too! They wouldn't admit it but way down underneath, they know that charm can be just as masculine as feminine. And so in this issue, I report several kits for men. I kept utility and masculinity in mind, as well as the "small boy" habit of collecting odds and ends, and found as one of my selections, the lovely spacious tan cowhide case, 10½ x 4¾ x 2½", pictured above. When the confining strap and zipper are undone, it is a large brown and yellow plaid oilskin lined case, containing a large tube of shaving cream, a big box of talcum and a generous bottle of after-shave lotion. The kit is capacious enough to contain all the toilet accessories even *he* will want to cram into it. It is a worthwhile, long lasting gift for $5.00. Write me for shopping information on this gift, if you are unable to purchase it in your town.

DAME FASHION has put us into hoop skirts again! And as we move the calendar backward to the 1800's, we must appear as our ladylike predecessors did, and put up our hair. But, you wail, "mine is so short, or so skimpy, or I am so very clumsy in making my own curls." And here is where a very clever well-wisher has come to our rescue and has designed ready-made curls, attached to tiny combs, that can be pinned into place, giving a magnificent "hair-do" in less time than it takes to tell. They are, of course, made to match your own hair. They can be had as individual curls, puffs, or in clusters, to be used on top or across the nape of the neck, or as a soft bang. They are easy to comb and will remain curled indefinitely. They can be cleaned by dipping into a light cleaning fluid. The manufacturer has also made a braid of hair (which matches your own) that serves as a strap to hold those perky little hats in place, without causing an unsightly "dent" in your upswept coiffure. The individual comb-curls are priced from $2.00 each. If you are interested, write me, Room 613, 350 Madison Avenue, New York, for further shopping information.

Model before hair pieces are adjusted.

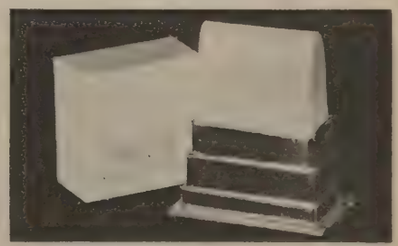


Tuckurl held in hand (curl on tuck comb) in single, double, triple and cluster curls.

Coquette Oval Cluster (10¼" x 4¼") comes in smaller sizes, too.

Combination Bang and Crown Cluster (9½"x 10½"), comes in flat and puff curl.

"Night and Day" Hair Piece—(2) 12"—forming top-knot cluster for evening wear.



Doll Hat Braid to keep hats on head.

KITS FOR WOMEN!

The fine little manicure case (6 x 1½ x 3¼") of simulated tan pigskin or black smooth grain leather, pictured above, is a splendid buy at $1.00. It contains a full-size bottle of cream nail polish—a choice from eleven exciting shades—Congo (deep orchid-rose), Cabana (tawny red tinged with brown), Tropic (soft ash-pink), Spice (exotic burgundy), Natural (cream or clear), Shell (shell-pink pastel, cream or clear), Suntan (dusky and rich), Old Rose (soft rose), Russet (misty red), Thistle (rose-beige), Rust (lovely rust-red). It also contains polish remover and cuticle remover, a small box of absorbent cotton, a file, emery boards, orange wood stick and a nail tip whitener pencil. It would make a gift to be proud of. If your dealer does not have this set, write me and I will have the manufacturer send you the name of a dealer in your vicinity, from whom it can be purchased.

Pictured is the deluxe edition of a beautifully boxed new powder base stick, which comes in flesh, rachelle, brunette and sun tan, and which has a pleasant odor. It is splendid for day-time or evening use and more particularly for a platform make-up foundation. This powder base goes on like lip stick. Its application is simple. Touch the stick to the forehead, nose and face, spreading the cream gently with the finger tips until it is smoothly blended. The dull, smooth satiny textures which the skin assumes and the new evenness with which the rouge and powder blend into the complexion, will be a revelation to any woman accustomed to putting her cosmetics directly on the skin. At the end of the day too, you will be surprised at the intactness of your make-up. This is immensely important to musicians, whose busy lives sometimes do not permit several fresh applications of make-up in a day. The deluxe size is $1.00, the utility size, 50¢, but the manufacturer has consented to send a trial size at 10¢ to any ETUDE reader who will send me her name and address with stamps (not coins or Canadian stamps) to cover mailing cost. Please specify shade desired.

Edited by Carl Reinecke

Selections from the sonatas and fantasias, and from the shorter compositions of this genius of the keyboard.

Oliver Ditson Co.

THEODORE PRESSER CO., Distributors — 1712 CHESTNUT ST., PHILA., PA.

Her Christmas Piano

(*Continued from Page* 778)

than that, every member of the family would have had far more wholesome fun from the hours spent with music than the hours spent in dissipation.

Someone has called the piano the foundation stone in all musical education. Every musician, of course, knows why this is so. Not every layman, however, understands that the keyboard enables the player to supply the complete harmonic and contrapuntal background which makes the comprehensive study of music possible. Other musical instruments are largely supplementary to those of the keyboard variety (the piano and the organ), although the accordion, the marimba, the harp and some of the fretted instruments, have means of presenting the harmonies. The piano, with its large tonal range, its sensitive and responsive action, and its relatively compact size, has been the "must have" instrument in all modern musical history.

Pianos now are far closer to the limitations of the family purse than they were twenty-five years ago. The prices for instruments have been greatly reduced, and smaller types of pianos are now adapted to lower incomes and less commodious homes. When you buy a piano you purchase,

a. The quality inherent in the instrument itself, the materials, the workmanship, and so on.
b. The reputation of the maker for sustaining that quality.

With the modern piano, as with the modern automobile, you get pretty much what you pay for. Our advice is to pay as much as you can for an established make, not as little as you can for an unknown instrument. You must not expect to get a Grade A piano at a Grade Q price.

Also, remember that a piano, unlike an automobile, is an enduring investment. If you buy "her" a piano for this Christmas, you have every reason to expect that it will be in good shape ten years from now, and in fair shape in twenty years (long after your automobile has been laid to its fantastic rest in one of those awesome graveyards of bygone prosperity). Let us suppose that you pay as high as one thousand dollars for your piano (a cheap price for a middle grade automobile) and that the piano shall last twenty years. At the rate of fifty dollars a year, is that not a very reasonable cost for all the joy, inspiration, entertainment and instruction "her Christmas piano" can bring to the home? And many excellent pianos may be secured under the thousand dollar mark.

Again let us stress, "Save the home and save America!" The piano may have a far greater part in this than the average citizen realizes.

Shopping for Charm

(*Continued from Page* 807)

A CHANCE TO EARN WHILE YOU LEARN

Several times in my browsing around among the cosmetics manufacturers, I have found new products which deserve much quicker distribution than they usually get. The tendency of manufacturers is to get their products into stores in the very large cities first. This means that the smaller places usually get these very fine products only through visits to the larger cities or through local representatives. Two or three of these manufacturers have listened with interest to the idea of having local representatives (similar to the Real Silk Hosiery representatives). I therefore rush in where angels might fear to tread and suggest, in turn, to ETUDE readers, that many of them might find such sales work both pleasant and profitable. Since I am an earner myself, who doesn't really *have* to work for a living, I feel that there are many families in the ETUDE's vast readership, some one of whose members might welcome an added income to provide for the taking of more music lessons, the buying of some added instrument, the attending of more concerts, or the taking of a musical trip each year. This month for instance, I ran across an excellent line of London lavender-scented toiletries for me and women. Nearly everyone loves lavende and these are so nicely packaged, that the have, so to speak, both eye and nose ap peal. There's a men's set (#5002) con sisting of a fancy wood shaving bowl an a tin of talcum which retails at $1.55. large oval tin of lavender bath dustin powder sells for $1.65. (#6007). Not ex pensive when you consider their quality The soap which is wonderful, sells at 15 a cake. This line, plus a good line o cosmetics would provide the means fo many a worthy musician's education an pleasure. Teachers particularly should fin this a good opportunity to extend the mu sical education of their pupils by showin them how they can earn while they learn

There would be no sense in suggestin this specifically to manufacturers unles there is sufficient interest on the part o ETUDE readers to warrant it. If you ar interested or know of anyone who migh be interested in becoming a local reta sales representative for high grade toil etries, I urge that you write me imme diately to that effect.

Your Christmas Piano

A new piano on Christmas morning will bring happiness to the heart of every member of the home—a practical, permanent reminder of a joyous Yuletide and a gift that will be prized above all others.

Thousands in America are now thinking about buying a piano, but do not know just how to begin making a wise choice.

This page gives the latest models of some of the piano manufacturers at prices to fit all purses.

In order to make your problem easier, all you have to do is to write to any of these manufacturers and ask him to refer you, with a letter, to his nearest local dealer, or, if not represented locally, to send you full purchasing details. Simple enough, isn't it?

Your request will receive special attention, and your desire can be gratified with a fine new piano in your home on Christmas.

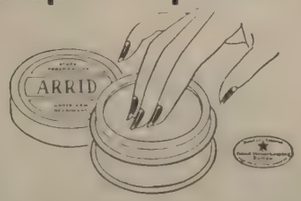
WHAT A GIFT!

Any man or woman, boy or girl will welcome it—and it costs

ONLY $1 post paid

M. STEIN'S AMATEUR MAKE-UP KIT

■ With the Xmas Season coming on, with all its plays, pageants, masquerades, balls as well as radio and concert appearances—there will be few gifts so immediately used and appreciated. Yet this gift kit—even at its small price—will give pleasure to the average user for months to come. And it's an unusual gift—one the average person might not think of. Young people particularly will be fascinated with it. *Real* make-up just like the best known stage and screen stars—many of whom have used STEIN'S make-up for years. Simply check above, write name and address in margin enclosing $1 each for the number of kits you desire.



■ If you have *regular* use for Stage make-up it will pay you to send for our regular color chart and price list. We will be glad to send them to you free on request. Simply check *this* paragraph giving name and address.

■ If you would also like to have us enclose a copy of STEIN'S 25c Theatrical Make-up Manual—free—check *this* paragraph.

Act quickly so you will be sure to have the make-up kits before the Xmas holidays. Orders sent same day as received.

Theodora Van Doorn's Christmas Gift Ideas

(*Continued from Page* 808)

Every woman, young or old, adores glamourous gifts at Christmas. There is something exhilarating in the opening of a box which discloses the sheen of gold and jewels, for we all love luxurious accessories. Think of the sheer luxury of giving the set I have pictured. Two one-dram size gold-ball screw-capped bottles of a famous cosmetician's perfumes, each with a tiny scene etched on its bottle, together with a slim golden rectangular compact, with broad classic stripes and a large imitation ruby, sapphire or emerald; also a matching jewelled lipstick. This sumptuous set is encased in a "copper and wood" gift box for $5.00. If your local dealer cannot supply you, write me and I will furnish the desired information.

Beauty, say the poets, is as precious as the rarest of jewels. One of the well-known beauty specialists has used a traveling jewel box as the inspiration of her grained leatherette case, thus outpoeting the poets. This 7 x 2½ x 5¼" beige moire lined carrying kit comes in red, green, brown, black or navy and houses a splendiferous set of beauty aids; cleansing cream, powder, lotion, liquid foundation and night emulsion cream. It is also fitted with a mirror that can be lifted to an effective angle. There is an extra pocket for your own small flat gadgets like lipstick, bobby pins, nail file and so on. At $5.00 it is a real "find". I will let you know where this kit can be purchased if you cannot find it locally.

For the male (Dad, Brother or Beau), who is so meticulous that he prefers the kit that has special places for his comb, razor, etc., I show a genuine, short grain, split cowhide "carry-all". It is a handsome suntan color and has a waterproof Keratol lining. Fitted with large sized packages of shaving cream, after-shave lotion and talcum, it is a fine present for any man who likes his leather accessories to follow conventional lines. A sturdy handsome gift at $4.25. Your dealer may have this kit or he may be willing to order it for you. If not, I will tell you the name and address of the manufacturer from whom you may order it, in answer to your postal card, giving your name and address.

Do you have a mannish tweed coat, suit or skirt in your wardrobe, which you wear and wear and wear? Work-a-day clothes, country clothes, and sports clothes are never worn with satin evening slippers and yet we carry the most frivolous compacts and lipsticks with these very homey "at ease" clothes. With the outdoors loving and living woman in mind, a noted perfumer has matched a tweed-patterned double vanity case with a tweed design lipstick which are just the things to be tucked into the deep pockets of your camel's hair or tweed coat. The set in a gift box is priced at $6.50. A card to me will bring you the name of this well-known manufacturer, who will tell you where it can be bought.

CHRISTMAS PERFUME TRIO

One of the most popular of the offering shown in the now-gone-but-not-forgotten August "Sampler," was the group of six *Faoen* perfume odors at 10¢ per bottle, in ultra modern, ultra smart, little purse sized glass and composition containers.

These little leak-proof bottles (from which the perfume will not come out until tapped on the bottom) are so different and their contents are so exceptional for the money that I could not help mentioning them again. Especially since this is the month we are playing up kits of all kinds, and *Park & Tilford* showed me quite confidentially, the delightful little ensemble that they will sell through the chain stores at Christmas this year. The three most popular odors, *Cherish, Adventure and No. 3*, are packed in a nice (but not expensive) Xmas paper box—and wonder of wonders, all for 25¢. And they have consented to include this Xmas box in my column offering for this month only.

There are so many people to whom you want to give some little token of affection at Christmas, yet for whom you cannot afford to spend a larger sum. So I suggest that you take advantage of this unusual offer and stock up both for yourself and for your friends. The offer at 3 for 25¢ mailed, is unlimited (of course within reason). Music teachers will find this a most inviting, yet inexpensive, remembrance for their feminine students.

Let **COVERMARK CLEAR THE WAY** *to Success in Music!*

BEFORE AFTER

DO YOU know someone who hesitates to appear publicly, or avoids delightful musical occasions because of disfiguring birthmarks, burns, or other discolorations of the skin? . . . Then he or she will be glad to know about COVERMARK—"the modern miracle" (Reader's Digest), which *completely conceals all blemishes!*

The untouched photos above show how COVERMARK makes blemishes fade from sight . . . It has helped thousands of people to happiness and success in both public and private life—won't you help yourself or a friend to this same freedom? Send for booklet; mention ETUDE and I'll give personal suggestions for your problems. COVERMARK CREAM, or COVERMARK SPOT-STIK (for small blemishes) $1.25.

Music Students—Earn while you learn. We will pay 10c each for names of people with blemishes who might be interested in COVERMARK. Booklet will be mailed anonymously. Write for further details.

Beethoven's "Contra Dance in C"

(*Continued from Page* 794)

eighth note on the first beat in the treble; while in Measure 69 there is a very pronounced accent on the second chord on the second beat, in both hands. This chord should be held a trifle longer than its value, as if it formed the interrogation mark at the end of a question, the question being the phrase which occupies measures 68 and 69 in the treble; the answer coming in the next Measure 70, in *piano* tone, rather as an echo.

There is a little accent on the first note, D, in the bass of Measure 70, and also one on the first octave on D, in the treble, on the second half of the first beat. Three notes, very much *marcato,* in Measure 71, on the eighth notes D and G, in the right hand, and D in the bass, and also G in Measure 72, should be played rather slower and with more vehemence. In Measure 72 the *tempo* returns again to normal. Measures 76, 77 and 78 are repetitions of measures 68, 69 and 70, only a little more ornamented, and must be played in the same way. The ensuing measures, commencing on the last half of the second beat of Measure 79, and continuing to Measure 103, find the left hand part equally prominent as the right hand; and the music should be played like two voices talking together, both the top notes and the bass being brought out with singing tones—measures 80, 81, 82 and 83 being especially *legato,* as are also measures 88, 89, 90 and 91. The bass notes in measures 84 and 85 must be made especially prominent, with a *crescendo* in Measure 85 culminating in an accent on the top E, quarter note, on the second beat of this measure; whilst both of these measures should be a little *ritenuto.*

All the notes in Measure 86 must be brought out, in the bass, and a further accent should be given on the first note, high G, in the left hand in Measure 87. Measures 88 to 95 are similar to measures 80 to 87. Measure 96 is a repetition, in *pianissimo,* of Measure 94. Measure 98 should be *mezzopiano,* with a little *crescendo,* which sinks to *piano* again in Measure 99.

Though the *staccato* notes in Measure 100, in the left hand, are *pianissimo,* yet they, too, lead up to a little *crescendo* at the end of the measure, which, however, drops immediately again on the first note of Measure 101. A little *crescendo* appears again at the end of Measure 101, and leads to an accent on the first and third eighth notes of Measure 102, all of this being in the left hand.

All Joys Have an End

In Measure 103 a little ritenuto must be made, to prepare for the return of the original subject of the *Contradanse,* which is ushered in at Measure 104. All the *staccato* notes, which form the passage in the left hand, especially from Measure 97, to the end of these passages in Measure 103, must be played exactly and crisply, with a coy kind of humor, the accents being strictly observed and marked. At Measure 103, just after the last eighth note in the bass, there should be a breath pause, the solo left hand being lifted off the keys before attacking the bass C on the first beat of Measure 104, where the *tempo primo* reappears. This *tempo primo* ought to be played with the same accents, and in the same way, as the first seventeen measures of the piece; only the level of tone should now be a little less loud, and a little less pointed.

From the last half of the second beat in Measure 121, where there are sixteenth notes in both hands, there should be a brilliant *fortissimo,* which proceeds onwards through measures 122, 123 and 124, to terminate in a *sforzando* on the G octave on the first beat of Measure 125. In measures 126 and 127 I make a *crescendo* during the sixteenth note figures in the treble, as I have marked in the piece in this issue, so as to get the true Beethovenesque effect of the sudden *mezzopiano* at the beginning of Measure 128. Measure 130 is *pianissimo,* like an answer or an echo to Measure 128. Measures 132 and 133 ought to be played with singing tone, and plaintively, with a very marked *ritenuto,* as though the dancers were viewing the speedy drawing to a close of the dance, with sentimental regret; whilst the last two chords of the work, on the second beat of Measure 134, and on the first beat of the final measure, must, by contrast, be very loud and abrupt, emphasizing the fact that the dance is definitely at an end.

The fun is over.

The whole of the piece must be played with a sparing use of the right pedal.

Worth While Music in the Movies

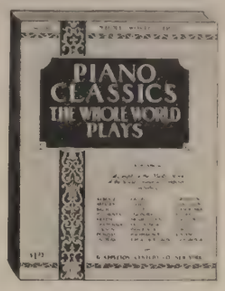
By Verna Arvey

(*Continued from Page* 786)

significant. Thirty minutes of the Columbia film, "Girls' School" (with Nan Grey of "Three Smart Girls," Ann Shirley and Ralph Bellamy) were occupied with background music composed by Gregory Stone, who did the musical score for Max Reinhardt's Hollywood production of "Faust," and this music, despite its length, was so intelligently handled that one critic commented on its unobtrusiveness.

From Franz Waxman's musical score to the Selznick picture, "The Young in Heart," a popular song has been made by the composer and Harry Tobias. This is published by Selznick and Leo Feist, Inc.

Boris Morros, at Paramount, has substituted four composers for Werner Janssen, originally scheduled to create background music for "Men with Wings." These composers are Franke Harling, Gerard Carbonara, Hoagy Carmichael and Lou Alter. At Paramount, also, Harry Sherman has engaged The King's Men, noted male quartet, to act in his forthcoming "Hopalong Cassidy" film, starring William Boyd, and to sing the three unpublished Western songs lately purchased by Paramount from Phil Ohman and Foster Carling: *Lullaby of the Herd; Lazy Rolls the Rio Grande;* and *Hi-thar, Stranger!*



* * * * *

"Take the light away from the skies, take the flowers off our earth, take the waves from the sea, and take music out of our lives, and what is left? A darkened world, a barren earth, a waste of stagnant water, saddened days and joyless nights."—Sampson Low.

IDEAL GIFTS

Plan to give your musical friends or pupils and to purchase for your own use one or more of the delightful volumes in the "Whole World" and "Master Composer" Series.

COMPLETE LIST BELOW

Each volume consists of 256 to 448 pages of the best music, (the four individual composer volumes, 160 pages) beautifully printed, sturdily bound and attractively covered. For the opera lover there are several fine collections containing the stories and the choicest music from the most famous operas. These books will add to your enjoyment of the radio presentations. For the home vocalist, a splendid selection of songs that will live forever. For the pianist, violinist, organist, etc., a representative selection of music covering all grades of difficulty. Each crystallizes the best of music in substantial volumes of varying character that have become, both through musical merit and economic value, necessities for the fullest enjoyment of the musical hour. Send for our free 40 page catalogue which illustrates, describes and gives the complete contents of each book—a postcard brings it. (The catalog is not sent to Canada or European countries.) A complete list of the books will be found below.

What Do You Know About Music? (Cloth, $3.00); Boards	2.00

This outstanding volume in our "Whole World" Series is "new" from cover to cover. It is of particular interest in view of the growing demand for music of the modern school of composition, not alone in concert programs but also in the home and studio repertory of the average pianist. Includes a large group of selections of recent origin, as well as a select number of favorite classics. many of which do not appear in any other collection. There are compositions by Stravinsky, Prokofieff, Scriabin, Rimsky-Korsakow, MacDowell, Dohnanyi, Tschaikowsky, Schumann, Beethoven, Brahms, Chopin and many others. Newly engraved, large page size with large notes.

For Sale at all Music Stores (Except in Canada and European countries) or sent direct on receipt of marked prices.

THE SINGER'S ETUDE

Edited for December by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

To Sing Well, Be Natural

By ERNEST H. SHEPPERD

AS MORE AND MORE young people are taking up the study of singing, either as a career or as a hobby, so the need is increased for a better understanding and simple teaching of the basic principles of tone production.

In past decades, the ambitious songster expected to give five or six years to study, before considering performance in public. To-day, even the path to public appearance seems to be streamlined. What with scholarships, contests, and radio auditions, the haste to be in the spotlight would seem to overrule the common sense of real fundamental preparation and understanding. We well might ask these young students, "Do you wish to sing to be famous, to make money, or for the real love of singing?"

One of the chief obstacles to good singing would appear to be lack of naturalness. Freedom of song is conspicuous by its absence. We must not altogether blame the young pupil. Text books which go too deeply into technical and physical aspects of singing, dealing with larynx, glottis, diaphragmatic and abdominal breathing, mystify the young student as to what to do, and what muscles to use, resulting in the production of a hard, thin, forced, non-vibrant tone. Incompetent and inexperienced teachers add to the negative results of aspiring vocalists.

A Well-Laid Foundation

LET THE YOUNG SINGER remember that breath control is the fundamental basis of good tone production. If the bellows of a pipe organ are of insufficient and irregular pressure, the result is a wheezy and unsteady noise. So the weak, quivering, untrue tone production of a singer signifies lack of wind pressure, or breath control.

For the production of good tone, the position of the body has more to do than is generally realized. The lungs, so important to the singer, must have freedom to work. The body then, should be held erect, with shoulders well back, and without any sense of muscular tenseness. With mouth and throat freely open, and the tongue trained to lie flat, breath should be taken deeply, fully, and noiselessly. There must be no gasping or heaving of the chest when breath is required.

When the lungs are filled by this deep breathing, the following exercises will develop breath control, so necessary to good singing. Hold this supply of wind while mentally counting four slowly. Then exhale slowly, striving at all times to control the force of expulsion. Repeat this several times, just as a breathing exercise. Make sure that there is no up and down pumping movement of the shoulders or collarbone. When control of a smooth inhaling and exhaling has been mastered, repeat this exercise using tone in the middle range of the speaking voice, on the vowel *ah* or *koo*. Smooth, sustained, steady tone must be the aim. Use this exercise on the five Italian vowels *a, e, i, o, u* (pronounced *ah, aye, ee, oh, oo*) with the five tones of the middle register from E to B. Good tone production on all the vowels is the secret of good diction, so strive for perfection in these fundamental exercises.

In studying a song, use this method. Take all the vowels from the words, and vocalize them along the lines just described. Then sing, watching the consonants. The vowels must have full value of a sustained note, the consonant coming at the final release. In ascending passages the general tendency is to increase the tone volume as the voice rises. This increase must be smooth, growing with each rising note, and not with any spasmodic jerk at the top. An excellent exercise for control is to practice such ascending passages with decreasing tone, so that the top notes may be produced on a very soft, smooth, unshaky tone.

Good tone production cannot be achieved with a rigid, set jaw. This seems to be one of the most common faults among students, and most difficult to overcome. The lower jaw must be relaxed, free from any strain or stiffness, the teeth apart, the tone well forward, to result in a natural, well controlled and pleasant tone quality.

Sing for the love of singing. Do not pose. Any form of affectation detracts from successful results. An artistic rendition, with good tone quality, good diction, and good interpretation, will have its own reward, and does not require affected showmanship.

From the Vocal Sinai

AS AN AID to achieving the above results, the student may do well to use as a guide the following "Singer's Decalog":

1. *Thou shalt have sufficient breath.* Lack of breath control is often the chief cause of bad singing.
2. *Thou shalt stand erect.* Do not expect good results with a slouchy, stoop-shouldered posture.
3. *Thou shalt relax.* Stiffening of body and facial muscles is one of the greatest drawbacks to effective singing.
4. *Thou shalt breathe deep from the abdomen.* Short gasps, and the well named collar bone breathing are unsightly as well as most ineffective.
5. *Thou shalt watch the vowels.* Correct placement of tone production on all the vowels is the secret of good diction.
6. *Thou shalt watch the consonants.* Slipshod use of final consonants may spoil an otherwise good rendition.
7. *Thou shalt not sing through the teeth.* An open mouth, with teeth well apart, and with jaw relaxed, produce both good tone and clear diction.
8. *Thou shalt not pose.* Striking poses, either from affectation or subconsciously, detract from effective performance.
9. *Thou shalt not sing to the gallery.* A true artist sings to interpret the words and music, not to attract notice.
10. *Thou shalt be natural.* Remember that singing is talking set to music. The best results are attained through freedom from muscular effort or affectation. Be natural.

Then, as a final injunction, remember the secret of all great art is to cultivate the ability to be natural.

Overcoming a Musical Crisis

(*Continued from Page* 789)

to Professor Bake who was kind enough to coach me in Agathe's aria from the *Freischütz* and "Elsa's Dream" from *Lohengrin* without taking any payment. Herr Bake, an excellent concert-accompanist, did his utmost to instill into me the rhythm that I lacked. I was in constant conflict with all note values and in the excitement of singing I kept forgetting, in spite of arduous practicing, to think of the beat I didn't really feel. So Herr Bake was not particularly enchanted by me either, and earnestly discussed this grievous lack of mine with Fräulein Reinhold.

"She probably doesn't practice enough," she said with a severe look.

Herr Bake shrugged his shoulders: "Possibly she doesn't work hard enough. What a pity—her voice is so beautiful and promising."

I stood there, pale and covered with shame. So it came to this: I must practice harder—although I always had worked really hard.

The audition surpassed all expectations. In the salon of a large Berlin hotel Baron Putlitz heard me and gave my voice quite exceptional praise. He showed a great interest in me and said I might write to him when I considered accepting engagements so that we might have another audition and then come to a definite agreement. I went home very happy, filled with gratitude toward Herr Bake who had accompanied me and steered me cautiously past all the dangerous reefs of rhythmic uncertainty.

In spite of this success I did not feel happy with this singing method. It is generally an enormous stroke of luck to find a teacher who will give a voice individual training. What is right for one is not right for all! I had heard pupils who had made the most marvelous progress there and for whom that method of singing seemed to be made. For me it certainly wasn't the right one. I felt myself fettered and chained the whole time, singing became difficult—and I felt that the training I was having was so contrary to my natural instincts that I simply had to force myself to sing as I was supposed to. We had exercise sheets with the three vocal registers, chest voice, middle register and head voice, printed in different colors. The voice fairly leaped audibly from one register to another, a thing I couldn't agree with, for to me a steady flow of tone was the highest possible aim. Amid doubts and despair I struggled on—for if things were to go wrong here, where would I find a way?

In summer, on Fräulein Reinhold's recommendation, I went to stay with friends of hers. I spent enchanting weeks with Frau von Poser in Schweidnitz, where she lived with her husband, an officer of high rank in the regiment stationed there, and her charming, well-mannered little boy, in a lovely house with a huge garden—a real "park!" I was welcomed with warm-hearted affection, not for a moment regarded as a protégé but rather as a really welcome companion—such was the atmosphere that surrounded me. I still feel deeply indebted to that dear, fine woman, and am always glad when, in summer during the Salzburg Festival, I can visit her and her husband, now a retired general, at their lovely place, Castle Grubhof.

A Fateful Aria

FULL OF GRATITUDE, I went back to work and tried by continuous application to understand what seemed incomprehensible to me. My zeal and industry did not flag—but my joyous courage did, that firm confidence which is the best foundation for solid work. Fräulein Reinhold began to grow impatient. For weeks and weeks we worked at the same thing, "Dove sono," the Countess's big aria in *Figaro*. Psychologically it would have been more correct if Fräulein Reinhold had laid aside for a while this aria which simply refused to come right, and had taken up something else with me and come back to it later. But she did things differently. She wanted to make it come. Day after day, week after week, the alpha and the omega of the singing lesson was this aria before which my inability rose to an *idée fixe* and became such a nervous phobia that even at the first chords of the recitative my knees would start trembling. Shortly before the New Year—I had studied for about a year with her—Fräulein Reinhold informed me with a black look that Frau Gerster wanted to hear me again. I can scarcely remember anything about that audition. I sang in a

semi-conscious condition—I no longer remember what. Whether it was the *Freischütz* aria that had won me the friendly praise of the Stuttgart director or the Countess's aria that haunted my dreams in torturing dissonance—I don't know. All I remember is cold eyes, shoulders shrugged crushingly—and when I closed the doors of the elegant Gerster School behind me after a "good afternoon" that was received in silence, I knew that they would never open again to me. . . .

I wrote to Fräulein Reinhold—a letter filled with desperate questions, accusations and self-denunciations. I knew, of course, that she wouldn't go on teaching me now—but why had she made me keep on at that one aria and not tried something else? Did she want to have nothing more to do with me? Had she at least sufficient regard for me to recommend me to another teacher? I couldn't live without my work—without the hope of becoming an artist. And I begged her—I beseeched her to help me, not to leave me in the lurch. The next day—it was New Year's Eve—Fräulein Reinhold asked me to come round to her home. She stood before me—oh, so strange and unapproachable! Her eyes were fixed on me, harsh and severe, and harsh and severe were the words with which she condemned me. Frau Gerster had been most dissatisfied, I had sung very badly and done her no credit. My studies were now at an end, she knew of nothing for me, and—good-by.

I stood on the stairs for a time in a sort of daze and everything went round me. On my way home to Lichterfelde the wheels of the suburban train no longer sang the old childhood song: "I think I can—I knew I could" . . . oh no. They kept thumping out the same thing, Fräulein Reinhold's hard angry "good-by." Good-by to my lovely dreams! Good-by to all hope! Good-by to all happiness!

At home I couldn't find words to tell them everything. Dumb and silent I sat at table until a messenger came with a parcel for me and out of the wrappings fell the sofa cushion I had made for Fräulein Reinhold at Christmas and the following letter:

"Dear Fräulein Lehmann:

"I shall speak to your father today on behalf of Frau Gerster, but I should like to write you a few lines. I am sorry that your singing instruction at the Gerster School has come to an end in this way, but alas! I have seen this coming for months. I can only say that none of my pupils has ever been such a disappointment as you have, and this has given me many a dark hour. I believe that, if you want to and have to achieve something in the future, you should take up a practical career. Only then will you come to know the real meaning of hard work, and perhaps you will realize later that you weren't doing your duty with all your might. Whether you were considered a hard worker at the Hochschule you will know best yourself. Finally, I have one request to make. It is very painful for me to keep this cushion you gave me, now that you are no longer my pupil. You have taken great trouble over it and I am sure you will be able to make use of it elsewhere. I don't want to hurt your feelings, Fräulein Lehmann, but I really cannot keep it. The feeling that you had made any sacrifice for me would be painful to me. Now I know that the only sacrifice that you and your parents made during your year's study at Frau Gerster's School of Singing was only a matter of ten or twelve marks, and that you were unfortunately unable to appreciate the value of your tuition—for which others pay sixty marks a month—its true worth. Frau Gerster requests me to tell you that your progress is not even that of a mediocre pupil, *and that even as a paying pupil you would have been expelled.* Free tuition in her school is only for girls of exceptional attainments, moreover Frau Gerster was extremely surprised at the tone of your letter to me. She says that I had done more with you by my great patience in teaching you than she could have expected, for otherwise you would have been dismissed from her School of Singing several months ago. How could you expect me ever to recommend you to any other member of the staff in the school when Herr Bake found your industry unsatisfactory.

"With all good wishes for your future, Fräulein Lehmann and kindest regards

"I am, Yours sincerely,

"Eva Reinhold."

So Now a Commercial Career?

So THERE I WAS with nothing left for me—all hope, all longing at an end. I was so completely paralyzed in my innermost being that I couldn't even cry. I was actually too healthy to faint, but my mind was in a sort of daze. I could neither think nor feel nor even wish for anything. Mother helped me to bed crying and sat beside me, desperately seeking some word of comfort. Father fell silent when he looked at me and all his "I told you so's" remained unsaid. And Fritz? He stayed with me until daybreak, long after my parents were asleep and I had found relief in tears that would no longer be denied. It certainly sounds sentimental when I tell it, but it is nevertheless true: the New Year's chimes outside sounded like a death knell to me. Everything for me was at an end. Even Fritz, who had never lost courage and never even allowed the thought that I might have to give up my studies to enter the realm of possibilities, even he had nothing to suggest. And so we kept on saying to each other that we must be sensible and realize where we stood, it was all over now and we must pull ourselves together. . . .

What was I going to do? I shuddered at the thought of bare office walls and shyly suggested: "Don't you think I could get a post as companion? I imagine it might be quite nice to be with some aristocratic old lady and read and sing to her—I'd be good enough for that," I added bitterly.

Fritz agreed enthusiastically, glad that I had expressed any opinion whatsoever about the future. He brought the newspaper really with the idea of distracting me and we looked through the "vacant situations" column to see if we could find a suitable one.

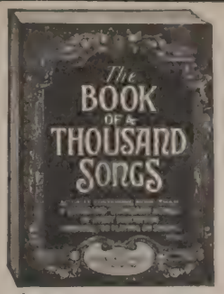
"It would be best," said Fritz, "for us to put in an advertisement. We could word it just as you like."

And we sent in an advertisement that

(*Continued on Page* 838)

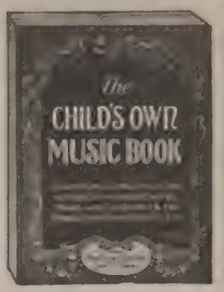
As the Poet Sings

By EVERETT E. HALL



PHILIP HALE, the noted critic of the *Boston Herald*, writing of a new book of poems by Mrs. Agnes Sheffield Welch, herself at one time a student of singing, quotes a few lines which are most suggestive as to the voice quality for which students should strive. The poem is entitled "When Kathleen Sings," and the lines follow:

"Warm, rich, melodious, her voice
envelopes me,
Like velvet cloak on shoulders that
are still."



CHRISTMAS GIFTS FOR MUSIC LOVERS

A COMPREHENSIVE collection of more than two hundred well known classic, modern, light operatic and sacred compositions. NO MUSIC LIBRARY COMPLETE WITHOUT THIS VOLUME.

AN outstanding collection of standard favorite songs. Words and music. Included are many home, sentimental, operatic, sacred, children's, southern, college, sea, rounds, hymns, patriotic, national and folk songs, popular in Radio Broadcasts.

A MOST complete child's book, containing nursery rhymes, songs and a series of piano pieces and duets suitable for the young folks. A REFRESHING FOLIO OF HAPPY REMINDERS OF YOUR OWN EARLY EFFORTS.

Each volume contains 536 pages. Cloth Binding $3.00 each. Reinforced Paper Cover Binding $2.00 each.

For sale at all good music stores. If your dealer cannot supply you we will send postpaid on receipt of price. Money cheerfully refunded if not entirely satisfied. (NOT SOLD IN CANADA.)

THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

On Organizing and Management of a Volunteer Choir

By ALFRED WALTHER

THE MAINTENANCE and success of a volunteer choir depend upon its efficient management as an organization as well as its having good leadership musically. To insure permanence, the choir should form an organization with appropriate constitution and by-laws. An annual election of officers could be held consistently and conveniently at the time of the first rehearsal in September, which month, in most churches, opens the choir term of activity.

The officers of the choir may be a chairman or president, secretary, vice-president, treasurer, librarian (who may also have charge of vestments). In addition to this group, one member should be elected from each of the four voice sections to serve with the officers as an executive committee or board. This executive committee would handle all choir business matters, supervise choir activities, both social and money-making, and suggest possible new choir members.

This problem of new singers is sometimes a difficult one to solve. As likely as not, a person who really can sing does not wish to do choir work, and another, who cannot sing at all well, is extremely desirous of becoming a choir member. Therefore, great care must be exercised in selection of new singers, who should always be chosen for their musical ability rather than for their being social or financial assets.

A voice test for all prospective choir members is imperative. One good plan is to establish a "waiting list" or register of all applicants, with their vocal and musical qualifications annotated. The most desirable singers on this list would form a reserve to be drawn upon whenever a choir vacancy occurred. Applicants would not know in what order the names were listed and, for diplomatic reasons, would be unaware of their rejection for lack of ability. In this way, only suitable voices would be selected and the highest possible standard of musical performance maintained, consistent, of course, with the talent of the community.

Keep all choir chairs or benches occupied. Fill any vacancies immediately. Vacant seats are depressing both to director and singers—as are also empty auditorium pews.

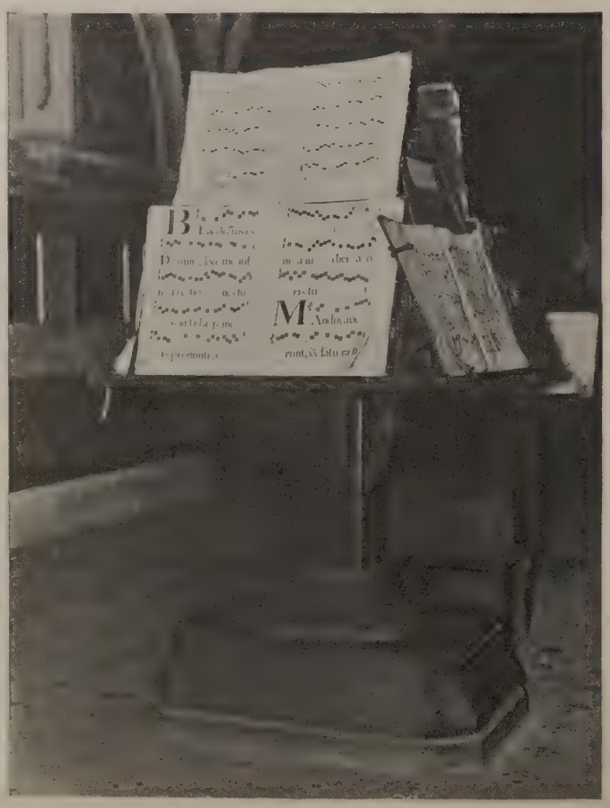
To raise the quality of the choir's work, grade each Sunday's or other occasion's performance. Excellent would be 100; very good, 90; good, 85; fair, 75; below 75, poor. The choir secretary or librarian can keep a record of the anthem used on each occasion and the grade given by the director. The grade of the previous Sunday may be read at the weekly rehearsal, and, if desired, the reason for the good or bad rating. A great deal of interest will be shown, and if handled with discretion and good-natured, general criticisms, no ill-feeling will result.

A volunteer choir is like almost any other unpaid organization and will respond in attendance, attention, enthusiasm and performance in exact proportion to the interest maintained both musically and socially. Neither church nor choir that is not a success socially is fulfilling its mission. In other words, good music and good feeling must prevail. Any antagonism or resentment must be overcome immediately and tactfully.

As to good music, a wealth of it may be heard for the mere turning of a radio dial and the musical taste of the average church congregation has improved greatly during the last few years. Certain sensational, undignified, unbeautiful and, last but not least, unholy hymns are no longer used in many churches, for which most choirs and directors are thankful.

Good, well-written music does not necessarily mean difficult music. There are many hundreds of excellent anthems that are quite easily sung and are truly inspiring to both choir and congregation. Among these numbers are Shelley's "Hark! Hark! My Soul!"; Mendelssohn's "He watching over Israel"; Mozart's Twelfth Mass "Gloria"; Woodward's "The Radiant Morn hath Passed Away" and "Be glad All Ye Righteous." With good leadership they can be learned quite easily by the average volunteer choir. These anthems "sing well" and sound well to the listening congregation. Some numbers will be found that "sing well" but are not attractive to the average congregation because they have no outstanding melodic or dramatic interest. The average person and most musicians like melody, which is as it should be. There is a place for so-called modern wierd and barbarously dissonant chord progressions that are painful to the ear, but that place is not in church. "Beautiful and holy" should describe any and all church music and anything not fitting this description should be avoided. It is certain that the immortal Bach wrote his sacred music with reverence and due appreciation of its use as part of a church service. Consequently nothing better of its kind has ever been written and probably never will be.

The social activities of the choir ought to be encouraged. The choir, of course, should first of all be interested in singing, but business and pleasure should go hand-in-hand. Keeping up the spirit of the choir socially is very important and helps to minimize and cover up possible unpleasantries between members—as will happen occasionally in even the best of choir families.



Having choir parties several times during the year is enough; too frequent get-together entertainments become common and lack interest, thereby defeating their purpose. These "socials" are best held after choir practice, when all members could be present without having to disarrange a weekly engagement schedule.

Related to these social affairs would be an attendance encouragement idea arranged as follows: At the end of the choir season have a dinner, pot-luck supper or other function given to those members who were not absent more than once a month. This entertainment would be paid for, or otherwise provided for, by those members whose attendance record was not sufficiently good to place them among the winners.

A choir may be made self-supporting, or partly so, by being assigned a time during each church year for holding a money-making event, such as a secular music concert, a stage production, or a dinner. In this way the choir would be enabled to buy music, pay for the organ up-keep, or perhaps assume the responsibility for all church music expenses, thereby relieving the church finance committee of at least one burden.

As to discipline, the choir's spirit of fair play should be appealed to. There must, of course, be no whispering or otherwise causing a disturbance in the atmosphere of worshipful respect and dignity during a church service. Everyone likes to see an organization functioning with precision and showing unfailing devotion to its duty and loyalty to its director and the people it represents, whether it be a church choir, a high school band, or an American Legion drum corps.

A choir with all members congenial is a real help to any church. On the other hand, a choir kept in more or less turmoil by factions or even one or two ill-dispositioned members is anything but a good example of churchly or fraternal conduct. Bad feeling among choir members soon finds sympathetic partisans in the church congregation and unpleasantness in varying

WHY DID THEY MAKE THE MUSIC SO LARGE?

A great many music students, on seeing ancient musical manuscripts for the first time, have wondered why the pages are so large. In the office of the editor of THE ETUDE, *is a manuscript page of a mediæval church service, measuring twenty-four by eighteen inches, which is beautifully lettered upon parchment and reputedly four centuries old.*

The picture here shown indicates why the manuscripts were made so large. This is a music rack in the choir loft of St. Angel, an ancient church just outside of Mexico City. There are many such racks in old European churches. In the Cathedral of Toledo we actually came upon a group singing the Mass from such racks. Four singers stood in front of each side of a rack; and by the light of the candles the age-old books were sufficiently illuminated so that each of the singers could easily read the words and the music. It seems a little amazing that in this period of aeroplanes and radios there are still, in remote churches and monasteries, large numbers of the religious who have recourse to these manuscripts daily. The cloistered brothers, who spent their lives in carefully lettering and illuminating these remarkable pages, would be astounded if they, to-day, could look out upon the world of 1939.

A REAL PIPE ORGAN for $895 with ALL-ELECTRIC ACTION

Hundreds of homes and studios throughout the country know WICKS' glorious tone. Even the smallest instruments have the unsurpassed construction, and quality of tone and action as is found in organs built for large edifices.

WICKS makes it possible *now* for even those with most modest incomes to own a *real pipe organ* . . .

WICKS ORGAN COMPANY

degrees of intensity often follows.

The choir director ought to be chosen with care. One with a good disposition and tact as well as musical and executive ability is ideal and is almost invaluable to any church. Furthermore, it is just as necessary, in most cases, to have a choir director *and* an organist as it is to have an opera conductor and an opera orchestra.

In order to compete with the many good music programs heard on the radio and the concert stage, it is necessary for a church to have inspiring music and good musicians to interpret it. Unless an organist has exceptional ability it is not possible for one person to accompany accurately and conduct well at the same time. Having the organist and choir follow a good choir leader is the better way. There are many girls and women who are excellently trained organists but who could not conduct a choir; and there are many fine singers, with a general knowledge of music, who would be first-rate choir directors. Almost any church with even a fair sized volunteer choir could advantageously change to an organist *and* a choir director at comparatively little cost; thereby, at the same time, improving the music and helping the musician employment situation by giving work to two persons instead of but one.

If the director be an organist, too, he will have the respect of the church organist, if his knowledge is not superficial. It is sometimes necessary for a director to make suggestions as to organ registration to obtain certain effects that mean a more consistent or colorful background for the voices. If these suggestions are made to an organist by an organist, they will be made intelligently and received more graciously than if the director were not well acquainted with the tone qualities of the different stops. Furthermore, it is desirable for every church to have a capable understudy to substitute for the regular organist when necessary. The choir director should be responsible for the selection of this assistant organist, or at least ought to have a voice in the matter, if a high standard of music is to be maintained. In too many instances, really good assistant organist prospects have been discriminated against and an inferior player appointed because of church "politics" or influential church members. This is not only wrong but detrimental to both church spirit and music.

Although some choir directors are satisfactory from a musical standpoint, they lack ability to manage and often have what could be termed disorderly minds—cannot discipline themselves. This type of director needs a good choir executive committee to lean upon and should work conscientiously with this committee in all matters except actual musical direction. On the other hand, the ideal, clear-minded, executive type of director should not have to contend with pettiness or interference from any source so long as he performs satisfactorily the prescribed musical duties of the church and co-operates with those helping to build up the church itself.

In this connection, some instances could be cited of church music committees that caused much dissension in both choir and congregation by unintelligent and unwarranted criticism and doing no constructive work aside from passing upon the annual music budget. A music committee of this kind, appointed from more or less musical members of the congregation, often forgets that the church is under considerable obligation to its unpaid volunteer choir. At least a part of the church music committee should be made up of some members of the choir executive committee. In many cases, only the choir executive committee will be found necessary to conduct all of the business pertaining to the church's music. They would work with the minister, whose opinions and authority would be respected. Only the closest coöperation of all concerned will insure satisfactory results.

It's fun to play the Hammond Organ!

Even the simplest melody can be "orchestrated" a hundred ways!

WHEN YOU SIT at the console of the Hammond Organ, you have a veritable "orchestra" of instruments at your finger-tips! With hundreds of instrumental voices at your beck and call you can play your favorite compositions not only in one tone—but in an almost endless variety of tonal *combinations!*

Thousands of people have found "making music" on the Hammond a fascinating new experience. Yet, with all the fun it can provide, the Hammond is still an instrument whose true and lovely tone is heard in great cathedrals and with famous symphony orchestras . . . is praised by many of the world's most eminent musicians.

Your Hammond dealer will gladly answer your questions. A small down-payment will put the Hammond in your home; you can buy it out of income. Hammond dealers are located in all the principal cities of the United States and Canada and in 38 countries abroad. Or write to the Hammond Organ, 2929 N. Western Ave., Chicago, Ill. *In Canada*, address Northern Electric Company, Ltd., Montreal.

SMALLER THAN A GRAND PIANO —PRICED FOR MEDIUM INCOMES

Gone are all the difficulties which once attended the installation of an organ. The Hammond has no pipes or reeds, creates its lovely tones by electrical impulses . . . fits in a four-foot square, is ready to play wherever there is an ordinary electrical outlet. Two men can carry it anywhere . . . and it cannot get out of tune!

SEND FOR THIS INTERESTING INSTRUCTION BOOK

Every musician and teacher will be interested in "Playing the Hammond Organ"—a fascinating introduction to the Hammond's technique and musical possibilities. Get your copy from your Hammond dealer or send in the coupon below, with $1.00.

ORGAN AND CHOIR QUESTIONS

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. I will appreciate your comment on the enclosed specifications of a two manual organ, including a reproducing player. I have two locations to place the pipes and chests. The one is an attic space over the living room. This space, when finished, will be 16′ x 9′ x 7′ high. Two openings into the ceiling of the living room at each end would serve as expression shutters and tone outlets. The second location is a closet space directly in back of the living room wall, beneath a stairway leading to the upper floor. The space is 9′ x 3′ x 8′ slanting down to 2′ at the lowest end. The use of this closet would necessitate the cutting of a panel in the room for the expression shutter and tone outlet. Which specification would you advise, and which location would be preferable? Does this specification appear all right, or could you suggest an addition that would improve it? Is it possible to add to this type of installation?—W. B.

A. From the standpoint of good organ building, we would prefer specification Number one, which includes a Geigen Diapason. For a residence organ a Vox Humana might be useful. We are not partial to any specification that does not include a Diapason of some type. Can you not increase your specification to include both stops? We would also prefer pipes to reeds for the pedal "Sub Bass," making it a Bourdon. Neither of the spaces you indicate appears ideal. The closet space, with opening into the room might be preferable as the effectiveness of the tone coming from above through the ceiling might be doubtful. The makers of the proposed instrument build larger organs and can advise you as to the possibilities of making later additions. If you are considering making a larger installation at this time, the specification, of course, can be increased to whatever extent you wish, or that your space will accommodate.

Q. I have access to a two manual organ, of the specification enclosed. This set up requires some quick changes to get a desirable near effect. I have had two years of organ study, part of it on a three manual organ. I am hoping some time to have a better organ. What would you advise as a course of study in preparation for such opportunity? I have done the Truette Bach themes for Pedal, have learned Bach's Toccata and Fugue in D minor. *Am working on the Guilmant* Sonata, No. 1 *and the Bach* Prelude (Fugue?) in G minor (*master lesson in* THE ETUDE), *assorted short pieces, and am reviewing Dudley Buck's Pedal pieces. What books would be good texts to study? I know little of the theory and practice of organ building and tuning. How expensive is it to have practice pedals for the piano? What kind of two manual and pedal organs, suitable for the home, are available; at what price; and how satisfactory have they proven to be?*
—I. M. B.

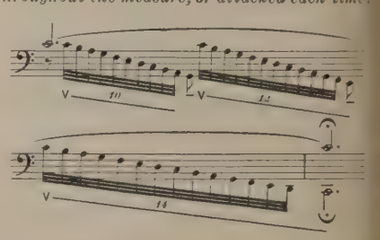
A. The work you are doing should help fit you for a larger organ when the opportunity comes. We advise your continuing along the lines you have indicated. For general organ information, we suggest your study of "Organ Playing—Its Technique and Interpretation" by Hull. You might communicate with an organ builder and inquire cost of a pedal board. Add to that cost the amount you will have to pay to have it connected with your piano. Small instruments, with two manuals and pedals are available for practice purposes, for from less than one thousand dollars up. Of course, the larger the instrument, the more satisfactory it will prove for your purpose.

Q. Do you think that it would be practical to turn my one manual reed organ into a one manual pipe organ with pedals, using the cabinet and keyboard as a console? What stops would you recommend if it is possible to convert the organ?—E. T. R.

A. We would not consider converting a one manual reed organ into a one manual pipe organ. So little, if any, of the material would be useful that it is not worth consideration. We would not advise a one manual pipe organ under any condition.

Q. I am interested in building for myself, some organ pipes, both wood and metal. Can you give me some information as to the correct size and length of pipes of different scales, best suited for an average home? Also would like to know wind pressures to secure best results. Can you give me the American Guild of Organists console specifications?—R. B.

A. You might investigate "Organ Stops" by Audsley and "The Contemporary American Organ" by Barnes, but for your particular purpose (a residence organ) we suggest your getting advice as to scales, wind pressure and so forth, from a reliable tonal expert, giving him size of room, size of chamber for organ, and so forth. For The American Guild of Organists console specifications, we advise your addressing the Guild Headquarters, R. K. O. Building, Rockefeller Center, 1270 Sixth Avenue, New York City.



Q. Will you kindly give me some combinations for hymn playing, and for the playing of other music? I am practicing on a three manual organ with stops named on enclosed list.
—M. E. W.

A. We think your instrument is partly unified, and some stops may appear twice under different names, though derived from one set of pipes. For hymn-tune playing we suggest the following: Great Organ: Open Diapason, Dulciana, Flauto Traverse, Principal and Oboe; Swell Organ: Open Diapason, Viola, Violina, Flute d'Amour, and Dolce Cornet; Pedal Organ: Open Diapason, Bourdon, and Violoncello; Couplers: Swell to Great 8′—Swell to Pedal 8′ and Great to Pedal 8′. In the playing of "other music" the registration is dependent on the character of the music. Some stops that can be used for "solo" effects include Vox Humana, Oboe, Tibia, Gamba and Doppel Flute.

Q. I have recently taken over the directing of our church choir, which is a new experience with some problems. One is pronunciation of words. A rule I need badly is an authentic one about the pronunciation of the word "the"—when it is "the" and when it is "thuh." Is there an authentic dictionary of correct pronunciation for the singing voice? Do you have a catalog of music for church use? Would also like the names of any books which would be of help in my work. I would appreciate any suggestions that might help to improve regular attendance of choir members at the church services.—O. H.

A. The rules for pronunciation of "the," briefly are—"the" ("e" as in "her") before consonant sounds: "the" ("e" as in "eve") before vowel sounds. Before words such as "honest" (where the "h" is silent) use the word "the" as before the vowel sound, which is the second letter. As the word "one" seems to include the sound of "w" (not always a vowel) the tendency is to use the word "the" in such cases as preceding a consonant. A good dictionary should provide you with proper pronunciation of words, but if you wish a work on diction, we suggest "English Diction for Singers and Speakers," by Russell. A catalog of church music has been sent you by mail. For information as to directing, and so forth, we suggest "Choir and Chorus Conducting" by Wodell and "Choral Technique and Interpretation" by Coward. The problem of attendance by choir members is a different one. Perhaps if the church gave them an occasional dinner or "party" it might help. Or, it might be effective to emphasize loyalty to the church, to be shown by regular attendance at services as well as rehearsals.

Q. How should the following glissando *be played (from Yon's* Second Concert Study for Organ)? *Should the "middle C" be held throughout the measure, or attacked each time?*

Are the pedal trills in "Finlandia" by Sibelius to be played with one foot? If so, is there any good way of making the notes distinct at rapid tempo? Or should they sound more or less blurred? Perhaps they should be slow trills?
—L. M.

A. We cannot say just what the composer's intention is in the passage you quote. We prefer holding the "c" and beginning the *glissando* on the "b"—but, of course, getting the feel of the "c" as a start. Let the "c" be heard during the rest produced by the left foot making the leap from the lower note to the "b." Be sure that the held "c" is heard as a starting note for each *glissando*. The pedal trills in "Finlandia" can be played by one foot—in fact it is necessary to play them with one foot where a *crescendo* is to be made by the use of the swell pedal. The trills need not be distinct, and sometimes are really played by simply holding down two notes.

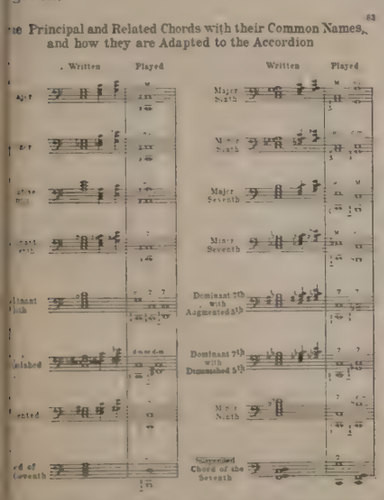
Q. We have a three manual organ in our church. It has weak foundation tones—Diapasons and Flutes. What can be done to remedy this condition? The instrument also has a dull, gloomy and tiresome tone on the stops that are most necessary for hymn playing. Can anything be done to improve the tonal quality?—D. S.

A. Since you did not send the specification of your instrument, we cannot tell whether it contains proper stops for an effective ensemble. If the specification is satisfactory, we suggest that you have the instrument examined by a tonal expert, with the thought in mind of revoicing or replacing some stops. This tonal expert can also advise you as to the efficiency of your present specification. Perhaps your auditorium lacks resonance.

Q. Will you please furnish the names and addresses of a few reputable residence pipe organ builders; also the names and addresses of some firms which manufacture fine reed organs, including two manual type. In what country and address are the organ builders, Casavant Freres of St. Hyacinthe located?
—G. T. K.

A. We are sending you information by mail. The full address of the Casavant firm is Casavant Freres Ltd. St. Hyacinthe, P. Q., Canada.

THE ACCORDION DEPARTMENT



A Study of Accordion Chords

By PIETRO DEIRO
As told to ElVera Collins

DURING THE PAST MONTH we have received an interesting group of letters from readers and, by a ange coincidence, the majority of them ve asked the same information. For that son we shall devote this article to a neral reply to these questions.

Accordionists seem to want further en- intenment about the bass section of the cordion. They want to get away from stereotyped accompaniment of chords mechanically combined within the instru- nt. This is most gratifying because in of our writings we have endeavored to ess the importance of an interesting bass ompaniment.

Some of the letters received asked how produce dominant ninths, major and nor sixths as well as suspended chords. order that these questions may be an- ered collectively, we present the chart ich accompanies this article. It is self planatory as the names of the chords are wn, as well as the individual notes re- red to form them, and then the system combining these tones on the accordion given.

e Principal and Related Chords with their Common Names, and how they are Adapted to the Accordion

chart shows the chords of the key of C. For all other keys, use the same preced- ed the same fingering

mplete mastery of all chords and their construction, the student should study Accor- rmony by Pietro Deiro.

It is suggested that the ambitious ac- rdionist use this chart, which is in the of C, as a pattern and transpose the ire chart into all other keys. Write m out away from the accordion so that notes are fixed in the mind. Take one a day until they are all completed.

Much has been written about the aug- nted chord but it received its share of ention among the questions. The stand- d 120 bass accordion does not have a cial row of buttons to produce the aug- nted chord. Most standard accordions, wever, have the bass section combined that the dominant (fifth) is omitted in dominant seventh chords. These chords may then be substituted for augmented chords. As an example, a C7th chord con- tains G natural whereas a C augmented chord contains G sharp. When the G is omitted in the mechanical combination of the C7th chord, that button may be sub- stituted for the C augmented. Where pos- sible, most accordion arrangers add the G sharp, or whatever the augmented fifth may be, to the harmonization of the right hand.

Another popular question concerns the fingering for the diminished chord. Gen- erally this chord is combined with a coun- terbass to make it complete. Example: C diminished chord would be combined with an F-sharp counterbass. Whether a coun- terbass or a fundamental bass be played, the third finger is always used to play it while the second finger always plays the chord button. This explanation covers the instances where a straight diminished chord is to be played. There are, however, oc- casional instances where the diminished but- ton is used in combination with certain counterbasses to form a minor ninth chord. The fourth finger is then used to play the counterbass as the distance is too great for the third finger to reach. Refer to the chart accompanying this article and note that the illustration of a C minor ninth combines a B-flat diminished chord with a C counterbass. This particular combina- tion is rarely seen in accordion music but it is well for students to understand it.

We suggest that students cut out this chart and paste it on a piece of cardboard so they may conveniently refer to it when perplexed about unusual chords.

(PIETRO DEIRO WILL ANSWER QUESTIONS ABOUT ACCORDION PLAYING. LETTERS SHOULD BE ADDRESSED TO HIM IN CARE OF THE ETUDE.)

Questions and Answers

Q. *Would you please explain how hymns should be played on the accordion? I play melody notes in the right hand and full chords in the left. I enjoy the pieces you have in* THE ETUDE *and hope we may have more of them as I get much instruction and pleasure from your department.*—Mrs. S., California.

A. Thank you for your kind remarks about this department. When playing hymns, en- deavor to simulate the organ as much as possi- ble. If your accordion has a bass register switch, use it so that the low octave is removed and the chords play in close harmony. I would not confine the right hand to the melodic line alone. Fill in some harmonization so the tone from both sides of the accordion will be more equally balanced. Watch your phrasing care- fully and reverse the bellows only between phrases, not in the middle of them.

Q. *I would appreciate answers to these ques- tion: What fingering is correct for the harmonic scale ascending and descending? How is the augmented chord played by the left hand? In playing a diminished seventh chord, does one use the third or fourth finger on fundamental or counterbasses?*—J. J. W., Chicago.

A. Harmonic Minor scales are fingered thus: *2 3 4 2 3 4 2 3 4 2 3 4 3 2.* The figures in italics indicate counterbasses. Your second and third questions are answered in detail in my article, "Study of Accordion Chords."

3 REASONS EXPLAIN THE SUPER PERFORMANCE OF Soprani AMPLIPHONIC ACCORDIONS

1 Ampliphonic reed blocks, an exclusive patented Soprani feature, the greatest improvement in the accordion since its invention.

2 Lighter instruments, easier to play, 1/3 less bellowsing, quicker response; better volume and beauty of tone.

3 Styling, the latest added attraction. Beautifully streamlined models, with many improved details, appearance as impressive as performance.

Fifteen models, ranging in price from $175.00 (Rialto, Eighty Bass) to $1,000.00. These instruments are easier to learn, easier to play, easier to teach. Write for new illustrated folder showing the complete line and describing their many unique features and advantages. No obligation, send today, sure. 214

THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself

Paganini's Secret

A Historical Mystery Solved

By DOROTHY BRANDT DALLAS

REALLY REMARKABLE violin playing always has seemed to embrace the uncanny, so rarely has it occurred. The superior tone, the assured accuracy and technical ease, the volatile expressiveness of the artist; these never have seemed wholly explained by his fine violin, incessant toil, and God given artistic nature and talent.

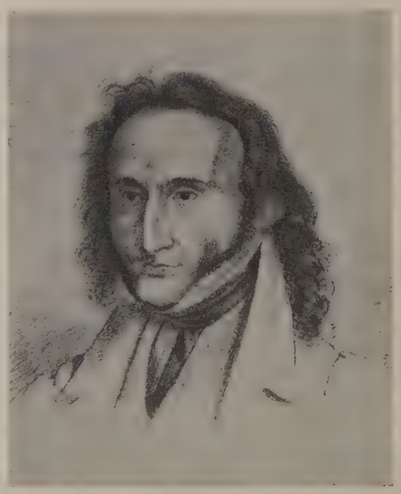
The fascinating example, the technician extraordinary, is Nicolò Paganini, who alone among outstanding violinists admitted having a secret concerning his remarkable technic. It is quite true, rogue that he was, that he may have invented the story to bewitch further a public that could not believe such music the product of a human being unaided supernaturally. But, on the other hand, he may have been the only violinist who had surprised the secret of his technic; or he may have been alone only in his disposition to hint, but not give away, the possession of an "open sesame" to violin mastery.

The existence of such a secret has been decorously denied. "The late Prof. Fetis, of the Brussels Conservatoire," writes a biographer, "believed that no such secret could possibly exist. He asserted, doubtless with much truth, that there is no royal road to brilliant execution, and nothing but downright hard work, combined with an extraordinary natural gift, could account for the wonderful impression Paganini made on the world of music."

Since the invention of language, words and phrases with obscure meanings have been coined, either to mask or to exploit man's ignorance. Each generation inherits these cryptical phrases, with the result that much balderdash flourishes unchalleneged. A most favorable physique, a certain disposition toward music, an immeasurable energy and application thereto, as well as a persistent disregard of dogmatic method, Paganini surely had, and certain it is that these faculties would go a long way towards explaining his genius. Yet we find the academician, true to his self-satisfied, uninquiring nature, clinging to his phrases while the great Paganini, regardless of the years of hard work which helped to undermine his health, insists that "Everyone has his secrets."

Indeed, the profession too long has been content to attribute to talent all that would not readily explain itself. Failing in its duty to discover of exactly what the "one hundred per cent directness" of genius consists, it confuses the student with superficial rules which are more compromises than methods. Here we have it ignoring what to-day would be called a "hot tip," due to its egotistical lack of curiosity. Professional jealousy is a phrase that is only whispered, yet it accounts for much lost progress; and it is almost unbelievable to what lengths it will go to defend an endangered prestige.

Paganini the Master



THE RARE STUDENT uses the teaching profession only as a stepping stone to instrumental mastery; he seems instinctively to adjust himself to the situation and cannot be corrupted by bad methods. Paganini is represented as "mocking at all accepted rules," which would, of course, antagonize their advocates. Says Brémont, "He was a giant in the land, and the little men were conscious of their inferior stature, while they were loth to admit aloud that there was any difference in height or breadth, and, of course, ascribed their lack of popular favor to the perfection Paganini . . . outraged." "People tried in vain," writes another chronicler, "to explain his method of playing; professors criticised him, and pamphlets were published which endeavored to make him out a quack or charlatan. But it was all to no purpose." Paganini stands to-day the most famous of all fiddlers, whose story has become almost a legend.

Another critic admits, "Even sensible people believed that Paganini had some uncanny and unlawful secret which enabled him to do what was impossible to other players." Paganini himself related, with evident relish, the hallucination of one beholder who "distinctly saw the devil standing behind me, with his arm linked in mine, and that he guided the motion of my bow. His likeness to me accounted for my hellish origin; he was clothed in red, had horns on his head, had a tail, and so on. After so circumstantial a description, the accuracy of the story could not be doubted; and thus many people deemed that they had discovered the secret of what they called my *tour de force*." Yet another writer claims that Paganini "promised to reveal the secret of his remarkable playing before he died; but, as he did not, it remains still a mystery."

Several incidents in Paganini's career seem to support the hypothesis that he was not fabricating. Paganini taught but two pupils, a little girl, Calcagno, and Camillo Sivori, into whose training he surely would have incorporated any secrets he knew. The former, in a few years, was "astonishing audiences with the boldness of her style and the brilliancy of her playing." Sivori, according to one critic, was "one of the finest, if not the very finest violin player ever heard." This would seem to afford his secret some versatility, accenting surety of technic in one and quality of tone in the other; while it evidently is simplicity itself.

To the violoncellist, Ciandelli, in return for an invaluable service, Paganini "gave some insight into the secret in question, which transformed him, in less than a fortnight, from a very mediocre performer into a virtuoso of the first rank"; or, to the tune of a less impulsive chronicler, Paganini gave him "some valuable instruction, which enabled him in the course of a few years to become transformed from a very mediocre player into an artist of considerable rank." Now, nothing short of necromancy could effect such a remarkable change, without allowing a reasonable lapse of time for personal application; so Paganini's secret was considered black magic. It was not for nothing that the curious took to following him about in an endeavor to surprise him in his secret; but all they ever were able to discover was that he never practiced.

On the whole the profession has been disposed to countenance the legend, and biographers to improve on it. Many have been the violinists who were intrigued by the idea, and gave forth many interesting conjectures. It has been observed that Paganini always played in "easy keys," and this has been brought forward as his "secret." For it is indeed true that half the keys engendered by the semitone system are very awkward to execute on the violin

NICCOLO PAGANINI

A rare etching by Ludwig Emil Grimm, done in 1830, from life

and, for this and other reasons, are seldom employed. Spohr, in his "Autobiography," similarly mentions "best keys for violin," the significance of which presently will be apparent. It also is known that Paganini played in "sharps" while the orchestra accompanying him played in "flats"; which he accomplished by the simple ruse of raising the pitch of his instrument a semitone —which would not have kept his music from being copied, as one biographer suggested, by any clever musician. It is unquestionable that Paganini was aware of the superior general brilliancy of the sharped keys over the flat keys, when used on the violin—a phenomenon called key color—and that he used this knowledge to his advantage. By this simple ruse he gained in brilliancy over the orchestra, by means of key as well as from the higher pitch of his instrument. It is difficult to determine what pitch Paganini generally employed, since the standard varied considerably in time and place; but to-day, with violins adjusted to A-440, a difference of a semitone is very striking—particularly downwards, when the instrument is grave and solemn to the point of comedy.

A Popular Belief

THAT PAGANINI "CARRIED TO THE GRAVE an important secret, which alone would explain, if not the whole of his success, at least nine-tenths of it," is generally believed. The world always has been sensitive to riddles, and such historical mysteries are not so many that it soon forgets them. "Paganini's secret" is almost a household phrase; as much an enigma of the present as it was in 1840 when he died. The statement of its discovery has been made so many times that it has become about as exciting as the perennial solution of the secret of Cremonese varnish, which is supposed to hold the answer to the supremacy of Italian violins. It is possible that his secret, as Paganini knew it, was too unconvincing, too obscure, for the majority of musicians and much less his general public to grasp, and he consequently chose to benefit from its mysticism rather than to take the chance of provoking untimely ridicule. For it must be remembered that Paganini's path was not all strewn with roses. He had many professional enemies; and in some towns he was so badly received "that he made all haste to leave."

We wish to offer another solution to this centenarian mystery; one which answers well to the clues pertaining to Paganini's secret, in its simplicity, its aid to violin tone and technic, and its connecton with key color—a tonal and intonational violinistic phenomenon which we will call resonant intonation.

Many players have noticed the superior resonance of certain tones on the violin. This simple fact fosters a complete system of intonation for the bowed instruments. For each semitone, throughout the full compass of the instrument, possesses a pitch of superior resonance, which, once recognized by the ear, constitutes the "perfect" intonation of that semitone. Thus do the bowed instruments create their own twelve toned temperament, scientifically founded.

Playing in tune on the violin thus consists of an unequally tuned twelve toned temperament, closely resembling the equal temperament of the piano—whose imperfect intonation violin students long have disdained. The violinistic temperament, which we have called resonant intonation, is achieved through neither pitch nor interval relationship, but through volume of tone—the resonance previously noted. On using this intonation, the power of even the most mediocre instrument is nearly doubled; while technic is immediately facilitated; for natural intonation, which heretofore has been the violinist's ideal, is eight times as difficult to produce on the violin as tempered intonation.

These resonant violin tones are readily detected by the ear, once its attention has been gained. As an easily perceived example, play the tone "a" on the D string, exactly in tune with the open A. Notice the great fullness of tone a-on-D possesses at this pitch, compared with pitches slightly higher and lower than the A string. The reason for the superior tone of the former pitch is simply that when a-on-D is exactly in tune with the open A string, the latter

sounds sympathetically with a-on-D, greatly augmenting its volume and richness.

The violinist does not need to take the judgment of only his ears in this matter. The A string can be seen vibrating in sympathy with its unison a-on-D, when the latter is exactly in tune with the open string. Play the A string and notice how it vibrates, widest at the middle. Then play a-on-D, exactly in tune to the open A, and notice the A string vibrating. The louder one plays a-on-D the more noticeable the vibrations of the A string.

Now suppose we play a-on-D, slightly out of tune to the open A. The latter no longer vibrates so readily, and the tone is considerably duller. Gradually slide the finger in tune, and it will be noticed how the tone immediately brightens. This sympathetic reënforcement is the underlying principle of resonant intonation.

The case is similar with each of the remaining semitones, which may de demonstrated with the other octaves of "a." If we play a-on-G, we find that the open A string responds similarly as when a-on-D was played. But a-on-G is an octave lower than the A string and, instead of being reënforced through its fundamental tone, is receiving this reënforcement through its first upper partial tone, which, like a-on-D, forms a unison with the open A string. These upper partials correspond with the harmonics of the violin strings, used as tonal embellishments. For instance, the first harmonic of the A string is its octave, which also is known as its first upper partial.

The violin harmonics enter into the creation of resonant intonation, just as do the open strings. To demonstrate this, play a-on-E, exactly in tune to the A string. This time the A string acts a little differently; for the first harmonic of the A string is now supplying the sympathetic reënforcement. Thus, instead of vibrating its full length, the A string now is vibrating—not quite so visibly—in two equal sections, just as when one induces the same harmonic to sound by lightly touching the middle of the string with the fourth finger.

(To be continued in THE ETUDE *for January)*

Fundamentals of Modern Violin Teaching

By SAMUEL APPLEBAUM

THE SCHOOLS OF VIOLIN PLAYING, as we know them, may be divided into the older German School, the more recent Franco-Belgian School and the modern Russian School of Professor Leopold Auer. Only the most important differences in the various schools will be here discussed.

For years the student was taught to throw the fingers on the string so as to produce a hammerlike click when the finger struck the fingerboard. This resulted in a possible brittleness of tone production, and tended to injure the delicate nerves of the finger tips. Now we train the finger to strike with lightness and surety and to press firmly upon reaching the fingerboard. Pupils of the writer are asked to imagine that the fingerboard is made of rubber and to press into the rubber, not by the force of the blow, but by the firmness of the pressure after the string has been struck.

As to the holding of the bow, the differences in the various schools seem rather small when measured in inches, but the results in public performance are very apparent. In the older German School the forefinger came in contact with the bow in the indentation of the first joint nearest the tip. The newer theory advises the bow to be placed between the first and second joints, while the modern school insists that the most natural point should be in the indentation of the second joint. This enables one to draw a rounder and firmer tone with much less effort.

Even the drawing of the bow presents problems that have been more successfully solved by the modern theorists. In the past the bow was drawn so that only a portion of the hair was used, with the stick of the bow tilted toward the fingerboard. Then came the use of a portion of the hair in the lower part of the bow and all of the hair in the upper part. The player was advised to keep the bow hair firmly stretched.

To-day we advise a looser bow, the use of all the hair, and the stick of the bow held directly above it.

As the violinist of the past approached the nut of the bow, the right arm would gradually be lowered towards the body, thus creating quite an angle between the wrist and the arm. There are still a number of teachers who require that the pupil hold a book between the right arm and the body as he draws the bow.

The artist of the present does not lower the arm as he draws the bow. The wrist and the arm form practically a straight line. It is interesting to note, for example, the extremely high bow arm of Heifetz, of Menuhin and of Elman.

An extensive use of the wrist, in a desire for a smooth bow change, has been found disturbing as well as unnecessary. A more satisfactory bow change may be managed by the use of the fingers and with only a slight but skillful use of the wrist.

Conditions Favorable to Violin Study

By LAWRENCE METTERSHEIMER

THERE ARE MANY students of the violin, but few of them are capable of pleasing an audience with their playing. Quite often the excuse—if they are serious—is that their listeners are not educated up to the music selected for the program.

A good performance requires more than to have the violinist think that it is easy for him to play. Technical mastery presupposes the establishment of basic emotional conditions favorable to the attainment of a technic. Any attempt to acquire such technic by repeated efforts of the will must fail unless the correct emotional attitudes have been very firmly established.

Talent is displayed during the practice hours as well as in public performance. The talented pupil is pleased to practice slowly, to keep an even time, to phrase carefully. He is pleased to give attention to shifting the positions accurately; and, because these things are a source of pleasure to him, he learns much faster than the ordinary pupil. The necessary discipline imposed by his teacher and also by himself does not seem irksome. As a result, his violin sings when he plays. And, most important of all, others enjoy his playing.

Start the Little Ones Early

THE reason why so many parents, to say nothing of doting grandparents, aunts and uncles, give THE ETUDE as a Christmas present to children, is that they themselves were "brought up on THE ETUDE" and know what it means in the child's life as well as in that of the adult.

Since the very beginning of our Junior ETUDE section, its main objective has been to make music study for little ones a matter of glee instead of gloom.

Miss Elizabeth A. Gest, the Editor of the Junior ETUDE, is a composer and teacher of distinction, trained at the Institute of Musical Art in New York, and at other leading institutions. Because of the fact that she "just loves kiddies" she has taken an affectionate and intimate interest in this work, far exceeding mere editorial supervision. She literally "lives with it" and loves it.

The little folks who write to Miss Gest in such great numbers, are the best indication of her popularity. She devotes hours to the preparation of the department. We are very glad to pay this tribute to Miss Gest, who has conducted this work for twenty happy years.

No one knows what the investment of $2.00 for an ETUDE subscription in the early years of a child's life may mean to the little one's entire career.

Christmas is of course the ideal time for such a gift.

The Etude Music Magazine

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

Violin Making in England

Y. T.—The English, as a nation, always have been interested in violin making, and some of their makers have produced excellent instruments. London affords us the greatest violin market in the world, and a number of the world's greatest Cremona violins have been owned there. London is the only city in the world where auction sales of Cremona, and of other valuable violins, are held at frequent intervals. Many violin makers and dealers have made their homes in London, and numerous interesting stories can be told of their adventures.

John Betts, violin maker in London from 1755 to 1823 was a famous character. A well known authority says of him, "He made solid, good, square work, without showing anything extraordinary in the construction of his violins." He was an expert judge of old violins, and became famous through the purchase of the so-called Betts Strad. One day somebody came to his shop (Royal Exchange, No. 2) and offered him a violin for which he had no use. The price asked was twenty shillings (five dollars) Mr. Betts saw that he had one of the handsomest Stradivarius violins before him, and bought the violin. This instrument became known all over the world as the famous "Betts" Strad.

Trouble with the A String

B. B.—1. Without examining your violin, and hearing and watching you play, I cannot tell why your A strings break so often. As you are now practicing four hours daily, instead of two, this would no doubt have a great deal to do with the strings breaking more than formerly. Strings wear out, like everything else. It may be that the trouble is due to the fact that your finger nails are not trimmed closely enough, and that they scratch and scuff the string, causing it in time to break. This theory is borne out by the fact that you say your strings always break at the same place. I have examined the parts of the broken string that you sent, and find that they are scratched and scuffed at the breaking point. Try closely trimmed finger nails for a while, and see if it does not help. 2. Some violinists put a little oil of sweet almonds on the fore finger, and rub the gut strings with it, except the part where the bowhair touches the string. This seems to help, especially in very warm weather. Also, you might try another brand of strings. Most violinists have a great deal of trouble with gut strings breaking in extremely hot and damp weather. A famous violinist once told me that, at a concert in New Orleans, he broke seven lengths of gut E strings, due to the very hot, damp, sticky weather. It spoiled his concert.

A Schuster Violin

Rev. P. S. B.—I cannot find any extensive information on the value of the Schuster violins made in Germany. Bauer, in his "Practical History of the Violin," names two violin makers named Schuster—Joseph Anton Schuster of Schönbach in 1778, and Johann Christian Schuster in Prague, 17—. He volunteers no information concerning the quality or value of these violins. These are both obscure makers, and their instruments would not be of much value. The best way to find the value of such instruments, would be to show them to an experienced dealer in old violins.

A Variety of Questions

J. R. DeL.—1. I cannot tell whether you could become a professional violinist, commencing to study at twenty-three, after having had two or three years' lessons in boyhood, from teachers who did not themselves, play the violin. I should want to hear you play first. Better go to an experienced violin teacher, play for him, and get his opinion. I cannot advise you, because I do not know you, and have never heard you play. 2. About your gland trouble, you should consult a good physician. 3. No expert can possibly value a violin, or tell if it is a rare old instrument, or an imitation, by hearing the player who owns it, play the instrument in an orchestra over the radio. He would have to give it a personal inspection in order to express a reliable opinion. 4. Why do you not write to the violinist who plays the violin in which you are interested, and ask him about its maker? You could address him in care of the orchestra in which he plays, at the radio station where this orchestra is playing. This is the only possible way of learning the identity of the violin.

Bowing and Other Questions

F. N. F.—1. I do not know the Giacomo violins. Maybe some dealer in old violins in Toronto, which is near your home, can supply the information. *Fliegendes* is the German for flying. *Fliegendes staccato* means flying *staccato*. The bow is pushed along with little strokes, but it leaves the string between the strokes. It is similar to a flat stone skipping over the surface of the water of a pond. It keeps bouncing a certain number of times. The bow bounces once to each note marked with a dot. There is a curve over all the notes intended to be played flying *staccato*, and the bow keeps in the same direction as far as indicated. 2. A measure of *Schön Rosmarin*, by Kreisler, is played at the rate of six eighth notes to one tick of the metronome, or to one tick of the clock. Some violinists vary the speed at times, or in different parts of the composition. 3. *Saltato* and *Spiccato* are varieties of the springing bow, and mean about the same. 4. If you will study the bowing exercises in Kreutzer, and in Sevčik's "Variations, Op. 3," you will know all that needs to be known about the various types of bowing used in violin playing. 5. How to assign new lessons to pupils, depends very much on the ability of each pupil. You will learn this as you gain experience in teaching. The new lessons should include scales, *arpeggi*, bowing exercises, etudes, technical exercises, pieces, harmonics, *pizzicato*, trills, double stops and so on. Of course all of these are not included in each lesson, but three or four branches could be covered, until finally all are mastered. This subject is thoroughly treated in the book, "Violin Teaching, and Violin Study," by Eugene Gruenberg, which I recommend for your diligent study. This book can be purchased through the publishers of THE ETUDE. It contains much information on practically all branches of violin study.

Women Violin Makers

Y. T. R.—There are very few female violin makers and repairers; a condition somewhat remarkable, as the fair sex is well adapted for the work. There are a few women in England, Scotland and Canada, who have made some fair instruments, but the women of other nations do not seem to take kindly to the profession of violin making. This will probably change, as the interest in violin making grows; and, in the days to come, we shall have eminent female violin makers, possibly a female Stradivarius.

Violins "in the White"

W. R.—When you see violins advertised in musical catalogs and price lists as being "in the white," it means that these instruments have not been stained, colored, or varnished. That part of the work is left to the purchaser. Some people prefer to do their own staining and varnishing; even some violin makers and dealers, who then advertise the violins as their own. Many amateurs also, enjoy buying violins "in the white," and then varnishing and finishing them themselves. They become so much interested in the work, that they often attempt to make complete violins. If they have talent for the work, many of these amateurs reach a point where they are able to turn out some really good instruments.

Violin Literature Books

T. C. H.—Valuable works in the literature of violin playing are: "My Long Life in Music," by the late Leopold Auer, world famous teacher of the violin, and teacher of some of the greatest violin virtuosos now living, and "Violin Playing as I Teach it," also by Leopold Auer. This work abounds in advice and hints to the violin student, which are of the greatest possible value. A third work is "Violin Mastery," by Frederick Martens. This book has short biographies of leading modern violinists, with excellent portraits, and contains a great wealth of information about the violin and its masters. Another work which the young violinist should study thoroughly is "Dictionary of Music and Musicians," edited by Sir George Grove. This work contains many articles written by eminent authorities on the violin, and other strong instruments, and the student who studies them thoroughly will soon become well informed on the subjects. These works are usually to be found in the public libraries of the larger cities, and should be purchased by students who live in the smaller communities.

Keep the Rosin Clean

T. W.—There is a great deal to learn about every detail of violin playing, and the care of the violin. Rosining the bow is no exception, and that, too, requires great care. You say you cannot get the rosin to come off the cake evenly. From the description of your trouble I should judge that you are using a new cake of rosin, which has a smooth glossy surface that makes it hard to get the bow hair to "take hold." The remedy is to scratch the surface of the rosin with the blade of a pocket knife, or any sharp pointed instrument. If this is done the surface of the rosin is soon covered with a fine coating of rosin dust, which easily transfers itself to the bow hair, when the bow is rosined in the usual way. Or you can powder a small piece of rosin and apply some of this dust to the bowhair, before it is drawn across the rosin cake. Perhaps your cake of rosin is not new and glossy, but has become dirty and greasy with "just laying around." The remedy for this is the scratching process described above. It is always wise to have a good clean cake of rosin. Do not use the rosin too violently, or energetically, as too much force is apt to melt the rosin slightly. A fine dry powder gives the best tone.

PLEASE ASK FOR
CENTURY Certified EDITION SHEET MUSIC
YOU WILL SAVE MONEY ON YOUR MUSIC BILLS
15¢ A COPY
20¢ in CANADA

INVEST YOUR MUSIC MONEY WISELY

WHY IS the Bible the cheapest book in the world? Why can you purchase the complete works of Shakespeare at less than the cost of the latest novels?

The answer is simple—mass production; no royalties; constant demand.

By the same token you can buy Beethoven's "Moonlight Sonata"—15 pages of the world's best music—for only 15c. in the CENTURY EDITION.

Beautifully printed, carefully edited, the best of paper and workmanship throughout.

Think of it! Over 2,900 selections to choose from and none of them cost more than 15c. a copy. Century Sheet Music is truly dollar value for 15c.

TEACHERS who are today supplying their pupils' needs from the Century catalogue are making it possible for many parents to continue their children's musical education, and its low cost is likewise aiding them in their new student enrollment.

That's why we say, "Please Ask for Century Edition." You will get a new conception of your money's worth.

Bands and Orchestras

(*Continued from Page* 791)

from a loud one. They are essentially the same. A soft tone is merely not as much tone as a loud tone. The quality is the same.

When we speak of quality of tone, we are mentioning a mental concept which must be approached through the other side of our original dualism. Quality as well as timbre, intonation, shading, expressiveness, darkness, brilliance and dynamics, while physical in their manifestations, are mental in their conceptions. Tone is an expression of thought by means of sound. It depends on ideas, memory, concepts of mental images. When one plays, he is not merely going through a series of meaningless and empty physical activities. He is expressing his thought processes and ideas by means of a physical medium controlled by these same thought processes. The student must think, think constantly—not intermittently. It is this ultimate problem of awareness which provides such a stumbling block to many. Music is a vital force. Aestheticians tell us that it is the most fluid, living and vital of the arts. A true musician must be aware at all times of all that he is doing. It is quite apparent that certain questions concerning the phenomenon of emotion could be raised to excellent advantage.

Tonal Characteristics

AS FAR AS QUALITY is concerned, the student must try to analyze and to realize the particular and individual uniqueness of the clarinet tone. It is at once moody and heroic, robust and tender, mellow and full of meaning. It is woody, rich and flavored with all the overtones of a full set of harmonics. The student should listen to a good tone, remember it, form a mental image of it, and listen to himself as he plays, striving always to conform to the ideal. The timbre of the clarinet is unapproachable by any other instrument. It is a unique combination of the joy and sadness of life with an admixture of contemplation upon them. The clarinet, in addition to being the "King of the Woodwinds," may well be termed the "philosopher of the orchestra." Where the flute possesses a limpidity and freshness of tone, pure in its simplicity, the clarinet matches it with a superb clarity of expression. Where the oboe sarcastically or mournfully laments the bitter sweet of pastoral poetry, the clarinet expounds the joy of the open and the free flowing of the cycle of nature. Where the bassoon humorously or gravely asserts a theory the clarinet broadly and reverently deals with the problem.

No other instrument save the violin can match the clarinet for sheer virtuosity of dynamics. The softest whisper of a *pianissimo* is possible as well as the noble fullness of a grand *forte* passage. The flexibility and the grace of a phrase can be turned with the same ease as a rapid, *staccato, scherzo* passage. Lest this eulogy of the instrument be deemed merely a flight of fancy prejudiced by the author's fondness for his instrument, let us hasten to add that here we are dealing with concepts. No words can express actually all of the meaning inherent in a tone, as no words can express music, nor can music express the same shade of meaning as a poem. It is impossible to make an exact transposition of the two mediums. Thus do the arts maintain their invulnerable integrity. But some approach can be hinted at by means of a correlation. These concepts put into words stimulate the mind to action and it is by a serious effort to inspire the imagination that we at last come to a stage of understanding and respect for the subtleties of tonal expression.

Having observed the preliminary stages of muscular coördination so essential to the correct physical approach to tone production, and having further formed a concept or mental image of tone, the student will be ready to put into practice his ideas and his physical equipment. At this point it should once again be observed that all individuals are individual by virtue of the fact that they possess unique physical and mental qualifications and attributes. However general any discussion may be of a problem, the individual will find that all theory and practice concerning it will be relative to his own character, temperament and physical make-up. For this reason constant experiment and a clear head are invaluable. The student must not be too ready to accept all ideas nor too easily be discouraged if at first he finds that certain principles are difficult to put into practice. He must balance himself on one side of the equation against the ideal which he wishes to attain on the other. He must therefore have some method of procedure which will enable him to go on with the experiment.

The mental images or concepts of tone are subject to the same individuality of treatment. Some poetry fires one man's imagination and leaves another cold. Bach may bore some, inspire others, and so on. The fact that these individual differences exist lends the richness of variety to the approach and is responsible for the full symphony of human achievement. As far as a method of procedure is concerned with the mental concept of tone, it is suggested that the student begin with the few concepts listed above. He will soon find that he places his own evalution and interpretation on what is presented to him, and will have his own set of concepts developed.

Method of Procedure

TO CLARIFY THE METHOD used in the formation of concepts would be impossible for one man. It is too intangible and complex a subject to deal with lightly and in such a general discussion as this. However, certain methods of the physical approach and development of the embouchure can be mentioned to advantage. The basic principles of tone production can best be studied and developed by means of long, sustained tones. It is a good plan to play scales in sixths and octaves holding each note for a slow eight beats and breathing between every pair of notes. This will aid in attaining evenness of register, flexibility, control, relaxation and accurate intonation. Incidentally, the enumeration of these words, evenness of register, and so on, is the enumeration of another set of concepts which will again have to be considered as relative to the individual. After a certain proficiency has been gained in the production of a pure, sustained tone, it is well to proceed with chords, scales (particularly scales in thirds), and other technical exercises.

Above all the student should remember that it is not so much what he practices as how he practices. No matter what facility of technical skill is achieved, there is no substitute for a good, thoughtful performance. This is the fundamental difference between the artist and musician and the player of notes. As mentioned at the beginning of this discussion, the problems of clarinet playing are subtle and involved. The approach to and the development of a good embouchure are necessary to good tone production. The development of the physical activities and of the mental concepts of tone are the first steps towards this ideal. It is hoped that this discussion will serve not merely to answer this problem but to stimulate thought concerning it. That in itself is the ideal of all sincere teaching, a stimulation to achievement and thought, not the barren imparting of isolated facts.

EASY to Own—
EASY to Play

It's new, it's thrilling, it's spectacular—a genuine 2½ octave DEAGAN marimba, embodying DEAGAN standards of quality and beauty, at the lowest price in history.

The DEAGAN STU-DETTE is your opportunity, at negligible cost, to *stimulate* the musical interest of your children, *develop* their musical talent. No instrument gives greater expression to musical abilities. None wins greater applause—or is easier to master.

There's fun for all the family in the DEAGAN STU-DETTE. Shall we send you particulars? . . . J. C. Deagan, Inc., Dept. E12, 1770 Berteau Ave., Chicago.

THE HARMONIOUS BLACKSMITH

Lowell's Harmonious Blacksmith

HERE IS THE TALE of a real harmonious blacksmith. He is Frank B. Hill, who has a blacksmith and automobile shop on Worthen Street in Lowell, Massachusetts. Mr. Hill is now seventy-two. He has been musically inclined since childhood, when he used to practice upon an old square piano. His hands were too tiny to reach an octave; but this he remedied by tying a stick on the end of his little finger.

His father and his grandfather were blacksmiths. His father played the violin and took a great interest in his son's musical talent. At the age of fifteen, the boy was substitute for the organist in a Methodist Church; and he has, since then, directed many large choirs.

One of his Neighbors writes:

"FOR ABOUT twenty-five years he supervised his blacksmith shop in which his organ was installed; but he did not work in it, as he was devoting most of his time to music. For the past twenty-eight years he has played for different Masonic Lodges, and he still continues to do so. His playing is notable for the expression which he develops.

"An old army blanket covers his organ when not in use. The keys are unusually white, and the woodwork well polished. He has a black broadcloth suit, of which he is very proud. He calls it his "Go to Heaven" suit, as he wears it when playing his beloved organ. He is sorry that more people do not appreciate good music; and he thinks every boy should learn to play the piano, because when he is alone he can then pass away many a happy hour and thus often be kept out of trouble. He says that when a boy goes to college, if he can play he becomes more popular, and it also keeps the boy from becoming homesick. He believes that classical music, with melody, is much finer for young people to play than is noisy jazz.

"Mr. Hill is contented with life, and he never has drunk a drop of liquor. He did not smoke until he was sixty-four years old. He does all the painting and work in the shop, himself. He still goes to dances, and he thinks that dancing is good for old age and that it keeps rheumatism away. His one son also plays the piano; and it is the father's hope that the son will devote more time to music than he himself has done."

A Prophet not Unknown

A LOCAL PAPER, in writing about Mr. Hill, says:

"Partly hidden by carriage wheels, scraps of iron, a wagon or two and all sorts of automobile accessories is an Estey organ, equipped with twenty-four draw stops, which brings much happiness to its owner, Frank B. Hill.

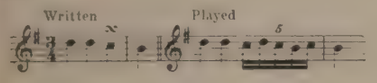
"Although Mr. Hill is by day a blacksmith and automobile repair man, when his work is finished he finds beauty and comfort in his music at night. The familiar strains of the *Sextette from 'Lucia,' Narcissus,* Sousa's famous marches, and many beautiful church hymns, all are frequently heard as Mr. Hill plays them, revealing his deep appreciation for the finer things in life.

"Mr. Hill has been an organist for forty-three years in this city, having served at Calvary Baptist church for nineteen

(*Continued on Page* 838)

Question and Answer Department

Conducted



By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

The Turn in a Famous Minuet.

Q. I am a constant and grateful reader of your articles in THE ETUDE. *Since I am a former pupil of Oberlin Conservatory and am in need of immediate advice, I am taking the liberty of writing directly to you. Will you kindly tell me if this is the proper way to play the turn in Paderewski's* Minuet?—Mrs. R. W. S.

A. You are correct in your assumption that this turn is played as though it were written after the note instead of directly over it. As a matter of fact, I am told that Paderewski himself always did it as you have written it.

The Seven Rhythms Again.

The question of your correspondent G. C. M. concerning the seven rhythms (THE ETUDE for May) is an interesting one. Mursell in his "Psychology of Music" (1937, Norton) lists and explains the seven unit groups which he calls "the basic constituent elements of the whole structure of musical rhythm." Happily enough, I was reading this book when I saw this query. These are the types he mentions:

⏑ — Iamb Type ⏑⏑ — Anapest Type
— ⏑ Trochee Type ⏑ — ⏑ Amphibrach Type
— ⏑⏑ Dactyl Type ⏑⏑ Tremolo Type
| — | — | Single Beat Type

Mursell has this to say of the tremolo type: "We find the form in the beat of the tympani, in the trill, and in the rapid, even, unshaded run." Of the single beat he says: "If we slow any rhythmic sequence down below a certain *tempo*, its rhythmic quality, which is its quality of grouping, disintegrates, and it becomes a mere sequence of single beats." As an example of this, he quotes the *Dead March*, from "Saul." The comparatively rare amphibrach is, he says, "carried by a coördination of the type where the strong beat is prepared by a forebeat, and where the pause does not occur immediately and abruptly after the strong beat, but where the tension is released through an afterbeat." The four other types are common enough to require no comment here.

Incidentally, Mursell does not take credit for discovering the seven unit groups but accords it to recent writers that have preceded him.

On the whole, the book is interesting, comprehensive, and surely provocative.

In closing, I should like to say that although I am no musician, I read THE ETUDE every month and never without learning something.—R. M. K.

What Is "Tone"?

Q. 1. A question was set, "Enumerate and explain the different ways in which the word tone *is used in connection with music." This was answered by two people. One answer (a) stated that: 1. tone may be used in connection with the tone producing mechanism of the piano, whether light, even, and so on; 2. tone may also be used in connection with tone shading, such as* crescendo; *3. tone may be used in connection with touch; 4. tone may mean the difference in pitch between any note and the next but one on the piano keyboard. The second answer (b) stated tone to be: 1. a musical sound in contradistinction to a noise; 2. a sound of a certain pitch (high or low, and so on); 3. a sound of a certain quality (sweet, harsh, and so on); 4. second smallest interval of practical music, a semitone being the smallest; 5. a mode. I should like to know which of the answers is right. On the other hand, if they are both wrong, could you please answer the question correctly?*

2. What grade is each of the following pieces? (a) Ballade in A-flat major, *by Chopin;* (b) "Rigoletto" Paraphrase *by Liszt;* (c) March Militaire *by Schubert-Tausig;* (d) Jardins sous la pluie *by Debussy;* (e) Concert Arabesque (By the Beautiful Blue Danube) *by Strauss-Schulz-Evler;* (f) L'Alouette (The Lark) *by M. Glinka—M. Balakirew.*

3. How many pianoforte concertos did C. Saint-Saëns compose? Where and from which publisher can I procure copies of them?

4. Has the recently discovered "Rumanian Rhapsody," by Liszt been published? If so, by whom?—Miss G. L.

A. 1. They are all correct, for the word *tone* like many other words, has a great variety of meanings. In a general sense it refers to sound that is generated by regular or ordered vibration as opposed to *noise* which is sound generated by irregular vibration; but as used technically by musicians it may mean quality of tone, quantity of tone, size of interval (such as, half tone), and son on.

2. According to Dr. Hipsher, the grades are as follows: (a)—9; (b)—10; (c)—8; (d)—4; (e)—10; (f)—9.

3. Five. From the publishers of THE ETUDE.

4. This Rhapsody has been published by Universal Edition of Vienna and it may be secured from the publishers of this magazine.

How to Pedal Mozart.

Q. What suggestions would you make for the use of the pedal in the following compositions? Fantasia in C Minor, *by Mozart; "Sonata, No. 12, in D," by Mozart; "Sonata, No. 16, in A-flat," by Haydn.*—Miss M. L.

A. The space allowed this column is too limited to show you the pedaling for these pieces. The first thing of importance is whether or not you have the proper fundamentals for pedaling. By that I mean this: Play the "Doxology," changing the pedal at each chord. If your foot comes up simultaneously as you strike each chord and down immediately afterward, your fundamental pedaing is correct; if, on the other hand, you depress the pedal at the moment of striking the chord, your pedaling is wrong. Then I would advise you to get the simple little book of Jessie Gaynor's "Pedal Studies." A little work on this material will give you the proper timing in foot movements. After that, whether you pedal well or not depends pretty much on how musical you are. The pedal markings for many compositions are very unreliable; however Mr. Theodore Wiehmeyer has edited the three compositions you mention with very careful pedal marks. I think the publishers of THE ETUDE can furnish you with them and I suggest that you purchase copies and study his pedaling carefully.

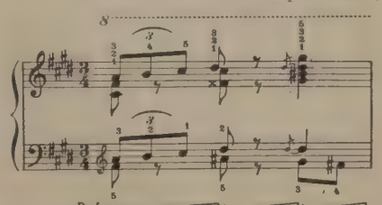
What Clefs Are Used in Music for the Viola da Gamba?

Q. Could you please advise me as to which clefs are used for the Viola da Gamba?—G. C.

A. I have asked my friend, Maurice Kessler, to answer your question and he has given me the following information:

"In old compositions one finds all three clefs: the bass, tenor (on fourth line) and the alto (on third line). Music written and published to-day for this instrument usually employs the same clefs, also the treble occasionally.

How Many Pomp and Circumstance Marches did Elgar Write?



Q. Will you please tell me how many "Pomp and Circumstance Marches" *Edward Elgar wrote; and did he use the same two strains for each of the marches?*—Miss B. B.

A. Edward Elgar had a plan of writing six marches. They were to be in a sort of symphonic form; that is, music that could be used both for the concert stage and for soldiers when on the march. As far as I have been able to find out, all have been published except for the sixth. The fifth one was written when Elgar was an elderly man, thirty years after the first was written. Number 1 is the most popular in our country, although Number 4 is nearly as much so in England and, by many musicians, is considered the best of the five. Different themes are used for each of the compositions.

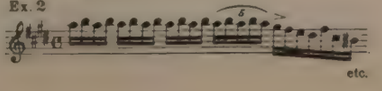
MacDowell's "The Eagle."

Q. Will you please tell me how to play measure two where the grace-notes appear in both hands of MacDowell's The Eagle?
—Miss R. D.

A. No doubt you mean the sixteenth notes which really are played like grace notes, as I have written them in the example shown.

Notice that the sixteenth notes are played like grace notes, and that all quarter notes are played like eighth notes. Try releasing the keys as each chord is caught by the pedal. You will find that this greatly simplifies the playing of this measure.

A Beethoven Trill.



Q. In the cadenza near the end of Beethoven's "Moonlight Sonata," is B or G-sharp to be taken as the subsidiary note? The following is from Von Bülow's edition. Will you kindly write out the trill as you play it?
—W. W. H.

Ex. 1

A. The trill as you have it would have six beats. Some players trill only two beats while others trill four; however, I have been unable to find any edition giving the trill six beats as in your example. My Von Bülow edition has only a whole note for the trill, and that is the way Beethoven has it marked in the original manuscript. It should be played like this, B being the auxiliary note:

Ex. 2

OCTOBER 1938 — MAY 1939

A Musical Obligation

Students have no financial obligations other than to support themselves — they pay no tuition fee.
Students have, however, the musical obligation of maintaining Curtis Institute standards.

OMISSION

Due to unavoidable circumstances, we have been obliged to omit THE ETUDE Historical Portrait Page for December. We trust that this will not disappoint the many ETUDE readers who have found this page an interesting feature each month. The Series will be resumed with the January issue.

FRETTED INSTRUMENTS DEPARTMENT
Edited by GEORGE C. KRICK

Electrical Instruments

DURING THE PAST MONTHS quite a number of letters have been received by this department from readers requesting information regarding the new electrical instruments, and in this article we shall endeavor to give a fairly accurate picture of the development of electrical amplification as applied to the fretted instruments.

The first instrument of that type to make its appearance several years ago was the electrical Hawaiian guitar. The latest model offered in the catalog of a leading company is a triumph of instrument making and engineering skill. The complete unit consists of a small sized guitar made of curly maple, mahogany neck and rosewood finger board with twenty-nine frets, giving a range of almost four and a half octaves. Tone and volume control are both placed on one side for fast, easy action; with a sensitive pick up unit, containing the finest steel magnets, placed inside under the strings to avoid interference with fast playing. A cord connects the guitar with the Amplifier which will accommodate two instruments, a microphone and an extra speaker. Seven tubes with tremendous reserve power, and with four stage amplification, guarantee maximum volume and reproduce the tone without any distortion. The control panel shows: 1. On-off switch; 2. replaceable fuse; 3. extra speaker socket; 4. control dial for microphone; 5. Ruby light on-off indicator; 6. control dial for instruments; 7. sockets for microphone; 8. sockets for two instruments; 9. Bass or normal tone control.

Another device just recently developed is the "foot volume control." It is made of aluminum with a rubber pad to keep it steady on the floor; it is connected with the amplifier, and its purpose is similar to that of the pedal on the piano. Being worked with the foot it can readily be seen that the playing positions of the right and left hand are not disturbed. This device has opened to the player many possibilities for new and beautiful effects; at a moment's notice the tone can be changed from the softest *pianissimo* to a powerful *crescendo* and *fortissimo*, at the same time sustaining the tone to sound almost like an organ. In addition to changing and controlling the tone volume, it is also possible to effect a change in the quality or character of tone from a deep sonority to a high pitched soprano voicing.

Easily Adapted

THE AVERAGE PLAYER should have very little trouble changing from a standard instrument to one of those just described, but some additional study will be required to enable one to use readily the different resources of this new electric guitar. Many orchestra leaders, ever on the alert for something new and different, have given this instrument a permanent place in their organizations and this in turn is responsible for the creation of several new varieties of the instrument. Gene Mack with Lee Shelley's Orchestra uses a guitar with a double neck, one having seven strings, the other eight—two instruments combined in one. The different tunings make possible a wider range of harmony and simplify the forming of any chord combination. A somewhat similar instrument is used by Alvino Rey, member of the Horace Heidt Orchestra.

The orchestra guitar (often called "Spanish") also the mandolin were next in order to receive the attention of the sound engineers. Both guitars and mandolins used are regular concert size instruments; they are held and played just as any ordinary guitar or mandolin, and in appearance they differ very little. With the exception of the coil and volume control the entire pick up unit is built inside the body of the instrument; and the tone may be amplified to any volume desired. In using the tone control the tonal color may be changed from a rich sonorous bass to a brilliant treble. A decided advantage is the low and easy string action requiring very little force from either hand, which helps considerably to facilitate left and right hand technic, at the same time reproducing with remarkable fidelity the characteristic tone of these instruments. Several manufacturers have put out some amplifying units, that may be attached to any instrument and while they are quite satisfactory, it is the opinion of the writer that the units built right into instruments constructed for that purpose, give the best results.

The latest electrical instrument perfected is the banjo. To the best of our knowledge Ken Harvey, one of our outstanding banjoists, is the first one to use an electric banjo in his concerts, and with it he created quite a sensation on his concert tour through England during the past season. Since the writer has had no opportunity to hear this artist, the information given here comes from one of the English critics and from the company, which constructed the instrument especially for Mr. Harvey.

The instrument is a plectrum banjo with an eleven inch rim and a standard finger board with five additional frets. The main visible difference between it and a standard banjo is that no vellum is used, but a maple top containing the pick up unit placed under the strings in front of the bridge. The pick up transfers the string vibrations into electrical impulses, which in turn are carried to the amplifier.

Unlimited Tonal Possibilities

AS WITH THE OTHER instruments described the tone of this banjo, while it retains its characteristic banjo quality, is greatly enhanced through amplification and the "volume and tone control" gives the player unlimited opportunities to vary his performance.

Ken Harvey includes such numbers as Rachmaninoff's *Prelude in C-sharp Minor*, Gershwin's *Rhapsody in Blue* and others of similar type in his program; and in his rendition of classic music this new banjo with its improved tone and volume control has proved a revelation.

It seems an undisputable fact that electrical amplification has opened up new fields for the player of fretted instruments; no more is he hampered and handicapped through lack of tone volume, but he is able to appear in large size theatres and concert auditoriums. Many of the leading companies are putting on the market these beautiful instruments and it is up to the players to perfect their technic to cope with this new development. One correspondent recently wrote: "Sales of electrical instruments have more than exceeded our fondest expectations and they are constantly growing from day to day."

Who knows what will prove the most popular musical instrument of the future.

In Response to Many Requests

DR. LAZAR S. SAMOILOFF

Will teach at his Los Angeles Studios throughout the entire season of 1939 without interruption.

Class and Private Instruction Available in:

Voice placement, musicianship, sightreading, languages, History of Music, acting, repertoire, public speaking, with Dr. Samoiloff and associate teachers. Teachers' course in theory and practice of voice instruction given by Dr. Samoiloff. **Write for Catalog.**

Dr. Samoiloff says:

The field of music is not an easy one, but it is replete with chances for the able and well trained. Whatever your vocal fault, if you become sharp, or flat, if you have a tremolo or lack range, **it can be remedied by correct training. Start right!**

SAMOILOFF BEL CANTO STUDIOS AND OPERA ACADEMY

610 South Van Ness Avenue, Los Angeles, California. **Federal 8294**

VOICE QUESTIONS
Answered
By DR. NICHOLAS DOUTY

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

The Change of Voice

Q.—I am a boy of fifteen. My speaking voice has changed, but my singing voice is still soprano. I have been studying over a year, by myself. I want to become an opera singer; but it seems that my voice, which has developed great power of tone, is not going to change to the lower register. I have not taken lessons. Should I consult a teacher?—K. H. P.

A.—It is probable that before long nature will solve your problem. In any event you will do well to consult a first class teacher as soon as possible.

The Down Scale. Dissipation

Q.—I am a boy nineteen years of age and have studied violin for eight years. Recently I discovered that I have an exceptional tenor voice. My teacher suggests that in order to develop my upper tones I shall start upon the highest note and sing down the scale. Every time I use this method and repeat the exercise a few times, I find that I cannot reach the high tone again. My highest note is G-sharp. Do you think my range can be developed to high C?

2. How does dissipation react upon the voice? Could a voice be ruined by constant dissipation?—E. B.

A.—Some singing teachers encourage their pupils to start their scales upon the highest tones and descend to the lowest ones.

Ex. 1

The theory is that attacking the high tone places the voice "In the head" or "Encourages nasal Resonance" or "Brings the voice farther forward" and that the scale will become smoother by this method. Sometimes it is a complete success, but it should never be persisted in to the exclusion of scales from the bottom to the top. It is too difficult and apt to strain the voice or to stiffen some or all of the muscles used in voice production, especially the throat, fauces, and tongue. Nor do I believe the upper range of the voice is often increased by this exercise. Rather add a low note something like this

Ex. 2

and alternate with the ascending scale of the ninth.

Ex. 3

High C is a rare tone in the tenor voice. If you can produce and sustain a B-flat of good quality, you should be happy.

2. By dissipation I suppose you mean much smoking, drinking and carousing around at night. If you persist in it you will speedily ruin your health and every chance you may have of a career. Singers must learn to be moderate in all things except hard work.

The Maturer Student

Q.—I am twenty-nine years old and have a child eight years of age. Before I was twenty-one I had six years of piano and vocal study. Friends asked me, "Why do you not keep on with your voice?" I could not do so for financial reasons, though my practicing has not been neglected. Lately I have again begun to do public work. My voice is rather unusual, strong and clear, with a range from middle C to high B-flat. How do you advise me to continue my studies?
—J. O. R.

A.—As we so often have to say to inquirers, a good teacher who has had the opportunity to talk with you and to hear you sing is the only one in a position to give a common sense answer to your question. If you possess a good voice, it is but natural that you should want to use it publicly and not to confine yourself to local choral conducting. Get the help of a good teacher, at least for a short period, as soon as possible.

Tenor or Baritone, Which?

Q.—I am twenty-six years of age and I have been studying vocal music seven years. My voice is usually called a baritone, but some teachers call me a tenor. My range is from G on the first line of the bass clef, to high C, not falsetto, but full chest. Of late I have noticed that my lower tones are not so full and strong below middle C. It has given me the impression that my voice is going up and that I might possibly develop a Helden Tenor. Is this probable? The falsetto I have not used to any great extent. My repertoire covers eight-hundred songs, including Eri Tu: Prologue *to "I Pagliacci"*; Largo al Factotum; *and so on.*

2. Do you know of any outlet in Canada, for any talent I may possess? Is it possible to work for a scholarship in the Eastman School, The New York Academy or some such school?
—G. A. P.

A.—Quite often a voice, that has been classed as a baritone in early youth, turns out to be a dramatic tenor in later life. The classic examples are the dead Jean de Reszke and the living Laurits Melchior. From your description of your voice, which you describe as going up, it may be one of these. No one can tell with any certainty, without an audition. You should seek a thorough examination of your voice from the most famous teacher in your neighborhood, so that you may be sure that you are upon the right road. The songs you mention are all baritone songs. If you turn out to be really a tenor, you must supersede them by songs in the usual tenor repertoire. Until you have made this very important decision, you can scarcely hope for much financial success. Then study ten or twelve songs so that you know them perfectly from memory, both words and music, and all the small *nuances* of *tempo* and expression that the songs demand. When you are satisfied that you are ready to sing them before a board of judges, write to the Eastman School, The Juilliard Foundation, or the Curtis Institute, for information as to their auditions. Most students allow their ambition to run away with their common sense and apply for these scholarships too soon. Remember to prepare faithfully, and you may have the good luck to be chosen. There are very few dramatic tenors the whole world over, and there is always room for such a voice.

2. Between the strong, firm sound of the dramatic tenor, and the soft, breathy tone of the falsetto register, there is a tremendous difference of power and quality. It is seldom practicable for the dramatic tenor to blend these tone qualities, and it is usually very dangerous for him to attempt to use the falsetto. The result, is often quite inartistic and often ludicrous.

Throat Infection After The Influenza

Q.—My daughter is sixteen years old and has been taking singing lessons one and one-half years. She was getting along well until she took the "Flu." Since then she has had trouble with her high tones and with hoarseness during both singing and speaking. There is much mucous in her throat, and her larynx is painful. Most of the doctors who have examined her have advised rest, but some have told her to continue her singing lessons and the exercise will help to cure her. She is a High school senior, full of ambition, and she has been told by artists that she has a fortune in her beautiful voice. She has a high soprano and people who hear her want to hear her again. The present doctor says she is well enough to start her singing lessons again. If so, why the mucous?—Mrs. F. B.

A.—It seems from your description as if the "Flu" had left your daughter with a throat infection extending into the larynx itself, especially into the Crico-arytenoid and the Thyro-arytenoid muscles. When these muscles are called upon to contract, either in speech or in song, she speedily becomes hoarse. You would do well to consult the most famous throat specialist in your neighborhood. Have him look for nasal catarrh and infection in the frontal sinuses as well. It seems a shame that a girl full of ambition and with a good, natural voice should be so afflicted; and I am almost certain that a good doctor could find the seat of infection and in time, cure her. It is my opinion that she may take singing lessons under a skilled and careful teacher, but she will be under a great handicap until she is cured.

"Singing too High"

Q.—I am eighteen years of age, a senior in High School. One evening two years ago I was singing and I decided to find out how high I could go. I went up to E above high C and down again. The next day I was hoarse as if I had a cold. This sensation disappeared after resting until two weeks ago, when I sang harder and longer than usual preparing for a concert, when it returned again. I wonder if I could do anything to rid myself of this thing for all time, for I have a marked talent for singing and I am very anxious to get ahead.—G. E.

A.—It is quite evident that you have strained your voice by foolishly trying to see "how high you could go." There are three things that you and every other young singer should learn:

1. Never sing too long at a time.
2. Never sing too loud; never shout.
3. Never go beyond your natural range, either in the upper or the lower register.

Fortunately nature is kind and will in time repair any moderate damage to the throat and vocal cords, as happened in your case.

If you are really ambitious and have natural talent for singing, find a good singing teacher. Read, also, all the books upon that art that you can lay your hands on, and discuss them with him. Do not let your ambition run away with your common sense, and avoid straining your voice ever again in the future.

Singing The High Tones Flat.

Q.—A young friend of mine, with an exceptional voice, can reach the high notes but they are always off key. Her teacher tells her that she sings flat, but does nothing to remedy it. Just what can be done?—J. H.

A.—That is a very difficult question to answer. Is your young friend tone deaf? Can she distinguish between a tone of the correct pitch and one that is out of tune? This must be first decided, before any permanent cure can be effected. Perhaps she is forcing her voice to go beyond its natural range. Or she may be propelling more breath against the vocal cords than they are able to resist. In either case the result would be flatness. You might try scales well within the range of the voice. Scales up and down as far as the ninth, alternating with arpeggios first *staccato* and then *legato*. Abt's "Singing Tutor"; Connell's "Master Exercises"; and Vaccai's "Practical Method" (the words to be sung in Italian); all are to be recommended. However, nothing can take the place of the advice of a competent teacher.

Lowell's Harmonious Blacksmith

(*Continued from Page* 834)

years, the Tewksbury Congregational church for three years, Paige Street church for seven years, the Pawtucket Congregational church for four years and the Fifth Street Baptist church for seven years. He has substituted as organist for almost every church in this city.

"Although he is seventy-two years of age, and he works on material that roughens and hardens his hands, his musicianly technic is still remarkable. His right hand, especially, moves nimbly over the keys. He reads some of his music but can play for hours the classics that he has memorized.

"Seven years ago, Mr. Hill's wife died. It was then that he broke up his home and took his organ to his place of business. It stands, a shrine in itself, amidst the clutter, heat and toil of the blacksmith shop, waiting for the man to pour his soul into the beauty of its music."

The famous *Harmonious Blacksmith* of George Frederick Handel was not given that name by the great composer. Handel wrote a "First Set of Lessons for the Harpsichord," which was published in 1720 by Cluer, under the title "Suites des Pièces pour le Clavicen." This was obviously one of the early instruction books for keyboard instruments. The fifth piece, originally called *Air et Doubles in E major,* was widely played by a music dealer named Linton, in Bath, who had once been a blacksmith. He played it so frequently and with such success that he had the audacity to publish it with the title, *The Harmonious Blacksmith.*

What Now for Music Teachers?

(*Continued from Page* 788)

classes. The class periods are lengthened. Class tuition is reduced from the private rate. The plan has proved most profitable.

Pupils, who enroll for private voice lessons, receive one class lesson per week, gratis. The class group is small: two to four pupils. Much time is given to individual singing.

Emphasis is placed on small classes for all high school pupils.

EDITH MAY MILLER
President, Nebraska Music Teachers' Association

EDITH MAY MILLER

THE MOST IMPORTANT step for the private music teachers to take at this time, to insure larger professional and business results during the coming year, would be: To get last season's pupils well organized. Plan monthly recitals, with educational value and entertainment. Inform pupils that "music study is the finest game of all." Contact prospective pupils by personal calls, telling them the value of music lessons, both for developing the mind and for giving a cultural background.

ROGERS WHITMORE
President, Missouri Music Teachers' Association

THE MOST IMPORTANT STEP the private music teacher may take at the present time is to promote general musical culture, and in turn be promoted, by affiliating with the general educational system. In those states where certification is available, the private teacher should take advantage of the opportunity for High School credits for his or her students. In other states the private teacher will find it advantageous to promote the organization of this plan.

Overcoming a Musical Crisis

(*Continued from Page* 825)

sounded very alluring to us. I was quite keen about it—but I often caught myself thinking: "Is it really for me we're trying to find a job? Is it possible? Won't some miracle come and save me? Is this really the end of everything?"

Yes, it was the end. I must learn to realize it. All this listening for the bell to ring in the next few days bringing a letter or a telegram was useless. Slowly the days crawled by, gradually my heart ceased its wild beating at every step on the stairs, ordinary every-day life returned and with it the increasingly urgent problem—what was I to do?

Father was against my becoming a companion and pleaded the cause of a secretaryship with the old fervor. I soon yielded—it was really all the same to me what I was going to be. So Father entered my name for the next course at the commercial school which was due to begin, I believe, on January 15. I listened in silence with downcast eyes while he urged me to believe that I would be very happy in that profession and one day would have forgotten all about this silly singing business.

"No," I cried suddenly—and all this yielding-to-the-inevitable was swept away as if by a storm—"no, I can't—I can't! Believe me—I simply can't! I'll try once again—just once more! I'll write to Frau Mallinger." I had seldom seen Father so angry. This unreasonableness verged on sheer stupidity! Didn't I realize that Fräulein Reinhold was probably quite right? Did I imagine it was the teacher's fault if I didn't make any progress? Wasn't I rather forced to believe that I really hadn't any talent? But his patience was at an end—the commercial school for me—and that was final!

I Find a Guiding Genius

I DIDN'T SAY A WORD, but sat at the table and wrote—to Mathilde Mallinger who, after a great career as a famous opera-singer at Berlin and at Bayreuth, had a singing school of high repute in Berlin. I wrote page after page, telling her everything—even my own doubts of my talent, my perplexities, Fräulein Reinhold's and Frau Gerster's devastating condemnation, the frightful business of being expelled. . . . I didn't ask for free tuition—I knew that it was absolutely hopeless as she had to earn her living—but I begged her to give me an audition and perhaps recommend me to some advanced pupil.

Father looked at me, amazed at this obstinacy so foreign to my nature. He roared indignantly at my wasting a penny stamp on this useless letter—but then he went out very thoughtfully, and through all his anger there glimmered an affectionate fatherly look, full of solicitude for me.

I quickly took the letter to the mailbox with the bitter thought: "This penny stamp is really the last I shall waste on my happiness."

Life again held something for me—a new hope. When, after a few days, I received a letter from Mathilde Mallinger summoning me to go and see her, all my doubts and troubles vanished. I lived only for the one hour that was to decide everything.

Next Month

THE ETUDE AND THE NEW YEAR

THE ETUDE MUSIC MAGAZINE starts the New Year with an Issue of Commanding Interest

WALTER GIESEKING

THE AMAZING MUSICAL WORLD OF TO-DAY

Walter Gieseking, French born German pianist with an international experience, is one of the most individual of all keyboard interpreters. He presents in THE ETUDE his very distinctive and thought provoking ideas on music in the present day world. The reader will be certain to disagree with some of his opinions, but no one can afford to miss reading them.

EARNING A LIVING THROUGH SINGING

Crystal Waters, New York concert artist, has fought her way to success, and tells many things that young singers may ponder with profit. This is an article rich in practical ideas for all interested in voice.

THE SPELLING OF MUSICAL NOTATION

The late Dr. Preston Ware Orem, one of the most widely studied theorists of his generation, wrote, at the solicitation of the editor, an article for THE ETUDE, on one of the most necessary of subjects. This is the kind of information you will want to keep for years and to pass on to others. Very few musicians know how to spell music properly. A large part of Dr. Orem's experience as a music editor was spent in correcting bad musical spelling. In this article he tells how this art may be mastered.

MASTER LESSON ON A GREAT CHOPIN ETUDE

Alberto Jonás has prepared a Master Lesson upon the **Etude, Op. 25, No. 7** by Chopin. This Spanish born, Belgian trained virtuoso, for years one of the foremost teachers of Berlin, has devoted his recent years to pedagogy in the United States. Our readers will find this lesson very clear and detailed in explaining how this beautiful **Etude** should be played.

Especially fine music and other features will make of THE ETUDE for JANUARY, 1939 a memorable number.

Musical Books Reviewed

Harmony for Schools and Colleges

By ANNIE O. WARBURTON

Here is another harmony built upon aural foundations. It should be welcomed by teachers, as it gives many new aspects of the age-old but ever new art of chord writing. We used to know a teacher in Germany who dictated his own harmony to every new pupil, and then advised him to go over the whole ground several times, using other representative text books. While much of the material in the present new harmony is orthodox, there are many new and valuable suggestions; and the practical examples given to be worked out are excellent for their purpose. Sol-fa names are used for aural work, and the doh-minor for minor keys. The work is highly recommended by the English theorist, C. H. Kitson.

Pages: 327.
Price: $2.00.
Publisher: Longmans, Green and Co., Ltd.

Origins of Musical Time and Expression

By ROSAMOND E. M. HARDING, Ph. D.

Musical Expression depends upon the quality of tone, the variations in time, including rhythm and design, and variations in volume of tone. Rosamond E. M. Harding, Ph. D., has embodied four scholarly papers in a volume of a highly technical and richly documented type, dealing with time, the pitch pipe, the pianoforte and other subjects. Not designed for popular reading, the book contains much that is useful and valuable for the very serious student.

Pages: 115.
Price: $4.25.
Publisher: Oxford University Press.

Ear, Eye and Hand in Harmony Study

By ERNEST FOWLES, F. R. A. M.

Here is a book by a distinguished English educator, upon the subject of how to study harmony through hearing, speaking, reading and writing. It is in no sense a text book, but a work for teachers who aspire to teach the art. The author was a man of exalted ideals and keen penetration; and, in this little volume, he has preserved ideas which are of permanent value to educators.

Pages: 57. Paper Bound.
Price $2.00.
Publisher: Oxford University Press.

World of Music

(*Continued from Page* 776)

SERGE PROKOFIEFF, one of the younger of Russian modernist musicians, will spend the latter part of the season in America, making a rather lengthy stay in Los Angeles to write a film score and to serve as guest conductor of the Philharmonic Orchestra for one of its March programs.

* * * * *

COMPETITIONS

TWO PADEREWSKI PRIZES of one thousand dollars each are available to American composers. One is for an orchestral composition of fifteen to twenty minutes length, another for a concerto for solo instrument with orchestra and not less than fifteen minutes in length. Manuscripts must be received not later than March 1, 1939; and complete information may be had from Mrs. Elizabeth C. Allen, Secretary of Paderewski Fund, 290 Huntington Avenue, Boston, Massachusetts.

THE CALIFORNIA COMPOSERS AND WRITERS SOCIETY will be especially recognized on August 22nd to 25th, 1939, as the sponsors of leading activities of the Golden Gate International Exposition of San Francisco. California born musicians are asked to communicate with Galen M. Harvey, Secretary, 616 Aileen Street, Oakland, California.

AMERICAN COMPOSERS are asked to submit works to Howard Barlow, Columbia Broadcasting Company, 485 Madison Avenue, New York City, to be considered for performance on the Everybody's Music orchestral series over CBS. Having begun with July 24th, each program now includes one American composition—a fine recognition and opportunity for our creative musicians.

Christmas Buying Well Done

A useless gift is not only a waste of the giver's money, but it is an embarrassment to the recipient. Fortunately, there need be no waste of money, or any useless presents, when the recipient is a music lover. In fact, through the Annual Holiday Offers of the Theodore Presser Co., the giver's money has increased buying power at the Holiday Season, and, through the many things offered at special Holiday cash prices, suitable and delighting gifts may be obtained for any musical friend, whether that friend be a juvenile who is just beginning the study of music, an amateur performer or singer, a professional performer or singer, or just a music lover who enjoys reading interesting and informative books on composers, artists, or matters musical.

Theodore Presser Co. brings to attention a portion of its Annual Holiday Offers on several pages in this issue of THE ETUDE. There a variety of suggestions is given, but if your gift shopping for musical friends must cover a goodly number of gifts, send a postal request immediately for a folder of all the special Holiday Offer Bargains offered by the Theodore Presser Co. Many music lovers, music students, and active music workers make it a point to take advantage of these money-saving opportunities to add to their own music libraries during the period in which these reduced prices are in effect.

While there may be a limit to the number of items Theodore Presser Co. includes in the Holiday Offers because these Holiday Offers are on publications in its own catalog, there exists an incomprehensible wealth of gift suggestions for the musical in the wide range of publications from the catalogs of all music publishers carried in the stock of the Theodore Presser Co.

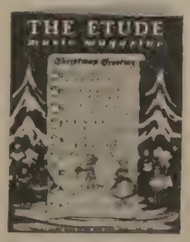
Last, but not least, remember that you can make the happiness of Christmastime more assured for yourself, the recipient of your gift, and those supplying the gift or gifts, as you want, if you order at once and by such early action avoid the disappointments possible when last-minute action is taken in the rush created by belated Christmas buying. Remember that our Holiday Offer prices carry over until December 31, so that recipients of money gifts at Christmastime can take advantage of these Holiday Offers for themselves.

Our Fifty-fifth Annual Christmas Salutation

THIS is the fifty-fifth time that THE ETUDE MUSIC MAGAZINE has held out its arms to greet its vast assembly of readers at Christmas time. It would require two hundred theatres of the average size, or to say it in another way, two monster open air stadiums to hold the huge audience of ETUDE subscribers and valued patrons of the Theodore Presser Co.

Wouldn't it be wonderful if we all could get together, face to face, on Christmas Eve or New Year's Day,—we who are earnestly working with a common ideal in the tone art, realizing its important present-day relation to human affairs? Because this is impractical, may we here exclaim with all sincerity and joyous good cheer,

MERRY CHRISTMAS



and

HAPPY NEW YEAR

To ETUDE Friends and Patrons Everywhere.

In imagination we hear this holiday greeting heartily echoed from the two hundred thousand throats of our loyal supporters, to each one of whom we are especially grateful at this glad hour. We have been greatly blessed in a multitude of ways, and we hope that the blessing the little Christ child brought to the world may come to you bountifully at this season.

The Cover for This Month

Among those who have taken great pleasure in contributing articles and novel bits to THE ETUDE, particularly for *The Junior Etude* pages, is Miss Frances Taylor Rather. Miss Rather conceived the idea for making a unique and fitting Christmas cover for THE ETUDE MUSIC MAGAZINE, and after a painstaking review of Christmas hymns used by every denomination, Miss Rather selected from each of nine different hymns a line which would fit into her plan of having the initial of the first word in each line spell "Christmas."

Miss Rather, who is from Dallas, Texas, suggested the general form of presentation of this cover, and in the rendering of this idea in a color painting a young and coming artist for the first time is represented by her color work on the cover of a magazine with a nation-wide distribution. This artist is Miss Elizabeth Worthington, Woodbury, New Jersey.

Although there are many parts of the world where Christmas is celebrated when the season is warm and balmy and everything is in bloom, there is, to the majority of people in the United States, a love for associating Christmas with snow-covered scenes, and because the earliest recollections of Christmas are associated with grandparents, parents, and others of preceding generations, thoughts of good, old-fashioned wholesomeness have a natural heart-warming association with Christmas.

The cover for this month includes these things, in the snow-covered scene and the pictured carol singers of a yesteryear, and the music parchment floating ethereally over the scene gives us the great handmaiden of Christmas. That handmaiden is Music, for since the very first Christmas morn, when the angels sang, mankind has taken great joy in celebrating the birth of Christ through joyous and reverent singing of Christmas hymns and carols.

An Omission Corrected

Some of our readers were quick to discover that no artist's name was given in connection with the cover that appeared on last month's issue of THE ETUDE (November 1938).

We are indebted for this cover to Miss Louise Waldorf of the School of Fine Arts, Oklahoma College for Women, Chickasha, Oklahoma. This was a black and white photographic study made by Miss Waldorf. All rights to this photograph are the property of Miss Waldorf, THE ETUDE having secured the cover privilege only in making use of it.

Advise Promptly of Any Changes in Address

THE ETUDE is mailed under regulations set by the Post Office Department. These regulations require pre-payment, by the subscriber, of additional postage on any copies that must be forwarded. If you intend moving, or have already changed your address, advise us in Philadelphia immediately, giving both old and new addresses. Please help us to give you good service.

Christmas Carols

From All Ages and All Climes

The singing of carols is probably the oldest form of celebrating the birth of the Christ Child that still is in practice today. Long after the customs some of them describe have passed into oblivion their simple folk-melodies, the musical expression of peoples' devotion, are today heard in church and Sunday school, in office, factory and shop, in the Christmas celebrations of school children, in the Christmas Eve caroling of the "waits"; yes, on every street corner in our cities and towns, for a week or more before the almost universal holiday. Many of these carols are of obscure origin, some are definitely identified with writers and composers of the past century. Phillips Brooks probably will be remembered as the author of *O Little Town of Bethlehem* long after much of his notable service to the church has been forgotten.

Christmas carols are not the product of any one people, or nation. America, as well as the older European countries, has contributed her share to the music of Christmas.

So great is the popularity of Christmas carols that publishers have vied in bringing out attractive collections of these numbers for the convenience of singers and the general public who wish to join in the singing of them. Among the most practical for special singing groups, or for general use, are the following:

Christmas Carols We Love to Sing (29 carols) .15c
Four-part Mixed Voices (SATB)
Christmas Carols for Treble Voices
(15 carols) 15c
Two-part (SA)
Yuletide Carols for Men's Voices (15 carols) .15c
Four-part (TTBB)
Traditional Christmas Carols for Junior Choirs
(15 carols) 15c
Unison—Compiled and Arranged by William Baines
Ditson Christmas Carol Book (47 carols) 50c
Unison or Four-part Mixed Voices (SATB)—Edited by Norwood Hinkle

Fragments from Famous Symphonies

Compiled and Arranged for Piano

By **William Baines**

As was expected by the publishers, when the manuscript of this book was accepted for publication, the announcement of the forthcoming appearance of *Fragments from Famous Symphonies* has been most cordially received by piano teachers. These energetic, wide-awake individuals keep abreast of the trend of the times, and their daily contact with our musical youth keeps them informed on many things that may not be apparent to the casual observer.

Not so many years ago "song transcriptions" and "operatic medleys" were "all the rage"; today, with the cultural asset of the radio in the many fine programs available to every home, young people have learned to love the inspired themes upon which master symphonic compositions have been written.

To desire to play these superb melodies, therefore, is most natural. In this soon-to-be-published album Mr. Baines presents piano arrangements of themes, or fragments, from the better known symphonies of Mozart, Haydn, Beethoven, Schumann, Schubert, Brahms, Tschaikowsky and Dvořák. These arrangements will be within the playing capabilities of piano pupils well along in the second grade of study

Single copies of *Fragments from Famous Symphonies* may be ordered now at the special advance of publication cash price, 30 cents, postpaid. The sale of this book will be restricted to the U. S. A. and Its Possessions.

Calendars for 1939

Present Six Famous Musical Pictures

Many of our music teacher readers at this time of the year write in to ask for suggestions in the line of inexpensive, yet appropriate Christmas remembrances to give their pupils. This year Theodore Presser Co. is putting out a series of calendars, six in number, that should be most attractive to music lovers.

These will be 8" x 11" in size, printed in brown on an india stock. One-half inch from each edge there is a neat border design, and in the upper center of the space this border encloses there is a panel in which appears a lithographic reproduction of one of the world's famous paintings of musical subjects. In the lower center there is a pad with the days of 1939 grouped in months.

The following well known subjects may be had:

Schubert—Maid of the Mill
Beethoven—Dawn of a Masterpiece
First Music Lesson
Beethoven—The Approaching Storm
Mozart at Salzburg
Haydn Crossing the English Channel

As in past years these calendars will be sold at 10 cents each, $1.00 a dozen—single subjects, or assorted.

Penitence, Pardon and Peace

A Lenten Cantata by J. H. Maunder
Arranged for Women's Voices
***By* James C. Warhurst**

There is an increasing demand for music arranged for singing by the treble-voice section of choirs, as choirmasters are beginning to realize that these dependable groups well can be entrusted with the presentation of important programs. Arrangements for three-part singing can be made to satisfy all harmonic requirements with the aid of a well made organ accompaniment. Solo assignments, divided between sopranos, mezzos and altos, can lend sufficient variety.

Cantatas for Easter and Christmas, arranged for treble voices, that the publishers have issued in recent years have been surprisingly successful. Mr. Warhurst's arrangement of this noted cantata, so often given during Lent and Holy Week, probably will be equally welcome. One feature of this work that appeals to those who build programs of church music is its division into three sections which may be rendered separately, if desired. Another use for *Penitence, Pardon and Peace* is as part of the regular church service, the singing of its numbers being interspersed with collects, readings and addresses. The entire work requires about 35 minutes for performance.

As we expect to have copies of this work ready for delivery immediately after the first of the year, church music folk can become acquainted with this new arrangement early by ordering single copies now at the special advance of publication cash price, 30 cents, postpaid. Orders can be accepted only from patrons in the U.S.A. and Its Possessions.

The Youthful Baritone

An Album of Songs for Studio and Recital

The guidance of young voices, especially in solo singing efforts, is a task that should be attempted only by an experienced teacher. Many of our good friends in the teaching profession always are on the lookout for suitable songs for their pupils of high school and college age. Not only the tessitura and voice range of the melody line, but the subject and text as well, are scrutinized carefully before assigning songs to these younger pupils.

All of the songs in this book answer the most rigid requirements of these careful instructors. But, presenting the volume as an album of songs for the "youthful baritone" does not mean that more mature and experienced singers should consider the songs as being unworthy of their singing them. While they come within the requirements for the "youthful baritone," many proficient singers will find them an excellent addition to the repertoire for program and encore numbers.

Single copies of *The Youthful Baritone* may be ordered now at the special advance of publication cash price, 35 cents, postpaid.

The Youthful Tenor

An Album of Songs for Studio and Recital

When the young man's singing voice definitely has changed from childish treble to manly tenor quality, he should have instruction from a capable teacher. Then, there will be no danger of injuring the precious vocal organ by attempts to sing beyond the natural range.

Teachers, who exercise the greatest care in lesson assignments for young voices, also are very particular in their selection of songs for these budding vocalists to sing. In this book they will secure a fine, safe repertoire for the youthful tenor.

While texts, tunes and tessitura of these songs are distinctly for young singers, tenors of more mature years also will find them quite interesting and well worth adding to their own repertoire. Another feature that will appeal to singers is that these songs do not appear in other collections, as a rule.

In advance of publication copies of *The Youthful Tenor* many be ordered at the special cash price, 35 cents, postpaid.

Ten Studies in Black and White

For the Piano
***By* Mana-Zucca**

MANA-ZUCCA

Even in her celebrated song creations, such as *I Love Life, Because of You,* etc. Mana-Zucca reveals a mastery of the piano keyboard as one of her accomplishments. Before she decided to abandon the concert platform and the studio for composing and the joys of family life, this prolific and talented American composer had successfully appeared with leading orchestras and had brought out many excellent pupils.

Mana-Zucca has never relinquished her love for young students and her contributions to piano teaching literature are noteworthy, indeed. This latest *opus* offers ten original studies about the fourth grade or higher, veritable gems of melody and technical worth. Each is attractively titled and each covers some necessary phase of technic at this stage of the pupil's advancement.

A Sky-Line (to develop the stretch of the hand); *A Misty Scene* (melody and accompaniment in legato style); *Autumn Leaves* (octave study in crisp staccato); *The Dancing Spray* (wrist attack); *A Seascape* (left hand arpeggio study with right hand melody); *A Spanish Scene* (study in contrasting rhythm); *Clouds over the Ocean* (double notes); *Still Life* (study in legato); *Flowers in Bloom* (study in quick attacks); and *The Fountain* (study in velocity).

This work will be the next added to the celebrated *Music Mastery Series* of Piano Studies, each volume of which is uniformly priced at 60 cents. In advance of publication orders may be placed for single copies of this study book at the special cash price, 20 cents, postpaid.

Organist's Resource

***A New Collection of Organ Music Selected from the Compositions and Arrangements of* I. V. Flagler**

Few performers are called upon to maintain a more extensive repertoire than is the church organist. For many the most practical and economical means of building and maintaining a library is in the acquisition, from time to time, of well chosen collections of organ music.

Organists of the older generation remember *Flagler's Collection of Organ Music,* a 5-volume publication that contains an excellent compilation of original compositions and superb arrangements of appropriate organ music. *Organist's Resource* will contain a careful selection of the very best numbers from the original work and will be issued in the convenient oblong 12" x 9" size.

While *Organist's Resource* is in course of preparation single copies may be ordered at the special advance of publication cash price, 60 cents, postpaid. The sale of this volume will be restricted to the U.S.A. and Its Possessions.

One String Solos

For Violin Beginners
***By* Kate La Rue Harper**

As the final details of editing and engraving this work are completed, and it begins to take shape as a finished book, our editors are more and more enthusiastic about the possibilities of this unusual publication for little violinists.

One String Solos is being issued in two separate volumes: the Violin Part (for the student) and the Piano Accompaniment (for the teacher or accompanying pianist). No expense is being spared to make the Violin Part attractive and interesting to the youngster. Each piece is complete with a charming text, which may be sung if desired, and is illustrated with an appropriate picture to attract the child's interest. This part also contains diagrams showing the correct location of the notes on the fingerboard and the proper finger position for each string. Only three fingers are used, as the small player sometimes finds difficulty in placing the fourth finger properly in the beginning. The pieces are designed to establish the correct fingering in the Key of C. While other keys are used, there are no accidentals in the violin part. The A and D strings are introduced first because they have the same pattern of fingering. Then follow the G and E strings, each with a different finger pattern.

In advance of publication we are booking orders for these two books at the following special prices: 15 cents for the Violin Part, 20 cents for the Piano Accompaniment. Copies will be delivered when the work is published.

Play and Sing

Favorite Songs in Easy Arrangements for Piano
***By* Ada Richter**

Just get yourself used to something good, and you are sure to want more of it. This trait did not come to you in maturity, but was with you in childhood. Likewise, many young music students were introduced to something they found good, and enjoyable, when they were given Ada Richter's *My First Song Book.*

It is quite natural that these youngsters soon will be looking for more such good things to come their way as they progress in their piano playing. This new book, *Play and Sing,* will provide those "more good things." In arrangements suitable for the playing abilities of young pianists who have completed about a year of study and are taking up things progressing into second grade, this book gives well over three dozen songs. This is a generous number of favorite singable melodies for the young piano student to have under his command at the keyboard, and it represents just such a collection as will make it possible for that young piano student to make a real contribution to musical enjoyment in the home.

Some idea as to the contents may be gathered from the five groupings which Mrs. Richter has made in the book. These groupings are: School Songs, Songs of Other Lands, Songs of My Country, Songs from Operas, and Songs My Grandparents Sang Long Ago.

This publication is a generous offering in advance of publication at the low postpaid cash price of 25 cents. Because of copyright restrictions on some of the numbers in this collection in other countries, orders will be accepted only for delivery in the U.S.A.

Victory Divine

Easter Cantata by J. Christopher Marks
Arranged for Women's Voices
***By* James C. Warhurst**

DR. MARKS

Immediately after the Christmas holidays, or at least in ample time for rehearsals, we expect to issue, from the press of Theodore Presser Co., two choir cantatas for Lent, Holy Week and Easter. The first of these, *Penitence, Pardon and Peace* by J. H. Maunder, so frequently presented in the weeks prior to Easter, is reviewed in another note on these pages. *Victory Divine* by J. Christopher Marks, for many years has had a prominent place in the repertoire of choir and choral organizations and is often presented at Eastertime.

Now, we are bringing out these two celebrated cantatas in arrangements for three-part singing by choruses of treble voices. There is an insistent demand for choir and chorus numbers, both individual anthems and larger choral works, that can be sung by treble voice singing organizations, such as high school and women's club choruses.

Victory Divine, with its beautiful choral numbers *God So Loved the World, It Is the Hour of Morning,* etc. makes a most interesting subject for these popular arrangements. There is plenty of variety in the musical content. Solos for soprano, mezzo and alto and a duet for soprano and alto give opportunities for the proficient vocalists of the organization. The choruses are in three parts (S S A) throughout, with an occasional division of the voices for added emphasis.

While this arrangement for treble voices is in preparation single copies may be ordered at the special advance of publication cash price, 35 cents, postpaid. The score of the original edition for mixed voices is now priced at 75 cents.

16 Modern Etudes

For the Advanced Trumpet Player
***By* John Huber**

School music educators, who have in their band and orchestra organizations young trumpet players of promise, should make the acquaintance of this forthcoming publication. Teachers of advanced students also will find it most valuable and a real economy in making unnecessary the purchase of several books of studies.

Under the guidance of a skilful teacher the pupil can obtain from these studies much valuable practice for developing interpretive

(*Continued on Page* 841)

A Christmas Favor

● "Do me a favor, Dad?" asked Melville Clark, Jr., sixteen year old son of Melville Clark, head of the largest music business in Syracuse, N. Y., (established 1858).

Naturally father was curious as Christmas was approaching.

"What is it, son?" he inquired. "Well," said the young man, "I wish you would include a subscription to THE ETUDE MUSIC MAGAZINE among my Christmas gifts."

Thousands of young folks have this wish close to their hearts at this time of the year, and do not express it.

The best Christmas present is the one most wanted. Young folks interested in music, in any way, eagerly desire the bright, new, progressive ETUDE.

Why not hang one of the gay Yuletide announcements of a gift subscription on a few Christmas trees of friends this year? They will be received with glee, and with joyous anticipation of 365 days of musical inspiration, information and amusement.

The Theodore Presser Co., in wishing all its friends and patrons a very Merry Christmas and a Happy New Year, feels gratified that it has, through THE ETUDE, a means of extending this fine spirit of Christmas happiness for a whole year.

ADVERTISEMENT

16 Modern Etudes (Continued)

ability, flexibility in triple-tonguing and, above all, proper breathing and correct tone production. Material is outlined for practice in playing triplets, chromatics, trills, mordents and in various rhythms. Velocity, of course, is ultimately achieved.

In order to permit educators to become acquainted with the merits of this work a special advance of publication price of 40 cents, postpaid, is now in effect.

Manual of Fugue

By Preston Ware Orem, Mus. Doc.

Whatever the musical subject may be, and however uninteresting it may seem from the title alone, one may be sure of its being handled most attractively when done by the pen of the late Dr. Orem. Even a casual reading of the first few pages of this book makes the subject of fugal writing so clear that the desire is created to continue the study through to the very end. And when this is done attentively, the working out of the different problems becomes a pleasure instead of a task, and the student finds he really knows more about the art of fugue than is generally the case after months of study with the usually dry books treating of this subject.

In this charming treatise the main angles of Fugal writing—*Canon, Imitation, Double Counterpoint,* etc.—are thoroughly treated in simple fashion. It goes without saying that those who have had a preliminary study of harmony, composition, and counterpoint, particularly as handled so entertainingly and efficiently in Dr. Orem's published books on these subjects, will be better prepared to get the greatest benefit from the study of his Fugue manual.

After studying this book one is amazed at the new shades of musical beauty revealed. This work helps to emphasize the fact that music is really one of the outstanding arts.

The *Manual of Fugue* is in preparation, but single copies may be ordered in advance by taking advantage of our special advance of publication cash price of 40 cents. Copies will be forwarded as soon as printed.

All-Classic Band Book

***Arranged by* Erik W. G. Leidzén**

School bandmasters will learn with interest of the forthcoming publication of this important book for the elementary band. The material is drawn entirely from the classic composers and represents a careful selection from unhackneyed compositions not available in other collections for band. Charming and characteristic excerpts from Haydn, Schumann, Bach, Schubert, Martini, Beethoven, Mendelssohn, Mozart, Verdi, Handel, and Gluck make up the sixteen selections comprising this book.

The arranger, Erik W. G. Leidzén of New York, needs no introduction to bandmasters. His brilliant transcriptions, as played by such organizations as the Goldman Band and others, have made his name synonymous with the best in this field. In arranging this volume to meet the needs of the elementary band, he has kept the material simple and easy. Care has been taken to introduce as many phases as possible to give students real band experience and familiarize them with signs, symbols, and procedures they will encounter as they advance. Different styles of playing, such as soft tongueing legato, and staccato, are introduced. Rehearsal numbers are frequent and invariably placed over a bar to avoid confusion.

The instrumentation is complete for the modern school band. The Horn parts are confined to 1st and 2nd Horns (or Altos) only, however, since no notes of extreme range are introduced in any parts. While a full complement of parts will give the best results, the harmony is complete if the clarinets and brasses are present. The Conductor's Part serves a two-fold purpose: a playable piano part for pre-rehearsal study and a fully-adequate short score on two staves for conducting. All entrances are marked and cues are indicated by parentheses; thus the conductor can call for strengthening of sections or for substitution.

In an instructive Foreword to the book, Mr. Leidzén says: "This volume, when mastered, ought to be a welcome addition to any band program. Short numbers, well played, are far more effective than long and difficult compositions which are beyond the capacity of the players." Hence this book will have distinct program value even to the more advanced school bands and will be unsurpassed for sight reading material.

The complete instrumentation is as follows:

C Flute and Piccolo
D-flat Piccolo
E-flat Clarinet
Solo and 1st B-flat Clarinet
2nd B-flat Clarinet
3rd B-flat Clarinet
E-flat Alto Clarinet
B-flat Bass Clarinet
Oboe
Bassoon
1st E-flat Alto Saxophone
2nd E-flat Alto Saxophone
B-flat Tenor Saxophone
E-flat Baritone Saxophone
Solo and 1st B-flat Cornet
(B-flat Soprano Saxophones)
2nd B-flat Cornet
3rd B-flat Cornet
1st Horn in F
2nd Horn in F
1st E-flat Horn (Alto)
2nd E-flat Horn (Alto)
1st Trombone
2nd Trombone
3rd Trombone
1st and 2nd Trombone (Treble Clef)
3rd Trombone (Treble Clef) (B-flat Bass Saxophone, or B-flat Bass)
Baritone (Bass Clef) (Euphonium)
Baritone (Treble Clef)
Basses
Timpani, Drums
Conductor's Score (Piano)

In advance of publication copies of this work may be ordered at 15c each for the Parts; 25, or more, Parts at 10c each; 25c for the Conductor's Score (Piano).

Reward Cards for Music Pupils

(Second Series)

Bizet	Gluck	Rimsky-Korsakow
Chaminade	Grieg	Rossini
Debussy	MacDowell	Rubinstein
Dvořák	Massenet	Saint-Saëns
Elgar	Moszkowski	Sibelius
	Moussorgsky	

Interest continues to be shown in this new series of *Reward Cards* to supplement the popular series of old classic masters that for years has been used by teachers in class and private instruction. The first series, which sells at 50 cents, included Bach, Beethoven, Brahms, Chopin, Gounod, Handel, Haydn, Liszt, Mendelssohn Mozart, Schubert, Schumann, Tschaikowsky, Verdi, Wagner and Weber.

The illustration, as shown above, is lithographed in the style of a water color painting, and on the reverse there is a black and white reproduction of the composer's signature, a facsimile of his manuscript and a condensed biography.

With each set of 16 *Reward Cards* is given a *Prize Card,* reproduced from steel engravings and containing the portraits of 8 great composers, and with space for the teacher's signature and other data.

Reward Cards (Second Series) may be ordered now at the special advance of publication cash price, 35 cents, postpaid.

Advance of Publication Offer Withdrawn

Piano teachers who regularly read these notes, and who realize the bargains that are offered here, will be glad to know that one of the works, for which they have subscribed in such generous numbers, is now ready for delivery. The publishers feel that this book of studies is a really valuable addition to the literature of piano teaching material and that it regularly will be used by teachers, everywhere. In accordance with our usual policy, as this work is placed on the market the special advance of publication price is withdrawn. Copies now may be had for examination.

Twenty-eight Miniature Etudes, for the Piano, by Ella Ketterer presents, for pupils in the third grade of study, invaluable supplementary material to the necessary work in the average piano instruction book of this grade. In the first place, the studies are just one page in length; no dry, tiresome *etudes,* pages long, to memorize. Each covers one specific technical figure, or difficulty, to be mastered. Each is presented in the form of an appropriately titled piece. Incidentally, this is an excellent study book for very young pupils who have progressed to the third grade. Price, 75 cents.

Premiums Received for Subscriptions Make Splendid Christmas Gifts

Why not let THE ETUDE help you with suitable holiday gifts for your friends and family? We offer you the opportunity of doing your entire Christmas shopping without a moment's waste of time, and without any cash expense. This is the way to go about it. For each one-year subscription to THE ETUDE which you secure, either new or renewal, we will give you one point credit toward any of the fine merchandise illustrated in our catalog. These articles are not for sale, but are offered as rewards for making new friends for THE ETUDE.

Each premium, or gift, is merchandise of which you need not be ashamed and with which your friends will be pleased. Of course your personal subscription alone cannot be counted. The idea in offering these gifts is to acquaint music lovers generally with THE ETUDE and to renew friendships with old subscribers. Simply show THE ETUDE to any musical friend, pupil or teacher and point out how indispensable it is in the pursuit of their musical studies and pleasure. Then collect $2.00 for a full year's subscription and send it to us. In this way, your entire list of Christmas gifts can be filled without expenditure on your part and with very little effort.

The following are a few selections taken at random from the catalog:

PIERCED AND FOOTED SANDWICH OR CAKE PLATE, Chromium Plated, Diameter 10". Three subscriptions.

HOT CAKE OR TOAST DISH, with crystal glass plate, diameter of plate 8½", with chromium-plated cover. Your reward for securing one subscription, not your own.

NUT OR CANDY DISH, chromium-plated, grape design. Swing handle, Diameter 8". Height overall 7". Three subscriptions.

CHROMIUM-PLATED WATER PITCHER, with practical Ice Guard. Made of solid Brass, beautifully chromium-plated inside and outside. Has attractive metal handle. Top diameter 5". Height overall 9¾". Capacity two quarts. Your reward for securing seven subscriptions.

DESK SET—Here is a splendid Desk Set—6 pieces with genuine leather. Your choice of red, green, brown or blue. Pad size 12" x 19". Your reward for securing four subscriptions.

SANDWICH TOASTER AND GRILL, Length 12¾", width 8¼", height 3½". Air-cooled black baked enamel base with pressed-in handles. Fitted with drip cup. All bright parts heavily plated. 110 volts-550 watts. Your reward for securing two subscriptions.

Send post card for completely illustrated list of rewards.

THEODORE PRESSER CO.
Music Publishers, Dealers, and Importers
1712 Chestnut St., Philadelphia, Pa.

The Printer's Font

The printer buys the type which he uses for hand-set jobs by the font. When he purchases one of these sets of a type face he does not get an equal number of every letter; for instance, the average piece of copy to be set requires more a's and more e's than any other letters, so it is apparent that a judiciously balanced font of type must supply more of such popular letters as these than it supplies of the other letters in the alphabet.

In the realm of music there are many publications, but, in the constant run of the demands of active music workers, more copies of some are required than of others. Very naturally, those most demanded require stock replenishings, and in noting the new editions of these as they are represented on each month's Publisher's Printing Order, it is easy to keep informed on music publications which have a record of dependability in the particular field of music endeavor which each respective one serves.

It is always easy to make the acquaintance of any of these numbers by asking the Theodore Presser Co. to send to you single copies of the ones you want to examine. Numbers so requested will be charged "on approval" with full return privileges on any unused numbers which you desire to return.

SHEET MUSIC—PIANO SOLOS

Cat. No.	Title and Composer	Grade	Price

Stella Ann Learns Her Scales

By Priscilla M. Pennell

"OH DEAR," sighed Stella Ann, "I can't seem to remember my scales. Just as soon as I learn one I forget the others."

"Never mind," said Miss Gray, "I think I have a plan that will help. We'll learn all the scales at once with a pattern which you can make yourself."

The girl's eyes were wide with wonder as she watched her beloved music teacher cut a piece of cardboard seven inches long by two and a half inches wide. Then Miss Gray told her to put the card back of the black keys with its left edge in line with the left edge of the C key. With a pencil Stella Ann made a mark at each crack between the keys. Then at these marks she ruled the card into sections.

"Now," said Miss Gray, "We are ready to put the numbers on. Then your pattern will be finished. You remember I told you all scales are made up of half steps and whole steps, with the half steps between 3-4, 7-8. You see, we'll put numbers from 1 to 8 on the card, skipping spaces between them, except for the half steps. All you have to do to play any scale is to place your pattern card with number 1 back of its first note and then to follow the numbers."

Stella Ann was delighted. This was just like a game, and when she tried it she found it very easy. Scales are fun now. By fingering them all alike (using four fingers of each hand) she can very soon play all the scales even without the card. Later she will take them up one by one with the correct fingering.

As Stella Ann is a real little girl, she feels sure that all the boys and girls who take piano lessons will enjoy making the pattern card and learning the scales as she did.

Skiing in Scale Town

By Gladys Hutchinson

KEYBOARD HALL is open for the reception and entertainment of all year round guests.

The magnificant mountains covered with snow present a series of wonderful views, and they can nowhere be enjoyed in greater variety and sublimity than at the "Gateway of Scale Town," the St. Moritz of Musica.

C major is especially favorably situated in the northern snow belt, and there are acres of open slopes and trails on the hillsides, and fourteen other real down mountain trails,

G, D, A, E, B, F-sharp, C-sharp
C-flat, G-flat, D-flat, A-flat, E-flat, B-flat and F major.

The Keyboard Ski Club is especially active in providing unusually excellent instruction. Classes are held daily with competent American and European instructors, who will show you how to do well and safely this fascinating sport.

Come to Scale Town where there are accommodations for all!

SINGING HEART'S CHRISTMAS EVE

(Playlet)

BY E. A. G.

Characters:
ELDORA
RAVELLA
ARDEENA

Off-stage: Chorus

Scene: Interior, with piano, chairs and table.

RAVELLA, *seated, knits.*

ELDORA (*seated in armchair, reads aloud*): Singing Heart was very busy on Christmas Eve, and she was Oh! so happy. She had been busy all day, too, from sun up to sun down, taking baskets to some neighbors, taking fruit to others, taking gifts to others; Tinker Bell, the kitty had to have a new red ribbon; Chippy and Chirpy and Dusty, the goldfinches had to have a bunch of holly tied on their cage; stockings had to be hung—oh yes, she was very, very, busy, and Oh, so happy.

RAVELLA: Well, this is Christmas Eve and we have lots and lots to do yet; we had better get busy, too. My kitty needs a new red ribbon herself; but I must finish this knitting for Grandma's present before I do another thing. I'm sure she will like it.

ELDORA: Yes. And our stockings are not hung up yet; and my canary needs that new swing, and Mummy's present is not wrapped up yet; and Oh! there are so many more things to be done. But I just must finish this story about Singing Heart.

RAVELLA: Go ahead and read while I finish this knitting. I can work faster when someone reads, and that is a lovely story about Singing Heart.

ELDORA: Well, let's see. Where was I? Oh yes. (*Reads aloud*): Singing Heart was so happy. "Tomorrow is Christmas," she told her kitty. "Tomorrow is Christmas," she told her goldfinches. "Tomorrow is Christmas," she told her baby sister. "Christmas!" she repeated, "The birthday of the Christ Child. The Angels sang the first Christmas, she said; the Angels sang *Peace on Earth, Good Will towards Men.*"

RAVELLA: I know that carol about the Angels singing.

ELDORA: Please go to the piano and play it. I forget how it goes.

RAVELLA: I must finish this knitting. Play it yourself. You know it just as well as I do because Miss Halley had all of us learn it last year. Don't you remember it? (*Ravella hums melody.*)

ELDORA: Oh yes. (*Lays book on table, goes to piano and plays softly,* HARK, THE HERALD ANGELS SING. (*Voices off-stage join in at* GLORY TO THE NEW BORN KING.)

RAVELLA: Eldora, I hear voices! Listen!

ELDORA: (*taking hands from keyboard as voices cease*): So did I. Maybe it was Singing Heart. Do you think the song will come again? Let's try. (*Plays softly as voices sing this carol entire.*) (*Enter Ardeena.*)

ARDEENA: Well, you girls do not seem to be very busy, considering that it is Christmas Eve.

ELDORA: No? But we are having such a wonderful time listening to the voices. Aren't they lovely?

ARDEENA: What voices?

ELDORA: The voices singing about the Angels.

RAVELLA: Didn't you hear them?

ARDEENA: No, I did not hear a thing. (*Picking up open book on table*), What book is this?

ELDORA: I was reading to Ravella about Singing Heart.

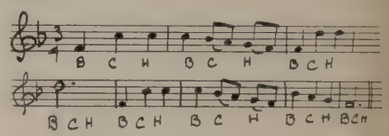
RAVELLA: Yes, and please continue. I will never get this done in time to go to bed! (*Picks up knitting.*)

ELDORA: I'm always losing my place. Oh yes, here it is. (*Continues reading.*) Then the Shepherds came following the Star, over the fields from ever so far, to see the Christ Child. Oh, it is a lovely story. It makes me feel happy, too.

RAVELLA: Eldora, you can play a song about the Shepherds, too, can't you? Maybe the voices will come again.

ELDORA: Maybe they will. Let's see, how

(*Continued on next page*)



Rhythmic Balls

By Sara Freed

How would you like to play a game of Rhythmic Balls? It is fun for club meetings or musical parties.

Each person takes turns using the ball, or several balls could be used at the same time. Select a song that has a good swing, sing it heartily, and play the ball at the same time. Playing the ball means to bounce it on the first beat of the measure, catch it on the second beat and hold it for the third beat. If the song is in four-four time bounce on first beat, catch on second, bounce again on third and catch on fourth beat.

In the accompanying example B stands for bounce, C for catch and H for hold. See how well you can play this game. It is not easy at first!

? ? ? ? ? ? ? ?

Musical Geography

1. In what country was the first opera written?
2. In what city did Mendelssohn found a conservatory of music?
3. What river gave its name to a famous waltz?
4. In what country was Dvořák born?
5. In what city is Handel buried?
6. In what country does Sibelius live?
7. From what country does the *Song of the Volga Boatmen* come?
8. In what country is the scene of the opera, "Madame Butterfly" laid?
9. From what country does the *Morris Dance* come?
10. In what state in the United States is MacDowell buried?

(*Answers on next page*)

Little Judie Yanno

By Carol Anne White

There was a girl named Judie Yanno
Who really loved to play piano.
BUT—

THOUGH she practiced morn and night, her pieces never sounded right. The reason was quite plain to see—she didn't watch her time and key. If in the signature she read two-four, she'd count six-eight instead; and if F-sharp were in the score, she'd flat her E and sharp some more. Her teacher said, "Now listen here, you'll never learn to play, my dear, if you go on this careless way; you're going backwards day by day." So Judie then made up her mind; a careful little rule she'd find, by which her key and time she'd tell; and this she did, and learned it well. Before she played a piece at all, the key and time out loud she'd call; My key's G major, F-sharp, so; my time's four-four," and then she'd know.

So, now that little Judie Yanno
Plays beautifully on her piano.

Singing Heart's Christmas Eve

does it go? I have been so busy I have not had time to play carols lately. (*Goes to piano and plays softly,* WHILE SHEPHERDS WATCHED THEIR FLOCKS BY NIGHT. *Voices join, softly at first, then louder.*)

ARDEENA: Oh, that is lovely; They really are voices, aren't they! But where do they come from?

RAVELLA: We told you we heard voices. Play it again, Eldora. (*She plays but the voices are silent.*)

ARDEENA: Well, read some more in the book, then. I am really excited!

ELDORA (*reading*): Singing Heart went gayly about her preparations for Christmas. "Come, Tinker Bell," she said, "you must have a new ribbon for Christmas. Tinker Bell, did *you* know the Wise Men came to Bethlehem? You are wise, Tinker Bell, and your bow is very becoming. You look almost happy, Tinkie. But you look very wise. The world needs more Wise Men nowadays, Tinkie."

ARDEENA: That reminds me to put a new bow an Scottie. I'll never be ready for Christmas.

RAVELLA: What were the Wise Men's names, El? Do you remember? We had them once in a Sunday School pageant, but I forget.

ELDORA: Maybe we will find them in the story. (*Continues reading*):

"Tinker Bell, you must be as wise as you look, you know, and you must promise me not to go near the goldfinches' cage," said Singing Heart. "You must not go near them, but you can admire them from across the room. They have new names for Christmas, Tinkie, after the Wise Men. The one with the most gold is Balthasar—that was Chippy—and the others are Caspar and Melchior. They are nice names, don't you think? They are happy, too, Tinkie, because tomorrow is Christmas."

ARDEENA: There is a Christmas song about the Wise Men, too. Can you play it, Eldora?

ELDORA: No. I forget how it goes. You play it.

ARDEENA: Very well. Do you think the voices will come for me, too?

I hope they will. (*Plays* WE THREE KINGS OF ORIENT ARE *as voices join in.*)

RAVELLA: Lovely! And my knitting is almost finished.

ARDEENA: So is mine. But what about putting up the holly? It is getting very late, you know.

RAVELLA: Yes, let us put it up now. It is so pretty. Maybe the voices will sing while we work.

ELDORA: I'll play *Deck the Halls with Boughs of Holly.* (*Voices join in carol as others put up holly.*)

RAVELLA: It looks perfectly beautiful and I feel just as happy as Singing Heart.

ARDEENA: So do I.

ELDORA: So do I. But it is very late. We simply MUST go to bed.

RAVELLA: Yes, and my knitting is all finished.

(*Girls leave, one by one, taking last look around and lowering lights.* FIRST NOEL CAROL *is heard off-stage without accompaniment as curtain falls. Audience may join in singing a few more carols, or repeating this one.*)

JUNIOR MUSIC CLUB
Freemont, Ohio

True or False Game

By Gertrude Greenhalgh Walker

APPOINT LEADERS and the leaders take turns in choosing partners for their sides, like a spelling match. Then the teacher or councillor, if the game is used at a club meeting, asks various questions, always prefacing the question by, "Is it true or false that—?

Each question that is answered correctly gets a credit of five points and the side having the most points at the end of a given period is declared winner.

The game may be varied by allowing the one who gives the correct answer to a question, to put the next "Is it True or False?"

Honorable Mention for September Essays:

Jean De Riemer; Berte Greene; Hascia Levine; Nathalie Wells; Eleanor Anderson; Martha Roberts; Angelo Cruice; Evelyn Helman; Cynthia Bronson; Agnew Wheeler; Louis Adamson; Mary Hillman; Esther Janeway; Mary O'Keefe; Rose Hinton; Jack Heller; Sydney Brown; Estelle Klinger; Barbara Sherman; Jean Parks; Cleo Werner; Bobby Mitchner; Marion Hawley; Marcia Ellman.

Musical Games

(Prize Winner)

I HAVE two musical games which help me with my daily practicing. Sometimes I pretend I am playing at a concert, and during this game I watch all the expression marks; watch my position, the position of my hands and feet, as though I were being watched by the audience.

My other game is that I am a pianist who plays popular music. I do not like the way the piano part is written in popular music, so I change it. I enjoy this game, and with these games I enjoy my practicing and lessons better; and they seem to help me very much.

MAURIEN FORGY (Age 12), Class B.
Texas

Answer to September Puzzle

Coronet-cornet; heron-horn; groans-organ, (or booes-oboe); sharp-harp; orange-organ.

Answers to Musical Geography

1, In Italy. 2, Leipzig. 3, The Danube. 4, In Bohemia (now Czechoslovakia). 5, In London. 6, In Finland. 7, Russia. 8, Japan. 9, England. 10, New Hampshire.

Music

By Shirley Mason Hurwitz (Age 15)

With its strains so sweet and mellow,
And its echo in my heart,
It is soothing as a 'cello;
Of my soul it is a part.

It expresses all the meanings
That in words can not be said;
It awakens many feelings
Which are passive, but not dead.

Music, Hope and Joy together,
All as in one perfect prayer,
Come to us from where, forever,
All is calm and truly fair.

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month, for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "Religious Music."

Must contain not over one hundred and fifty words, and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by December Eighteenth. Names of prize winners and their contributions will appear in the March issue. The thirty next best contributors will receive honorable mention.

RULES

Put your name, age and class in which you enter, on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper, do this on each sheet. Write on one side of paper only.

Do not use typewriters and do not have anyone copy your work for you.

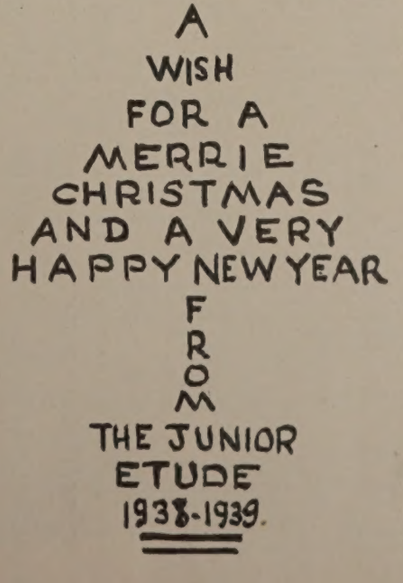
When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules will not be considered.

The Missing Instruments Puzzle

By Alfred I. Tooke

THE MEMBERS of the seven piece orchestra at Tooters Corners had a practical joke played on them the other day. Someone hid their instruments, and when they went to get them they were gone, and, like Little Bo Peep and her sheep, they "didn't know where to find them!"



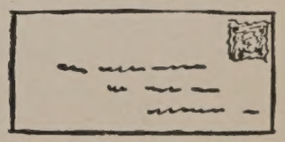
However, perhaps you can help them? The instruments are hidden in the following sentences—one instrument in each sentence. Can you find them all?

1. I told Mary I would mend her doll if I felt a break in its arm.
2. When I had put a fresh arm on I umpired a ball game.
3. If you have no pencil, char pieces of matches and keep score with them.
4. When the other umpire was in accord I once suspended a player.
5. His conduct only resulted in his team losing the game.
6. There were Indians on the team, also Boers from South Africa.
7. They had no car in a fit state to drive me home, so I walked.

DEAR JUNIOR ETUDE:

Every Saturday our class, called the Theory Class, meets for an hour. We are learning about the diatonic and chromatic scales and about different sounds. Although I am only a beginner in music I like it very much.

From your friend,
MARGARET ANDERSON (Age 13),
Ohio.



Musical Games

(Prize Winner)

MUSICAL GAMES, or that is, the idea of musical games, vary with different individuals. Music itself is a kind of game or puzzle, because we have lines and spaces and notes and each note represents a different letter with its own sound. When we can play each note correctly we have a musical tune. Therefore our puzzle has been worked—we have played the puzzle!

There are games consisting of scrambled letters, which when arranged correctly give musical names or terms, and this helps us to become more familiar with these names. There are others representing instruments, and so on. Musical games are a lot of fun and they are very helpful in the study of music.

JEANIE MARCHALL (Age 14), Class A.
Illinois

DEAR JUNIOR ETUDE:

I am interested in music to a great extent and am very fond of stamp collecting and model engineering and I would like some of Uncle Sam's sons to write to me.

I am in the South African Air Force and would be pleased to receive letters from any boy who is interested in my lines of hobbies and occupations. I am seventeen years old and am interested in the views of other people in the subjects mentioned.

From your friend,
CECEIL VAN BLERK (Age 17),
No. 5886, Bungalow 1527, S. T. T.
South African Air Force,
Roberts Heights, South Africa.

DEAR JUNIOR ETUDE:

I am a boy ten years old and I am studying the piano and love it. I also play violoncello in our school orchestra, and play E-flat horn in our Community Band, and love them all; but piano comes first and I hope some day to be a concert pianist.

I have taken THE ETUDE a year and expect to keep on taking it, as my teacher gives me solos from it and my mother and I have fun playing the duets. The Junior page is great!

From your friend,
RUSSELL WILEY (Age 10),
Massachusetts.

Prize Winners for September Puzzle:

Class A, Jeanette Van Os, (Age 15), St. Louis, Missouri.

Class B. Hilda Boswell (Age 12), California.

Class C, Louis A. Bonelli, (Age 9), District of Columbia.

Honorable Mention for September Puzzles:

Betty Madigan; Andrew Wilson; Johanna Torrel; Ivy Lamson; Lea Whittier; Elfrieda Price; Morris Collins; Sylvia Andrews; Leona Wohlston; John Miers; Ellen Hough; Margaret Lewis; Lorraine Ditmars; Anthony Burt; Nancy Lemar; Teddy Wolfe; Eleanor Turson; Rita Elaine Scogna; Adolph Strackmar; Leonie Dangroise; Marcia Wells.
